SIXTY-FOURTH CONGRESS,
FIRST SESSION.

VOLUME LIII, PART 11.

(PAGES 10473 TO 11516.)

Congressional Record.

PROCEEDINGS AND DEBATES OF THE SIXTY-FOURTH CONGRESS, FIRST SESSION.

SENATE.

THURSDAY, *July 6, 1916.*

(*Legislative day of Wednesday, July 5, 1916.*)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

AGRICULTURAL DEPARTMENT APPROPRIATIONS.

The Senate, as in Committee of the Whole, resumed consideration of the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

The VICE PRESIDENT. The pending amendment is the amendment offered by the Senator from Colorado [Mr. THOMAS], which will be read.

The SECRETARY. On page 57, strike out lines 1 to 22, inclusive (these lines provided the appropriation for destruction of coyotes), and insert the following:

That all persons engaged in destroying wolves, coyotes, bear, and other predatory animals, the destruction of which is provided for by State laws, and bearing license or permits from the proper State authorities, shall at all times have access to the national forests of their respective States in pursuit of such purpose.

Mr. THOMAS. Mr. President, my opposition to these appropriations can be voiced just as well to empty seats as to a full Senate. Hence I shall not ask for any call of the Senate.

Mr. SMOOT. Mr. President, will the Senator yield to me?

Mr. THOMAS. Not for that purpose.

Mr. SMOOT. All right.

Mr. THOMAS. I shall not detain the Senate, Mr. President, upon this amendment or this substitute more than a moment. I have listened with interest to nearly all the arguments that have been urged in support of this paragraph of the bill as it stands, and I have listened with peculiar interest to my good friend from Nevada [Mr. PITTMAN], whose appeals for land and for money upon the floor of the Senate are always made so earnestly and so eloquently and so pathetically as to touch the heartstrings of the most miserly economist. It is extremely difficult for me to oppose any measure which the Senator from Nevada really has his heart set upon. I know that he feels from his inmost soul the prime importance of this appropriation. But I had no idea when I introduced the substitute that he would start an epidemic of hydrophobia, beginning in the regions of the Pacific coast and traveling eastward with such startling rapidity.

There is some foundation, doubtless, for his apprehensions, but I think it has been greatly quickened and enlarged by the prospect of large appropriations. And it is to be noticed that behind this appropriation there is an organized movement. It is one of the characteristics of all reasonably large appropriations in the Senate that some organization is behind it. This has one whose interests are very properly aroused by this danger, if it exists, and their appeal to the Senate or to Congress for relief is most natural.

Mr. President, it is becoming characteristic of the present generation that whenever any unusual event occurs, when any local condition arises which is unsatisfactory to our people, instead of putting their own shoulders to the wheel and endeavoring to find and apply a remedy, to ask the Government of the United States to come to their rescue. Our self-reliance, our enterprise, our resourcefulness are disappearing under the tendency of our constituency to rely upon the Treasury of the United States for relief and the pressure to that end which they exert upon their representatives. The Government, in the ordinary estimation, was created and is maintained to be plundered; that it is a huge financial reservoir containing vast quantities of money which the people need and which they ought to have and propose to get through appropriations for every conceivable purpose. Consequently we are making appropriations for every conceivable subject, 90 per cent of which a few years ago was taken care of locally and as a matter of course.

Mr. WORKS. Mr. President——

Mr. THOMAS. I yield to the Senator.

Mr. WORKS. The Senator has spoken about a specific class of people who are interested in this legislation. I wish to ask the Senator if he has not found, by his experience in the Senate and his general observation, that these things go by States, that each State thinks it ought to have its share of whatever may come out of the National Treasury, and that these bills are filled with appropriations which have grown up in that way?

Mr. THOMAS. Yes, Mr. President, that is true; the modern test of the usefulness and capacity of the Senator or Representative is his ability to get greater appropriations for his State or locality than the other States or localities get.

Mr. WORKS. I am glad the Senator is taking that view of it, because I have insisted on the floor of the Senate more than once since I have been here that the condition of things is most deplorable. I think it is a growing evil and ought to be taken account of by the Senate of the United States. I rather think this is a good time to take some notice of that situation.

Mr. THOMAS. The difficulty is not so much with the Senate itself; it is with the constituencies of the Senate.

Mr. WORKS. I am not willing to accept that statement. No Senator has a right to be influenced in that way by his constituents.

Mr. THOMAS. We have no right to be influenced in that way, but we are. We are all of us influenced in that way.

Mr. WORKS. That is very true.

Mr. THOMAS. Our constituents point the finger or shake the fist at us in the demand or request for appropriations. It influences us, and I do not know any Senator who is sufficiently courageous—morally courageous, if I may use that expression—at all times to resist that pressure.

Mr. WORKS. That is very true; I agree with the Senator about that; but, that being so, it is hardly right to say that a Senator is not responsible.

Mr. THOMAS. Well, Mr. President, the criticism of the Senator may be well founded. There may be and probably is a mutual responsibility; but the main responsibility, the ultimate responsibility, must rest upon the constituency. And should our constituency, our taxpaying constituency, organize, as I hope they may—although an organization to keep money in the Treasury is not so alluring an organization as to get money out of it——

Mr. SHAFROTH. Mr. President——

Mr. THOMAS. If our constituents, taxpayers, were organized and made their demands through organized agencies, there would be far-reaching and most salutary moral and financial reform in both Houses of Congress. It will not come until they do so. I yield to my colleague.

Mr. SHAFROTH. In line with what the Senator is saying, I will ask the Senator if it is not generally recognized as a fact that the first thing that is asked a Senator or a Representative when he returns from a session of Congress is, "How much did you get for us?" And in State legislation it is, "How much did you save for us?"

Mr. THOMAS. Yes, Mr. President, that is largely true; but even in State legislation the representative or senator who fails to look after his district or State and get his proportion of the appropriations, and as much more as possible, runs the risk of punishment by retirement. That situation is deplorable, but it is one which, nevertheless, accounts for these enormous aggregate appropriations almost exclusively.

I have received letters in the last three months from constituents of mine, some of them personally abusive, because of my reluctance to yield to all their suggestions for desired appropriations from the Treasury. I have sinned in the other direction just as my associates have. I am arrogating to myself no peculiar virtue. Mr. President, I am possessed of the same tendencies, the same influences, the same fears, the same reluctance to arouse opposition that are generally prevalent. But I have thought that in the emergency which the country

faces, where we are also yielding to a popular clamor and making huge appropriations for Army and Navy purposes, we ought for the time being to contract wherever we can the other appropriations to the end that the public burdens may be minimized as far as is consistent with the orderly and proper administration of public affairs.

Now, Mr. President, before I proceed with what I intended to say, in line with the Senator's suggestion, while coming over from the House Office Building to the Capitol this morning a friend handed me a copy of the Saturday Evening Post of to-day's issue containing a cartoon showing an emaciated devil of a taxpayer with a huge cask upon his shoulders mounting a flight of stairs, labeled "rising cost of necessities," the cask filled with pork and labeled "two billion dollar Government," with Congress, in the form of an obese individual, at the foot of the stairs leaning upon a very large trunk marked "extra taxes for preparedness," and asking the taxpayer if he "has got time to carry a trunk." It is a very appropriate and significant cartoon and a burlesque of actual conditions. The taxpayer is carrying the greatest burden which this Government ever imposed upon him. We are about to take up a revenue measure made necessary on account of these conditions whereby we propose to increase the annual burdens of the people some two hundred and fifty or three hundred million dollars, and I am unable to see in either House, either on the Republican side or on the Democratic side, any consistent, determined, or other sort of effort to minimize our appropriations in other directions. And we are told that a bond issue must be provided for.

Now, I do not believe, Mr. President, that there is any need for these additional burdens represented by the increases in our general appropriation bills. "Pork-barrel bills" is a common expression. But every general appropriation bill is becoming a "pork" bill. They are amended with riders for this, that, and the other purpose carrying certain amounts of money, aggregating millions of dollars, and they are as much subject to that public criticism as the specific bills to which it was originally directed.

Mr. President, I believe that this appropriation which will be made, instead of remedying the evil it is aimed at, will be followed next year by an increased appropriation for the same purpose, and we will then be told that this evil has extended itself notwithstanding the efforts of the Government and the expenditures of this money to prevent it.

Take the boll-weevil pest. I do not know how many hundreds of thousands of dollars have been expended for the extermination of the boll weevil. My information is that it is not only not exterminated but that in spite of our appropriations and our efforts it continues, and is traveling eastward; that it has now invaded the State of Georgia. It is a terrible calamity to the cotton-growing interests, and consequently to the country; something ought to be done about it; but the fact is that this method of treating it with money plasters seems to be unsuccessful. So with predatory animals and the rabies, which is said to be spreading, because of its existence among some of them, with such startling and frightful rapidity.

It may be said that the man who makes opposition of this kind should suggest some remedy. I have no remedy to suggest at the present time. I must be content with insisting that the present appropriation will not subserve the purpose, and in support of it point to the fact that the last appropriation has accomplished nothing.

Mr. CLAPP. Will the Senator pardon an inquiry?

Mr. THOMAS. Certainly.

Mr. CLAPP. Is not the practice of economy a sufficient remedy for extravagance? In other words, when you are pleading against extravagance, is it not sufficient to plead against it and ask for economy without suggesting some other form?

Mr. THOMAS. It ought to be; but I realize that the situation in regard to this particular appropriation is a serious one and one which demands the cooperation with the States of the General Government.

I shall not detain the Senate any longer, Mr. President. I think the substitute which I have offered ought to be adopted. I think it would be a very good thing if we would take all these appropriations and re-refer them to the committee with instructions—not partisan instructions but Senate instructions—to go over them and minimize as far as possible in the interest of economy these large appropriations.

Mr. CLAPP. Mr. President, I have been very much impressed with the remarks of the Senator from Colorado. It is evident to anyone who studies the course of legislation that we are simply, year after year, plunging deeper and deeper into extravagance until to-day, save for a bandit irruption in Mexico, this Nation, in a time of profound peace, contemplates the issuance of a bonded indebtedness, which will be a mortgage on the energies, activities, and economies of those who come after us.

What interested me was the interruption of the Senator from California [Mr. WORKS]. Human nature is human nature, and a man placed in a position where he has to exercise a spirit in opposition to the tendency of human nature has got to have some support.

I have insisted for years that there is but one remedy for this situation, and that is that there shall be in Congress a committee who shall sit around a table as a board of directors sit around a table and pass upon the question of how much shall be used and how much shall be allowed to each department of the Government. If that were done, then the chairman of a committee dealing with appropriations could say to those who appeal to him to add to an appropriation, "I am powerless to permit this addition because there is back of me a board that will limit this appropriation to a given amount."

Some years ago, after many years of urging this upon the then leader of the Senate, the late Senator from Rhode Island, he seemed to see the wisdom of the suggestion and organized a committee consisting of the chairmen of the committees dealing with appropriations. I do not think it is any discredit to his memory; perhaps he was naturally on the alert as to any suggestion that came from me; and so he added to that group four or five more. We had a meeting of that committee and immediately parceled out each subject to a subcommittee, putting it right back where we started, leaving the chairman of a committee dealing with these appropriation bills powerless to protect himself against the inroads upon the appropriations by the fact that there was a concrete force behind him that had said "thus far and no farther," and that was, of course, the first and last meeting of that particular committee.

I want to make a prophecy here to-day. I have not indulged much in prophecies, but I now prophesy that this condition will never be cured until Congress has established a committee which will say to every department, "We can allow you so much and no more." No corporation on earth could exist if the men in charge of the various subdepartments of that corporation were permitted to go to its treasury, each one independently, and take out what he thought his particular department could use; yet we sit here as a Congress and allow that very thing. The only remedy for that situation—and some day we shall have to come to it—will be one concrete force in Congress which can put itself behind the chairman of every committee dealing with appropriations, so that he can say to those who, through his committee, seek to make inroads upon the Treasury, "You can have so much, and you can have no more." When that is accomplished we shall have a reform in this matter, and I do not believe we ever shall have a reform until it is accomplished.

Mr. WORKS. Mr. President, ever since I have been a Member of this body I have been very earnestly contending against the present tendency of the National Government to take over the duties and the responsibilities of the States. I have not done that so much because of the matter of dollars and cents involved in it, but more particularly with respect to its effect upon the people of this country. We are so legislating day after day as to make beggars of all of the people of this country, save none. The States are coming to the Treasury of the United States for funds to accomplish what should be done by the States themselves. Individual citizens, representing particular interests, are coming here constantly asking the Congress of the United States to appropriate moneys to do what they should be doing themselves.

It is not only an illegitimate and an unlawful raid upon the Treasury of the United States, but it is taking away the initiative and the independence of the people of the several States. We see evidences of that on all hands and in almost all of these appropriation bills. A very vigorous fight was made against the rivers and harbors bill on that account, upon the theory that it was making appropriations for projects that ought not to be supported by the Government under any circumstances; but this bill is no better than was the rivers and harbors bill. It has appropriations in it that are just as unjustifiable from any point of view as were many of the appropriations that were so vigorously attacked in the rivers and harbors bill.

I have called attention to one of these in particular that is supposed to be beneficial to my own State, that of helping the people to ascertain how to irrigate their lands. An appropriation of that kind by the National Government is supremely absurd. The people of California who are irrigating their lands know more about irrigation probably than do the whole Agricultural Department combined; they do not need any help of that kind; and if they did, they are not entitled to it, as coming from the National Government. The so-called

irrigation States should take care of their affairs. It is not in any proper sense a national affair that should be taken care of by the Federal Government.

The proposition which has been commented upon by the Senator from Colorado [Mr. THOMAS] is another of a like kind; but you will find that this situation is confronting us all the time: If one State or one group of States is allowed an appropriation for a particular purpose beneficial to that State or to those States, then another group of States, for example, in the western or semiarid region, will insist that that ought to be balanced up by making the same appropriation for the benefit of those States. So it goes.

Not only that, but every congressional district, having its Representative, is saying to Congress, "If you make an appropriation for the benefit of the district of this man, you should make a like appropriation for my district; my district must be protected; I must be protected, as a candidate for reelection"; which is often at the bottom of it. So we are going on from time to time. We start an appropriation on a particular project, and it is followed up next year by a larger appropriation to carry on what has been commenced.

It is a most vicious kind of legislation, and the question is, how are we going to meet it, or are we going to do it at all, or are we going to proceed along these same lines indefinitely?

The Senator from Minnesota [Mr. CLAPP] thinks he has a remedy for the evil. He says human nature is human nature, and therefore we ought to have a committee appointed that could control this situation. Well, that would be a human institution, just as much so as is the United States Senate.

Mr. CLAPP. The strength of that, it seems to me, would be in the fact that it forms an equation. I admit there is cowardice in the suggestion that any man needs an equation back of him; but, as I have said, human nature is human nature, and if you can get back of the man and form an equation you can put a protection behind the man who subsequently deals with the concrete demand at the hands of those who besiege his committee. You will have to decide between protecting the chairman in a growth of extravagance.

Mr. WORKS. Well, Mr. President, you ought to find as high a standard of human nature in the United States Senate, it seems to me, as almost anywhere else; and even to suggest that you can go outside of the Senate and find some sort of separate body that can take upon itself this responsibility, which belongs to us, is to convict us of moral cowardice.

Mr. CLAPP. I want to ask the Senator from California a question. However, first, to correct a wrong impression, I will say that my suggestion does not go outside of the Senate and the other House; but it is that there be formed a committee of the two branches. The Senator from California has, however, stood here for six years and has plead for the policy of economy for which he is pleading to-day; yet I think he must admit to-day, in spite of that pleading, the condition has grown worse right straight along. Is that not the fact?

Mr. WORKS. Well, Mr. President, if I have made any impression favorable to my views on this subject I have not been able to discover it.

Mr. CLAPP. Nor have I; and I do not say that to the discredit of the Senator, of course.

Mr. WORKS. And I am not taking any credit to myself personally, Mr. President, with respect to it. There are other Senators here who feel just as strongly about it as I do and who are just as anxious to serve their country in this way as I am. It is simply a condition which has grown up in the Senate, and we are allowing this thing to drift along without doing what seems to me to be our plain duty to the country as a whole.

Now, it is hardly worth while for me to take up the time of the Senate in saying what I have said more than once. I was brought to say something on account of what has been said by the Senator from Colorado [Mr. THOMAS]. I am glad to support him in any way I can in the position which he takes on this subject.

I think we must realize, Mr. President, that this is a time, if there ever was a time, in the history of this country when we should be at least to some extent economical. Without discussing the merits of the amount of money that we are going to expend for preparedness, that money is going to be appropriated and the people of this country will have to meet the enormous expense that grows out of it. That being so, if we can cut off a few millions of dollars by trimming down such appropriation bills as this we will at least be easing up the burden to that extent, and I think we should do it.

Mr. WARREN. Mr. President, may I ask the attention of the Senator from California for just a moment? The Senator from Colorado [Mr. THOMAS] objects to this particular item. He wants to put the burden which properly belongs to the United States, of protecting its own property, onto the citizens of the States who live in the neighborhood where the Government property is located, who receive no benefit from the ownership of that property by the Government, while the Government, holding that property in reserves, is leasing it, is selling the timber, and is running a business for profit. What we seek to do is to have the Government do its share by assisting in the destruction of the predatory animals which make the Government's property their breeding grounds and infest the surrounding region. To do what the Senator from Colorado proposes is to shift the burden of the United States onto the citizens of the States, who receive no taxes and no income because of the location of the Government's property within their borders.

Mr. WORKS. Well, Mr. President, I was not speaking especially with respect to this particular appropriation. That very distinctly illustrates my position. If this is a national liability, and if it is the duty of the Government to protect outlying lands by reason of what may develop upon its own property, then, of course, the responsibility rests with the Federal Government, and it ought to assume it and take care of that situation.

Mr. WARREN. That is exactly this case.

Mr. WORKS. That is just exactly what I am contending for, that the Government of the United States should attend to its own business and allow the States to attend to theirs, and should assume its responsibilities and allow the States' responsibilities to rest where they belong.

Mr. SUTHERLAND. Mr. President, I desire to ask the Senator from California a question. With his criticism I entirely agree. The Senator is absolutely right, that we are coddling the States; we are doing things for them that they ought to do for themselves; and I think the process is quite as bad in its ultimate results as it is to coddle an individual by doing things for him that we ought to allow him or compel him to do for himself; but I ask the Senator from California whether he does not think his criticism ought to go further than that? Is there not a constant and growing tendency in Congress not only continually to do things for the States which they should be permitted to do for themselves, but continually to invade the domain of private enterprise and private business, as, for example, in the case of the appropriation of a large sum of money, some $15,000,000, made the other day to put the Government of the United States into the business of manufacturing fertilizers for the farmer? Does the Senator from California not think, if we would omit appropriations of that kind and appropriations of the sort which he is criticizing, that we would save probably a hundred million dollars on the appropriations made at this session of Congress over what will be made?

Mr. WORKS. Mr. President, I have no doubt of that; and the Senator from Utah may remember that I opposed the particular appropriation to which he has referred, and upon the very ground stated by him. I think the Government of the United States should confine itself strictly to its legitimate purposes and objects, and whenever the Congress of the United States goes out of its way for the purpose of making appropriations like that referred to by the Senator from Utah, it is abandoning the very principles upon which this Government is founded; it is going outside of its duties and obligations and is taking over the obligations of the States and of individuals as well. I think it is a dangerous tendency and one that ought to be counteracted just as speedily as possible.

I had occasion to say, not very long ago, I think, that practically the dividing line between the States and the National Government is being completely obliterated; that directly we will have no State rights; that the Government will be centralized right here in Washington; and that not only the obligations which belong to the States will be taken over by the National Government but the rights of those States and their citizens will be taken over by the Government and practically destroyed.

Mr. STERLING. Mr. President, before the Senator from California takes his seat, I should like to suggest to him a very practical question arising out of one of the items in this appropriation bill.

Mr. WORKS. Mr. President, I thought I had been discussing practical questions.

Mr. STERLING. It is perhaps a little more practical, and comes more nearly home to the Senator from California, than anything he has so far discussed. On page 19, beginning with line 11, there is found the following item:

For conducting such investigations of the nature and means of communication of the disease of citrus trees known as citrus canker, and by applying such methods of eradication or control of the disease as in the judgment of the Secretary of Agriculture may be necessary, $250,000.

Now I wish to ask the Senator from California if he thinks all of the activities on the part of the Government implied in the entire paragraph in which this language occurs should be carried on under an appropriation of $250,000, or whether he does not think the Government should be confined in its work to acquiring and then disseminating information in regard to the eradication of citrus canker among the citrus-fruit growers, and that if the functions of the Government were so limited, we might cut down this appropriation from, say, $250,000 to $150,000?

Mr. WORKS. Well, Mr. President, I suppose the Senator from South Dakota thinks he can confuse me by referring to this appropriation that applies specifically to my own State.

Mr. STERLING. Mr. President, I beg the Senator's pardon. I did not think for a moment of confusing him. I have prepared, and have presented to be printed and to lie on the table, an amendment to that section to that effect. It does not apply alone to the Senator's State, but it applies to other States of the Union as well.

Mr. WORKS. But, at all events, it applies to mine. I want to say, however——

Mr. BRYAN. Mr. President——

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Florida?

Mr. WORKS. I yield to the Senator.

Mr. BRYAN. So far as I know, there is no citrus canker in California now, nor has there been; but the appropriation for that purpose rests upon a little different basis from the most of these appropriations, in this respect—that citrus canker found its way into this country by reason of the failure of the Government agents at the ports to discover what it was and to prohibit its importation; and in that way, of course, the Government became responsible for its introduction into the United States.

Mr. WORKS. Mr. President, I know very well that the State of Florida, so ably represented by the Senator who has just spoken, is suffering from this disease of the citrus trees in that State, and I sympathize very much with their condition. I have had a great many letters from people in Florida calling my attention to those conditions and asking me to support some appropriation to help them out of their troubles.

This question presents just the thing I have been talking about. If this is a national affair, if it can be shown that it is interstate in its character or that it has resulted from some neglect of duty on the part of the Federal Government, then the responsibility rests properly upon the National Government. But, Mr. President, replying more specifically to the question asked by the Senator from South Dakota, there is no reason why the Government should go into the State of California at all and undertake to do the work of taking care of the trees for the purpose of removing a disease of that sort. Our people have no right to ask any such thing. The only theory upon which that kind of an appropriation can be justified is the danger of transmitting or transferring that disease from one State to another, thereby making it an interstate question. I think myself there is very little reason for these appropriations upon that basis; but certainly to go into the State for the purpose of doing for a fruit grower in California what he should do for himself—take care of his own trees—is perfectly unjustifiable from any point of view.

With respect to the matter of education of the people in such a way as to enable them to overcome conditions of that kind, that is quite another matter; and if I could believe that the Agricultural Department was competent to educate us in that way, if I believed that the employees of the Agricultural Department knew more about those conditions and the remedy that might be applied to them than the people in California know, I should be disposed to think that an appropriation of that kind might be justified. But even that, to my mind, is exceedingly questionable, because I have my doubts about the ability of the Agricultural Department to do that thing any better than it can be done by the people of California.

I know, Mr. President, that sometimes it is a difficult matter to draw the line between what should be State obligations and what should be Federal obligations in dealing with questions of this kind. I think that line ought to be sharply drawn wherever it is possible to do it, and that it is our duty, as representing the National Government, to prevent appropriations being made to do things that should be done by the States or the individual citizens within the States.

Mr. SHEPPARD. Mr. President, I want to say to the Senator from California [Mr. WORKS], the Senator from Colorado [Mr. THOMAS], and the Senator from Minnesota [Mr. CLAPP] that far better results would be obtained in the matter of regulating and controlling Federal expenditures if the committees on expenditures in the various departments of the Government would discharge the duties for which they were originally intended. In Rule XI, paragraph 36, of the Rules of the House, those duties are outlined, so far as the House is concerned, as follows:

> The examination of the accounts and expenditures of the several departments of the Government, and the manner of keeping the same; the economy, justness, and correctness of such expenditures; their conformity with appropriation laws; the proper application of public moneys; the security of the Government against unjust and extravagant demands; retrenchment; the enforcement of the payment of moneys due to the United States; the economy and accountability of public officers; the abolishment of useless offices; the reduction or increase of the pay of officers, shall all be subjects within the jurisdiction of the nine standing committees on the public expenditures in the several departments, as follows:
>
> In the Department of State, to the Committee on Expenditures in the State Department.
>
> In the Treasury Department—
>
> And so forth.

If the committees on expenditures in the various departments, both of the Senate and the House, would work together, or work in harmony, along the lines set out in subparagraph 36 of Rule XI of the Manual of the House of Representatives, millions and millions of dollars that are now uselessly expended would be saved to the Treasury.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Texas yield to the Senator from Colorado?

Mr. SHEPPARD. I do.

Mr. THOMAS. The Senator from Texas is on the Committee on Expenditures in the Agricultural Department. I think he is chairman of that committee. If the Senator attempted to perform the duties that he has just read to the Senate out of the rules of the House, how much time would he be able to give to his other duties here in the Senate?

Mr. SHEPPARD. I shall say that I have in mind a resolution giving the committee of which I am chairman power to send for witnesses and papers, to administer oaths, and so forth, in order that it may exercise the very duties herein set forth, and attempt to accomplish the results for which the committee was originally designed.

Mr. THOMAS. That does not answer the question. If the Senator attempted to do what this rule requires the similar House committee to do, he would have to work by night and work by day and devote his entire time to it, if he did it properly. To impose such duties upon active Members of the Senate, particularly where there are only 96 Members, is practically to deprive them of usefulness in all other directions.

Now, there is no question but that a supervision of the expenditures of these departments is desirable, but it is simply impossible for Members of the Senate to do it if they expect to do anything else. Such a committee should be organized elsewhere, and should be composed of men who can attend to that business and nothing else.

Mr. SHEPPARD. Mr. President, I believe it would be entirely practicable for these committees to exercise such supervision over the expenditures in the departments as to keep constantly in touch with them, and to produce gratifying results.

Mr. THOMAS. If the Senator will attempt it, and make an experiment on the Department of Agriculture—the appropriation for which I think is less than that of any other—and it is successful, I believe I am on one of those committees as a member, and I should be very glad to imitate his good example.

Mr. SHEPPARD. I shall be very glad to endeavor to set that example.

I want to make one further observation: If it is impossible for a single committee to look after one department, how would it be possible for one general budget committee to look after all the departments, to keep in touch with their details, and to say exactly what amount should be expended by them throughout the year?

Mr. WADSWORTH. Mr. President, I have been very much interested in the discussion of this item, carrying $420,000; and I think perhaps it is proper that I call the attention of the Senate to one phase of it, in that it is not confined in its operations to the public lands of the United States. Under the language used in the first five lines, a large portion of the money appropriated may be spent in any State in the Union, whether or not it has public lands within its borders.

Mr. SHAFROTH. Mr. President, if the Senator will allow me right there, I will say that these predatory animals are not to any appreciable extent in the other States, where there are no public lands.

Mr. WADSWORTH. Mr. President, I can not quite accept the correctness of that statement.

Mr. SHAFROTH. In the State of Colorado, for instance, we do not get taxes on more than one-third of the land contained in the State, the balance of it being public land. A large part of that Government land, about half of it, is included in forest reserves. The tendency is to keep everything out of the forest reserves, and thereby they become a kind of breeding place for these predatory animals. Now, I can see that the eastern part of the State of Colorado does not need any of this, because it is being settled up by farmers. Kansas, no doubt, does not need any of it, because nearly every acre of it is in cultivation. But in these mountainous countries, where these forests are, and where these predatory animals roam and thrive, something must be done; and it seems to me the only way in which it can be done is by an appropriation of Congress.

Mr. WADSWORTH. Mr. President, I am in entire accord with the latter portion of the remarks of the Senator from Colorado; but there are States in which these predatory animals do exist and in which there are no public lands, and one happens to be the State of Texas. This money can be spent in Texas or in Oklahoma or in Kansas, where all the animals named in this item thrive. I do not intend to impose upon the Senate personal experiences, but for some time I have had experience with these very animals in attempting to destroy them in the State of Texas, as being responsible for a piece of private property. I have always considered it the obligation of the people of that State, just as it is the obligation of the people of the State of New York, to take care of their own local pests; but under the language of this item the public money of the United States can be spent in any State, whether it has public lands or not. I do not believe that that was the intention of the Committee on Agriculture, although I am not entirely certain as to that, but I will call attention to the language, commencing on line 3:

Including experiments and demonstrations in destroying wolves, coyotes, prairie dogs—

And why "prairie dogs" I can not understand. They are scarcely a predatory animal, and I do not believe even the Senator from Nevada would contend that they are spreading rabies—

and other animals injurious to agriculture and animal husbandry.

With no restrictions as to the territory. Now, I am in sympathy with the Senator from Nevada and the Senator from Wyoming in their contention that the United States Government should take care of pests or evils which exist or originate upon its own lands, but I can not see why the United States Government should go outside of its own territory and proceed to do the work that ought to be done by private individuals in the exercise of their functions as citizens or in the defense of their own property.

Mr. SHEPPARD. Mr. President, may I ask the Senator a question?

Mr. WADSWORTH. I yield.

Mr. SHEPPARD. Was any money expended by the Federal Government in resisting the foot-and-mouth disease in the State of New York?

Mr. WADSWORTH. There certainly was. That was a great national peril, and it should have been so expended.

Mr. SHEPPARD. So are predatory animals a great national peril.

Mr. WADSWORTH. But why money should be spent to eradicate prairie dogs in Oklahoma or in Texas passes my comprehension. There is no more necessity for demonstrating how to kill a prairie dog than there is for demonstrating how to swat a fly. I have seen them killed by the hundreds and by the thousands by the simple use of strychnine placed upon a little grain within 3 or 4 feet of the prairie dogs' holes. It does not need the service of the United States Government to do that; and I can not see that the prairie dog is a predatory animal or a danger to society in that he may carry rabies. I have not heard it contended that he does; and I know that vast tracts of country in the Southwest have been rid of the prairie dog by the efforts of the owners of the land, and yet under this bill the United States Government is going into the business of poisoning prairie dogs.

Mr. WARREN. Mr. President, may I interrupt the Senator?

Mr. WADSWORTH. Certainly.

Mr. WARREN. I agree with the Senator that the first lines of this bill as it came from the House may not be aptly worded, but if he will examine the language more closely I think he will see that his construction is erroneous. I read from the provision:

For investigating the food habits of North American birds and mammals in relation to agriculture, horticulture, and forestry, including experiments and demonstrations in destroying wolves, coyotes, prarie dogs, and other animals—

Now, that, so far as I have read, is for experiments and demonstrations in destroying these animals. When we come down to the part where the money is to be expended for destroying them it is very plain. The proviso reads:

That of this sum $15,000 shall be used for the destruction of ground squirrels on the national forests and other public lands.

Then, when we go further:

That of this sum not less than $125,000 shall be used on the national forests and the public domain in destroying wolves, coyotes, and other animals injurious to agriculture and animal husbandry.

And then it says, further:

That of this sum not more than $125,000 shall be used on the public lands, national forests——

Mr. WADSWORTH. And elsewhere.

Mr. WARREN. Well, this is about rabies—

and elsewhere in the Western and Northwestern States for the protection of stock and other domestic animals through the suppression of rabies—

Which disease seems to have originated in the forests, and which, of course, radiates out from there. But in the main destruction the intention is, and I think that will be the result, as it will be applied, to have the money expended in the national forests and on the public domain. In the case of rabies, however, there has been a different construction, for the reason I have given. The original appropriation for rabies was in a deficiency bill. It was an emergency, and the Appropriations Committee and the Senate, without a dissenting voice, understanding the great danger from it, appropriated the sum asked—$75,000. They did not confine it to national forests and to public lands at the time.

Mr. WADSWORTH. Mr. President, taking the three sums that are itemized here, we find that there is $265,000 out of the $420,000 itemized, and the method of the appropriation or expenditure is directed; but that leaves a considerable balance out of the $420,000 which may be spent anywhere, for any purpose, apparently, so long as it has something to do with some animal that is a danger to agriculture or animal husbandry, and there are a great many animals that may be so classified that are not in this list.

Mr. PITTMAN. Mr. President——

Mr. WADSWORTH. If we are going to inaugurate all over the United States the policy that every animal that is injurious to agriculture or animal husbandry shall be the subject of destruction at the expense of the Federal Government, $420.000 will nowhere near cover it, and we will have millions appropriated for this purpose within a few years.

I yield to the Senator from Nevada.

Mr. PITTMAN. I would gather, from the Senator's argument, that it does not apply to the use of the $265,000. This is, the $265,000 is expressly set aside for the destruction of these predatory animals upon the public lands and in the forest reserves, except with regard to rabies; and I do not suppose the Senator objects to the appropriation to check the rabies epidemic.

Mr. WADSWORTH. Mr. President, I have not an objection on principle to the appropriation for the eradication of rabies. I am a little in doubt as to the $15,000 which is to be appropriated for the destruction of ground squirrels. I am not entirely certain that it is necessary. I do not know much about it.

Mr. PITTMAN. I will say to the Senator that there are two phases of that. The ground squirrels are exceedingly destructive in the vicinity of forest reserves in the West. There is not any question about that. The balance of $155,000 in that item is used solely for experiments and demonstrations.

Mr. WADSWORTH. Mr. President, may I ask the Senator from Nevada, in the event of its being in order, and that I offered an amendment to insert on line 3, after the word "demonstrations," the words "upon the public lands of the United States," whether he and the others who are in favor of this appropriation would look with favor upon it? Perhaps he could not commit them.

Mr. PITTMAN. I may say that from the standpoint of direct personal or selfish interest, so far as my State is concerned, it would not affect us much, as to-day about 90 per cent of the land in our State is public land and forest reserves; but I do not see why experiments and demonstrations that are expected to be beneficial to agriculture should be limited to any particular portion of the country. I think the main question with regard to experiments and demonstrations is whether or not it is probable that such experiments or demonstrations will benefit agriculture. If they do, I do not care where the experiments and demonstrations take place.

Mr. WADSWORTH. The term "experiments and demonstrations" is rather absurd in this connection, if I may criticize the language of the bill. No man nor no government can make experiments about shooting a wolf or coyote, or trapping them. There are just one or two ways to do it, and everybody who has done it knows how to do it. It is necessary, I assume, to employ men to do it. The term "experiments and demonstrations" seems to indicate that somebody has a lot to learn about it. In the countries where wolves and coyotes abound the inhabitants know how to kill them or trap them, and it does not take a Government official nor the service of a Government official to teach them how to set a trap for a coyote.

My objection to this item is that it will permit or authorize Government officials to go in any State of the Union and assume to tell people how to shoot or how to trap or how to poison these predatory animals, and I want to have it confined to the Government's own domain.

Mr. PITTMAN. I have no objection to that. I have stated my ground.

Mr. GORE. It seems to me that the form of the amendment suggested by the Senator would defeat in a large measure the object of the appropriation, because the animals affected with rabies might make their escape from the reservation, and then there would be no authority to pursue them. The purpose is to exterminate these animals on the public domain and in the vicinity, I assume. It certainly ought not to be extended to any considerable quantity of land in any other State and in a State where there are no public lands or no public domain.

Mr. WADSWORTH. The all-embracing language, let me say in reply to the Senator from Oklahoma, is in the first four lines to which I direct my criticism—

Including experiments and demonstrations.

To my mind experiments and demonstrations in any State of the Union which the Agricultural Department could select directed toward teaching people how to do a thing they already know how to do is absurd. The last proviso reads:

And provided further, That of this sum not more than $125,000 shall be used on the public lands, national forests, and elsewhere in the Western and Northwestern States for the protection of stock and other domestic animals through the suppression of rabies by the destruction of wolves, coyotes, and other predatory wild animals.

That I do not object to in the same sense. That is simply the case of hiring a certain number of men to go and destroy the animals that are dangerous with respect to rabies, but the idea of sending certain other groups of men into other States where there is no rabies whatever and no danger from it to teach the people how to set a trap or shoot a wolf is to me absurd. That is why I should like to have the restrictions placed in the third line, in order to confine those remarkable demonstrations and experiments to the Government's own property, and in due time I expect to offer an amendment to that effect. I understand I can not do it now.

The VICE PRESIDENT. Now is the time.

Mr. WADSWORTH. I understand the amendment of the Senator from Colorado [Mr. THOMAS] is pending.

The VICE PRESIDENT. The Senator from Colorado proposes to strike out and insert. The Senator from New York proposes to amend the text, which amendment is now in order.

Mr. WADSWORTH. Then I move to amend by inserting, on page 57, line 3, after the word "demonstrations," the words "upon the public lands of the United States."

The VICE PRESIDENT. The question is on the amendment of the Senator from New York.

Mr. WADSWORTH. The Senator from Wyoming [Mr. WARREN] corrects my nomenclature. In reply to the suggestion of the Senator from Wyoming, I call his attention to the use of the same expression, "public lands," in line 18.

Mr. THOMAS. Is not the substitute which I offered yesterday before the Senate?

The VICE PRESIDENT. The rule of the Senate is to the effect that when there is a motion to strike out and insert, and that is the motion of the Senator from Colorado, the part to be stricken out is subject to amendment and the part to be inserted is subject to amendment, and a motion to amend the part to be stricken out has precedence. The amendment of the Senator from New York is in order.

Mr. GRONNA. I take it the Senator from New York is not willing to exclude forest reserves.

Mr. WADSWORTH. No; I did not mean to do that.

Mr. GRONNA. It is land owned by the United States, but if it were public land homestead entries could be made upon it. The language ought to be changed.

Mr. WADSWORTH. I desire to correct it in that respect, and I apologize to my colleagues. Will the Secretary substitute the words "upon the lands of the United States"?

The SECRETARY. Eliminate the word "public" from the proposed amendment, so as to read "upon the lands of the United States."

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from New York.

Mr. SHEPPARD. Mr. President, the Senator from New York says there is nothing to be learned in the matter of destroying wolves, coyotes, and so forth; that it is merely a matter of teaching people how to shoot. I wish to quote from an article here appearing in a report of the Bureau of the Biological Survey upon this question:

BOUNTIES.

Bounties for the destruction of predatory animals have been paid in almost every country of the world, and probably never with much effect upon their numbers. Wolves have been the subjects of bounty wherever they exist. France has continued its payments for several centuries, and although as high as 200 francs ($40) is paid for the destruction of mature wolves, they have not diminished in numbers during the past half century. As late as 1890, 500 were killed in a single year. In Russia wolves are practically increasing, although thousands are destroyed annually, and bounties paid for their heads. Bounties on 49,000 wolves were paid in one government or province (Wologda) in a year.

The history of every State in the United States since the earliest settlement of the country has been one of struggle against predatory animals, bounties having been resorted to early in the seventeenth century. It is probable that while premiums have helped in diminishing the numbers of carnivorous pests, civilization and close settlements have been the main factor. At present bounties are paid in all but a few of the Southern States east of the Mississippi, and Arkansas and Louisiana west of that river. In 1913 the bounty system cost the 12 States of Montana, Oregon, Washington, Idaho, Wyoming, South Dakota, Utah, Texas, California, Kansas, Arizona, and New Mexico nearly $600,000; Montana alone paying out $178,047. In spite of these enormous payments, predatory animals have not decreased. In Kansas, where the bounty cost is laid upon the counties, the bounty on coyotes has steadily increased for the past 16 years, showing that coyotes are not being exterminated under the moderate bounty of $1 for each coyote.

From 1903 to 1909 the payments were as follows: Nineteen hundred and three, $17,493; 1904, $18,443; 1905, $20,550; 1906, $20,900; 1907, $23,200; 1908, $27,000; 1909, $30,400. Thus in the seven years coyotes apparently increased over 70 per cent.

The Michigan wolf bounty began with the act of December, 1837. Payments diminished slightly from year to year until 1889 when they actually ceased and the wolf was regarded as nearly extinct. A few were killed each year, however, until 1898, when the number of wolves began to increase. The bounty was increased in 1898 to $15 for a grown wolf. In 1905 it was again increased to $25, but payments of bounty also increased steadily. In 1914 the State's half of the wolf bounty was $6,769.

In the 10 years ending 1914, Minnesota paid bounty $48,131, the cost to the State being $286,068.66.

From 1901 to 1910 Montana paid bounties amounting to $1,125,675.20, while a large sum was still due on outstanding warrants.

In the two years 1913 and 1914, Utah paid $124,089.91 in bounties, the largest item being on 31,787 coyotes.

Wisconsin in 10 years—1905–1914—paid a State bounty of $215,753 on wolves, lynxes, and wildcats.

Texas in four years ending 1915 will have spent $200,000 in bounty payments.

So it seems to be much more of a problem than the Senator from New York would have us believe. Indeed, it is in a large sense a national problem, and one toward which the effort of the Department of Agriculture can be very legitimately directed in any section of the country; in fact, as much so as for the destruction of the boll weevil, the gypsy moth, the pests that affect chestnut trees in the Senator's own State, or similar pests in other States of the Union.

These experiments and demonstrations ought not to be confined to any one section of the Union, but ought to be made wherever the work may most advantageously be done.

I have here a resolution adopted by the last National Conservation Congress, which assembled here in May, 1916, and which resolution reads as follows:

REPORT OF THE GENERAL COMMITTEE ON FARM ANIMALS TO THE NATIONAL CONSERVATION CONGRESS, WASHINGTON, D. C., MAY 2–4, 1916.

PREDATORY ANIMALS.

The loss from predatory animals in the range States is severe, particularly in the case of cattle and sheep. Based on reports to the Forest Service of the loss of animals on national forests, your committee estimates that the value of animals killed in the range States, excepting Texas, amounts to no less than $7,000,000 per annum.

The work of the Bureau of Biological Survey in the control of predatory animals is rapidly coming to be regarded as one of the more valuable features of the Federal department's activities in the Western States. This work is being organized on a scientific basis, and results are already being obtained which seem to indicate that a scientific study of predatory animals in the community, and the destruction of those which are preying on domestic animals will yield more practical results than the indiscriminate operations of bounty hunters. Naturally a bounty hunter will not find it profitable to work in a territory where predatory animals are not numerous; and it has been found that not all coyotes prey upon domestic animals. The claims of the Biological Survey are that only a small per cent of coyotes operate in this way, but that a large majority of them make their living from jack rabbits, prairie dogs, and similar wild animals. By hunting out the ones which are preying upon domestic animals and destroying them the loss is immediately stopped. The wolf is regarded as a menace under any and all circumstances, and likewise the mountain lion. These animals will have to pass with the advance of civilization.

The Wyoming Wool Growers' Association held a convention at Casper, Wyo., February 24, 1916, and passed the following resolutions:

Extract from resolution adopted by the Wyoming Wool Growers' Association at its twelfth annual convention at Casper, Wyo., February 24, 1916.

Whereas for many years the losses of sheep and lambs from the depredations of wild animals has resulted in financial loss to western sheep men; and

Whereas there now exists in several of the Western States a dangerous disease known as rabies, affecting the coyotes, which results in menace to human beings and live stock; and

Whereas the Biological Survey has been doing very commendable work in the eradication of coyotes and prairie dogs in Wyoming; and

Whereas the present appropriation allowed by Congress to the Biological Survey for such work has been proven to be inadequate: Now, therefore, be it

Resolved, That we urgently request the flockmasters to devote a portion of their time to the eradication of these dangerous or destructive pests, and that we petition Congress for an appropriation of $500,000 to be used by the Biological Survey in the eradication of predatory wild animals and prairie dogs.

Another resolution passed by the Beartooth Live Stock Association, at Clark, Wyo., March 4 of this year, is as follows:

CLARK, WYO., *March 4, 1916.*

Resolved, That we heartily approve of and indorse the action of the Federal Government in its work of extermination of predatory animals by the Biological Survey. We offer our cooperation in this work and request that hunters and trappers be allowed to this district the coming season.

This work should be carried on in all the Western States.

Coyotes and wolves are migratory, and a campaign to be effective must be carried on in all the country in which they are found, and the appropriation for this work should be very liberal, and the bounty or wages increased as the number of animals are reduced.

BEARTOOTH LIVE STOCK ASSOCIATION,
By GEO. M. HEALD, *Secretary-Treasurer.*

Mr. President, these are some of the resolutions and statements showing the value of this work, showing its scientific basis, and showing that the evil is interstate in its character. These predatory animals are migratory. When they are driven out of one State, they go into another State. When they are driven from the public-land States of New Mexico or Colorado, they come into my own State—the State of Texas—where there are no public lands, but which is largely a western State, with extensive cattle, sheep, and goat ranges. Therefore it seems to me to be entirely just that the demonstrations and experiments should not be limited to any particular section of the Union.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from New York.

The amendment was agreed to.

The VICE PRESIDENT. The question recurs on the amendment of the Senator from Colorado [Mr. THOMAS].

Mr. WARREN. Mr. President, there has been considerable discussion on the general proposition of the size of our appropriations. We have been in the habit of debating quietly the expenditure of millions and hundreds of millions of dollars, and then creating somewhat of a fog over a few hundred or a few thousand dollars.

The question at issue is whether the United States shall do its part or whether it shall shift what rightfully belongs to it on private individuals.

There is no doubt that the live-stock interest is suffering materially from the attacks from predatory animals and that the industry must be protected in some manner.

If that is the only industry to be skipped, the only one that should receive no attention in the Agricultural appropriation bill, I submit that it would not present a case of fairness and equity.

A great many of the appropriations in the Agricultural appropriation bill provide for experiments and provide for scientific researches regarding damage to industries in localities where the Government is in nowise responsible for the evil. We have to eradicate the brown-tail fly, the spotted-tail fly, and such insects in various places where they attack fruits. We have to provide against the citrus-fruit canker, where the United States is not responsible.

But we have here an evil that is very serious, one that is destroying millions of property, and of the kind of property that we most need. I think that will be admitted by all. The Government is conducing really to that depredation rather than assisting in eradicating it, unless we provide so that the United States shall take the same care of its land which it reserves from settlement and reserves from taxation and reserves from contributing to the State incomes. That the Government should take the same care there that we take outside of its lands is all we are asking. Here are hundreds of millions of acres, anywhere from a quarter to a half of several of the so-called public-land States, that are reserved to the United States. They are no longer public lands. Then outside of that there are the public lands which are left, upon which the Government pays no taxes, and for which the States must provide protection. Here in this case we can kill all the wolves that there are outside of the forest reserves, and yet they will flood over from the breeding grounds that are afforded by the reserves. In fact, the breeding grounds are generally in the forest reserves, because, first, the reserves are more or less mountainous, and they have more or less of forest; and, second, they are more secluded, few settlers live on them, and the animals are freer from attack. So the animals breed there very rapidly, and then from there they circulate out and destroy the live stock, not only that which is within the reservation, and paying for the privilege of being there, but that which is outside of that area.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Wyoming yield to the Senator from Colorado?

Mr. WARREN. I do.

Mr. THOMAS. I am informed that the original appropriation for this purpose three years ago was $25,000, and that it has been increasing regularly and in very large amounts. Last year it was $300,000, and this year it is something over $420,000. The evil seems to be growing more rapidly, according to the Senator's report, than is the appropriation. I should like to ask the Senator what the probable appropriation for this purpose will be three years from now?

Mr. WARREN. Mr. President, the Senator from Colorado is misinformed, and I know he does not wish to misinform us. There never was any considerable appropriation for this purpose until last year.

Mr. THOMAS. But there was an appropriation of $300,000 last year. My information may not be sound or may not come from a very good source, but I understand the original appropriation was $25,000.

Mr. WARREN. The original appropriation was made for various uses; it did not apply specifically to this object in any manner, but it covered all of the depredations of insects, unnamed, and of destructive animals of all kinds. It did not specifically apply to the killing in the reserves of the predatory animals, and that work was not taken up by the department through its representatives in the various reserves until last year, and, for that matter, it has been pursued practically for about 10 months only.

Mr. THOMAS. Well, Mr. President, I think that aggravates the situation. If the appropriation for all these purposes was but $25,000 a few years ago, and the appropriation for this specific purpose has now grown to $420,000, I can see the opportunity for very large appropriations hereafter, with no diminution of the evil which it is intended to eradicate.

Mr. WARREN. Mr. President, the Senator from Colorado is again wrong. The sum of $125,000 of this appropriation is for emergencies which have arisen since the appropriation of last year in the matter of rabies. If the Senator will deduct the $125,000 from that, he will find that the appropriation is less than we had before.

Mr. THOMAS. The Senator from Wyoming is mistaken about that, because the House appropriation was $400,540, and the Senate Appropriations Committee have increased that amount by $20,000, and then have segregated $125,000 as the amount for the purpose to which the Senator alludes.

Mr. WARREN. Then, if the Senator will figure it and take $125,000 from the total amount, he will have less than before.

Mr. WORKS. Mr. President, I should like to ask the Senator from Wyoming how the amount of this appropriation is arrived at? How is it determined how much money shall be expended there for this purpose? Has anybody made any estimate about it?

Mr. WARREN. That is left to the discretion of the department within limits which we fix in the bill. I may say that as to this amount we have not increased the sum which the House undertook to insert; but after the House had placed in the bill fully as large a sum as we have proposed to appropriate, it went out on some point of order.

Mr. WORKS. Mr. President, I think an appropriation of this kind, as I said a while ago, may be justified; but by the amendment which has just been adopted by the Senate the scope of the work is limited, and I was wondering whether there was any real necessity for so large an appropriation as this for the purpose, which seems to be very largely guesswork.

Mr. WARREN. I think the appropriation should be even larger than it is.

Mr. GORE. Mr. President——

Mr. WARREN. If the Senator will permit me to answer the question of the Senator from California [Mr. WORKS], I desire

to say that the time to eradicate an evil of this kind is in its earliest stages, if possible. A very thorough extermination for one or two or possibly three years, with the cooperation of the States and of the United States, will reduce such an evil very greatly.

Mr. SHAFROTH. Mr. President, will the Senator from Wyoming permit me to interrupt him?

Mr. GORE. Just a moment, Mr. President.

Mr. WARREN. I yield to the Senator from Colorado.

Mr. SHAFROTH. With relation to this matter, I desire to say that in the estimate which was made by the Secretary of Agriculture occurs this item:

d. One hundred and twenty-five thousand dollars to continue, during the next fiscal year, the work connected with the suppression of rabies by the destruction of wolves, coyotes, and other predatory wild animals. Unless the work is continued during 1917, much of the value of any work that may be undertaken during the present fiscal year will be lost. (H. Doc. 679.)

Mr. WORKS. But, as I understand, that applies only to the extermination of rabies.

Mr. SHAFROTH. Yes.

Mr. WORKS. It does not go beyond that.

Mr. WARREN. The estimate came in the regular way, I will say to the Senator from California.

Mr. WORKS. I do not know what is the regular way of bringing in these appropriations. That is what I am trying to find out.

Mr. GORE. Mr. President——

The VICE PRESIDENT. Does the Senator from Wyoming yield to the Senator from Oklahoma?

Mr. WARREN. I yield.

Mr. GORE. I should like to say that in the regular estimates contained in the Book of Estimates the Agricultural Department asked for $275,000 for this purpose. On account, I suppose, of some urgency, resulting from the breaking out of rabies, the department afterwards submitted a supplemental estimate for $125,000, making in the aggregate $400,000.

I may add that in one of the urgent deficiency appropriation bills, which was passed, I believe, in February, a considerable sum was appropriated for this purpose, due to an estimate, I think, submitted at that time, and owing to the exigency, or supposed exigency, which existed in the Northwestern States.

Mr. WARREN. Mr. President, the Senator from California [Mr. WORKS] may be assured that this estimate came in, as I have said, in the regular way. I supposed the Senator understood about that; that these were regular annual estimates coming from the Treasury Department.

Mr. THOMPSON. Mr. President——

The VICE PRESIDENT. Does the Senator from Wyoming yield to the Senator from Kansas?

Mr. WARREN. I yield.

Mr. THOMPSON. I wish to say that I opposed this item in the bill of last year, and I am opposed to the item still. I have had occasion to look up the appropriations for this purpose from the beginning, and have found that in 1911 this item was $25,000, in 1912 it was $23,000, in 1913 it was $40,000, in 1914 it was $60,000, in 1915 it was $115,000, and last year it was $300,000, although the department had said that $110,000 was sufficient for all purposes. This year the estimate is for $275,000, and we have increased it to $420,000. I think, under all the circumstances, that the item is growing rather rapidly.

Mr. GORE. Mr. President, the Senator from Kansas ought to include the supplemental estimate for $125,000 a year ago, so that, even though this appropriation is made for the extermination of wolves and other predatory animals, possibly there will be enough left to pension the Spanish-American War soldiers and their widows, costing many million dollars a year.

Mr. WARREN. Do I understand the Senator from Kansas to be opposed to the appropriation for this purpose?

Mr. THOMPSON. I am opposed to the extravagant amount proposed to be appropriated. I would favor a reasonable amount for the purpose desired.

Mr. WARREN. Well, I suppose the Senator considers that the bugs in his section of the country are more dangerous than the wolves, for he is very anxious that the bugs in his State should be properly exterminated.

Mr. THOMAS. Mr. President, I think the Senator from Kansas is after some of the predatory wolves who have designs on the Treasury.

Mr. SMOOT. He was not yesterday.

Mr. THOMPSON. Mr. President, if the Senator will allow me, there is only $10,000 appropriated for the destruction of the worms and bugs so disastrous to the crops of the country, to which the Senator from Wyoming refers, and the institution for which this small appropriation was made saved my State alone in one year $500,000 and the Middle West several million dollars during the last few years. The Senator from Wyoming should not object to so small an appropriation for such a worthy cause.

Mr. WARREN. It is claimed by the associations who have to meet this predatory wild-animal difficulty that the depredations of such animals have caused a loss of $15,000,000 per annum to live stock. That, however, may be a small matter as compared with the bug business in Kansas.

The States have expended a great deal of money to eradicate this evil. The sum which it is proposed that the United States shall devote to this purpose, considering the land which it owns, is but a trifle; it is not even 1 per cent of what it is costing private individuals and the States, and I think the Government should do its full share toward exterminating these pests. I have here a memorandum showing that in 1913 six of the Western States spent a little over $600,000 in the effort to stop this evil. Montana paid $178,047 in one year, and it has paid similar sums in other years, and other States have paid from fifty to one hundred thousand dollars each for a number of years.

To go back a little, some of the States in the Middle West had to contend with the same difficulty. For instance, under the Michigan law providing a wolf bounty, which was enacted in the first place in 1837, the payments diminished slightly until 1889, when they actually ceased, and it was regarded that wolves were extinct. A few were killed each year, but in 1914 the State's payment was only $6,769. The State of Minnesota paid $286,068.66 during the one year of 1914. Montana, from 1901 to 1910, paid $1,125,675.20, and the other States have paid in about the same proportion according to their area; that is, the 14 or 15 States which have within their borders forest reserves and public-land reserves of various kinds.

I present for printing in the RECORD the following memoranda regarding bounties for destruction of predatory animals.

The matter referred to is as follows:

BOUNTIES.

Bounties for the destruction of predatory animals have been paid in almost every country of the world, and probably never with much effect upon their numbers. Wolves have been the subjects of bounty wherever they exist. France has continued its payments for several centuries, and, although as high as 200 francs ($40) is paid for the destruction of mature wolves, they have not diminished in numbers during the past half century. As late as 1890, 500 were killed in a single year. In Russia wolves are practically increasing, although thousands are destroyed annually and bounties paid for their heads. Bounties on 49,000 wolves were paid in one government or Province (Wologda) in a year.

The history of every State in the United States since the earliest settlement of the country has been one of struggle against predatory animals, bounties having been resorted to early in the seventeenth century. It is probable that while premiums have helped in diminishing the numbers of carnivorous pests, civilization and close settlements have been the main factor. At present bounties are paid in all but a few of the Southern States east of the Mississippi and Arkansas and Louisiana west of that river. In 1913 the bounty system cost the 12 States of Montana, Oregon, Washington, Idaho, Wyoming, South Dakota, Utah, Texas, California, Kansas, Arizona, and New Mexico nearly $600,000, Montana alone paying out $178,047. In spite of these enormous payments, predatory animals have not decreased. In Kansas, where the bounty cost is laid upon the counties, the bounty on coyotes has steadily increased for the past 16 years, showing that coyotes are not being exterminated under the moderate bounty of $1 for each coyote.

From 1903 to 1909 the payments were as follows: 1903, $17,493; 1904, $18,443; 1905, $20,550; 1906, $20,900; 1907, $23,200; 1908, $27,000; 1909, $30,400. Thus in the seven years coyotes apparently increased over 70 per cent.

The Michigan wolf bounty began with the act of December, 1837. Payments diminished slightly from year to year until 1889, when they actually ceased, and the wolf was regarded as nearly extinct. A few were killed each year, however, until 1898, when the number of wolves began to increase. The bounty was increased in 1898 to $15 for a grown wolf. In 1905 it was again increased to $25, but payments of bounty also increased steadily. In 1914 the State's half of the wolf bounty was $6,769.

In the 10 years ending 1914 Minnesota paid bounty on 48,131 animals, the cost to the State being $286,068.66.

From 1901 to 1910 Montana paid bounties amounting to $1,125,675.20, while a large sum was still due on outstanding warrants.

In the two years 1913 and 1914 Utah paid $124,089.91 in bounties, the largest item being on 31,787 coyotes.

Wisconsin in 10 years, 1905–1914, paid a State bounty of $215,753 on wolves, lynxes, and wild cats.

Texas in four years ending 1915 will have spent $200,000 in bounty payments.

THE PAYMENT OF BOUNTIES FOR THE DESTRUCTION OF NOXIOUS ANIMALS AND BIRDS.

The policy of paying premiums for the destruction of noxious species has been advocated in the United States for nearly three centuries, and has been thoroughly tested in most of the States. One of the first bounty laws was that passed in Virginia in 1632. Rewards have been paid on large animals, such as wolves, coyotes, bears, and panthers; on rodents, notably gophers, ground squirrels, and rabbits; and on a few birds, including crows, English sparrows, hawks, and owls.

Among the notable bounty laws are the following:

California: The coyote bounty law of 1891, under which a bounty of $5 was paid for each coyote, remained in force until January, 1895, when the claims amounted to nearly $400,000. Payments ceased, however, in 18 months after the law went into effect, on September 30,

1892, and the amount actually paid was $187,485. During this period some of the counties drew more from the State treasury for coyote bounties than they contributed for State expenses, and in some months more money was paid for the destruction of coyotes than for the support of the State University. Coyotes are still abundant in the State.

Montana: The ground-squirrel act of 1887 remained in force but six months and it became necessary to convene the legislature in special session to repeal the law. The payments during that period amounted to more than $9,000 a month, or $54,578, between March 5 and September 13, 1887. The wolf bounty law of 1895 remained in force for 14 months, and cost the State $89,871.

Texas: A bounty law passed in 1891 for the protection of farmers, providing bounties on wolves, coyotes, and other species, cost the State $50,000 in a period of 16 months.

Kansas: The law of 1899, authorizing payment of bounties for coyotes, has resulted in the destruction of many thousands of these animals, but annual payments have increased regularly from year to year, and in 1909 amounted to about $30,000, but apparently show little or no results so far as extermination of the pest is concerned.

Pennsylvania: The so-called "scalp act" of 1885 is estimated to have cost the State $150,000 in the 23 months in which it remained in force, from June, 1885, to May, 1887. Under a recent law, passed in 1913, bounties are paid only on foxes, wildcats, mink, and weasels. In the period of about 22 months between June 25, 1913, and April 15, 1915, claims amounting to $320,000 were presented to the auditor general for payment. Since that date all claims have been carefully examined by the game commission, with the result that during the 13 months ending June 1, 1916, the total claims allowed has amounted to only $56,309. In examining these claims gross irregularities were brought to light. In one county, in which the claims amounted to $9,922, only $560 was allowed. A recent letter states: "We are still at work auditing these old claims and following them by a searching investigation in practically every county in the State, and we usually find numberless irregularities and often downright crookedness. Up to this time we have convicted a score or more, comprising claimants, justices, and so on, their punishment ranging from a month or so in jail to several years in prison."

Objections to the bounty system may be briefly stated as follows:

Expense: Usually out of all proportion to the benefit gained and greater than a county or State can afford.

Impossibility of maintenance in all parts of an animal's range for any length of time.

Impossibility of maintaining equal rates in all States.

Impossibility of preventing payments for animals imported from other States, for counterfeit scalps, or for animals raised for bounty.

Advocates of the bounty system seem to think that almost any species can be exterminated in a short time if the payments are only high enough. Such, however, has not been the experience in this country or abroad, where the system has been thoroughly tried. Theoretically a bounty should be high enough to insure the destruction of a majority of the individuals during the first season, but experience has demonstrated that it is practically impossible to maintain a high rate more than a few months, and the higher the rate the greater the incentive to and danger of fraud. Even in thickly settled countries like England and France the destruction of wolves by bounties has proved a slow and expensive policy. Efforts to exterminate wolves in England began about the year 960, but wolves did not become extinct until the beginning of the sixteenth century. France has paid bounties on wolves for more than a century, and a few years ago increased the rewards to $30 and $40.

Virginia encouraged the killing of wolves from the first settlement of the colony, sometimes paying as high as $25 apiece for their scalps, but the wolves were not exterminated until about the middle of the nineteenth century. Several million dollars have already been expended for bounties in the United States, and in some cases the results have been practically negligible a few years after the payments ceased. In no case has any species been actually exterminated by the payment of bounties.

Mr. WARREN. The extermination of wolves is not a new matter in this country. Foreign countries have pursued the policy of exterminating wolves for many years. France has paid as high at times as $40 a head bounty on wolves, as the memoranda, which contains official data, will show. I am informed that it cost in one of the Provinces abroad over $196,000 to pay bounties on predatory animals in one year, and still they are not extinct; but, if some action had not been taken, whole sections would have been completely overrun, and the prosecution of the live-stock industry, other than in stables and in close pastures under the eyes of keepers, would have been rendered impossible.

It may be a trifling matter to talk about ground squirrels and such animals as those, but the fact faces us that the raising of cattle, of sheep, and to some extent the raising of horses in the sections of this country which furnish the bulk of the meat supply and which produce the bulk of the horses is being in many cases rendered unprofitable. Unless the ravages of the predatory animals are checked, if not completely prevented, the business of raising cattle and sheep will pass away in the West, as the sheep business has passed away in the New England and other States because of ferocious dogs. Senators who have kept track of that business know very well that in some sections of the country, particularly in the North Atlantic States, dogs have really driven the business of sheep raising out of existence.

Here is a case where we are not asking anything whatever from the Government except that it do some part of its share of this necessary work; that it shall on its own land do what private individuals and counties and States are doing. The unfairness of the Government declining to do its share, it seems to me, ought to strike one at first glance. While individuals and communities and associations on the outside of Government forest reserves are spending money like water to eradicate these pests, the United States is furnishing the ground to the extent of millions of acres where these animals breed and multiply. We ask for this paltry sum. We asked for it last year and we ask for it this year. It is possible it will take another year before the appropriation can be greatly reduced, but so far the results have been very satisfactory.

I heard one Senator quoting another to the effect that there had been three wolves killed; at any rate, some statement of that kind was made. The department has official records covering 10 months of the prosecution of this work. As a matter of fact, the work has only been commenced within that time, and last year was the first year when any considerable appropriation was made for this purpose; but the reports show that the department employees have captured and killed 362 gray wolves, such as the stock associations are offering bounties for, in addition to the regular bounty, to make the amount sometimes as much as $50 a head.

They have killed 1,218 bobcats, which are as dangerous animals as live in any locality or country so far as the destruction of cattle and sheep is concerned. They have killed seven mountain lions, and everyone who knows the habits of the mountain lion knows that he kills an animal and sucks a mouthful or two of blood and then kills another. A mountain lion has been known to kill three or four hundred sheep in one night. Then they have killed 9,252 coyotes, which, while they may not pull down a mature head of cattle, pull down a sheep, a calf, or a colt, and, like all the other animals, while they may eat the meat of an animal if they only have one and are driven to it by hunger, yet almost invariably they take only the blood. They really seize the animals by the throat or in some other part of their body, take what blood they want, and then kill others.

With the money which was appropriated in 10 months after this movement was started—and really, it might be said, almost before the movement was under way—they secured the destruction in forest reserves of the number of animals I have indicated. If that number—362 wolves, 1,218 bobcats, 7 mountain lions, and nearly 10,000 coyotes—had been allowed to roam at large and to breed, think of the number of such animals we might have had this year and what a loss they might have caused.

Mr. President, this is a matter which has had the attention of every livestock association. It has had the attention of the legislative bodies of the States. We have had memorials galore from, I think, every one of the States which has been afflicted; we have had them from the National Wool Growers' Association, an association formed in 1864; we have had the most earnest resolutions from the American Live Stock Association, an organization nearly as old as the Wool Growers' Association, and one which covers, as does the Wool Growers' Association, the entire United States. I inserted in the RECORD yesterday a memorial from the State of Oregon bearing on this question. I now ask the Secretary to read another memorial from the State of Wyoming, which states the matter rather succinctly and quite fully.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

Thirteenth Legislature of the State of Wyoming, enrolled joint memorial No. 2, House of Representatives, State of Wyoming.

To the Senate and House of Representatives of the United States, relative to the destruction of predatory wild animals on forest reserves, Indian reservations, and in the Yellowstone National Park:

Be it resolved by the House of Representatives of the State of Wyoming (the Senate concurring), That the Congress of the United States be memorialized as follows:

Whereas the State of Wyoming has made earnest effort to destroy predatory wild animals by appropriating large sums of money to be paid as bounties for the destruction of these pests, which destroy large numbers of live stock and game and cause great damage to the principal industry of the State, decreasing the assessable property of the State; and

Whereas the Yellowstone National Park, the national forest reserves, and the Indian reservations where such animals have certain protection, are prolific breeding places of these animals, setting at naught the efforts of this State and its rural inhabitants to exterminate them: Therefore be it

Resolved, That the Congress of the United States enact a law and provide ways and means to exterminate, as nearly as practical, the predatory wild animals on all Indian reservations, forest reserves in this State, and in the Yellowstone National Park, and that civilians may be licensed by the proper Federal authorities to enter the said Yellowstone National Park at all seasons of the year to carry on the occupation of trapping predatory wild animals, under rules and regulations to be prescribed by the Federal authorities; be it further

Resolved, That the secretary of state be instructed to send a copy of this memorial to the United States Senators and Representatives in Congress from Wyoming.

EDWARD W. STONE,
President of the Senate.
JAMES M. GRAHAM,
Speaker of the House.

Approved February 25, 1915, 10.18 a. m.

JOHN B. KENDRICK, *Governor.*

Mr. ASHURST. Mr. President, I am heartily in favor of the committee amendment proposing to appropriate $125,000 for the destruction of predatory animals in the Western States.

Able arguments have been made on both sides of the question. I wish, however, for a moment to cite the situation respecting my own State.

The total acreage of the State of Arizona is 72,838,400 acres. Of that area there are in military reservations 98,452 acres; in national monuments, 835,245 acres; in Indian reservations, 16,424,327 acres; and in national forests, 12,499,485 acres, making a total amount of land in the State that has been withdrawn from sale and settlement of 29,857,509 acres, or slightly over 40 per cent of the total acreage of the State.

It seems to me but just and proper that where the Government has withdrawn from sale and settlement and from occupation by the settlers over 40 per cent of the total area of the State—twelve and one-half million acres of such withdrawn lands being pine and cedar forests, in which predatory animals abound in great numbers, such as the gigantic, ferocious, and agile lobo wolf, which can destroy a human being as easily as it could carry away a rabbit—the Government should take steps promptly to destroy such animals.

Cases have come under my observation where these lobo wolves have destroyed mares and horses, to say nothing of colts and smaller animals. The losses to the stockmen of Arizona each year from predatory animals—I will try to be conservative—must be at least half a million dollars. I see the Senator from Utah [Mr. SMOOT] nodding approval as to the correctness of my figures.

It must not be forgotten that before cattle, sheep, or horses may be grazed in a national forest you must first secure a permit and pay to the Government the necessary fee which the Government sees fit to exact for the running of your sheep, your cattle, or your horses upon the national forests. Indeed, Mr. President, for the year 1915 the stock growers of Arizona paid to the Federal Government for the privilege of grazing their cattle, sheep, and horses upon the national forests in Arizona $152,799 in grazing fees alone. So it seems to me but fair and equitable that where the Federal Government reserves 40 per cent of a State and then requires certain fees to be paid the Government, at least, should contribute and assist the State in its efforts to destroy these animals, which are a menace, a very dangerous menace, to the stock business.

This question has another phase. The English-speaking people are peculiarly beef and mutton eaters. We all know that. We know that beef and mutton are substantial foods. The number of cattle in the United States has been declining; it declined in 1912 and 1913, although there was a slight increase in 1914 as compared with 1913—whereas our population is increasing. We have an increasing number of people and a decreasing number of cattle. If we are to reduce the price of beef and place beef at a figure where people of moderate means may have it, what must we do? Increase the production of cattle. How are we going to increase the production of cattle if our losses in one State from predatory animals alone amount to $500,000 a year?

So I wish to say that, looking at it from the standpoint of economics in government—that is to say, the increasing of the herds—we ought to adopt this amendment. But there is still another side to this question, upon which side possibly a number of Senators from the far eastern States have not reflected.

In Arizona we have the skunk in great numbers. I am advised that the bite of the eastern skunk is not fatal; yet if a human being is bitten by the ordinary Arizona skunk the most malignant type of hydrophobia—rabies—sets in. Numbers of persons in past years have been obliged to get treatment at the Pasteur Institutes in Chicago and in St. Louis by reason of skunk bites, for if a person be bitten by one of those skunks his death in a most frightful form is sure unless he secures treatment at once. While I was on the range many of my associates were bitten by skunks, and those who did not secure this treatment died a most horrible death. Those who secured the treatment all recovered, so far as I know.

Then, again, Mr. President, after the discussion of the skunk, we have the coyote, as we call it. Singularly enough within the last year or two, in some parts of the West, rabies has spread among the coyotes. To my knowledge it did not happen previously to the last three or four years. These coyotes bite the horses, the cattle, the sheep, and especially the horses. We have, therefore, a situation on the range where stock is pitiably and malignantly afflicted with rabies, caused by the bite of a coyote which has been inoculated, possibly, from a skunk or from some other animal. These raging, mangy, foaming coyotes afflicted by this deadly distemper will bite anything. They are erratic in their manner, and they go snapping, biting, and spreading their deadly virus over the range, infecting the wild and domestic stock as well.

So it seems to me this is a proper expenditure. I can not see why any complaint should be made as to expending a part of the money derived from the grazing fees for the purpose of exterminating these animals that prey upon the stock, and that, in addition to preying upon the stock, bite human kind.

Mr. LODGE. Mr. President, I only want to say a single word.

If predatory animals which are dangerous to domestic animals are to be killed on the public lands, on the forest reservations—and I think it ought to be confined to that, as the amendment of the Senator from New York does—that certainly ought to be under the control of the Government. If we throw those reservations open to anyone with a license they will not only kill the predatory animals, but they will kill the elk and the deer and the buffalo that are now in reservations like the Yellowstone Park which it is the desire of everybody to preserve; and not only would it lead to the extermination of the predatory animals, but it would lead to the extermination of the very valuable game animals that are not predatory. I think if this is to be done at all it ought to be in the full control of the Government.

Then, as a matter of curiosity, there is something I should like very much to know about. The Government agents apparently have killed some three or four hundred wolves. The fur of all the fur-bearing animals commands very high prices in the markets to-day, and the price is constantly rising, owing to the increasing scarcity. What becomes of those furs? The furs of the timber wolf are very valuable, and it seems to me that they should be saved and turned over to the Government, or something done with them. It does not appear that anything is done with them except to throw them away.

Mr. LANE. Mr. President, the Senator from Arizona [Mr. ASHURST] spoke of the damage done by the coyotes to horses through biting them, and their being very susceptible to rabies. For years and years the coyote roamed the plains and no horse feared him; nor did the cattle, nor did human beings. He was a coward. He only preyed upon the sick, the weak, and the young. The stockmen knew that—that he was an insignificant animal of a cowardly disposition, and that he kept his distance—and so the horses acquired no fear for him.

Mr. WARREN. Mr. President, does the Senator consider that he was innocent so far as sheep were concerned?

Mr. LANE. Oh, no; I was referring to horses and horned cattle. He preyed upon sheep. They were always afraid of him; but horses and cattle, to which the Senator from Arizona [Mr. ASHURST] referred—horses more particularly—had no fear of him.

Mr. WARREN. He also preyed on the calves and the colts.

Mr. LANE. The calves and the colts. That is, when the calf was young and the colt was young the mother would look out for it. But the adult animals became so fearless of him that they paid but little attention to him, outside of the sheep; so when he became afflicted with rabies he changed his entire disposition toward the human being and these other animals which I have mentioned and was able to approach them. Never having feared him, they did not guard against him; and he would rush in upon them and bite them. He becomes so bold when he has that disease that he will enter your tent or your house yard or go right into the corral of the cattle and bite madly, viciously, insanely, here and there and everywhere. That is why he has become a source of danger and terror.

But there is another feature of this question of interest. I do not say that we can make any use of it, but it is a matter of fact, and will be attested by all men who are farming in the far West, if you should kill off the coyotes, exterminate them—I should like to have the attention of the Senator from Massachusetts—if you entirely destroy the coyotes, then the rabbit—not the real, old-time jack rabbit of the plains, nor the white rabbit—snowshoe rabbit—but the new, imported rabbit which people in our country claim came from Utah and was imported into Utah from Australia—a smaller rabbit—takes possession of the country and destroys the farmers' crops. It will dig under a wire fence; it girdles fruit trees and causes immense damage. The coyote is the only check against that pest, and it is a greater pest even than the coyote itself; but there is no way, I suppose, in which we can balance it. It is a balance, however, which nature kept. We are disturbing it in a way. But the coyote, at any rate, has become infected with a disease known as rabies, and causes the loss of human life. It is unsafe, as I said yesterday, to send your children to school unguarded; you convey them up in a wagon or upon horseback. It is dangerous for them to walk back and forth through the sagebrush, and dangerous, too, for you to go afoot in the country—so dangerous that, as I said yesterday, I lay out only one night, and then I was compelled to do so in the country where these animals were infected with rabies.

As to the big gray wolf, the timber wolf, there is no man who traps them. They are too smart to be caught in that way. They are shrewder than you are. You may once in a while shoot one

at long range with a rifle. His fur is valuable; but there is no man that can make wages hunting him for his hide. He follows you day by day on the trail.

Coming out from Alaska in winter you will find, hour after hour, on your trail the footprints of the red foxes; and all of a sudden the fox track will disappear off the trail, and you soon know what is the matter. The big gray wolves have taken up your trail and the fox has wisely vamoosed. He lies on your flank and follows you hour after hour, maybe for a day. Perhaps your dog has frozen his feet between the toes, and you have not put moccasins on him, and his foot begins to bleed, and the wolf hopes that the outfit is breaking down. He stays with you just as close as he can with safety; but no man ever picks up the big gray wolf on the trail except by accident. No bounty hunter makes any money to speak of by scalping that gentleman. Two or three of them working together will tear down the largest steer or your best horse. They will herd him around and around and them hamstring him—drop him on his haunches—and feast upon him, and they will do the same to you if luck favors them. But the coyotes with this disease are exterminating one another. That is to be said; and following their extermination will come this pest of rabbits, and these gentlemen ought to be allowed some of this money to get rid of the rabbit also—not necessarily the true jack rabbit, but the voracious Australian rabbit, the new species of rabbit which was unknown when I was a boy in that part of the country. But the need of exterminating an animal which is causing death to human beings and to the best stock is great. I met one stockman who told me he lost two imported Belgian stallions that had cost him $4,600 from the bite of a mad coyote. It is important.

Mr. SHAFROTH. Mr. President, I can not believe that the Senate will seriously consider the motion of the Senator from Colorado, my colleague, in regard to striking out all of this appropriation. If it is extravagant, it might be reduced; but inasmuch as his motion is to strike out every dollar of the appropriation it seems to me that the Senate will not seriously consider it.

His proposition is that in lieu of this section there shall be inserted the following:

That all persons engaged in destroying wolves, coyotes, bears, and other predatory animals the destruction of which is provided for by State laws and bearing license or permits from the proper State authority shall at all times have access to the national forests of their respective States in pursuit of such purpose.

That affords no relief whatever. This is Government land. People who live outside of the reservation are not going on the reservation for the purpose of exterminating these predatory animals. Consequently, the substitute affords no relief whatever to the situation there.

As the Senator has said, this is a serious problem out in the West. It may be that gentlemen here in the East do not comprehend and do not fully take in what these animals are, and what damage they do. But when we find the legislature of the State of Oregon, for instance, and the legislature of nearly every other State in the western country, petitioning Congress for relief, and reciting that over $15,000,000 in destruction of the cattle industry in the country occurs every year through these predatory animals, it seems to me that we ought to consider it, especially in view of the fact that these are reservations made by the Government, over which the State has not the jurisdiction which it ought to have. Under those circumstances, this being a broad, sweeping elimination from this bill of every dollar of the appropriation, it seems to me it ought not to pass.

Why, Mr. President, think of the suggestion which is made in view of the fact that the Secretary of Agriculture came to the Congress of the United States and asked, as an emergency matter, that $75,000, a year ago, be appropriated for the eradication of rabies. Here is a statement which was made in the report contained in the House hearings. It says:

A recent outbreak of rabies in the Western and Northwestern States resulted in such serious losses to live stock and was so great a menace to human life that the Secretary of Agriculture, on January 26, 1916, transmitted to the Congress an estimate of $75,000, which has been included in the urgent deficiency bill, to be used, in cooperation with the States concerned, in the suppresion of the disease through the destruction of the animals by which it is spread. The funds already available were not sufficient to enable the department to cope with the situation. The sum included in the urgent deficiency bill will provide for the work only during the remainder of the present fiscal year. If effective results are to be obtained, it is important that the work should be prosecuted during the next fiscal year, and the committee, in accordance with a supplemental estimate submitted by the Secretary of Agriculture, has included $125,000 in the bill for this purpose.

Mr. President, it seems to me, in view of the fact that this substitute which is offered brings no relief whatever, inasmuch as this loss which occurs to the people of the West by reason of these predatory animals amounts, as has been estimated, to $15,000,000 every year, we ought not to wipe out every trace of remedy that might be offered by the Federal Government in granting at least some partial relief to the people who are running their cattle and having their herds on Government land and paying the Government a price for the grazing privilege thereon.

The PRESIDING OFFICER (Mr. KENYON in the chair). The question is on agreeing to the amendment of the Senator from Colorado [Mr. THOMAS] to the amendment of the committee.

Mr. GORE. Mr. President, it seems to me the advocates of this appropriation have made out a case. The settlers in the vicinity of these reserves contribute, the counties contribute, and the States contribute, hundreds of thousands of dollars annually for the extermination of these predatory animals. They prove their faith. The Government ought not to convert these reservations into a sort of sanctuary where these predatory beasts can multiply and sally forth on their mission of destruction.

It seems to me there are three policies which the Government could adopt. One is to abandon these reservations, the other is to exterminate these predatory animals, and the third is to indemnify the settlers for the loss of their live stock. At this time the extermination of the animals seems to be the most feasible and promising solution.

I think this appropriation ought to be continued in the bill.

I may add, in this connection, that the House failed to include any appropriation to combat the rabies, and if the committee amendment should be stricken out there would be no provision in the bill by which the department could pursue its warfare against the rabies, and there would be nothing in conference from which such a policy could be wrought out.

Mr. THOMAS. I ask for the yeas and nays on agreeing to my amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHILTON (when his name was called). I transfer my pair with the Senator from New Mexico [Mr. FALL] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. SAULSBURY (when his name was called). I transfer my pair with the junior Senator from Rhode Island [Mr. COLT] to the senior Senator from Nevada [Mr. NEWLANDS] and vote "nay."

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Tennessee [Mr. LEA] and vote "nay."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. He being absent, I withhold my vote.

The roll call was concluded.

Mr. SMOOT. I have been requested to announce the following pairs:

The Senator from Kansas [Mr. CURTIS] with the Senator from Georgia [Mr. HARDWICK];

The Senator from New Hampshire [Mr. GALLINGER] with the Senator from New York [Mr. O'GORMAN];

The Senator from Pennsylvania [Mr. PENROSE] with the Senator from Mississippi [Mr. WILLIAMS];

The Senator from Michigan [Mr. SMITH] with the Senator from Missouri [Mr. REED]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Maryland [Mr. SMITH].

Mr. MARTINE of New Jersey. I wish to announce that the Senator from Kentucky [Mr. JAMES] is detained on public business. He is paired with the Senator from Massachusetts [Mr. WEEKS].

Mr. LIPPITT. I have a pair with the Senator from Montana [Mr. WALSH]. In his absence I withhold my vote. If at liberty to vote, I would vote "nay."

Mr. CATRON. I am paired with the Senator from Oklahoma [Mr. OWEN]. I do not know how he would vote if present, and I therefore withhold my vote.

Mr. CHAMBERLAIN. I transfer my pair with the junior Senator from Pennsylvania [Mr. OLIVER] to the senior Senator from Virginia [Mr. MARTIN] and vote "nay."

The result was announced—yeas 10, nays 48, as follows:

YEAS—10.

Bankhead	Husting	Smith, Ga.	Thompson
Beckham	Johnson, S. Dak.	Taggart	
Clapp	Kenyon	Thomas	

NAYS—48.

Ashurst	Harding	Pittman	Smoot
Brady	Johnson, Me.	Poindexter	Sterling
Broussard	Jones	Pomerene	Stone
Chamberlain	La Follette	Ransdell	Sutherland
Chilton	Lane	Saulsbury	Swanson
Clark, Wyo.	Lodge	Shafroth	Tillman
Clarke, Ark.	McCumber	Sheppard	Townsend
Culberson	McLean	Sherman	Underwood
du Pont	Martine, N. J.	Shields	Vardaman
Fletcher	Nelson	Simmons	Wadsworth
Gore	Norris	Smith, Ariz.	Warren
Gronna	Page	Smith, S. C.	Works

NOT VOTING—37.

Borah	Goff	Lippitt	Reed
Brandegee	Hardwick	Martin, Va.	Robinson
Bryan	Hitchcock	Myers	Smith, Md.
Catron	Hollis	Newlands	Smith, Mich.
Colt	Hughes	O'Gorman	Walsh
Cummins	James	Oliver	Weeks
Curtis	Kern	Overman	Williams
Dillingham	Lea, Tenn.	Owen	
Fall	Lee, Md.	Penrose	
Gallinger	Lewis	Phelan	

So Mr. THOMAS's amendment to the amendment was rejected.

Mr. TAGGART. Mr. President, on Monday when I was discussing the same item, on page 57, I made a motion which was deferred by request of the Senator from Oklahoma [Mr. GORE]. The amendment offered by the Senator from Colorado [Mr. THOMAS] was virtually of the same character as mine, except that he proposed to add certain words to the section. The amendment I offered was to strike out all on page 57, beginning at line 1 and including line 22. I therefore renew my motion to amend.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Indiana to strike out, on page 57, from line 1 to line 22, inclusive.

The amendment to the amendment was rejected.

The amendment was agreed to.

Mr. LODGE. I desire to offer an amendment, to which I think the chairman has no objection. It will take only a moment. I offer it in behalf of the Senator from New Hampshire [Mr. GALLINGER]. It proposes to reappropriate money already appropriated in regard to the white-pine blister rust. It is to come in on page 20, after line 5. It makes no addition to the appropriation. It simply reappropriates the money left over in the appropriation of the urgent deficiency bill.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 20, after line 5, insert:

The unexpended balance of the appropriation of $20,000 for the emergency caused by the infectious nature and continued spread of the destructive disease of pine trees known as the white-pine blister rust, by conducting such investigations of the nature and means of communication of the disease and by applying such methods of eradication or control of the disease as in the judgment of the Secretary of Agriculture may be necessary, made in the further urgent deficiency act approved February 28, 1916, is hereby reappropriated and made available for the same purpose for the fiscal year 1917.

The amendment was agreed to.

Mr. SMITH of South Carolina. Mr. President, I send to the desk an amendment, which I should like to have read, and then I wish to explain the purpose of it.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. Add, as a new clause, between lines 11 and 12, on page 87, the following:

The parties to any contract for the purchase of cotton for future delivery, under the provisions of this act, shall have the option to mutually stipulate at the time of entering into such contract that in the settlement of differences as to price or value of grades other than basis grade mentioned therein shall be ascertained and adjusted in accordance with the following provision and not in accordance with section 6 of this act. In such case the contract shall specifically provide in its terms as follows: That in case cotton of grade or grades other than the basis grade specified in a contract shall be tendered in performance of the obligation thereof, and the parties to such contract shall not agree as to the price of the substituted grade or grades so tendered, then, and in that event, the buyer of said contract shall have the right to demand the specific fulfillment of such contract by the actual delivery of the basis grade named therein and at the price specified for such basis grade in said contract.

Mr. SMITH of South Carolina. Mr. President, that does not interfere with the present law at all. It simply adds a section or proviso that in case anybody does not desire to enter into a contract as specified now in the bill he shall have the option to take this form of contract. The bill provides for a tax on all forms of contracts that do not conform to one specific form, and that is that when a party buys a contract for, say, 100 bales of cotton for future delivery, and the time of settlement comes and other grades are tendered, then if the parties to the contract can not agree on a price they go before a board of arbitration here in Washington.

I have introduced a clause in order that the buyer and seller may have the option of taking what the bill now contains, or what I am introducing. Under the clause I am introducing, it reverses the old order in that it gives the buyer the right to say whether or not he shall accept other grades in settlement of his contract than the basis grade upon which the contract is made; and in case the parties to the contract may not agree as to the grade or the price of the grades, other than the basis grade, then the buyer shall have the right to demand the basis grade in settlement and at the price agreed upon. This necessarily, in the language of the exchange, gives the bulls an equal showing with the bears, and makes it impossible for those who wish to depress the market to sell it indefinitely; and makes it impossible for the sellers to offer any grade they see fit in settlement of their contract. In the other provision of the bill in event this is done and the buyers object, then the court of arbitration in Washington must settle the affair. This provision I am offering leaves the parties to the contract to understand fully and settle all of the questions at the making of the contract.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from South Carolina.

The amendment was agreed to.

Mr. ASHURST. On page 15, after line 24, I move to insert what I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 15, after line 24, insert:

For the elimination and eradication of the purple loco weed, the white loco weed, and other poisonous leguminous weeds, in Arizona, Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Utah, and Wyoming, $100,000.

Mr. POINDEXTER. I should like to have the Senator modify his amendment by inserting the State of Washington.

Mr. ASHURST. By recurring to my data here I ascertain that there is considerable loco weed of both the white and purple variety in Washington. I accept the Senator's suggestion.

Mr. POINDEXTER. I move to insert the word "Washington."

Mr. ASHURST. I accept that amendment.

The SECRETARY. After the word "Utah," in the last line of the amendment, insert the word "Washington," so as to read:

Utah, Washington, and Wyoming.

The amendment to the amendment was agreed to.

Mr. JOHNSON of South Dakota. Mr. President, I have a telegram which I have just received relating to part B of the bill, which I desire to have read and made a part of the RECORD.

The PRESIDING OFFICER. Does the Senator desire to have the telegram read at this time?

Mr. JOHNSON of South Dakota. At any convenient time.

Mr. ASHURST. I yield for that purpose.

The PRESIDING OFFICER. The Secretary will read the telegram.

The Secretary read as follows:

HENRY, S. DAK., *July 5, 1916.*

EDWIN JOHNSON,
Senator, Washington, D. C.:

South Dakota farmers, elevator stockholders, numbering 50,000, ask for Federal control of grain grading, and ask our Senators to support pending legislation to that end.

J. T. BELK,
Secretary Farmers' Cooperative Association of South Dakota.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arizona [Mr. ASHURST].

Mr. ASHURST. Mr. President, I shall trespass but briefly upon the time and patience of the Senate. It will be observed that I have offered an amendment proposing to appropriate $100,000 for the elimination of the white and the purple loco weed and other poisonous leguminous or pod plants in various Western States.

THE LOCO-WEED DISEASE.

Mr. President, the word "loco" is of Spanish origin, meaning crazy, and has been applied for years to a disease common among horses, cattle, and sheep in the West. The Federal Government first gave attention to this disease in 1873, and the descriptions of the symptoms of locoed animals in the reports of the Department of Agriculture are among the best written.

The losses of horses, especially in parts of Texas, have at times been very large, while in some localities in Arizona, Colorado, Nebraska, and Kansas it has been found impossible to run horses freely upon the range because of the large number that die from this disease. The losses of cattle have been heavier, perhaps, in Colorado than in any other State, while the losses from locoed sheep have occurred more frequently in the States farther north, especially in Montana.

LOCO PLANTS.

A large number of plants have been called by the name "loco weeds," most of those which are suspected of being poisonous belonging to the botanical family Leguminosæ.

THE PURPLE LOCO WEED.

The purple "loco" or the "woolly loco," sometimes known as the "Texas loco" or the "true loco," is the plant that in the past has been considered as the cause of loco poisoning. This is sometimes known as the "stemmed loco plant," because it has true stems, while the white loco weed is stemless. The former—that is, the purple—is a perennial plant growing in patches on adobe soil, in depressions rather than in elevated situations. It rarely grows in the abundance which is characteristic of some

of the other so-called "loco plants," but it may cover several acres. Under favorable circumstances where a plant grows for several years it may become, perhaps, a foot in height and possibly 2 feet in diameter. The flowers are a very deep purple and the pods short, black, and thick. The leaflets are ovate or elliptical and very densely covered with hairs, from which the plant gets its common name of "woolly loco." The plant has a decumbent habit—that is, the long branches are inclined to lie rather close to the ground. The purple loco plant is found in Arizona, New Mexico, Texas, Oklahoma, Kansas, Nebraska, and Colorado. In these regions it grows in varying abundance. It blossoms in Colorado about June 1, but farther south—in New Mexico, for instance—blossoms are found early in April.

THE WHITE LOCO WEED.

The white loco plant is distinguished from the purple loco by its long, lanceolate leaves and by the general habit of the plant, which is erect rather than decumbent. It has no true stem, and on this account is sometimes called the "stemless loco." The flowers are ordinarily on long flower stems and commonly are white in the plains regions, although there is considerable variation in their color. Purple flowers are not uncommon. In the mountain regions the white loco ordinarily has very deeply colored flowers—deep shades of violet and purple. It blossoms earlier than the purple loco. The pods of the white loco weed are slender and filled with seeds, which, when the pods dry, rattle as a person passes through a patch of the plants, making a sound which closely resembles the warning of a rattlesnake. In this plant, as in the purple loco, there is an extremely long root, growing down from 3 to 6 feet.

The white loco is found much more widely distributed than the purple loco, extending from the northern to the southern border of the United States, as far east as central Minnesota, and as far west as western Utah and Arizona. It grows largely on elevations and on sandy soil, and in some places in very great abundance.

OTHER LOCO WEEDS.

The experimental work in the field and in the pharmacological laboratory of the Bureau of Plant Industry has been largely upon the two species known as the purple loco and the white loco. These are the weeds which produce the disease from Montana to northern New Mexico and Arizona, and in western Texas. In parts of New Mexico, Arizona, and California there are found great numbers of locoed animals in localities where neither of these two species grows. Other leguminous plants in these States are known as loco weeds and it has been proved that some of them are poisonous, and the symptoms of locoed animals and the pathological findings are similar to those produced by the white and purple plants.

POISONING BY LOCO PLANTS.

The field work carried on by the Bureau of Plant Industry has demonstrated that horses, cattle, and sheep in the field may be poisoned by feeding upon the white or the purple plants. The majority of horses do not take readily to the purple plant, except as they are induced in the first place to eat some of it because of short feed. It has been demonstrated that the so-called loco disease of the West is not simply a matter of starvation, as has been supposed by some, and it has also been ascertained that when other food is abundant very few horses will eat loco. When, however, because of shortness of grass a horse is induced to begin eating loco, it is very likely to contract a habit which leads to continual feeding upon the weed, with eventually fatal results.

In regard to the white loco weed the experiments of the department show very clearly that horses, cattle, and sheep will eat this plant with great readiness, particularly if they come across it when the grass is somewhat scarce. Both the white and the purple loco weeds are green during the winter, when all grass is dry and brown. Moreover, they are prominent plants, which induces an animal to try them, and because of their succulent character and pleasant taste it may continue to eat them. Not only horses, but cattle and sheep will eat the white loco weed, and sometimes even with great avidity. Many animals will eat this weed even when grass is abundant, but it is more common for the habit to be contracted during the autumn, winter, and spring when there is a scarcity of green grass. Both horses and cattle will eat the white loco weed readily, but perhaps cattle take to it more readily than horses. During the spring months, before the grass starts, where the white loco weed is abundant practically all animals eat more or less of it. As the grass becomes more abundant many of these leave the loco weeds and devote themselves entirely to grass. Animals as a rule acquire a taste for the plant and an appetite which is not easily overcome, and will continue to eat the loco weed even where there is an abundance of other feed. Some cattle and horses acquire a habit which leads them to eat the loco plant almost exclusively, and such animals will die within a few months or, in some cases, even within a few weeks.

Sheep also are poisoned in much the same way as horses and cattle. The effect of the poisoning seems to be peculiarly noticeable on lambs. Frequently lambs will die within two weeks of the time when they commence to eat this weed, and without any marked loss of flesh.

SYMPTOMS OF POISONING IN HORSES.

The first symptom of loco poisoning in horses is often a change in the general condition of the animal. If high-spirited the animal becomes heavy and dull. Following this, irregularities in its gaits and in its manner of feeding appear. The irregularities in the gait may be due partly to weakness and simulate a paralytic affection. The horse drags its hind legs. Associated with this paralytic condition is an apparent loss of muscular coordination.

In stepping over a slight obstruction the horse lifts its feet unnecessarily high, or in going over a rut in a road it may leap as if jumping over a ditch. As the disease progresses the animal becomes solitary in its habit and seems to lose very largely its nervous sensibility. If one approaches a locoed horse, the horse does not notice the person until he is within a few feet, when it may suddenly rear up and perhaps fall over backward. When it drinks or when it eats there is a peculiar stiff motion of the jaws, showing a lack of control of the muscles. If a locoed horse is used either in riding or driving, this lack of muscular coordination may make it extremely dangerous, as such a horse shies violently at imaginary objects, can not readily be led or backed, and if started in motion is inclined to go in an automatic fashion at the same gait until stopped by some obstruction. In the later stages of the disease the animal loses flesh, its coat becomes rough, and eventually it dies.

SYMPTOMS OF POISONING IN CATTLE.

The symptoms of locoed cattle are very similar to those of locoed horses, the differences being only such as would be expected from the different character of the nervous organization of the animals. There is the same lack of muscular coordination, and while a steer is not apt to fall over backward, it will start and tremble and perhaps rear and jump backward when suddenly alarmed. A badly locoed steer shows a violently shaking head, particularly after it has become heated. Ordinarily a locoed steer is dull, but under some conditions it may become frantic and will run amuck. It is commonly said by stockmen that it is impossible to drive a locoed steer, because it is just as likely to run into the driver as in the opposite direction.

Locoed cattle gradually lose flesh, have staring eyes and rough coats, go to water less and less frequently, and eventually die of starvation.

SYMPTOMS OF POISONING IN SHEEP.

The symptoms of poisoning in sheep are not so marked as those in horses and cattle. The lack of muscular coordination is not so noticeable, but still exists. Locoed sheep show perhaps more clearly the weakness which goes with the disease, as they stumble and fall, and rise again only with great difficulty. The symptoms of loco poisoning in sheep resemble the symptoms caused by "grub in the head," and it is at times difficult to distinguish between sheep affected by this grub and those that are poisoned by loco weeds.

POST-MORTEM APPEARANCES.

The post-mortem examinations of locoed animals do not in all cases show clearly marked evidence of the progress of the disease. Since in all cases of fatal poisoning the locoed animals die of starvation, they are anemic, as would be expected, and, as a result of this anemia, accumulations of coagulated serum in a gelatinous form are found in various parts of the body. These accumulations are particularly prominent about the heart. There is also an accumulation of coagulated serum in the cavity of the spinal column. This is almost always present in cases where the loco poisoning has been a chronic condition. The nervous system is more fully supplied with blood than is the case with an animal in normal condition. This, however, is not a very pronounced feature, and the blood clots which are occasionally found in the brain are not so evident as would be expected from the accounts published in the literature upon loco poisoning. The poisonous substance (barium) in the loco plants produces an irritant effect upon the stomach and intestines, and in the large number of locoed animals this results in an inflamed condition of the walls of the stomach.

TREATMENT OF LOCOED ANIMALS.

A bulletin issued in 1909 by the Department of Agriculture says that experiments with substances which would be logical antidotes for loco poisoning have been disappointing, and at the present stage of the investigation there seems to be no reason

for hoping that a practical antidote can be found; hence we must resort to destruction of the loco weed.

DESTRUCTION OF LOCO WEEDS.

There is a common but mistaken belief among some stockmen of the regions infested with loco weed that in order to destroy the loco plants it is necessary to dig up the whole root, so that it has seemed to them almost impossible to clear a field infested with loco, even though the field is of comparatively limited extent. This impression in regard to the necessity of digging the whole root is ill founded. If either the purple or the white loco weed is cut off below the crown of buds, the plant is usually killed. There is not much danger of sprouts from the roots. The seeds of these loco plants live for a term of years and do not all germinate the season following their growth. Consequently in any field infested with loco there will be a continuous crop of plants, as these seeds under favorable circumstances germinate.

The impression that plants grow from the cut roots probably originated in the fact that seedlings are continually coming up in the immediate vicinity of a parent plant. The seeds of the purple and of the white loco weeds are not provided with any special means of dispersal by the winds. Ordinarily they fall near the parent plant and grow in that locality. Of course, the winds which move the dust of the surface will carry the seeds from one place to another, but under ordinary circumstances they are not dispersed for any considerable distance.

It follows that to cut out the loco weeds in pastures is a comparatively easy matter. A man with a spade can destroy the plants with great rapidity. A few days' work will accomplish very much. Because of the seeds which germinate later, it is necessary for this work to be done two or three times during a season, and it is also necessary that it be repeated during succeeding seasons.

From certain experiments carried on in Colorado it has been proved that it is possible to eliminate entirely all these poisonous plants, and in western Kansas, in Nebraska, and Colorado the growth of the purple loco weed has been diminished to a large extent by the larva of a moth well known to entomologists. There is a paucity of information concerning this subject, but I have been able to glean these details from a perusal of the various bulletins issued by the Department of Agriculture, as well as from personal observations I have made and the experience I have had as a stockman in the West. I am advised by the secretary of the live stock sanitary board of the State of Arizona that the losses to the live-stock industry in Arizona aggregate about $100,000 each year.

I ask unanimous consent at this junction to incorporate as an appendix to my remarks a letter from Mr. M. E. Bemis, editor of the Southwestern Stockman-Farmer, of Arizona, addressed to Hon. Dwight B. Heard, chairman of the American National Live Stock Association, which letter contains excerpts from the reports of live-stock inspectors throughout the State of Arizona.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

THE SOUTHWESTERN STOCKMAN-FARMER,
Phoenix, Ariz., June 3, 1916.

Hon. DWIGHT B. HEARD,
Phoenix, Ariz.

DEAR MR. HEARD: With regard to the loco situation, I am prepared to report in part. No doubt will hear from other districts later, and will be glad to advise you of any further information received.

From the following districts I have reports of "no loco": Buckeye, Maricopa County, district No. 1; Casa Grande, Pinal County, district No. 21; Gila Bend, Maricopa County, district No. 1; Ray, Pinal County, district No. 21; Ash Fork, Yavapai County, district No. 6; Albuquerque, eastern part of Apache County, district No. 2; Bouse, Yuma County, district No. 40; Lowell, Cochise County, district No. 23; Norton, Maricopa County, district No. 18; Show Low, Navajo County, district No. 2; Prescott, Yavapai County, district No. 7; Chloride, Mohave County, district No. 5.

Clarkdale, Yavapai County, district No. 9, reports: "Loss very light; exact number not known, but very few. Good feed; consequently, loss very small."—Joe Cook.

Nogales, Santa Cruz County, district No. 26: "Number of horses and cattle lost this season from loco about 100. There has been practically no loss since the three-year siege of it which occurred several years ago until this year."—Harry Saxon.

Ajo, Pima County, district No. 1: "Loss this season, one horse, no cattle."—H. W. Brady.

Winslow, Navajo County, district No. 2: "Some loss from loco. I think the loss has been greater this year than common on some parts of the range."—J. N. Pemberton.

Winkleman, Gila County, district No. 21: "Estimated loss, about 200. I think the loss has been greater this year than common."—J. McKinney.

Tucson, Pima County, district No. 19: "No cattle lost. Horses lost, 80. Loss has been greater this season than common."—Rye Miles.

Navajo, Apache County, district No. 2: "Exact number of cattle and horses lost from loco not known, but it is worse than ever known before on Little Colorado River, north and south from river."—F. V. Barber.

Holbrook, Navajo County, district No. 2: "No way of estimating loss, but the loss has been greater this year than common."—Lew H. Mickey.

Clifton, Greenlee County, district No. 29: "A few horses have been lost from something same symptoms of loco. No way of estimating number actually lost."—T. N. Miller.

Springerville, Apache County, districts Nos. 30–37: "Actual number of cattle and horses lost from loco not known, but would judge that 150 head would cover the loss from loco alone. It is thought that more cattle have been affected this year than usual. Loco weed has been more abundant this spring than for some years, but as its season is principally in March and April it doesn't do as much damage as if stock grazed on it the whole year around. It has nearly all matured and gone to seed by the 1st of May and become tough, so that stock eat less of it. Cattle and horses do not die immediately from its effects, but they are weakened so as to be likely to bog. There is always considerable loss here from bogging in the spring, and it is my opinion that it is largely cattle that have become weakened from loco. There are only certain sections of the country where the loco is very abundant, but it is generally places where the stock have to graze during winter and spring. While more cattle have been affected this spring, it is not believed that the loss has been any heavier, as the spring has been milder, with less wet and cold and less chance to bog."—D. B. Rudd.

A casual reading of the above report might indicate that the loss from loco is not particularly serious, but when it is taken into consideration that over a considerable territory the loss is reported as heavy, not possible to estimate it, it is not unreasonable to suppose that it would amount to probably several thousand head of stock, representing a considerable monetary loss. I shall comment further within a few weeks, when I publish the data collected.

My own opinion, which may not be of much value, is that the United States Department of Agriculture might be induced to send an expert botanist and a veterinarian here next season to work together in the localities where the loco is most abundant, and they should be able to gather some information which would enable an appropriation to be made along practical lines looking to the extermination of the weed. A great deal of data has been collected from time to time about the plant, but, so far as I know, there has been no attempt made to study the plant and its effects on animals at the same time. I think this is about all that can be done without more information than it is possible to obtain.

Yours, very truly, M. E. BEMIS.

Mr. CATRON. I wish to offer an amendment to the amendment, to come in after the word "Wyoming" and before "$100,000" and to read as follows:

And ascertaining and prescribing a cure for the disease caused thereby.

Mr. ASHURST. I will accept the amendment to my amendment. Let it be perfected in that way.

The amendment to the amendment was agreed to.

Mr. GORE. I ask that the amendment as amended be read.

The PRESIDING OFFICER. The Secretary will read the amendment as amended.

The Secretary read as follows:

For the elimination and eradication of the purple loco weed, the white loco weed, and other poisonous leguminous weeds, in Arizona, Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Utah, Washington, and Wyoming, and ascertaining and prescribing a cure for the disease caused thereby, $100,000.

Mr. GORE. Mr. President, I desire to say that this amendment was considered by the Committee on Agriculture and Forestry, and after consideration the committee decided not to report it as an amendment to the bill. I therefore feel constrained, as chairman of the committee, to make the point of order against it.

Mr. ASHURST. Will the Senator from Oklahoma withhold his point of order for just a moment?

Mr. GORE. Certainly.

Mr. ASHURST. Mr. President, I desire to say but a few more words on the amendment.

Mr. GORE. I beg the Senator's pardon. I thought he had concluded.

Mr. ASHURST. No; I wish to say a word further.

Mr. President, I appreciate the desire of the Senator from Oklahoma [Mr. GORE] for economy, but, as I pointed out awhile ago, and as I wish, further, to show, 40 per cent of the State of Arizona is within some kind of reserve. I think I can give the exact figures. Yes; 40.28 per cent of the State of Arizona is reserved from sale and settlement; 12,499,485 acres are within national forests. These 12,499,485 acres, or nearly all thereof, are leased to stockmen. Grazing fees are charged. The fees which were paid by the Arizona stockmen alone last year amounted to $152,799, yet the Federal Government, while charging fees amounting to $152,799 per annum, does not expend a dollar in improving the range, in reseeding, in regrassing it, or in taking pains to exterminate these poisonous plants that are deadly to stock that range and feed within the forests. I think in equity and in good conscience where a grazing fee is charged—and it is a high fee—the range, at the least, should be kept by the lessor, by the landlord, or agency charging the fee in such a condition that poisonous and deadly plants may not be scattered in great profusion all over the range. It is a matter of simple equity and justice.

Mr. President, I ask unanimous consent at this point to insert in the RECORD a copy of a letter from the Commissioner of the General Land Office, showing how much of the State of Arizona is reserved, for what purposes it is reserved, and

also showing the portion of the State which is withheld from the people.

The PRESIDING OFFICER. It is so ordered, in the absence of objection.

The letter referred to is as follows:

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, D. C., June 5, 1916.

Hon. HENRY F. ASHURST,
United States Senate.

MY DEAR SENATOR: The Secretary of the Interior has referred to me your letter of May 23, 1916, inquiring as to the area of land in Arizona that is in private ownership.

Prior to July 1, 1908, no record, by States, of the areas patented was kept, and for that reason I am unable to give you the exact figures. However, an estimate has been made that up to July 1, 1915, this office had issued patents for lands in Arizona to the extent of approximately 4,775,000 acres.

The various reservations in Arizona are stated as follows:

	Acres.
National forests	12,499,485
Indian reservations	16,424,327
National monuments	835,245
Military reservations	98,452
Total	29,857,509

The area of the national monuments as given above is not exact, for the reason that it has not been determined what areas within the exterior limits of the monuments were in private ownership at the dates of the withdrawals.

The State land department at Phoenix can doubtless advise you as to the area of State lands which has passed into private ownership.

Very respectfully,

CLAY TALLMAN, *Commissioner.*

Forty and twenty-eight one-hundredths per cent reserved from the people.

Mr. ASHURST. I yield the floor, Mr. President.

The PRESIDING OFFICER. Does the Senator from Oklahoma now renew his point of order?

Mr. SMITH of Arizona. Mr. President, before the point of order is insisted upon, I should like an opportunity to try to persuade the chairman of the committee to at least permit this matter to go into conference, for I know the Senator from Oklahoma and other Senators on the floor are conscious of the great danger, because of the presence of the loco weed, to live stock of the Western States, which to some extent supply the markets of the world and very largely the beef and mutton consumed in the United States.

The Government is leasing to the herders, the owners of sheep and cattle, these vast tracts of land in our own State, which have been placed in forest reserves. The Government has spread these forest reserves miles and miles beyond the points where a tree as large as my arm would grow, for the purpose of obtaining revenue from the people to whom they can rent the land. On these very grounds, for which the people are paying the Government as landlord a liberal sum for their use for grazing purposes, the Government is permitting the growth of this weed, or, if not permitting it, at least this dangerous, destructive weed is growing where the cattle and the horses who get to it are certain to be killed.

Some provision ought to be made by the General Government to demonstrate the best possible means of handling this situation. Men within their own ranges are required to fence in their live stock to protect them against this weed. If they fence in their stock they get them in such a condition, owing to lack of feed and water, that they can never be good for market.

This appropriation strikes me as one of the most important things in the bill. I know how easy it is to laugh at such appropriations and to say we are simply making a raid on the Treasury, but it is the Government's function, it is the Government's duty, to do this work, and more especially when, as my colleague has shown by the communication which he has sent to the desk, the Government is using in reserves more than half of the great State of Arizona; when every bit of the forest and most of the good grazing land—every particle of land that is worth anything for the purpose of raising revenue for the support of the State government—the Government of the United States itself holds; and yet it expects us to run our State on the profits from cattle that are poisoned by these Government weeds.

Mr. ASHURST. And the Government charges grazing fees besides.

Mr. SMITH of Arizona. Yes; and they expect us to run our State on the railroads that happen to run through it and on the taxes levied on the homes of our citizens. We are expected to police that whole State, which is almost as large as Ohio, Indiana, and Illinois combined, and yet the Government has taken all our resources. I think I am entirely within the facts when I state that nine-tenths of the present available land in the State of Arizona is held by the Government in reserve; in other words, the Government holds the unoccupied land in that State within the reservations, which cover nine-tenths of the land which is available for any use in the State, except great bodies of it which are available for scant grazing.

In that aspect of the case, in that attitude, and with the object of this Agricultural appropriation bill being to give some recognition to the agricultural interests of this great country, and considering those great plains which the Government still claims to own and which it holds, I think this appropriation at least ought to be allowed for an investigation of the subject. The injury from this poisonous weed is certain to come back not only to the people who are trying to raise stock, but also to the people who feed on the beef after it is made ready for the market.

Mr. ASHURST. Mr. President, if my colleague will yield for just a moment, I desire to say that I have here the latest Farmers' Bulletin on this subject, dated June 2, 1916. That bulletin discusses the prevention of the losses of live stock from plant poisoning. On page 1 it says, inter alia:

Loco losses—

That is, losses of live stock from this poisonous loco weed—

Loco losses of from 5 to 50 per cent are not at all unusual.

Mr. SMITH of Arizona. Mr. President, I have nothing further to say, except that I trust I have dissuaded the chairman of the committee from making the point of order against this amendment.

Mr. CATRON. Mr. President, I hope the Senator from Oklahoma [Mr. GORE] will not raise the point of order against this amendment. This bill has made provision for the destruction of predatory animals. The cause for the destruction of those animals is mainly for the reason that they destroy our live stock. The loco weed in localities where it prevails kills fifty times more live stock than do all the predatory animals. Last May I went out to a ranch in New Mexico, where the owner of it had 32 head of horses. They had got on to the loco weed that prevailed during that season in that locality and that had not been there before. Thirty of those horses had died when I was there; one of the other two was being doctored and was expected to die, as did probably the other.

This weed is absolutely destructive of animal life. A cure or a remedy for it has not yet been discovered. The Government should do something to enable us to obtain a cure or a remedy for it. If the expenditure of this $100,000 should result in finding a cure, it would be the cheapest expenditure that has been made under any of the Agricultural appropriation bills, especially to preserve the farmer or the stock raiser or the rancher in his rights and interests, so far as he has them there to preserve. It seems to me that this proposition has more merit than has any other single item in the entire bill, the intention of which is to preserve live stock and animals.

Mr. GORE. Mr. President, I appreciate the force and I appreciate the equity of the argument on the part of Senators in behalf of the pending amendment. It is pretty hard to answer the argument that the landlord ought to render his pastures harmless. The landlord either ought to do that or else he ought to allow for this poisonous weed in fixing the rental value of the property. I assume that that is taken into account when the rental rates are agreed upon.

I also appreciate the analogy between the pending amendment and the amendment in relation to predatory animals. Indeed one of the arguments urged against making the appropriation for the extermination of predatory animals was that it would constitute a precedent that would be appealed to for the jusification of other amendments due to some similar cause. There are, however, points of difference between the amendment and the object which it seeks to accomplish and the appropriation for the extermination of predatory animals.

I suppose the weeds have not the facility of locomotion, yet I know that this is a problem which must sooner or later be encountered by and combated by the Government. Something must be done, if anything can be done, to rescue that region from the presence and the prevalence of this pest.

My own judgment is that the first thing to be done would be to make a general survey of the situation and of the problem, so as to determine whether or not there is a practical solution. For my own part, I doubt it. The members of the committee observed that it would cost several hundred millions of dollars to consummate the object proposed by the pending amendment.

I will say to Senators, however—and they will appreciate my situation—that, in view of the fact that the committee itself considered the amendment and decided adversely upon it, I do not feel free to withhold a point of order against it, much as I regret to insist upon it.

Mr. ASHURST. If the Senator will pardon me, I want to return my thanks for the sympathetic interest that the chairman of the committee [Mr. GORE] exhibited, and which the other members of the committee exhibited, when I presented this matter to the committee. I tender them my thanks; but I fear that the distinguished chairman does not quite appreciate the amount of the losses that come to the live-stock business each year through the loco weed.

I say, again, we are all anxious to lower the price of beef. That can not be done by statute law. We can only do it by increasing the number of cattle, and, under existing conditions, the losses are so great, not only among cattle, but among horses, that it seems to me it is a wise and salutary thing to eliminate and to eradicate these poisonous weeds that occasion such enormous losses.

The PRESIDING OFFICER. The Chair desires to inquire of the Senator from Arizona [Mr. ASHURST] if this appropriation has been estimated for or been reported from any standing committee of the Senate?

Mr. GORE. Mr. President, I did not state at the time I made the point of order the ground on which I did so. I make the point of order against the amendment because the proposed appropriation has not been estimated for.

The PRESIDING OFFICER. Has it been favorably reported from a standing committee of the Senate?

Mr. CLARKE of Arkansas. Mr. President, it is the constant practice in the Senate for the Presiding Officer to submit meritorious propositions, technically subject to a point of order, to the Senate, and the questions thus submitted are habitually disposed of on the merits of the matter involved rather than on the technical question of order. The rule which authorizes the Chair to decide points of order is not absolute, nor is it necessary that the Chair shall be in doubt what decision to give before he can submit the question to the Senate under subdivision 2 of Rule XX. This is an absolute discretion that is vested in the Chair. I have known numerous instances where many such questions were submitted to the Senate when it was perfectly obvious that had a ruling been made by the Chair it would have been to exclude the item involved. This provision of our rules was adopted for the express purpose of meeting the underlying equity of just such cases as this.

Mr. CATRON. I was going to ask that the question be submitted to the Senate.

The PRESIDING OFFICER. The Chair, of course, is perfectly willing to submit the question to the Senate; and, if there is a call for a quorum, so that there may be a quorum present, the Chair will submit it to the Senate.

Mr. CLAPP. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	Overman	Smith, S. C.
Borah	Gallinger	Page	Smoot
Brady	Gore	Phelan	Sterling
Broussard	Gronna	Poindexter	Stone
Catron	Husting	Pomerene	Sutherland
Chamberlain	Johnson, Me.	Ransdell	Thomas
Chilton	Jones	Reed	Tillman
Clapp	Kenyon	Saulsbury	Townsend
Clark, Wyo.	La Follette	Shafroth	Underwood
Clarke, Ark.	Lane	Sheppard	Vardaman
Culberson	Lippitt	Sherman	Wadsworth
Cummins	McCumber	Simmons	Warren
Curtis	Martine, N. J.	Smith, Ariz.	Williams
Dillingham	Nelson	Smith, Ga.	
du Pont	Norris	Smith, Md.	

Mr. MARTINE of New Jersey. I rise to announce that the Senator from Montana [Mr. MYERS] is detained at home by illness and that the Senator from Kentucky [Mr. JAMES] is absent on public business.

Mr. HUSTING. I wish to announce that the Senator from South Dakota [Mr. JOHNSON] is absent on official business.

The PRESIDING OFFICER. Fifty-eight Senators have answered to their names. A quorum is present.

Mr. ASHURST. Mr. President, if the Chair will pardon me, I wish to make a very brief additional statement. I have tendered an amendment providing for an appropriation of $100,000 for the purpose of eliminating the white, purple, and other loco weeds from the grazing lands of the West. I think it is unnecessary to say anything further as to the deleterious effect of the loco weed upon the live stock of the West. I have just presented and had read a part of the last Farmers' Bulletin, showing that the losses because of the loco weed are from 5 to 50 per cent among the cattle and the other live stock of the West. To this amendment which I have tendered the Senator from Oklahoma [Mr. GORE], the chairman of the committee, has interposed a point of order.

Mr. CATRON. Mr. President, if the Senator will allow me, he has not referred to the amendment to the amendment presented by me, which I think is much more important than the original amendment.

Mr. ASHURST. I think so myself. The Senator from New Mexico [Mr. CATRON] has tendered what I conceive to be a more important amendment than the one I have tendered, which, in effect, is that out of this fund proposed to be appropriated for eliminating the loco weed a method shall be ascertained of treating and curing the disease caused by live stock eating the loco weed. I think that is the most important part of the amendment. To this amendment as modified the Senator from Oklahoma has interposed a point of order. Upon request the Chair has very kindly consented to let the Senate determine the point of order. That is the question before the Senate.

The PRESIDING OFFICER. The Chair will state the question as the Chair understands it. The Senator from Arizona [Mr. ASHURST] submitted an amendment, which the Secretary will read.

The SECRETARY. On page 15, line 24, after the amendment already agreed to, it is proposed to insert:

For the elimination and eradication of the purple loco weed, the white loco weed, and other poisonous leguminous weeds, in Arizona, Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Utah, Washington, and Wyoming, and ascertaining and prescribing a cure for the disease caused thereby, $100,000.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. The Chair desires to state the question. The Senator from Oklahoma [Mr. GORE] has made the point of order that this proposed appropriation has not been estimated for nor reported favorably by any standing committee of the Senate. The Chair was ready to rule that the point of order was well taken. Upon the suggestion of the President pro tempore of the Senate, that the matter might very properly be left to the Senate, the Chair, exercising that privilege, which has frequently been heretofore exercised, has deferred to that request and sentiment of the President pro tempore of the Senate. So the question is now submitted to the Senate, as it can be done under the rules, Is the amendment in order? Those believing it is will answer "aye" and those opposed "no."

Mr. SMOOT. Mr. President, just a question for information. Is there any question about an estimate not having been made for this item?

The PRESIDING OFFICER. The Chair understands there is no question about it.

Mr. SMOOT. There was no estimate made?

The PRESIDING OFFICER. No estimate was made.

Mr. CLARKE of Arkansas. Mr. President, under the almost universal practice in connection with the submission of such a question as the Chair has at this time submitted to the Senate, it is the sole province of the Senate to determine whether or not it wants that particular item on the bill. Under the prevailing practice, neither the inquiry nor the decision is directed to the narrow issue as to whether or not the provision is in order, as against a decision by the Chair. When submitted the Senate has the opportunity to express its determination whether or not it wants the item on the bill. That is the well-nigh uniform practice. The matter is not submitted because the Chair is in any doubt about how it should decide it, in the event he should decide. The rule does not require him to have any doubt about it. It is an independent right which the Chair possesses to turn over to the decision of the Senate a question that would otherwise go out on a technicality. It sustains the same relation to our code of rules as a court of equity does to a code of laws. On rare occasions there are exceptions, the merits of which are so obvious that it is thought best to leave to the sound judgment of the Senate the question as to whether or not the rule should be overlooked.

Mr. SMOOT. Mr. President, as I understand, the point of order is that the item has not been estimated for, and that it has not been reported by a standing committee of the Senate.

Mr. GORE. Yes, sir.

Mr. SMOOT. If that be true, the question then is as to whether the point of order is well taken; and, much as I should like the item to go into the bill, I shall certainly feel compelled to vote that the point of order is well taken.

The PRESIDING OFFICER. The question, as the Chair understands, is whether the amendment is in order.

Mr. CLARKE of Arkansas. That is nominally the form in which the question is submitted; but the question is really whether the Senate wants the amendment on the bill.

The PRESIDING OFFICER. The question is, Is the amendment in order?

Mr. SMITH of Georgia. Mr. President, I have great confidence in any opinion expressed by the Senator from Arkansas [Mr. CLARKE], and I usually lean on his opinions to find the correct construction of the rules; but in this instance it seems most clearly to me that the Senator has suggested a plan of abandoning the rules of the Senate, and I can not follow him.

A point of order is made that this amendment under the rules can not be submitted to the Senate now. Why? Because the rules say that an amendment increasing an appropriation on a general appropriation bill can not be submitted from the floor unless it has been prior to that time estimated for by the proper department of the Government or reported favorably by some committee of the Senate authorized to consider it. It must be reported favorably by the committee in charge of the general bill or by some other committee authorized to consider the subject, or it must be estimated for by the department under the rule. That is the specific language of the rule, as I understand.

The PRESIDING OFFICER. The Chair understands the question is not debatable.

Mr. VARDAMAN and Mr. FLETCHER. Question!

The PRESIDING OFFICER. Senators who believe the amendment is in order will say "aye"; those opposed will say "no." [Putting the question.] The noes have it, and the amendment is declared to be not in order.

Mr. FLETCHER. Mr. President——

Mr. ASHURST. Mr. President, I have another amendment, if the Senator will pardon me for just a moment. On page 15, line 24, after the word "cholera," I move the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 15, after the amendment already agreed to, it is proposed to insert:

Provided, That no grazing fees shall be levied or collected for grazing live stock on any national forest infested with loco weeds.

Mr. ASHURST. Mr. President, I shall not take up the time of the Senate, except to say that on the national forests heavy fees are charged for the live stock grazed thereon. It seems to me but just, equitable, and proper that the Government should not charge grazing fees for live stock upon a national forest which is so thoroughly infested with loco weed as to poison and destroy large numbers of the cattle, sheep, and horses which graze thereon. So I propose an amendment providing that no fees shall be charged for the grazing of live stock in the forests where the forest is infested with loco weed.

Mr. GORE. Mr. President, I should like to say to the Senator from Arizona that if he will modify his amendment so as to provide that the Government shall not lease lands infested with loco at all perhaps that will eliminate any objection to the amendment. Now, I am willing to protect the cattlemen in their right not to lease loco-infested lands, but I would hesitate to embark upon this policy in so precipitate a way, and I therefore feel obliged to interpose a point of order.

Mr. SHAFROTH. Mr. President——

Mr. GORE. I will first yield to the Senator from Colorado.

Mr. SHAFROTH. The Senator does not understand exactly the way the Government leases the land. The Government does not lease tracts of land to cattlemen.

Mr. GORE. It charges fees.

Mr. SHAFROTH. It makes a charge of so much per head. Consequently it is not a leasing of the land at all.

Mr. GORE. Yes; I understand. It is a system of fees—so much per head.

Mr. SHAFROTH. I should like to see the provision of the Senator from Arizona get in, if possible, because I think it is an outrage to hold out to the world that you have grazing lands there and then have them sprinkled through with a weed that will, as the Senator says, destroy 50 per cent of the number of cattle that graze thereon. It seems to me that ought to be very stringently objected to, and I had hoped that his $100,000 appropriation would go through.

The PRESIDING OFFICER. What is the point of order made by the Senator from Oklahoma?

Mr. GORE. That it is general legislation.

The PRESIDING OFFICER. The point of order is sustained.

Mr. FLETCHER. Mr. President, I offer an amendment which I will ask the Secretary to read.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. After line 7, on page 127, it is proposed to insert:

The unexpended balance on June 30, 1916, remaining to the credit of the appropriation authorized in the Agricultural appropriation acts approved March 4, 1913 and 1915, for the expenses of a commission to investigate and report to Congress on European cooperative land-mortgage banks and rural-credit unions, is hereby appropriated and made available for the fiscal year 1917 for the purposes set forth in said acts, to be paid out on the audit and order of the chairman of said commission; and such audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of such commission under this appropriation.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Florida. [Putting the question.] The Chair is unable to decide.

Mr. FLETCHER. Mr. President, perhaps before the vote is announced I may be allowed to say that I am offering this amendment to the bill in pursuance of a resolution passed by the United States Commission, composed, as Senators know, of seven members. A similar amendment was introduced and adopted at the last session and went on the bill at that time. There is a small unexpended balance to the credit of that commission. Its work has not been absolutely completed. We submitted the other day, and there is printed in the RECORD, a supplementary report on this subject of rural credits.

In my judgment, the farm-loan bill, which has passed both Houses, will take care especially of long-term credit, which will meet the needs of agriculture in this country. At the same time the question of personal credit is still open, and is a very important one. There are certain people engaged in agriculture who will be unable to avail themselves of the provisions of that bill. This commission has been authorized to pursue the study of this measure, and it is just a question of whether or not it is desirable to continue that work.

I have no preference in the matter, so far as I am concerned, and I am offering the amendment at the instance of the commission. The committees of Congress are studying the question and will, perhaps, have something further to report on it later. The commission, I think, has done very important work and is still able to do more work in that connection, but if it is desired that the commission shall retire and go out of this work entirely I have no request to make about it.

The PRESIDING OFFICER. The Chair was inclined to believe that the "noes" had it.

Mr. FLETCHER. I ask for a division, Mr. President.

Mr. VARDAMAN. I will ask that the amendment be stated. I was out of the Chamber when it was read. What is it?

The Secretary again stated the amendment.

Mr. SHAFROTH. That amount is how much, may I ask the Senator?

Mr. FLETCHER. It merely continues this commission until June 30 of next year. The balance on hand, I think, is some thirteen or fourteen hundred dollars.

The PRESIDING OFFICER. Those in favor of the amendment will rise. [A pause.] Those opposed will rise. [A pause.] It is a tie, and the Chair votes "no." The amendment is rejected.

Mr. FLETCHER. Mr. President, I desire to offer another amendment. I am not sure whether this amendment has been estimated for or not. If it has been, it has been done under the general head of expenses in connection with the investigations regarding diseases of plants, I assume. I will say that I do not think it has been specifically estimated for. I will ask to have the amendment read, and only submit one observation on it.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 20, after line 5, and after the amendment already agreed to at that point, it is proposed to insert:

For the investigation of the disease known as phoma rot and other diseases prevalent in and affecting the tomato crop, $10,000.

Mr. FLETCHER. Mr. President, I will say that of course tomatoes are grown in practically every State of the Union. The tomato crop is a very important one. This appears to be a new disease. I know of it because of its development in Florida. One grower, who last year had 500 acres in tomatoes, suffered extremely by reason of this new disease. Our information is that it has affected other crops, and unquestionably it will reach the tomato crop throughout the country. It has not received any attention on the part of the department because, as I say, it is a new disease, but it has just recently been brought to their attention. I am told that under the bill it can not be investigated and studied and anything done about it unless some provision is made for the expenses in connection with it.

Mr. SHAFROTH. Mr. President, does the Senator know the attitude of the department with relation to it?

Mr. FLETCHER. I know they are inclined to do this work. They sympathize with it and are inclined to do it, but the bill as it is now reported does not carry any provision for doing it. It affects a very important crop, the tomato crop.

Mr. SHAFROTH. But how does the disease manifest itself?

Mr. FLETCHER. It is called "phoma rot." I take it that it is in the roots of the plant.

Mr. SHAFROTH. Destroying the plant itself?

Mr FLETCHER. Destroying the plant itself. It is a new disease.

Mr. WADSWORTH. Mr. President, may I ask the Senator from Florida if this item has been estimated for by the department?

Mr. FLETCHER. I say the investigation and study and treatment of this particular disease has not been specifically estimated for. It may be included in the general estimate for the treatment of diseases of plants, I assume.

Mr. WADSWORTH. That is my own impression, that this same work can be done under another item of this bill, and I therefore raise the point of order.

Mr. FLETCHER. I will say to the Senator that it can not be done, because the other provisions of the bill will be devoted to other investigations that are contemplated under it; and this is not one of them, because it is a new disease.

The PRESIDING OFFICER. The Chair will be compelled to sustain the point of order.

Mr. BROUSSARD. Mr. President, I offer an amendment, which I should like to have read at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 16, after line 9, it is proposed to insert:

That the act of August 30, 1890, entitled "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes" (26 Stat. L., 414), is hereby amended so as to authorize the Secretary of Agriculture, within his discretion and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico, South and Central America, the islands of the Gulf of Mexico, and the Caribbean Sea into those parts of the United States below the southern cattle-quarantine line at such ports of entry as may be designated by said joint regulations, and also subject to the provisions of sections 7, 8, 9, and 10 of said act of August 30, 1890. That all such cattle, when entered, shall be subject to the regulations governing the handling and transportation of cattle from the districts infected with the southern, Texas, or splenetic fever.

Mr. BROUSSARD. Mr. President, it is not necessary for me to make any extended argument explaining the operation of the law under which cattle are imported into this country. I am fully aware that every Senator here is familiar with the method of procedure; but it is necessary for me briefly to state the facts, in order to point out the necessity for this amendment.

The legislation regarding the importation of cattle into this country is this: The law prohibits the importation of cattle from anywhere into the United States; and then the law provides that if the Secretary of the Treasury and the Secretary of Agriculture should decide that the herds in some country from which application is made to permit the importation of cattle are free from disease, they shall issue a proclamation to that effect, and thereafter, with the proper examination of the particular cattle intended to be imported, the ports of this country are open to the importation of such cattle.

In pursuance of the discretion vested in the two Secretaries under all of the acts of Congress making these provisions, dating back many years, cattle from Canada and from Europe generally have been permitted to be brought into the country through any port at which they were presented, provided that the regulation as to their inspection had been carried out. Cattle from the South, from Mexico, from South America, from Central America, from Cuba, and from Porto Rico, have never been permitted to enter the ports of the United States, because throughout that territory the cattle are infected with ticks that propagate the Texas or splenetic fever. The discretion in the act of 1890, which it is proposed to amend, undoubtedly exists now in the Secretary of the Treasury and the Secretary of Agriculture to open up the ports of the country to the importation of these cattle. There can be no doubt that Congress intended originally to vest that discretion in those two Secretaries, and to permit them to open any port in the country that they saw fit to open, provided the proper regulations were applied and the cattle herds of the country were not endangered by such importations.

The law being such, application not having been made to these Secretaries to open any ports of the country, some years ago, in 1911, when the Agricultural appropriation bill was pending in Congress, an amendment was placed in that appropriation bill opening the ports of Texas to the importation of cattle from Mexico; and since 1911, by virtue of this provision of the appropriation act of 1911, cattle from Mexico have freely entered the ports of Texas south of the quarantine line.

Subsequently, other nations south of the quarantine line applied to receive the same privileges that were accorded to Mexico with regard to the importation of cattle into the State of Texas, and the department submitted the matter to the Department of Justice. The Attorney General ruled that under the treaties between the United States and the Republics of Central America and the Republics of South America, which guaranteed impartial treatment to those countries, or such treatment to those countries as was granted to other countries, no doubt existed in his mind that the permission to import cattle from Mexico into Texas at the same time authorized the importation of cattle into the ports of Texas from every other Republic south of the quarantine line. So that by implication the right to enter these cattle into Texas was extended to every country south of the quarantine line.

The purpose of this amendment is to give to the ports of other States situated south of the quarantine line the same treatment that is now being accorded to the ports of the State of Texas. For instance, New Orleans is very much closer to Central America than are the ports of Texas. Large numbers of vessels ply between Central American countries and New Orleans; and these vessels are not permitted to carry cattle into New Orleans because the department holds that inasmuch as Congress has seen fit to legislate the right to import cattle into Texas, and not to extend that right to Louisiana or to Alabama or to Mississippi, the department is compelled to assume that Congress has taken away from the department that discretion which the law originally had granted the two Secretaries in applying the act of 1890.

The result of that is that cattle can come into Texas freely now under such regulations as the department has enacted regarding their importation, but they can not come into Mobile, they can not come into New Orleans, they can not come into Gulfport, they can not come into any port in Florida, nor in Georgia, nor in Mississippi, nor in Alabama, nor any of the ports in California, lower California being south of the quarantine line. None of the ports located in these various States are permitted to receive any of these cattle.

Mr. VARDAMAN. Mr. President, it seems to me that was evidently a legislative oversight.

Mr. BROUSSARD. No, Mr. President; I do not think it was a legislative oversight. I think it was due to the assiduousness of the Member from Texas in the House who introduced this amendment, and he did not look to any other ports except the port of his own State. I do not think it was an oversight at all.

Mr. VARDAMAN. It might not have been an oversight on his part, but it evidently was upon the part of Congress.

Mr. BROUSSARD. Yes; it was an oversight on the part of Congress in not enacting general legislation instead of enacting legislation made applicable only to the ports of one State, excluding the ports of all other States similarly situated to the ports of that State.

Mr. VARDAMAN. The purpose of my inquiry was to bring out the fact that there is not anything connected with the ports of Louisiana and Mississippi and Alabama and Florida and California which would not give equal protection against the importation of diseased cattle with that which they have in Texas. There is no special reason that the Senator knows anything about why Texas should be given that monopoly, is there?

Mr. BROUSSARD. There was no special reason, and there is no special reason now, why the privilege that now exists as to the ports of Texas should not be extended to the ports of the Senator's State or those of my own State.

Mr. WADSWORTH. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from New York?

Mr. BROUSSARD. Certainly.

Mr. WADSWORTH. Is it the statement of the Senator from Louisiana that the tick-infested cattle from Mexico are now permitted to be brought into the State of Texas?

Mr. BROUSSARD. Oh, yes. They not only are now being permitted to be brought into Texas, but up to recently, some time ago, when the Government of Mexico imposed an export tax of $20 a head on the exportation of cattle, they were coming across the border in great numbers. In three months as many as fifty-odd thousand head crossed over the Rio Grande into Texas, and from Texas they were shipped all over the country.

Mr. WADSWORTH. Mr. President, I want to make my inquiry perfectly clear. I am somewhat familiar with the importations of cattle from Mexico into Texas, but the ones with which I am familiar are not tick-infested cattle. Do I understand the Senator to say that our Federal Government, under an act of Congress, is permitting tick-infested cattle to come into this country?

Mr. BROUSSARD. I do not quite understand what the Senator understands by "tick-infested cattle." If the Senator understands by that expression, as written in the law, that these

cattle have ticks on them—no; they are not permitting that. The word "tick-infested," as written in the amendment and as interpreted at the department, does not mean cattle infected with ticks at the time of their importation, but cattle that have had ticks or that come from tick-infected country and that have been cleaned of the ticks and brought across the border. Such cattle are being brought across the border into Texas.

I may say to the Senator that if he will look into the regulations under which the cattle are brought into Texas from Mexico and from other countries under the provisions of the appropriation bill of 1911 he will find that the department, exercising its discretion with regard to the infection of these cattle, with regard to the ridding of the ticks in case they are infected with ticks, has made provision, and enforced these provisions, as I understand, through the medium of a corps of inspectors on the border, who inspect these cattle and see that they are treated in such a way that when brought across the border they do not endanger the cattle of Texas. As a matter of fact, Mr. President, after these cattle have been brought across the border they fall within the purview of the quarantine law of the country, and they enjoy the same privileges as to shipment everywhere in the West and to the market that are accorded to native cattle that come from Texas in that area, or come from Louisiana, or Arkansas, or any other State where the ticks exist.

It is not the purpose of this amendment to permit the importation into this country of cattle that are infected with ticks or that are infected with the fever. It is the purpose of this amendment to permit the Secretary of Agriculture and the Secretary of the Treasury to exercise that discretion which the act of 1890 placed in them, and which has been taken away from them by their own construction of it, by virtue of the fact that the amendment of 1911 was placed in the appropriation bill of that year; and the purpose of this amendment is to permit the same thing to be done, if desired, with regard to the same cattle coming from the same countries—to permit them to enter the port of New Orleans or the ports of Florida as they now enter the ports of Texas.

This amendment, Mr. President, has the approval of the Secretary of Agriculture. In fact, the bill which I originally introduced was not worded as is the amendment which I have offered. The bill was submitted by the Committee on Agriculture and Forestry to the Secretary of Agriculture, and it has been remodeled in this amendment in order to meet the requirements which the Secretary of Agriculture thought proper to write into the law in order to throw the proper safeguards around native cattle. So it not only meets with the approbation of the Secretary of Agriculture, but it is written by the department itself and submitted to Congress for its consideration.

I have here a letter from the Secretary of Agriculture, addressed to the chairman of the Committee on Agriculture and Forestry of the Senate [Mr. GORE], in which the Secretary strongly urges that this bill be passed, because he says that if these cattle are permitted to enter the ports of Texas there is no reason why they should not be permitted to enter other ports similarly situated with regard to this matter as are the ports of Texas. The bill has been considered; hearings have been given before the Agricultural Committee; and while the committee was not able to report the bill in the regular way, the committee has been polled and the Senator from Oklahoma [Mr. GORE] has made a favorable report on the bill as it appears in the amendment, and that bill is on the calendar, and I trust the Senate will see its way clear to put these other ports on a parity with the ports in the State of Texas.

Mr. SHEPPARD. Mr. President, I think it but proper to say that the National Live Stock Association, representing the cattle interests of the Nation, as well as the Texas Cattle Raisers' Association, are very strongly opposed to this measure. They fear the introduction of foot-and-mouth disease if quarantine restrictions on the importation of cattle into this country are further modified.

It is a well-known fact that many of these South American countries contain foot-and-mouth disease. It is an equally well-known fact that if we have another outbreak of the foot-and-mouth disease in this country it may mean almost the total destruction of the cattle of the Nation. During the last outbreak I believe the damage inflicted ran into the millions. The Government itself expended some $3,000,000 in repaying the owners of cattle that had to be confiscated.

The live-stock interests of the Nation are opposed to an extension of the exemptions that exist at present in so far as quarantine regulations are concerned. At their last annual meeting they passed a resolution against any measure of this sort. I say that if anything is to be done the privileges that are now allowed should be withdrawn and that there should be no movement in the other direction—no further movement in the way of more liberal regulations. We can not be too strict in the matter of quarantine protection against the entry of diseased cattle. I want no exception made of my State. Let the restrictions be uniform and rigid, not uniformly lax. We are headed in the wrong direction. That is all.

Mr. VARDAMAN. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER (Mr. POMERENE in the chair). Does the Senator from Texas yield to the Senator from Mississippi?

Mr. SHEPPARD. Certainly.

Mr. VARDAMAN. The Senator, then, I suppose, is in favor of closing the ports of Texas to them; is he not?

Mr. SHEPPARD. So far as I am concerned, it is entirely agreeable to me to have Texas placed under the same restrictions as the other States.

Mr. VARDAMAN. There is no more danger of the foot-and-mouth disease coming in through Mobile than there would be of its coming in through Galveston or Brownsville.

Mr. SHEPPARD. These cattle can not come in through El Paso, Tex., now, as I understand.

Mr. BROUSSARD. They can and do come through Galveston.

Mr. SHEPPARD. I mean El Paso.

Mr. BROUSSARD. El Paso is nearly on the quarantine line. Of course, they never could come through El Paso.

Mr. SHEPPARD. That is the distinction I wanted to make. They are not admitted indiscriminately into the State of Texas. They are only admitted into that part of Texas below the quarantine line; and they are only admitted, under the terms of this law, from Mexico itself. I think that admission below the line is due to the fact that a number of the ranchmen in Texas living on the Rio Grande, owning large ranches directly across the river, having the matter carefully in hand, were in position to bring cattle into Texas without the danger that would attend shipments from all the Spanish Americas. Gentlemen are making a mere local exemption the basis of general legislation, and a general modification of quarantine rules, the consequences of which no man may measure.

Mr. VARDAMAN. If they are brought into Texas, they are shipped by the ranchmen to Texas from every other part of the United States.

Mr. SHEPPARD. They can not except under the most rigid restrictions and except for immediate slaughter.

Mr. VARDAMAN. But it would apply to a shipment from Mobile, would it not?

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from Louisiana?

Mr. SHEPPARD. I had yielded to the Senator from Mississippi.

Mr. VARDAMAN. I withdraw.

Mr. BROUSSARD. I know the Senator from Texas does not want to make a statement except it be in keeping with conditions.

Mr. SHEPPARD. The Senator is correct about that.

Mr. BROUSSARD. There are some ports in Texas which these cattle enter. They do not enter into El Paso because El Paso is north of the quarantine line. The law does not permit their importation there, nor would this amendment permit their entrance north of the quarantine line.

But the Senator is mistaken when he says the cattle are brought only from Mexico. They are brought in from everywhere, and Galveston is receiving them now. It was at the last report, four or five weeks ago, receiving cattle from Mexico and elsewhere south. That port is open now to all these cattle.

Mr. SHEPPARD. My information is to the contrary. Of course, I do not question that the Senator believes he is correct.

Mr. BROUSSARD. I get my information directly from the Department of Agriculture, from the Secretary.

Mr. VARDAMAN. I wish to ask the Senator from Louisiana a question, if the Senator from Texas will pardon me. The terms of the Senator's amendment do not change the rules under which the cattle come from Mexico to Texas now?

Mr. BROUSSARD. No.

Mr. VARDAMAN. The rules and regulations will prescribe and apply to the ports of Mobile and Gulfport and New Orleans that are now in force in parts of Texas?

Mr. BROUSSARD. The Senator is correct.

Mr. UNDERWOOD. Mr. President, the amendment offered by the Senator from Louisiana is a very important amendment to a large number of people in this country, and it is absolutely necessary to correct an error that might be corrected pos-

sibly in the executive department of the Government, but upon which the executive department of the Government are not willing to act against the ports of other States except Texas. There is no disease communicable by the admission of tick-infected cattle. The ticks give them a fever, but the cattle can not communicate that fever except through a tick.

The purpose of this amendment is to allow cattle to be imported into the United States from tick-infested countries after the tick has been removed from the cattle by more restrictive rules as prescribed in this provision than the rules that are now in vogue by the Department of Agriculture in allowing tick-infested cattle to be removed from the far Southern States below the quarantine border into Northern States.

As I understand it, it is in the lower portion of the United States, although we are gradually getting the ticks out, and the quarantine line of it is gradually moving to the Gulf of Mexico. You got the benefit of the start. They cleaned up your States and they are moving to ours.

When cattle coming from the tick-infested portion of Alabama or Texas are moved north they must be dipped. I think they are required to wait five days and then be dipped again, and when that is done, under the rules of the Department of Agriculture, you can ship cattle from tick-infested countries, from Alabama into New York, Indiana, Ohio, or any other place north of the quarantine line.

Under the peculiar wording of the statute to-day the Secretary of Agriculture holds that if they come from a tick-infested country—I do not mean tick-infested cattle now, that are going to be moved, because the law does not allow any tick-infested cattle to be moved, but if they come from a country where the ticks have not been cleaned out of the country he can not make the regulations between those countries for cattle coming into the United States apply that he makes apply between the tick-infested portion of the South and the quarantine portion of the North.

I have had this matter up with the Secretary of Agriculture. I know his views on the question. He has given a report to Congress in favor of this legislation. It is not subject to a point of order. It has been reported here by the committee. It is in order to go on this bill, and it comes here with the approval of the department. It does not carry any disease whatever. It has no more to do with the foot-and-mouth disease than a child having chicken pox has to do with it.

The facts are that at one time in the history of the legislation of this Congress, through an appeal from Texas in the interest of the cattlemen of Texas, a law was passed, and Congress did not realize the effect of the law, and to-day Texas has a monopoly on the importation of cattle from South and Central America, and Texas to-day is trying to maintain that monopoly against a straight, plain provision of the Constitution of the United States. Naturally enough the Cattle Association of Texas, which has had a monopoly on the importation of cattle, has been trying to maintain it.

Mr. SHEPPARD. I shall say to the Senator it is the National Live Stock Association that has objected to this measure, as well as the Texas association.

Mr. UNDERWOOD. That is tautological. I have had the representatives of the National Live Stock Association up here before a committee, of which I was chairman, many times, and the head and front always comes from the State of Texas. I am not reflecting on the State of Texas in that regard, because it always is most ably represented.

Mr. BROUSSARD. Will the Senator permit me to make a short statement right there?

Mr. UNDERWOOD. I will.

Mr. BROUSSARD. This same association two years ago, when the House committee was giving a hearing upon this same proposition, was represented, and the representatives of the association got together, and we wrote the bill which I introduced here, and they agreed to it. They had no objection to it at that time, but agreed to the proposition. I believe the Senator from Texas himself introduced a bill at that time looking to the same purpose, though I am not sure.

Mr. SHEPPARD. I shall say frankly to the Senator that I introduced such a bill in a former Congress, not understanding the effect of it at the time. After looking into the matter I did not press the measure, and did not reintroduce it in the present Congress.

Mr. BROUSSARD. But let me state to the Senator the representatives of this association, conjointly with myself and a subcommittee of the House Committee on Agriculture, agreed upon the bill, of which this was a substitute, carrying the same idea.

Mr. SHEPPARD. Through what representative?

Mr. BROUSSARD. What was the name of the attorney?

Mr. SHEPPARD. S. H. Cowan?

Mr. BROUSSARD. Yes; Judge Cowan and I sat up nearly three-quarters of a night agreeing on a particular provision of this measure, and the amendment suggested by the Secretary of Agriculture is the identical wording of the bill we agreed upon.

I will state further that the association at its meeting, after having agreed there on the proposition, decided to oppose the thing to which they had already agreed. They did not say they were opposed to the importation of cattle into the United States, but they said they were opposed to the further extension of the privilege which Texas enjoyed. That is their position. In other words, they want the law for Texas, but they do not want that privilege extended to the other States north of the line.

Mr. UNDERWOOD. The Senator from Louisiana is evidently right. I do not criticize the people of Texas, having this very great monopoly granted to them, for being unwilling to give it up, but Congress did not intend to grant the monopoly to them. The whole situation was this: Under the law as it stood, although there is not a communicable disease in tick-infested cattle, the tick gives them a fever. When you have the tick off there is no communicable disease. It has nothing whatever to do with foot-and-mouth disease, but I suppose that it was represented to the Live Stock Association, and Texas naturally did not want to come to the Live Stock Association and say we want to maintain a monopoly against our sister States, but they said there might be a spread of the disease, and therefore they put it on the foot-and-mouth disease, because everybody had heard about it.

Now, I challenge the Senator from Texas to produce one line—and I will vote against this bill if he can—from the Secretary of Agriculture to say that this bill relates in any way to the foot-and-mouth disease or any other communicable disease.

Mr. SHEPPARD. I shall say to the Senator that it is my information that foot-and-mouth disease does exist or has recently existed in Central and South America.

Mr. UNDERWOOD. Certainly; but there is nothing in this bill that allows any cattle with foot-and-mouth disease to come in here.

Mr. SHEPPARD. It is frequently impossible to detect foot-and-mouth disease in cattle. The symptoms are frequently invisible for weeks.

Mr. UNDERWOOD. If you eradicate the tick question, you can import cattle from any other State that come into Texas or anywhere else, unless they come from a country where there is foot-and-mouth disease, and they can not come into any port in the Union then. They can not if you pass this law. They can not come into Texas to-day under the monopoly that is now enjoyed under the special legislation.

Now, the whole situation is this: Some years ago Texas cattlemen wanted—or, at least, they said they wanted—to drive their cattle across the border into Mexico to enjoy the pasture lands and bring them back. As the law prohibited the Secretary of Agriculture, under his regulations, to allow them to come back, they asked for an amendment, and, if I recollect aright, it was put on an appropriation bill, but I am not sure about that, simply allowing, not tick-infested cattle, but cattle coming from tick-infested countries, to go through the ports of Texas into that portion of Texas that was below the quarantine line.

Mr. CULBERSON. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Texas?

Mr. UNDERWOOD. I yield.

Mr. CULBERSON. I ask the Senator from Alabama if the amendment does not provide for the admission of tick-infested cattle?

Mr. UNDERWOOD. No; it does not.

Mr. CULBERSON. I ask the Secretary to read it.

Mr. UNDERWOOD. I happened to consult with the Secretary of Agriculture about it; I talked it over with him; I know it does not. It provides that cattle may be imported from tick-infested countries after the ticks have been eradicated.

Mr. CULBERSON. I ask the Secretary to send me the amendment.

Mr. CATRON. Let him read it.

Mr. UNDERWOOD. I should like to have it read.

The VICE PRESIDENT. The Secretary will read the amendment.

The Secretary read as follows:

That the act of August 30, 1890, entitled "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes" (26 Stat. L., p. 414), is hereby amended so as to authorize the Secretary of Agriculture, within his discretion and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico—

Mr. CULBERSON. That is enough.

Mr. UNDERWOOD. It is under the regulations not tick-infested cattle but cattle coming from tick-infested countries after they have been dipped.

Mr. CULBERSON. That is not the language of the amendment.

Mr. UNDERWOOD. He is merely describing the cattle, not the imported cattle. He is describing the cattle in the country from which they come, not the cattle as they come into the United States. I have no doubt about that. If the Senator from Louisiana has the Secretary's letter, I would be glad if he will send it to the desk in my time and have it read.

Mr. POMERENE. Mr. President——

Mr. UNDERWOOD. I should like to have the balance of the amendment read.

Mr. POMERENE. I was just going to ask to have that done for the information of the Senate.

The Secretary resumed and concluded the reading of Mr. BROUSSARD'S amendment, as follows:

to permit the admission of tick-infested cattle from Mexico, South and Central America, the islands of the Gulf of Mexico, and the Caribbean Sea into those parts of the United States below the southern cattle quarantine line at such ports of entry as may be designated by said joint regulations and also subject to the provisions of sections 7, 8, 9, and 10 of said act of August 30, 1890. That all such cattle, when entered, shall be subject to the regulations governing the handling and transportation of cattle from the districts infected with the southern, Texas, or splenetic fever.

Mr. BROUSSARD. Mr. President——

Mr. UNDERWOOD. Let me say one word here. As I said awhile ago, the regulations that the bill refers to are the regulations in the law to-day that require tick-infested cattle before they cross the quarantine line to have the ticks taken off them by dipping and after waiting five days to be dipped again. Under those circumstances our experts say they can not carry any ticks. So I say to the Senator from Texas that if you will just read that with the statutes and rules and regulations before you, you will see that it does not provide for the importation of tick-infested cattle but cattle coming from tick-infested countries where the presumption was they had ticks on them before they were treated for the eradication of ticks by the Agricultural Department.

Now I ask that the letter of the Secretary of Agriculture may be read.

Mr. SMITH of South Carolina. I should like to ask the Senator from Alabama if the provision contemplates the dipping of the cattle before they are shipped from the country in which they originate.

Mr. UNDERWOOD. The Secretary of Agriculture told me himself that he would not favor any regulation that did not require the dipping of cattle before they left the port of the country from which they are imported, and the law requires that.

Mr. BROUSSARD. If the Senator from Alabama desires, I can send the letter of the Secretary of Agriculture to the desk to have it read.

Mr. UNDERWOOD. I would be obliged to the Senator.

Mr. BROUSSARD. If the Senator will permit me, let me state to him that the act of 1911, by which these cattle are imported into Texas, uses the same words, "tick-infested cattle," but that did not prevent the department from cleaning them of ticks before permitting them to cross the border.

Mr. UNDERWOOD. There is no question about that. I asked the Secretary to read the letter.

The Secretary read as follows:

DEPARTMENT OF AGRICULTURE,
Washington, May 29, 1916.

Hon. THOMAS P. GORE,
Chairman Committee on Agriculture and Forestry,
United States Senate.

DEAR SENATOR GORE: The memorandum of May 26, 1916, of the clerk of the Senate Committee on Agriculture and Forestry advises me of the committee's desire for a report on S. 3351, introduced by Senator BROUSSARD on January 10, 1916, entitled "A bill to amend the act of August 30, 1890," and on H. R. 12717, intended to be proposed by Senator BROUSSARD to the bill making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, relating to the subject matter of S. 3351.

Section 6 of the act of August 30, 1890 (26 Stat., 414), prohibits the importation into the United States of cattle which are diseased or infected with any disease or which shall have been exposed to such infection within 60 days next before their exportation.

The act of March 4, 1911 (36 Stat., 1235), amended the act of August 30, 1890, "so as to authorize the Secretary of Agriculture, within his discretion, and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico into that part of Texas below the southern cattle quarantine line."

Two questions have been raised upon the act of March 4, 1911, namely, (1) whether by limiting importations of tick-infested cattle to the State of Texas the act is not in contravention of Article I, section 9, of the Federal Constitution, which provides that "no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another"; (2) whether, by limiting the importation of tick-infested cattle to such as shall come from the Republic of Mexico the act is not a discrimination against South and Central American countries, with which there are existing treaties guaranteeing commercial advantages equal to those accorded the most favored nation.

I infer that the chief purpose of both S. 3351 and H. R. 12717 is to accord to ports of other States situated similarly as Texas is to the cattle quarantine area the same privilege that is now accorded to Texas. So far as Central and South American countries, with whom the United States has treaties guaranteeing equal commercial advantages with those of the most favored nation, are concerned, I may state for your information that the department has adopted the view that by virtue of those treaties tick-infested cattle from those countries must be admitted equally with tick-infested cattle from Mexico. The Attorney General so advised the Secretary of State in an opinion of January 12, 1915.

S. 3351.

With the purpose of this bill the department is in full accord. The following amendments are suggested for the reasons hereinafter stated:

1. Page 1, line 9, strike out "sixteen" and insert in lieu thereof "fourteen." The correct reference to the act of August 30, 1890, is Twenty-sixth Statutes at Large, page 414.

2. Page 1, line 13, strike out "tick-infected" and insert in lieu thereof "tick-infested." The suggested substitute is the correct designation of the class of cattle referred to in the bill.

3. Page 2, line 3, insert before the word "quarantine" the word "cattle," so that the line mentioned will be described as the "cattle quarantine" line.

Insert after the word "line" the words "at such ports of entry as may be designated by said joint regulations, and also subject to the provisions of sections 7, 8, 9, and 10 of said act of August 30, 1890."

Beginning with the word *"Provided,"* strike out all the rest of page 2 and down to and including line 9 on page 3.

4. Page 3, line 10, strike out the figure "3" and insert in lieu thereof the figure "2."

If amended as suggested above, the bill would read as follows:

"Be it enacted, etc., That the act of August 30, 1890, entitled "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes' (26 Stat. L., 414), is hereby amended so as to authorize the Secretary of Agriculture, within his discretion and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico, South and Central America, the islands of the Gulf of Mexico and the Caribbean Sea into those parts of the United States below the southern cattle quarantine line at such ports of entry as may be designated by said joint regulations, and also subject to the provisions of sections 7, 8, 9, and 10 of said act of August 30, 1890.

"SEC. 2. That all such cattle when entered shall be subject to the regulations governing the handling and transportation of cattle from the districts infected with the southern, Texas, or splenetic fever."

The bill authorizes the Secretary of Agriculture to permit the admission of tick-infested cattle "within his discretion and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury." Ample authority is thus conferred upon the Secretaries of the Treasury and Agriculture to make regulations, if deemed advisable or necessary for carrying out the act, to require each of the affidavits mentioned in that part of section 1 suggested for elimination from the bill. It is quite doubtful whether these several affidavits, if required, would be of sufficient credibility upon which to admit cattle into the United States.

It is necessary, in order to safeguard the health of domestic cattle, that tick-infested cattle before admission must be inspected, perhaps in many cases dipped, and undoubtedly at times held in quarantine at the port of entry. These things can only be done at ports where the department has or can establish proper facilities therefor. Hence it is quite important that the ports of entry be designated by the regulations of the Secretaries of Treasury and Agriculture, and one of the amendments suggested above is intended to accomplish this. The act of 1890 confers upon the Secretary of Agriculture and the Secretary of Treasury the power of designating the ports of entry for cattle which are not diseased, or, in other words, those which are authorized by that act to be imported into the United States.

As the cattle which are authorized by the act of 1890 to be imported are subject to certain restrictions and conditions mentioned in sections 7, 8, 9, and 10 of that act, it is quite important that tick-infested cattle, which will be admitted if the bill under consideration is enacted, shall also be subject to the same restrictions and conditions. For that reason one of the above suggested amendments expressly provides that tick-infested cattle imported into the United States shall be subject to those sections of the act of 1890 as well as to the provisions of the bill. By this amendment, also, tick-infested cattle imported into the United States will, equally with other cattle allowed to be imported under the act of 1890, be subject to such quarantine as the Secretary of Agriculture may find to be necessary. Hence section 2 of the bill may well be stricken out.

H. R. 12717.

The purpose of this bill is evidently the same as of S. 3351. It is suggested that this bill be amended in accordance with the suggestions above mentioned.

Inasmuch as the amendment, if enacted as proposed by Senator BROUSSARD, will become part of an annual appropriation act, it is also suggested, in order to eliminate doubt as to the permanent character of the provision, that the word "hereafter" be inserted in line 2 between the words "as" and "to."

It is the opinion of the department that there is no controlling reason why tick-infested cattle from Mexico, South and Central America may not be admitted into any parts of the United States, as well in as outside of the cattle-quarantine area, provided the department be authorized to designate the ports of entry and make rules and regulations prescribing the conditions under which they may be admitted. This suggestion is offered in order that the committee may consider whether it cares to recommend the amendment of the bill so that it will admit tick-infested cattle into parts of the United States within as well as outside the cattle-quarantine area.

Very truly, yours, D. F. HOUSTON, *Secretary.*

Mr. UNDERWOOD. As the Secretary states, the Department of Agriculture is in entire accord with the purpose of this bill. Nobody can for a minute suspect that the Secretary of Agriculture desired these cattle to be imported into this country;

but the real facts are these, as I stated a while ago: A law was passed to authorize the ranchmen of Texas to drive their cattle across the border for grazing purposes. They had to mention the ports. The Secretary of Agriculture construed that that law related to water ports as well as land ports; and when the countries of Central and South America said they had a favored-nation clause with this country, they extended that construction not only to cattle coming from Mexico into Texas, but to cattle coming from all South America into Texas, with what result? A direct discrimination against every other port in America.

It is not merely the question of importing ticks that is concerned, but a large portion of the commerce of this country may be deflected by this law, because a ship wants to carry a cargo both ways; and when you load it with cattle from South America and say that it can only be landed in the ports of Texas—the ship is in Texas to load with your export goods to take it out—you deflect commerce from the other ports of the United States to Texas because you limit where the cargo can come into the United States. It does not affect the cattle below the quarantine line to-day. Any shipment of the cattle that is landed in Texas can be put on a railroad car and carried to any portion of the United States that is below the quarantine line.

Mr. SHEPPARD. Not now.

Mr. UNDERWOOD. I got my information from the Secretary of Agriculture within 30 days.

Mr. SHEPPARD. Under the last ruling you can not ship tick-infested cattle from one State into another unless the authorities of the State to which the cattle are to be shipped consent.

Mr. UNDERWOOD. Certainly. Tick-infested cattle you can not, but these are not tick-infested cattle.

Mr. SHEPPARD. You can not ship from one State to another below the quarantine line unless the authorities of the State to which you ship agree that it may be done.

Mr. UNDERWOOD. Of course, no State wants the cattle from below the quarantine line where they are infected.

Mr. SHEPPARD. The rule applies either above or below.

Mr. UNDERWOOD. I say below the quarantine line. Why should some one in Alabama, Mississippi, Louisiana, Georgia, Florida, or South Carolina object to Texas cattle, tick infested, coming into their State when they are already in that condition?

Mr. SHEPPARD. Surely there would be objection in the parts of those States that have been cleaned up, cleared of ticks, and taken out of the quarantined area.

Mr. UNDERWOOD. I said below the quarantine line and not above it.

Mr. SHEPPARD. Large sections of those States have been cleaned up, and are now tick free.

Mr. UNDERWOOD. But I am not talking about places above the border. I say it is the case under the law as it exists to-day, and I talked with the Secretary of Agriculture about it. The Senator from Texas is wrong. When these cattle are landed in Galveston they can be put on a railroad train and carried into Louisiana, Alabama, or Georgia, but we have to pay the freight rate from Texas to get them there; and, more than that, by your legislation you have diverted the course of that ship and made it go to the ports of Texas instead of the ports of other States.

Of course the law is not constitutional. I do not think there is a question about it. I wrote the letter to the Secretary of Agriculture that he refers to in the letter which he sent to the Senate, calling his attention to the violation of the constitutional provisions. But the Secretary of Agriculture is unwilling to determine that question himself. He say it must go to the courts or it is for Congress to enact legislation. The section is very clear. The Constitution provides:

> No preference shall be given by any regulation of commerce or revenue to the ports of one State over another.

When you put a law on the statute books which by construction says that you can import as many cattle as you want from Central and South America into the ports of Texas and leave the law on the statute book which says you shall not import them into the other States of the Union, is not that a discrimination?

Mr. SHEPPARD. The law does not say that they may now be admitted from Central and South America. It says that they may come from Mexico.

Mr. UNDERWOOD. The Senator is catching in the bark. The Senator understands this question as well as I do. When this law was originally enacted it had no reference to Central and South America. That has been explained. It related only to Texas. Congress did not contemplate anything else but to allow the ranchmen of Texas to drive their cattle across the border and back; but by a construction of a department of this Government under the favored-nation clause they said that when you admit these cattle from Texas you have got to admit them from Central and South America, and they are being admitted to-day under the law as construed by the department, and properly construed in that respect.

So you have a statute on the books to-day creating a monopoly for Texas against the Constitution of the United States. The regulations as prescribed in this statute will not allow a single herd of cattle or a single cow or steer to come into the United States where the ticks have not been removed by stricter regulation than they are removed when they come from the tick-infested parts of the United States and go in above the quarantine zone. It can not hurt anybody. The whole proposition involved in the case is that Texas, by the construction of the law, has a monopoly in the interests of its cattlemen, in the interests of its commerce.

Mr. SHEPPARD. Will the Senator allow me?

Mr. UNDERWOOD. I am not here to argue about what is necessary for Texas. I know that it is in the interest, especially when the troubles in Mexico are over, for the cattlemen of your State to drive their cattle across the border and bring them back. I would not interfere with your business; but what I object to is that you are trying to interfere with the business of my constituents. That is where the objection comes.

Now, I say to the Senator from Texas to-day that if he defeats this piece of legislation, he is doing an evil turn to the people of his State, because sooner or later the statute under which you maintain your monopoly will go to the courts of the United States and will be repudiated as unconstitutional, and it can not help from being repudiated, and then you have taken from your own people a harmless privilege to the balance of the United States, and a beneficial privilege that they are given to-day that you are trying to deny to the constituency that I represent.

Mr. SHEPPARD. Mr. President, the Senator from Alabama calls the right to admit diseased cattle a privilege—a privilege which ought to be extended to every other part of the country below the quarantine line.

Mr. UNDERWOOD. If the Senator will allow me, I deny that they are diseased cattle.

Mr. SHEPPARD. I think they are. That is why so many restrictions are thrown around their importation and shipment. It is my position that the restrictions ought to be made sufficiently rigid all along the line to carry out the spirit and purpose of the quarantine. If any part of the border under quarantine has a monopoly, the monopoly ought to be removed. Let us not use the fact that diseased or tick-fevered cattle may be admitted into one section of the country as the basis of the claim that they should be admitted into every other section below the quarantine line.

The Senator talks about destroying the business of his constituents. I say to him that if the foot-and-mouth disease is brought into one of the southern ports and breaks out again among the cattle of the country their business will be seriously imperiled, if not altogether destroyed.

Mr. BROUSSARD. May I ask the Senator from Texas a question?

Mr. SHEPPARD. Certainly.

Mr. BROUSSARD. The Senator from Texas has been talking about the foot-and-mouth disease being imported through the operation of this amendment. Does not the Senator know that the foot-and-mouth disease is unknown in the Tropics?

Mr. SHEPPARD. I do not. On the contrary, I understand it is in existence in Central America, or has been found there and in South America in recent years. The Senator's bill includes more than the tropical countries, however. It embraces the Southern Hemisphere.

Mr. BROUSSARD. Let me state to the Senator that the Department of Agriculture within the last five years has had that question investigated, and I have here a copy of their report, stating that the foot-and-mouth disease was unheard of in the Tropics. I talked with one of the commission—Dr. Dowling, I think it was—that was sent to Central America to conduct this investigation, and he stated that he had not been able to find any evidence that that disease was known to anybody in that section of country.

Mr. SHEPPARD. The National Live Stock Association of the United States makes the fear of foot-and-mouth disease in part the basis of its protest against enlarging the privilege already possessed by a certain section of our country below the quarantine line.

Mr. VARDAMAN. May I ask my friend from Texas merely one question?

Mr. SHEPPARD. Certainly.

Mr. VARDAMAN. The Senator from Texas seems to desire to save the balance of the Republic from the perils that are now suffered by Texas.

Mr. SMITH of South Carolina. That are enjoyed by Texas.

Mr. VARDAMAN. The perils that are enjoyed by Texas, by having——

Mr. SHEPPARD. Not at all. As has been explained, the operation of this law in relation to Texas applies for the most part practically to that section of Mexico immediately adjoining Texas, where the ranchmen of Texas own large tracts across the river. This merely gives them the privilege of driving herds across the river and bringing them back.

Mr. VARDAMAN. The practical effect has been to permit cattle to be shipped from South and Central American countries through the ports of Texas.

Mr. SHEPPARD. I think that phase of the matter has been largely exaggerated.

Mr. VARDAMAN. If the Senator from Texas thinks that is a mistake, we will grant, for the sake of this discussion, that it is a mistake. Now, all that the Senators from Alabama, Louisiana, Mississippi, Florida, and South Carolina desire is to be put on a dead level with Texas with reference to this privilege. We do not ask you to protect us at all or to protect our constituents, but just to let us enjoy the "peril" that you are enjoying; that is, that our constituents shall have the same opportunities which your constituents have, and you will permit us to acknowledge ourselves under a very great debt of gratitude to you. It may be that we are going to suffer from the foot-and-mouth disease; but let us have the pleasure of suffering it with Texas. All we want is to be treated as Texas is treated.

Mr. SHEPPARD. Then, why do you not leave the law as applying to Mexico only?

Mr. VARDAMAN. Well, that is not the law. As the Senator from Alabama [Mr. UNDERWOOD] has stated, the construction of the law and the effect of the law is to permit cattle to come from Central or South America into the United States through the ports of Texas. All we want is just to extend the law which Texas now enjoys to these other Southern States. If it is a bad law, let us suffer it; if it is a good law, we are entitled to it. But be it good or bad, immediate or remote, is of no moment just now. The chief desire of our hearts is to be put on a dead level with Texas.

Mr. SMITH of Arizona. Mr. President, this discussion is growing quite interesting to me. Ever since the unpleasantness with Mexico started I have had a very great deal of difficulty arising out of the fact, first, that they do not permit an American cattle owner owning lands on both sides of the border to drive his cattle across the Mexican border into Arizona.

Mr. BROUSSARD. The Senator from Arizona is correct.

Mr. SMITH of Arizona. In fact, I have to-day pending before the Agricultural Department a question as to some cattle owned by one Mr. Slocum, which were run across late at night by Mexicans, who attempted to seize them. Mr. Slocum, by the way, was originally a Texan. He got his cattle to the line and notified the Mexican authorities: "Here are my cattle; the Mexicans have 600 men here and a thousand yonder, and they are depredating on my herd. I have already lost 100. I can not have any relief." He drove those cattle across; he herded them against the international line on the American side, so as to keep them from the Mexican soldiers.

Mr. SHEPPARD. On what ground were those cattle kept on the other side?

Mr. SMITH of Arizona. They were kept on the other side on ground rented by the American, and they were taken from that side.

Mr. SHEPPARD. I asked for what reason were they kept on the other side? Why were the cattle prohibited from being brought over?

Mr. SMITH of Arizona. For the reason that every man in Texas keeps cattle on the other side—so as to get better grass than he has on his American plantation.

Mr. SHEPPARD. Why was it that you could not get them into the United States?

Mr. SMITH of Arizona. For two reasons: There is, first, the great export duty on the part of Mexico charging us now $10 in gold a head for the export and driving of American cattle——

Mr. SHEPPARD. That is not the question involved here.

Mr. SMITH of Arizona. Let us see whether or not it is. I do not usually talk away from the question that I apprehend is before us. If any man in Texas has permission to drive out of Mexico one head of cattle into any part of the United States——

Mr. SHEPPARD. It is subject to Mexican export duty, as much so as if it were coming into Arizona.

Mr. SMITH of Arizona. I am not talking about the duty. The Senator from Texas asked me what hindered this man from driving the cattle across. One thing was the Mexican duty, which amounts to confiscation. Another requirement, before he could come across with his cattle, was that they must be examined for ticks. If one head of these 600 cattle had been found to be infested with ticks he would be compelled to have them all dipped on the other side of the line, and they would be held for 30 days for a second dipping also, I think.

Mr. SHEPPARD. You are above the quarantine line, are you not?

Mr. SMITH of Arizona. If one of the cattle which were to be imported was found on an investigation to have ticks on it, that being true, the whole herd was very properly held until they were cleaned of ticks. A steer was killed; it was an estray in the herd.

Mr. SHEPPARD. That will apply to every section of the country, as it is cleaned up and taken out of the quarantined area.

Mr. SMITH of Arizona. Do you tell me that Texas has no privilege of bringing out of Mexico into Texas any cattle that Mississippi or any other State does not possess?

Mr. SHEPPARD. Not in that section outside the quarantine line. You can not bring them into El Paso.

Mr. SMITH of Arizona. But suppose they are infected?

Mr. SHEPPARD. I say you can not bring them into that part of Texas outside the quarantine line.

Mr. SMITH of Arizona. But not below the quarantine line. Does it apply to the people below?

Mr. SHEPPARD. No; the same rule does not apply below. But you are not in the same category with Alabama and Mississippi. They are within the quarantine line to a large extent.

Mr. SMITH of Arizona. It is exactly the same, so far as entering into the United States is concerned. If both sides of the line are infected, you can bring your cattle in, while if only the lower side is infected you can not bring them in. They are holding the cattle of which I was speaking to this day. The question is before the department as to whether or not those cattle which were driven across under the conditions which I have related shall be confiscated.

Mr. SHEPPARD. The adoption of this amendment would not change your situation.

Mr. SMITH of Arizona. The adoption of the amendment would have this effect: It would give every cattleman of Arizona on the Mexican border and every cattleman of California on the Mexican border every single privilege as to importing cattle into our country which is enjoyed in Texas, no matter what part of the world they came from, and under all conditions.

Mr. SMITH of South Carolina. Mr. President, if the Senator from Arizona will allow me a moment, I wish to state that the department is now trying to eradicate the cattle tick from my State. They have gotten down to a certain line approaching the coast. As I understand, the mysterious fever that killed cattle started in Texas. When an infected cow or steer was taken from Texas and shipped into certain latitudes it immediately infected other cattle and killed them, and for a long time it was called "Texas fever," because it was first discovered in Texas cattle.

Mr. SHEPPARD. The tick fever came originally from Spain.

Mr. SMITH of South Carolina. Anyhow, it is in this country.

Mr. SHEPPARD. The word "Texas" is a misnomer in connection with this fever. It ought not to be called "Texas fever," and I want here to register my protest against this historical injustice. Neither ought the tick to be called the Texas tick. The tick and the fever came with the cattle that were brought to the New World by the Spanish conquerors.

Mr. SMITH of South Carolina. Whether or not the name is a proper one, I do not know; but it is called Texas fever because, as I understand, it was first discovered in Texas cattle.

Now, the country along the Gulf coast inland for several miles, and from Florida up the Atlantic seaboard to some part of Virginia, is still the habitat of the ticks which produce Texas fever. South Carolina does not raise many cattle and does not export any or send them through interstate commerce. The same thing is largely true of Alabama; but on the plains of Texas, which are practically in the same latitude as South Carolina and Alabama, cattle are raised, and upon shipping them to other localities it was discovered that this fever would break out, and, upon investigation, it was found that a tick produced it.

Portions of Louisiana, Mississippi, Alabama, South Carolina, and Georgia, the coastal plain, lie still in the tick zone, so that the cattle imported into South Carolina from Central America or South America or Mexico, coming from tick-infested territory, would be landed in tick-infested territory. At present, before cattle can be shipped from Charleston, S. C., to Sumter, S. C., they have to be inspected and cleaned of the tick, because Sumter lies above the tick zone and Charleston lies below it. All that these gentlemen are asking is, as Louisiana, South Carolina, Georgia, and Alabama have exactly the same tick zone as Texas has, that their States be given the same privilege of importing cattle into their borders as Texas enjoys. That is all.

Mr. BROUSSARD. Mr. President, will the Senator permit me to put in the RECORD a short extract in regard to the statement that the foot-and-mouth disease exists in Central America. Here [exhibiting] is a report made after investigation by the Department of Agriculture extending very thoroughly over the entire Republic of Honduras, all of the herds being investigated. It contains this paragraph with regard to the foot-and-mouth disease:

Contagious foot-and-mouth disease appears to be unknown in Honduras and, to the best of my knowledge and belief, has never existed, nor does it now exist in that country.

Another paragraph of that report says that in Guatemala, Costa Rica, and the other Central American Republics the herds are in the same condition as are the herds in Honduras, and that the foot-and-mouth disease is unknown in those countries.

Mr. SHEPPARD. Does the Senator say that it does not exist in South America?

Mr. BROUSSARD. I am not talking about South America. There are few or no cattle, so far as I know, coming from South America into Texas; and if they came from a country in South America where the foot-and-mouth disease prevailed, under this regulation and under this provision the Secretary of Agriculture would be obligated to prevent their landing anywhere in the United States. So that question does not play any part at all, as the Senator from Alabama has said.

Mr. CATRON. Mr. President, I make the point of order against this amendment that it is general legislation, and therefore obnoxious to the rule.

Mr. UNDERWOOD. Mr. President, I understand from the Senator from Louisiana that this amendment has been reported favorably by a committee. Is that not so?

Mr. BROUSSARD. Yes, sir; that is, a bill in the same words as the amendment has been reported favorably by a committee and is on the calendar.

Mr. UNDERWOOD. I understand that under the rules of the Senate that makes it in order on a bill of this kind.

The VICE PRESIDENT. This seems to be an amendment of a statute. The amendment reads:

That the act of August 30, 1890, entitled "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes" (26 Stat. L., 414), is hereby amended so as to authorize the Secretary of Agriculture, within his discretion—

And so forth. It seems to be an amendment of a statute. If so, it is general legislation.

Mr. UNDERWOOD. As I understand, Mr. President, under the rules of the Senate, if a bill in identical terms with a proposed amendment has been reported by a committee, the amendment is in order. Of course, I will not contest the question at all that the amendment proposes legislation; there can not be any question about that; but it has been favorably reported to the Senate, and the same proposition is now on the calendar as a separate bill.

The VICE PRESIDENT. That does not authorize attaching it to an appropriation bill in the Senate, and the Chair must sustain the point of order.

Mr. BROUSSARD. Mr. President, may I ask the Chair to adopt the course pursued a while ago by another presiding officer, who held, the question being of great importance, that the discretion rested with the Chair of submitting the matter to the Senate, so that the Senate might be permitted to vote on the question as to whether or not it desired to include the amendment in the bill?

The VICE PRESIDENT. That may be brought about by an appeal from the decision of the Chair.

Mr. BROUSSARD. Mr. President, I should dislike very much to do that.

The VICE PRESIDENT. There has never been any feeling upon the part of the present occupant of the chair about an appeal from his decisions. The Chair has tried the other procedure a good many times, and he does not think it conducive to the dispatch of business. There is not any doubt about this being general legislation; but if the Senate wants to say that it is not, an appeal from the decision of the Chair will settle that question.

Mr. GORE. Mr. President, I should like to say just a word on that point. If the Senator from Louisiana appeals from the decision of the Chair, I shall be constrained to vote to sustain the Chair, because there can not be possibly any doubt about that. On the other hand, if the Chair should submit the question to the Senate to decide it in the first instance, I think then I would feel at liberty to vote otherwise.

The VICE PRESIDENT. The Chair understands that the Senator from Oklahoma, on an appeal from the decision of the Chair, would vote to sustain the Chair that it was general legislation; but if it was submitted originally to the Senator from Oklahoma, he would vote that it was not general legislation.

Mr. GORE. I will say, Mr. President, in the discussion this afternoon it was suggested that in that instance, while the formal question is as to the point of order, as a rule Senators exercise some discretion in respect to the question submitted and vote in accordance with their views on that question. That is the distinction I would make.

Mr. REED. Mr. President, I am heartily in favor of the proposition advanced by the Senator from Louisiana [Mr. BROUSSARD]. I should like to vote for it, but it seems that the point of order which has been made is fatal. The fact that it is referred to the Senate does not change the situation. I hope that the Senate is not going to adopt the suggestion that was made this morning that when the Vice President rules he must rule whether a proposition is violative of a rule, but when he sees fit to refer it to the Senate as a matter too grave for his own decision, the Senate will then proceed to disregard the rule, because that would break down all our rules, and we might as well wipe them out.

It may be very desirable once in a while to get out from under a rule, but, Mr. President, if we proceed along the line of tearing our own rules to pieces we will soon have no rules, and I think this body ought not to get into that situation.

Mr. UNDERWOOD. Mr. President, I regret very much that the point of order has been made against this amendment, because it is a matter of very vital importance to a large portion of the people of this county. It is of vital importance to the people of the United States who need bread and meat. Meat, constituting a large part of the food of the people of the United States, is becoming dearer in price, and yet we find that the cattle associations of the United States, backed by the monopolies of this country, are here exercising the power they possess to keep out clean cattle—and they are clean cattle after proper inspection by this Government. The Government of the United States, represented by the Agricultural Department, is asking for this legislation. To refuse to enact it is to aid in maintaining a monopoly for one section of this country and for one interest against the other parts of this country and the people of the United States. Therefore, Mr. President, I give notice that if this bill is pending until to-morrow I shall move to suspend the rules. I believe that requires one day's notice——

The VICE PRESIDENT. One day's notice in writing.

Mr. UNDERWOOD. Then, Mr. President, I hereby give notice in writing that at the expiration of one day hereafter, or so soon thereafter as I can obtain the attention of the Senate, I will move to suspend clause 3 of Rule XVI for the purpose of submitting to House bill 12717, making appropriations, and so forth, the following amendment to said bill, on page 78, after line 17:

That the act of August 30, 1890, entitled "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes" (26 Stat. L., p. 414), is hereby amended so as to authorize the Secretary of Agriculture, within his discretion and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico, South and Central America, the islands of the Gulf of Mexico, and the Caribbean Sea into those parts of the United States below the southern cattle quarantine line at such ports of entry as may be designated by said joint regulations and also subject to the provisions of sections 7, 8, 9, and 10 of said act of August 30, 1890.

That all such cattle, when entered, shall be subject to the regulations governing the handling and transportation of cattle from the districts infected with the southern, Texas, or splenetic fever.

Mr. THOMAS. Mr. President, I wish to give notice that I will reserve the right to make a point of order against all that part of this bill which appears on page 9, lines 2 to 14, inclusive, on the ground that it is not included in any estimate.

The VICE PRESIDENT. There is a committee amendment which has not yet been disposed of. The Secretary will state the amendment.

The SECRETARY. On page 21, line 9, after the word "thereof," it is proposed to strike out "$88,770" and insert "$109,920," so as to read:

For investigating the handling, grading, and transportation of grain, including the grain sorghums, and the fixing of definite grades thereof, $109,920.

Mr. GRONNA. Mr. President, that item went over at my request. I will say to the chairman of the committee that I have no objection to adopting it now.

Mr. GORE. I will be glad to have the amendment agreed to.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GORE. Mr. President, I send to the desk an amendment which I desire to move and which has been called to my attention by the Secretary of Agriculture.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 125, after line 26, it is proposed to insert the following:

That section 2 of the Agricultural appropriation act of March 3, 1885 (23 Stat. L., p. 353), be, and the same hereby is, amended so as to read as follows, effective on and after June 18, 1916:

"SEC. 2. That hereafter, in addition to the proper vouchers and accounts for the sums appropriated for the Department of Agriculture to be furnished to the accounting officers of the Treasury, the Secretary of Agriculture shall, at the commencement of each regular session, present to Congress a detailed statement of the expenditure of all appropriations for said department for the last preceding fiscal year."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GORE. I send to the desk another amendment and ask for its adoption.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 78, after line 17, it is proposed to insert:

That section 8 of the act approved August 20, 1912 (37 Stat. L., p. 315), entitled "An act to regulate the importation of nursery stock and other plants and plant products; to enable the Secretary of Agriculture to establish and maintain quarantine districts for plant diseases and insect pests; to permit and regulate the movement of fruits, plants, and vegetables therefrom, and for other purposes," be, and the same hereby is, amended so as to read as follows:

"SEC. 8. That hereafter the Secretary of Agriculture is authorized and directed to quarantine any State, Territory, or District of the United States, or any portion thereof, when he shall determine the fact that a dangerous plant disease or insect infestation, new to or not theretofore widely prevalent or distributed within and throughout the United States, exists in such State or Territory or District; and the Secretary of Agriculture is directed to give notice of the establishment of such quarantine to common carriers doing business in or through such quarantined area, and shall publish in such newspapers in the quarantined area as he shall select notice of the establishment of quarantine. That no person shall ship of offer for shipment to any common carrier, nor shall any common carrier receive for transportation or transport, nor shall any person carry or transport from any quarantined State or Territory or District of the United States, or from any quarantined portion thereof, into or through any other State or Territory or District, any class of nursery stock or any other class of plants, fruits, vegetables, roots, bulbs, seeds, or other plant products, or any class of stone or quarry products, or any other article of any character whatsoever capable of carrying any dangerous plant disease or insect infestation specified in the notice of quarantine except as hereinafter provided. That it shall be unlawful to move, or allow to be moved, any class of nursery stock or any other class of plants, fruits, vegetables, roots, bulbs, seeds, or other plant products, or any class of stone or quarry products, or any other article of any character whatsoever capable of carrying any dangerous plant disease or insect infestation specified in the notice of quarantine hereinbefore provided and regardless of the use for which the same is intended from any quarantined State or Territory or District of the United States or quarantined portion thereof into or through any other State or Territory or District in manner or method or under conditions other than those prescribed by the Secretary of Agriculture. That it shall be the duty of the Secretary of Agriculture, when the public interests will permit, to make and promulgate rules and regulations which shall permit and govern the inspection, disinfection, certification, and method and manner of delivery and shipment of the class of nursery stock, bulbs, seeds, or other plant products, or any class of stone or quarry products, or any other article of any character whatsoever capable of carrying any dangerous plant disease or insect infestation specified in the notice of quarantine hereinbefore provided and regardless of the use for which the same is intended from a quarantined State or Territory or District of the United States or quarantined portion thereof into or through any other State or Territory or District; and the Secretary of Agriculture shall give notice of such rules and regulations as hereinbefore provided in this section for the notice of the establishment of quarantine: *Provided*, That before the Secretary of Agriculture shall promulgate his determination that it is necessary to quarantine any State, Territory, or District of the United States, or portion thereof, under the authority given in this section he shall, after due notice to interested parties, give a public hearing under such rules and regulations as he shall prescribe, at which hearing any interested party may appear and be heard, either in person or by attorney."

Mr. CLARKE of Arkansas. I offer as an amendment to that amendment the matter covered by the amendment offered by the Senator from Louisiana [Mr. BROUSSARD]. It relates to the same general subject and is a very wholesome addition to it. It broadens its scope and improves its value as a measure of legislation.

The VICE PRESIDENT. The question is on the amendment of the Senator from Arkansas to the amendment proposed by the Senator from Oklahoma.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. REED. Mr. President, I desire the attention of the chairman of the committee. Referring to section 7, I ask to have read at the desk the language as it is now recorded, beginning at line 13, on page 106, of the amendment proposed by the chairman of the committee [Mr. GORE]. I am asking for the official record. My reason is that I think there has been a misprint. I called attention to it once, and I think it has been repeated.

The Secretary read as follows:

Provided, That in any State which has or which may hereafter have a State grain-inspection department established by the laws of such State, the Secretary of Agriculture shall issue licenses to the persons duly authorized and employed to inspect and grade grain under the laws of such State.

Mr. REED. Mr. President, that is correct in that form. There was a misprint in the copy I had. I understand that has been adopted.

The VICE PRESIDENT. That has been adopted.

Mr. REED. Very well.

Mr. CATRON. Mr. President, I did not understand or hear the language of the amendment proposed by the Senator from Arkansas a few minutes ago and which was adopted. It is the amendment embodying the matter that was ruled out on a point of order. I wish to give notice that when it comes up in the Senate I shall make the same objection to that amendment as he has offered it, and to the entire amendment which has been adopted, as well. I give notice of that now.

Mr. GRONNA. Mr. President, may I call the attention of the Senator from Missouri to what I think is an important matter? Although this language may be adopted, it will not take care of what we call an appeal to be taken either by the seller or by the buyer. I have prepared an amendment which I will offer at this time. I send it to the desk, and ask that it may be read.

Mr. REED. Mr. President, I was unable to hear the Senator. I will ask him if he is now offering an amendment to the amendment just read?

Mr. GRONNA. I am offering this as a separate section, which would in a way take care of what has been omitted.

The VICE PRESIDENT. The amendment offered by the Senator from North Dakota will be stated.

The SECRETARY. It is proposed to add to the bill a new section, as follows:

That there is hereby established in the Department of Agriculture a board of grain appeals. Such board shall consist of five members to be appointed by the Secretary of Agriculture. The salaries of the members of this board shall be $3,000 per annum. The board of grain appeals shall, under such rules and regulations as the Secretary of Agriculture may prescribe, pass on all appeals which may be taken from the inspection and grading of grain by inspectors licensed under this act; but in States where there have been established systems of grain inspection with State boards of appeals, appeals shall be considered only from the findings of such State boards of appeals. The board of appeals shall also, under the direction of the Secretary of Agriculture, pass on the qualifications of applicants for license under this act.

Mr. GRONNA obtained the floor.

Mr. REED. Mr. President, I hope the chairman of the committee will see his way clear to accept that amendment.

Mr. GORE. I will say that my attention had not been previously called to the amendment; but, as I understand it, I shall interpose no objection at this time.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from North Dakota.

The amendment was agreed to.

Mr. GRONNA. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 107, at the end of line 5, it is proposed to insert:

Provided, That no inspector or deputy inspector licensed by the Secretary of Agriculture to inspect or supervise the grading of grain shall, during his term of service, be interested, directly or indirectly, in the handling, storing, shipping, purchasing, or selling of grain, nor shall he be in the employment of any person or corporation financially interested in the handling, storing, shipping, purchasing, or selling of grain.

Mr. GRONNA. Mr. President, in a State where there is no inspection either by law or by rules adopted by the grain exchange, it would be impossible to have grain inspection, for there would be no one to accept a license issued by the Secretary of Agriculture save and except those who were interested in buying the grain. Of course, that would mean that the elevator men, the men who are buying and selling grain, would be the inspectors; or perhaps the millers might apply for a license. Everybody who has studied the provisions of this bill knows that there is no provision made for compensation to these

inspectors except in States where they have a grain inspection either by law or by the exchange, or by the board of trade, or by the chamber of commerce.

Mr. President, it seems to me that it would be just as unfair to the producers of grain to say that those who are directly interested in the buying and selling of grain should be the inspectors as it would be to say that the bankers of this country should be the inspectors of their own banks, or that the packers should be the inspectors of meat, or that the producers should be the inspectors of the grain.

I hope the chairman of the committee will accept this amendment.

Mr. GORE. Mr. President, I have no objection to the amendment. I approve of it, as I understood it.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GRONNA. Mr. President, I also offer the amendment which I now send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add to section 4, on page 104, the following:

And provided further, That in any State where there has not been established, either by the laws of the State or by the rules and regulations of any commercial exchange, a system of grain inspection, this act shall not apply so far as it relates to the shipment or delivery of grain entering into interstate or foreign commerce, but such grain shall be inspected at the terminal point if shipped to a State having a system of inspection, and if shipped to a foreign country through a State having a system of inspection it shall be inspected at the most convenient point within such State.

Mr. BRADY. Mr. President, on what page and line is that to be inserted?

The SECRETARY. On page 104, at the end of line 3.

Mr. GRONNA. Mr. President, if I may have the attention of the chairman of the committee for a moment, in the State which I in part represent, and in States like South Dakota and many others where there is no grain inspection either by law or under the rules of a chamber of commerce or a board of trade, it would be absolutely impossible, under this bill as it stands, for the dealers or for anybody living in those States to transact their business in the ordinary way. Section 4 prohibits the shipment of grain—it prohibits it from entering into interstate commerce unless it shall have been first inspected by a licensed inspector. Now, Mr. President, in a State like mine, where there are no inspectors, it could only be shipped out by type or sample. Everybody who knows anything about the grain trade knows that every bushel of grain has been bought under a system of grading. Every elevator man has bought on grades. It makes no difference, Mr. President, whether it is being shipped out on a grade or not. The grade has been established by the buyer, and section 7 of the bill provides a penalty of a thousand-dollar fine or a year's imprisonment for the violation of section 4. That means that every dealer who ships grain which enters into interstate commerce is subject to this penalty.

Mr. President, it may be that the people of our western country should be punished for doing business in their own legitimate way. I am receiving every day telegrams and letters from some of these people who, perhaps, mean well. They say: "Stand by the grain-grades act." I am afraid these people have not studied the provisions of this bill. I am afraid they do not know that if this bill were to be passed in its present form every elevator agent in my State, where there is no grain inspection, and every elevator man and every other shipper in my State, where there is no inspection, would be subject to tihs penalty of a thousand dollars fine or a year's imprisonment in the penitentiary, or both.

Now, I for one am not willing to send all the people of my State who are dealing in grain to the penitentiary, either at Leavenworth or any other Federal prison. We need them. We need all the men we have in our country. We are not so tired of our people that in order to supply these penitentiaries, which perhaps now are partly vacant, we ought to penalize them in this way.

Mr. REED. Mr. President, I will suggest to the Senator that, in view of the spirit that is now so broadly scattered in our country that men who deliberately organize trusts, pools, and combinations in restraint of trade ought to be dealt with gently, and ought to be guided out of the mazes of their own illegal conduct, and, above all things, that the criminal penalties ought to be stricken out of the antitrust acts, it might be that an equal degree of clemency could be extended to a farmer who happened to ship some grain and sell it as No. 2 wheat, selling it by grade, and failed to have it inspected. But I am informed that the chairman of the committee is prepared to accept this amendment, although I have no desire to speak for him.

Mr. GRONNA. I am very glad to know that. I did not think the chairman of the committee was willing to see this injustice done to our people; and I am very glad to know that he is willing to accept the amendment.

Mr. GORE. Mr. President, I desire to say, first, that I think both the Senator from North Dakota and the Senator from Missouri are under a misapprehension as to what section 4 of the grain-grades act undertakes to accomplish. The second and third provisos undertake to do exactly what the Senator proposes in the pending amendment, as I understand it. The second proviso permits a farmer in North Dakota to ship a carload of wheat or a trainload of wheat to Minneapolis without grading, and if he is satisfied with the grading at Minneapolis that ends the transaction. If he is dissatisfied with the transaction, he has under this act the right to prosecute an appeal. The third proviso permits a farmer in North Dakota from a by-station to ship without interference a carload of wheat to a by-station in Minneapolis where there are no inspectors.

I think both these Senators have in their minds a provision in the bill that was considered less than a year ago, which required that grain being shipped in interstate commerce must conform to the standards fixed by the bill and penalizing the shipment of grain that did not conform to those standards. That provision is not contained in the pending bill. I am in perfect sympathy with the purpose of the Senator from North Dakota and the Senator from Missouri that farmers should be permitted to ship their grain from Arkansas or Oklahoma to Kansas City and St. Louis without subjecting themselves to any penal enactment; and that is the purpose which the amendment just tendered by the Senator from North Dakota seeks to accomplish.

I say that I am in sympathy with that purpose. I have not had an opportunity to analyze the language as carefully as the importance of this provision deserves, but for the present I am not disposed to interpose an objection.

Mr. McCUMBER. Mr. President——

Mr. GRONNA. I yield to my colleague.

Mr. McCUMBER. I think the Senator from Oklahoma is in error if he assumes that any provision in section 4 allows a man to ship from North Dakota or any other State a shipment of grain without inspection unless he sells it without inspection. In other words, he can not, under the provisions of section 4, ship a carload of grain from North Dakota to Minneapolis unless it is graded or unless it is to be sold by sample. I want to call the Senator's attention to it, so that he will see that he is in error in that respect.

Section 4 provides:

That whenever standards shall have been fixed and established under this act for any grain no person thereafter shall ship or deliver for shipment from any State, Territory, or District to or through any other State, Territory, or District, or to any foreign country, any such grain which is sold or offered for sale by grade unless the grain shall have been inspected and graded by an inspector licensed under this act and the grade by which it is sold or offered for sale be one of the grades fixed therefor in the official grain standards of the United States.

Now, stopping right there, the Senator will see that there is an absolute prohibition against the selling of any grain so shipped by grade unless it has been graded first in the State in which it originated.

The next provision is this:

That any such grain not sold or offered for sale by grade—

Not any grain, but "any such grain not sold or offered for sale by grade"—

may be sold, offered for sale, shipped, or delivered for shipment in interstate and foreign commerce by sample or by type, or under any name, description, or designation which is not false or misleading, and which name, description, or designation does not include in whole or in part the terms of any official grain standard of the United States.

So the Senator will see that under that provision it will be unlawful to sell that grain by grade at the point to which it has been shipped. So he will see that it is impossible to ship a carload of grain from one State to another which has not been already graded before it leaves the State of its origin, unless it is sold by sample, or by some method other than that of grading.

Mr. GORE. Mr. President, it was the next proviso that I had in my mind, following the one just read by the Senator.

Mr. McCUMBER. We will take that proviso, then. The next proviso is as follows:

Provided further, That any such grain sold or offered for sale by one of the grades fixed therefor in the official grain standards may be shipped to or through any place at which an inspector licensed under this act is located, subject, under such rules and regulations as the Secretary of Agriculture shall prescribe, to be inspected at the place to which shipped, or at the place through which shipped for inspection, and subject further to the right of appeal from such inspection, as provided in section 6 of this act.

That deals only with grain that has been once graded.

That any such grain sold or offered for sale by one of the grades fixed therefor.

You see, that is dependent entirely upon its having been previously graded. I do not think myself that even the amendment offered by my colleague would make this a satisfactory provision, but at least it would eliminate the difficulty about which he has spoken.

Mr. GORE. There ought to be no doubt left upon that point, Mr. President, and I suggest to the Senator that the insertion of the words "shipped or offered for shipment" in the second proviso would contribute to that end. I have not had an opportunity to consider it. I do not object to the amendment, however.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GRONNA. Mr. President, I offer as a new section of the bill the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 108, at the end of part B, it is proposed to insert the following:

Nothing in this act shall prevent any person from selling or buying grain by sample, regardless of its grades.

Mr. GRONNA. Mr. President, may I have the attention of the chairman of the committee just a moment?

Mr. GORE. Mr. President, I should like to have the amendment read again.

The Secretary again stated the amendment.

Mr. GORE. I think that is embodied in the act, anyway, and I therefore shall not object—certainly not at present.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GRONNA. Now I offer another amendment, which I ask to have read.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 108, at the end of part B, it is proposed to insert the following:

SEC. 13. That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law or in which public warehouses are regulated by law: *Provided, however,* That the Secretary of Agriculture is authorized to cooperate with the officials charged with the enforcement of grain inspection and warehouse regulation in such States, and through that cooperation to secure the enforcement of the provisions of this act as far as practicable and in such manner as not to conflict with the laws of such States.

Mr. GRONNA. Mr. President, if I may have the attention of the Senate for just a moment, it is true that the bill has been greatly improved by the amendment offered by the Senator from Missouri [Mr. REED]. I think, however, that it would be better to adopt this amendment and leave it to the States to conduct the inspection.

I do not know of anyone from the grain States who is opposed to a standardization act. There is no opposition, so far as I know, to allowing the Federal Government to standardize grades and fix the standards for the entire country. But, Mr. President, when we are supposed to turn over to a department of the Government the regulation of the shipment or the sale of anything that enters into interstate commerce, I think it is a dangerous thing to do. I was impressed with the speech made this morning by the Senator from California [Mr. WORKS], when he said that we are drifting into a sort of a centralization; that the Federal Government is being asked to do all of these things that the States should do.

Mr. President, is there anyone upon this floor who will deny that the people of a sovereign State should have the right to transact their legitimate business in their own way? This bill seeks to take from them that right. I believe a better amendment still than the one I have offered would be to strike out everything after section 3—to strike out the entire act—and simply provide for a standardization act, and let the Federal Government standardize grades of all sorts of grain, and then let the States themselves transact their business in their own legitimate way.

But, Mr. President, I have received telegrams and letters from organizations asking me to support the so-called grain-grades act. Who is back of all this agitation, I ask you? For the last nine years the Department of Agriculture has undertaken to standardize grades; and I state as a matter of fact that during all that time, with an expenditure of over $700,000, the Federal Government has only been able to standardize corn so far as it relates to the moisture content. That is all that the Government of the United States has done with an expenditure of nearly $800,000.

But, sir, I am willing to let the Government expend this money; I am willing to let the Government of the United States say what the official grades or standard shall be in order to have a uniform grade.

It has been stated by experts in this country that in three months they could standardize all kinds of grain for the western country, and if you will give them seven months, they will extend this official grade for the entire country.

I do not believe that the Department of Agriculture should come here and tell the people of the United States how to transact their business. I do not believe that it is the function of the Government to say how this business shall be done. It is for the States and not for the Federal Government to regulate.

Mr. President, I do not care further to occupy the floor. The chairman of the committee has been kind enough to accept three of my amendments, and I trust that he has not accepted them only to get rid of them on the floor to avoid discussion. I know he will consider them in the committee of conference, and I am quite sure he will give it the attention which he usually gives to matters of this kind; also that he will see to it that the provisions remain in the bill.

I want to say, Mr. President, that it will be absolutely impossible for us in the West to conduct our own business if this bill is not amended. When the question of standardizing of cotton was before the Senate a few days ago, as the Senator from Georgia [Mr. SMITH] well said, there are certain provisions to which the Department of Agriculture could not agree, but the trade believe—the producers believe—that it would be better to adopt certain things in this bill.

Now, we in the North did not object to that. Those of us who are interested in grain, in the business of producing and handling and selling grain, did not object to what the people of the South wanted, and I know that you will extend to us the same courtesy and that you will accord to us the same treatment with reference to grain that we in the North accorded to you in the South in reference to cotton.

Mr. President, that is all I care to say.

Mr. McCUMBER. Mr. President, I desire the attention of the Senator from Oklahoma, in charge of the bill. I believe the Senator desires to enter upon the statute books an act that can be put in force and that will be workable. I greatly fear that those having charge of this measure have not given it the consideration it ought to have in respect to the method of handling grain in the great Northwest.

The Senator from Oklahoma understands that at every station in Minnesota and the Dakotas and eastern Montana there are a number of elevators, all the way from 2 to 10 at a station. The farmer hauls his grain to an elevator, his grain is graded at the elevator, and a price paid in accordance with the grade which is accorded to that particular grain. The wheat buyer or agent, whether it is a line company or an independent elevator company, knowing the grades that he would probably receive at the terminal, seeks to so grade it that it can be kept good at all times. He has to guess, of course, to some extent what kind of a grade he will receive at the terminal. Then he ships that grain. He may mix it with a certain grade of several bins going into one car. It necessarily must be shipped without reference to any grade whatever. So you will see that while he must buy it in at a grade he can not ship it out at a particular grade, because he must send it to the terminal, and the terminal, which is governed entirely by other laws and the laws of another State, will do its own grading and inspection, and though he were empowered to grade it, his grade would amount to nothing under the law as it now stands.

I understand that the Senator seeks to make a change, in that the grade which is fixed by the elevator must be the grade which will be accepted at the terminal to which the grade is shipped. Am I right in that respect?

Mr. GORE. No, sir; I think not. If it should be regarded under the terms of section 4 at the terminal and if there was any dissatisfaction with such regrading on the part of the State grader, then an appeal could be prosecuted under this act to a supervisor.

I wish to say to the Senator that we have entirely the same purpose in view, and whenever doubts are entertained by the junior and senior Senators from North Dakota as to the meaning of the language of this bill it ought to be placed beyond doubt. I am anxious to cooperate with them to that end. I want to make it so clear that the farmers can ship from North Dakota, where there is no licensed inspector, to Minneapolis, without laying themselves liable to a penal statute; that there can be no question about it whatever.

Mr. McCUMBER. I am not speaking now of the farmers.

Mr. GORE. I understand.

Mr. McCUMBER. I am speaking of the elevator companies themselves.

Mr. GORE. I will say that——

Mr. McCUMBER. Let me make it clear. The elevator purchases by grades and it compels the grade to be accepted at the terminal of another State.

Mr. GORE. No, sir; it can not.

Mr. McCUMBER. All right. Now, what provision allows that to be reinspected or compels a reinspection?

Mr. GORE. If the inspection at the terminal was satisfactory and was unchallenged, the grade would stand, but if there should be any dispute about it there could be an appeal under the statute. In fact, that is what this is intended for. I think the last clause of the second proviso of section 4 makes that clear.

Mr. McCUMBER. The last one?

Mr. GORE. Yes; the last clause of the second proviso to section 4 undertakes to cover the point which the Senator has in mind.

Mr. McCUMBER. That reads as follows:

Provided further, That any such grain sold or offered for sale by one of the grades fixed therefor in the official grain standards may be shipped to or through any place at which an inspector licensed under this act is located, subject, under such rules and regulations as the Secretary of Agriculture shall prescribe, to be inspected at the place to which shipped, or at the place through which shipped for inspection, and subject further to the right of appeal from such inspection, as provided in section 6 of this act.

But that is not quite the point I am making. My point is that the party purchasing at the elevator, having purchased by a standard and having been granted a certificate of the character of the grain which he receives, must ship that grain out under a certificate of inspection. In other words, he has no power to send it without inspection to the terminal where he is to sell it. I think if the Senator will read it over carefully he will find that that is the only construction.

Mr. GORE. I think that would be true where there was a licensed inspector stationed.

Mr. McCUMBER. Now, let me ask the Senator a question right there; and I hope I will be excused if I ask too many questions here, because I have just returned from my State and I have not had time to study the bill nor to listen to any arguments which have been made heretofore on it. Does the Senator contemplate that every wheat buyer in every State and at every station is to be made a Federal inspector?

Mr. GORE. No, sir; not at all.

Mr. McCUMBER. Very well, then, without the amendment which has been offered by my colleague to the bill it would have to be inspected by a Federal inspector; and I do not know any other way that you would have a Federal inspector unless you had as many independent men as there were elevators in the United States.

Mr. GORE. I think the Senator is mistaken. It does not require that it shall be inspected by a Federal inspector.

Mr. McCUMBER. Yes; but inasmuch as it is to be bought by grade, and always is bought by grade, it is sold at least by the farmer selling it on a grade and the party purchases by a grade. Therefore he must ship it by grade, must he not? Am I correct?

Mr. GORE. I will ask the Senator to state the question again.

Mr. McCUMBER. If the elevator agent or owner purchases from the farmer by grade, is he not compelled to ship by grade?

Mr. GORE. Not necessarily, not unless there is a licensed inspector. Of course he can do so voluntarily if he desires.

Mr. McCUMBER. He can not sell by grade unless he ships by grade, because under the provisions of the bill, in a State where inspectors or graders have been provided for he will adopt the grade and ship it by grade in order to sell it under the grading system.

Mr. GORE. When it reached the terminal market it would be regraded. But in this case it would be the first official grading by a licensed inspector.

Mr. SHAFROTH. He has the right unquestionably under the bill to provide the grade that he wants.

Mr. McCUMBER. Provided he will sell it without grade.

Mr. SHAFROTH. Yes.

Mr. McCUMBER. But suppose he wishes to sell it by grade.

Mr. SHAFROTH. Then they have a right to have it inspected.

Mr. McCUMBER. All right. Now, who is going to inspect it? That is the point I am getting at. We have an elevator agent, we will say in my State, who buys 100,000 bushels of No. 2 Northern. He wishes to sell it in Minneapolis as No. 2 Northern. If he wants to sell it by grade he can not send it to Minneapolis unless he has it graded before he sells it and has a certificate from some one under the provisions of section 4.

Mr. GORE. I think the Senator is mistaken under the second proviso.

Mr. GRONNA. Will my colleague yield to me?

Mr. McCUMBER. Certainly.

Mr. GRONNA. I will say that the second amendment which I proposed and which the chairman accepted provides specifically that in States where there is no inspection grain may have been bought under a grade and it may enter into interstate commerce, but it also provides that it shall be inspected at the terminal.

Mr. McCUMBER. That is true where you have no grade; but suppose you are shipping from Minnesota to Chicago, and Minnesota has a system of grades and an elevator on the Milwaukee road, for instance, that does not go through the terminal at Minneapolis at all, but in southern Minnesota, where they will have to ship all the grain to Chicago, how would that apply? Minnesota has a system of grades and you would have to grade it according to Minnesota, and you could not ship it to Chicago unless you provided that it was to be sold by the very grade that you purchased. In other words, you can not load out of a bin which you have bought in as No. 2 at Austin, Minn., and ship it down to Chicago and deliver it there to be graded at whatever Chicago desires to grade it at.

Mr. GRONNA. That is absolutely true under the provision of the bill.

Mr. McCUMBER. That is true under the provisions of the bill.

Mr. GRONNA. If my colleague will allow me, when I asked the chairman of the committee whether or not the acceptance of these amendments meant simply to avoid discussion I was interrupted, and I did not get an answer from the chairman, which I know he would like to give.

Mr. GORE. Mr. President, I do not think the Senator really intends to propound that question. I stated that I was in sympathy with the purpose of several of the amendments, as I gathered such purposes, to which I offered no objection. With respect to one of them, I stated that I had not been able to give it the consideration which its importance deserved.

It has been suggested to me that I accept the pending amendment. My answer was that I could not acquiesce merely for the purpose of remitting the amendment to conference. I think the course I have pursued will be sufficient answer to the Senator on that point.

Now, with respect to the pending amendment, I hope that it will not be adopted by the Senate, because I think it virtually neutralizes the entire act.

I wish to have read into the RECORD at this point a letter which I have received regarding this measure.

The VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

NATIONAL COUNCIL OF FARMERS' COOPERATIVE ASSOCIATIONS,
York, Nebr., July 3, 1916.

Hon. THOMAS P. GORE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: You will pardon me for again writing you in regard to the grain grades act, but the grain growers of the country are so anxious that Congress take action at this session on grain grading that I feel justified in doing so. They favored the establishment of uniform grades and now they favor the uniform enforcement of those grades by Federal authority.

We favor, almost universally, Federal inspection of grain; but since there are constitutional barriers in some of the States, we will be glad to accept Federal supervision as provided for in the act mentioned as being a step in the right direction.

You are familiar with the lack of uniformity in grain grading under our present system and fully realize how a uniform system will benefit the entire country. Furthermore, the Federal system will avoid much unnecessary duplication. Grain sampled and inspected under Federal authority at Omaha, for instance, will seldom need to be again sampled and inspected at Chicago or Minneapolis. This will result in a considerable financial saving. Under Federal control grain can be inspected at interior points before it gets to the great central markets. This will relieve congestion at those markets, a condition which holding grain for inspection has helped to make acute. It is a decided step toward economy and efficiency in grain marketing.

This appeal is coming direct from the grain growers themselves through their own organization. There are about 2,400 farmers' grain companies in the Mississippi Valley that have a membership of about 100 each, and those members will appreciate Federal control of grain grading.

Very truly, yours, J. W. SHORTHILL, *Secretary.*

Mr. McCUMBER. Mr. President, I wish that the committee had followed what is indicated in that letter. Had they done so, there perhaps would have been very little difficulty. A little over a year ago I had before the Senate a bill for Federal standardization, grading, and inspection. That bill was voted down. Those who opposed it indicated a perfect willingness to adopt a measure which would provide for Federal standardization and Federal supervision of that standardization, leaving the actual inspection to the States themselves. This letter is along that line. I regret very much that the committee did not feel

justified in stopping exactly at that point, simply for Federal standardization and supervision. If we had that, then we could easily provide afterwards for the Federal inspection if it became necessary.

The first was a step in the right direction, but with the many provisions that you have in this bill you are going to hamper trade very badly. If you could take the Lever amendment, I think it was, which was introduced last year, and just readopt that, I would be satisfied to let it rest right there until time would demonstrate wherein we could add to the efficiency of the law.

I want to call attention right here to an absolutely unworkable provision, and one that would cause a great deal of hardship. I wish to premise that with the simple declaration that there should be no provision whatever for any inspection outside of some great terminal where grain is finally to be disposed of. That is the only inspection you need. Take a State like the State of North Dakota, and what is the use of having grain inspected there if it is to be reinspected at Minneapolis? If we are to have no inspectors under Federal standardization and under Federal supervision which would insure a proper inspection of that grain, what benefit is there of an inspection in North Dakota or in Montana or in southern Minnesota, where the farmer or the elevator man desires to ship to Chicago? Therefore in the bill which I had previously prepared I provided only for inspection at these great terminal places.

Now, you are asking for an inspection and providing for an inspection practically at every elevator in the entire United States. That, of course, is absolutely impossible. You have not made any provision as to how those inspectors are to be employed. The only way that I can possibly see is for the old-line elevator to send to the Secretary of Agriculture the names of all of its employees buying wheat at every station in the United States, and ask that they be made Federal inspectors. Then you have your inspector and your buyer in exactly the same person or his agent. We would prefer to have even the old Minnesota and Chicago provisions, to which we have been objecting for years.

Mr. GORE. Mr. President, I should like to say to the Senator that perhaps he was not in the Chamber when the amendment was offered by his colleague [Mr. GRONNA] which prevents interested parties from being licensed as inspectors.

Mr. McCUMBER. That amendment would take care of our State, because we have no inspection. That, however, is the only provision which is made. It will not take care of other States where they may have a system of inspection; it will not take care of the State of Minnesota, where, as in the western portions along the Milwaukee Railroad, they would probably ship to Chicago instead of to Minneapolis.

Mr. GORE. I think the Senator is mistaken. I think the amendment prohibits any person who is interested in handling or in buying or in the transportation of grain from being licensed by the Secretary of Agriculture.

Mr. McCUMBER. Then where are you going to get your inspectors to inspect throughout the United States?

Mr. GORE. I will say, I think those are the Senator's inspectors, not mine. I do not think those inspectors will exist on every street corner, as the Senator seems to imagine.

Mr. McCUMBER. If the Senator please, I take a load of wheat from my farm in North Dakota to the nearest elevator. The elevator will buy that upon a grade. Now, the elevator man has got to inspect it. Has he any right to inspect it and to purchase it under the United States grade and issue a certificate unless he has a license?

Mr. GORE. Certainly not, Mr. President; but there is nothing requiring that to be done where the inspectors are not licensed. If there is no licensed inspector in any town which the Senator has in his mind, that prerequisite is dispensed with.

Mr. McCUMBER. Then, the Senator will see that it will force every wagonload of grain in the State of North Dakota and in other States to be sold without inspection, without any grading whatever. The farmer wants his grade; he wants to know whether it is No. 1 or No. 2, and he is not going to be satisfied if the elevator man says, "I will give you 85 cents a bushel for this."

Mr. GORE. Mr. President, I have to revert again to the same proviso of section 4, which provides that such grain can be sold at points where there are no inspectors and shipped to points where there are inspectors and then inspected upon arrival at such points.

Mr. McCUMBER. But suppose I desire the grain inspected where I am selling it in the country?

Mr. GORE. Very well. What would the Senator do now, if there were no inspectors?

Mr. McCUMBER. But every purchaser at the elevator does inspect the grain. There are inspectors.

Mr. GORE. There is nothing in this proposed legislation to prohibit a seller and a purchaser of grain from agreeing on the grade.

Mr. McCUMBER. Does it not prohibit anyone from making an inspection unless he is a licensed inspector?

Mr. GORE. It provides that where there are licensed inspectors the grain must be inspected; but where there are no such licensed inspectors there is no inspection whatever, more than now exists.

Mr. McCUMBER. No one could inspect.

Mr. GORE. They may agree between themselves upon a grade and sell it by grade. Then the farmer could take it to any point—say, to Williston, in North Dakota—and sell it to the elevator man or anybody else, if they could agree on the grade, and then grade it and ship it to Minneapolis. If the grade was not satisfactory, that would end it. If upon its arrival at Minneapolis there was a disagreement about the grade, it could be regraded under this act. I think there is no difficulty.

Mr. McCUMBER. I doubt very much whether that is the true construction; but I have not time to look through the amendments now in the midst of the debate. However, I call the Senator's attention to another feature of the weakness of the amendment. Suppose I bring a wagonload of a couple of hundred bushels of wheat to an elevator and it is inspected, or the elevator man says he will give me No. 2 for it, and I think that it is No. 1, have I any right of appeal in that case?

Mr. GORE. I think not at the point where the grain was sold within the State; but upon its arrival at a terminal market where there was an inspector, he would have, of course.

Mr. McCUMBER. Yes; but on its arrival at the terminal market it would be mixed with other wheat. You can not ship 200 bushels in a carload; you would have to ship from 1,500 to 2,000 bushels. Therefore, the wheat would be mixed with other wheat.

Mr. GORE. Where it was sold on a local market, and there was no inspection, of course there could not be an appeal, as I understand the matter, and I do not think there could be now.

Mr. McCUMBER. The Senator from Oklahoma will find, Mr. President, if he will look this amendment through, and if he is acquainted with the methods of dealing in grain, so many objections and obstacles, that he will himself, I think, agree that the proposition is scarcely workable.

Now, let us take the question of appeal. The language is:

Provided, That any appeal from such inspection to the Secretary of Agriculture—

And there is no other appeal, except to the Secretary of Agriculture. There is no chief inspector, no deputy inspector—

shall be taken before the grain leaves the place where the inspection appealed from was made.

All right. Now, suppose that it is inspected in Minneapolis on a car and the owner of that car of grain is dissatisfied with the inspection; must he hold the grain in that car, and can it not be moved until he can get the matter before the Secretary of Agriculture? There might be 10,000 appeals before the Secretary at that time.

Mr. GORE. I assume that there would be a Federal supervisor in Minneapolis to whom the appeal could be immediately presented and a decision obtained as readily as it could be under the existing system.

Mr. McCUMBER. Oh, but there is no one to whom to appeal, except the Secretary of Agriculture.

Mr. SHAFROTH. The act says that he shall do this by agents.

Mr. McCUMBER. No; not as to the appeal.

Mr. SHAFROTH. Yes, sir; it is to be done at the Secretary's direction.

Mr. GRONNA. I will say to the Senator from Colorado that he is mistaken. There is absolutely no provision in the bill which allows anyone to take an appeal, except to the Secretary of Agriculture.

I now call the Senator's attention to the fact that there is very often, even in the city of Minneapolis alone, a million bushels of grain which arrive at once—a hundred carloads.

Mr. GORE. I will say that I think it is substantially the same language as that of the amendment in the cotton-futures act, which provides for such appeals; a great many of which have been taken. I think they number 1,100 from the New York market alone. The representatives of the department testify that there is no difficulty whatever in the matter, and I assume that the same methods would be employed in the enforcement of this act.

Mr. GRONNA. Mr. President, it would be absolutely impossible, even if the Secretary of Agriculture wished to do it, for him to hear all of these appeals unless the amendment which I have proposed, and which has been accepted, remains in the bill.

Mr. GORE. I wish to say to the Senator that I think even the plan embodied in his amendment would not meet the situation. There ought to be somebody to whom the appeal could be made, and I assume under this act there would be somebody at Minneapolis or at Kansas City. I will say to the Senator that under the cotton-futures act—and I think this is substantially the same language—there are ways and means of submitting these disputes without causing unnecessary delay. Eleven hundred appeals have been prosecuted.

Mr. McCUMBER. Let me say to the Senator that 40 Secretaries of Agriculture could not take care of appeals that would daily come up from the great grain centers.

Mr. SHAFROTH. I will suggest to the Senator that on page 6 he will find the following:

> The findings of the Secretary of Agriculture as to grade, signed by him or by such officer or officers of the Department of Agriculture as he may designate, upon an appeal taken or dispute referred to him under this act, made after the parties in interest have had opportunity to be heard, shall be accepted in the courts of the United States.

Of course the Secretary of Agriculture could not attend to this; it has all got to be done by deputies or by assistants.

Mr. McCUMBER. That does not make any difference; it is an appeal to the Secretary. The Secretary may turn over to a dozen different persons an equal number of appeals, and he may authorize them to consider them; but, of course, he must finally pass upon them. He may not personally investigate them; in fact, I do not think he could do so to any great extent, because of the immense number of appeals that under ordinary conditions would come before the Secretary of Agriculture. I simply call attention to a few of the provisions here showing that it is not a workable proposition.

Experience of hundreds of years in the grain trade has developed a system of grading, of inspection, and of appeal that would work with approximate justice if we could just divorce the inspection and the grading from the purchasing interest. That is all we have been trying to do; and if we can do that, then we do not care anything about the matter of who makes the grade so long as it is not the purchaser. We do not care who makes the inspection so long as the party who is interested will not fix the grade of the particular grain that he is to buy. Whether the abuses are as great as we believe them to be there may be a question, but there is a great suspicion over the country that the grades are not just, and there is sufficient evidence to justify that suspicion. Now, to remedy existing evils you are introducing a new law which seeks to take hold of an immense proposition without sufficient provisions in it adequately to take care of that proposition; and it is better that we stop at this session of the Congress and simply provide for standardization and supervision, and get that work started and then see whether or not we ought to go further and ask for Federal inspection as well as supervision, and in that standardization and supervision I would go no further than the great terminal sections of the country.

Mr. GRONNA. Mr. President, I was going to say that I am in perfect accord with my colleague [Mr. McCUMBER] in what he has said. There is no provision in the bill for an appeal except to the Secretary of Agriculture. I do not know whether or not my colleague is in favor of the amendment which has been adopted. We have not had the time to give it the thought and the study to which it is entitled; but the amendment which has been adopted provides that in States where they have a State inspection and where the governor appoints an appeal board, appeals shall be taken to such board. Then, if the buyer or the seller is not satisfied, the case can be taken to an appeal board, appointed by the Secretary of Agriculture, which will make the final decision in the matter.

I know that the opposition which was raised against the bill introduced by my colleague and championed by him for many years originated very largely with certain organizations; and those organizations were instrumental in defeating that bill. There is no question about that; and the same organizations which were opposed to that bill are now supporting this bill. I make that statement without any qualification. The provision is not in the interest of the producers, and those who are engaged in the trade will find that it is not in their interest. It may be that we will find that after those who are engaged in the grain trade have studied the provisions of the bill, they will find it is not as satisfactory as they now believe it to be.

I remember well, Mr. President, when this bill was first being considered by the Committee on Agriculture that the members of the Chamber of Commerce of Minneapolis and members of chambers of commerce from other cities of the United States came before the committee and advocated the bill. They were asked this question: "Suppose the bill should provide that after the Secretary of Agriculture once shall have fixed the standard no modification can be made, would you be in favor of that bill?" They replied, "No; we would not be." That provision was in that bill at the time. It was a provision which was absolutely favored by the millers of this country. Now, Mr. President, I think the grain trade will find that this bill is not as satisfactory as they now think it is. It is another case of leading men up on a high mountain and saying, "All of this will I give to thee if thou wilt worship me," when they have not any title to anything whatever.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER (Mr. POMERENE in the chair). Does the Senator from North Dakota yield to the Senator from Nebraska?

Mr. GRONNA. I yield.

Mr. NORRIS. In the pending amendment which the Senator has offered there is a provision which reads:

> That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law or in which public warehouses are regulated by law.

The question I want to ask the Senator is whether this amendment, if adopted as he has offered it, would not make it impossible for the Secretary of Agriculture to fix standard grades if those standard grades should conflict with any State grades established by law and in existence at the time or established afterwards? Would not the State action have the effect of nullifying the standards established by the Secretary of Agriculture? As I understand, the thing the Senator desires as well as myself is that there shall be uniform standards all over the United States.

Mr. GRONNA. Yes; I am in favor of that.

Mr. NORRIS. But the question I ask is would not this amendment, if adopted, make it impossible to secure such standards?

Mr. GRONNA. I will say to the Senator that my understanding is that it would not on any grain that enters into interstate commerce. Of course, we can not regulate intrastate commerce, but any grain that enters into interstate commerce would have to conform to the official grade adopted by the Secretary of Agriculture.

Mr. McCUMBER. Mr. President, if my colleague will allow me, I think that the suggestion made by the Senator from Nebraska [Mr. NORRIS] is correct, and that the amendment would allow those States in which provision is made by law for inspection and grading of grain to continue selling under their inspection and grading system. I am quite satisfied that my colleague does not wish that, but I think the first provision of his amendment would be so construed.

Mr. SHAFROTH. Mr. President, I have no doubt that a more perfect inspection of grain could be made under a provision for United States inspectors at the numerous points in the United States such as was contained in the bill which the Senator from North Dakota [Mr. McCUMBER] had before the Senate a year or two ago; but in order to have an inspection of that kind it will be necessary to have thousands of inspectors, and it was thought that the condition of the Treasury was not such as to justify a complete inspection by the United States Government. So this bill has been framed on the theory that we want grain standards established. It was said in the testimony taken before the Senate Agricultural Committee that there are 35 different standards, and by one witness it was stated the standards existing numbered 150.

Everybody, I believe, concedes that that is a wise thing to do, because some of these States and some of these boards of trade have such loose definitions of the standards of grain that they are ridiculous.

Here is a statement showing a comparison of Baltimore, Philadelphia, New York, and Boston definitions of grades of corn.

No. 1 corn as defined by the New York Produce Exchange:

> Shall be mixed corn, sound, dry, and reasonably clean.

There is no certainty with relation to such a definition as that. What is "dry"? What is "sound"? What is "reasonably clean"?

Mr. NELSON. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Minnesota?

Mr. SHAFROTH. I do.

Mr. NELSON. The Agricultural Department has had appropriations for years, and has exhausted over $700,000, and has

only succeeded in standardizing corn as to its moisture content. It has never gotten beyond that, at an expense of over $700,000.

Mr. SHAFROTH. Mr. President, the Government has established grades as to corn, and they are being generally recognized in the trade, and they are specific, instead of the uncertainty that exists in regard to these local grades. The following are other New York Produce Exchange definitions under which corn is sold:

No. 2 corn shall be mixed corn, sound, reasonably dry, and reasonably clean.
Old No. 3 corn shall be mixed corn, dry, reasonably clean, but inferior in quality to that described as No. 2.
No. 3 corn shall be mixed corn, equal to the above grade of No. 2 in quality, but in condition may be soft.
No. 4 corn shall be mixed corn not fit for a higher grade in consequence of being of poor quality, damp, musty, or dirty.
No. 5 corn shall be mixed corn not fit for a higher grade in consequence of being of poor quality, very damp, musty, or very dirty.
No. 2 dried corn shall be mixed corn——

Mr. NELSON. Will the Senator be kind enough to read the grades prescribed by the Agricultural Department?

Mr. SHAFROTH. Yes, sir; I will.

Mr. NELSON. Just read that.

Mr. SHAFROTH. I will.

Mr. NELSON. Then we will have some standard to go by.

Mr. SHAFROTH. I want to read first what the officers of the Baltimore Chamber of Commerce have defined. They have a corn there that they name "prime sail mixed corn," and they require that it "shall be reasonably sound, reasonably dry, and reasonably clean."

Why, those are such indefinite terms that you can contend that any corn that is presented comes within them or does not come within them.

They have another grade there which they sell as "steamer mixed corn," and that—

May be slightly damp or slightly musty, or both, or not well cleaned, but must be cool.

Those are all indefinite terms. You can not tell from that what a sample comes within, whether the corn is of that class or not.

Then, again, in that same market, the Baltimore Chamber of Commerce grade, it is said:

No established grade corn (mixed).

That is another grade of corn that they put forth, and they say:

Shall embrace corn slightly inferior in condition to steamer mixed corn, but must be cool.

The last——

Mr. NELSON. Mr. President, why does not the Senator give us the standards fixed by the Department of Agriculture?

Mr. SHAFROTH. I will do it. The Senator will get that also in due time. I have it right here, and propose to read it; but I want to show how indefinite the terms are that are contained in these commercial standards that are established at the seaports, and I want to do it for the purpose of showing that the farmers are mulcted every time by reason of sending corn there which the middlemen buy at a low grade and sell at a high grade, by which they make an undue profit.

Here is the standard of the Philadelphia Commercial Exchange:

No. 2 mixed corn shall be sound, dry, and reasonably clean.
Steamer No. 2 corn shall include corn of the above-named grades in quality; in condition it may be slightly soft or damp, but must be cool and, in the judgment of the inspector, suitable for steamer shipment.
No. 3 corn shall include corn soft, damp, dirty, not damaged, but inferior in quality to steamer corn.
No. 4 corn shall include corn that is soft, damp, dirty, admitting more moisture than No. 3 corn, but suitable for warehousing.

There they are comparing something of a less grade to something that is not fixed in a prior grade, all of it being in indefinite terms.

They further prescribe that—

Sample corn shall include all corn inferior to No. 4.

Then there is the Boston standards. They have chamber of commerce grades. They have No. 2 mixed, which—

shall be sound, sweet, dry, and reasonably clean, yellow and red or white corn mixed.
Steamer corn shall include yellow and red or white corn mixed that is slightly soft or damp, but must be cool; or corn not good enough for either of the above grades, in consequence of containing a moderate mixture of poor kernels.
No. 3 corn shall include all damp corn or corn slightly inferior to steamer corn in quality, but must be cool and sweet.
No. 4 corn shall include all corn that is slightly sour or musty, but must be cool.
General rule: "No grade" shall include all corn that is hot, warm, or badly damaged.

Mr. President, the descriptions of those grades are such that sellers can contend, and reasonably contend, that the grain which they have comes within No. 2 or No. 3 or No. 4, to suit their own interest; and the buyers can in the same manner contend that the corn inspected is of a lower grade, and therefore that they ought to buy at a less price.

Now, let us see what the United States Department of Agriculture has done in this matter and let us see what grades they have established:

Grade classification of white, yellow, and mixed corn, showing maximum allowances of moisture and other factors.
No. 1 corn: The percentage of moisture shall not exceed 14 per cent.

That is easily ascertained. You have a tester, and all you have to do is to test a sample of corn, which can be done in 30 minutes, and if it exceeds 14 per cent in moisture it goes to a lower grade. That is mathematical. It is not subject to the opinion of anybody. It is not subject to the contention that it is slightly moist or it is slightly damp or that it contains elements that are of a nature upon which you can put one construction or another.

Next comes the question as to the quantity of damaged corn that can be in No. 1 graded corn. There it says:

Two per cent (exclusive of heat-damaged or mahogany kernels).

That is, the damaged corn in No. 1 corn shall not exceed 2 per cent; and that can be ascertained by samples very readily, so that there is a mathematical test as to whether or not it falls within No. 1. But that does not at all compare with, for instance, New York Standard No. 1 corn, which—

Shall be mixed corn, sound, dry, and reasonably clean.

That is a perfect jumble of uncertain terms, under which it can be plausably contended by the seller that his corn is fully up to the point or by the buyer that it is below the point of No. 1.

Now, under the United States standard they require that—

Foreign material, including dirt, cob, other grain, finely broken corn, etc., shall not exceed 1 per cent.

You can easily ascertain that by taking a sample, extracting the foreign matter, and weighing it, and then, if it exceeds 1 per cent, you can say with certainty, "That is not No. 1 corn." Consequently, we can ascertain with certainty what No. 1 corn is.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from North Dakota?

Mr. SHAFROTH. I yield.

Mr. GRONNA. The Senator seems to know so much about grading grain that I should like to ask him a question. Suppose we had No. 1 grain, the best quality that can be produced, with 10 per cent of foreign matter in it. How would the Senator grade that?

Mr. SHAFROTH. How much did the Senator say?

Mr. GRONNA. Ten per cent of foreign matter—dirt or weeds or whatever it might be. How would the Senator grade that?

Mr. SHAFROTH. I think you would have to sell that by sample. That is what you would have to do, according to this standard.

Mr. GRONNA. I am very glad, then, that we have not got the Senator from Colorado to grade grain for us.

Mr. SHAFROTH. Well, that may be.

Mr. GRONNA. Because any man who knows anything about grain would simply say: "We will adopt a system of dockage. We will take out the foreign matter and deduct whatever the dirt may be—whatever the seeds may be—and we will give you whatever the grain is."

Mr. SHAFROTH. Of course, if you want to eliminate some of it, you can determine your grade in that way; but in grading a sample without any extraction of the elements, of course, you have to grade it according to what is there. The maximum allowance in No. 1 corn of "cracked" corn, not including finely broken corn—see general rule No. 9—is 2 per cent.

Now, if there is more than 2 per cent of that in the corn that is sought to be sold, it can not be considered as No. 1 corn. The standard for No. 2 corn is as follows——

Mr. GRONNA. Mr. President, if the Senator will pardon me again, I think if he will read the testimony of Dr. Duvel, who is really the authority on this bill, he will find that Dr. Duvel stated, in substance, that he would not grade the grain down, as the Senator now indicates, because of any foreign matter in it. I can find that in the testimony before the committee of the House.

Mr. SHAFROTH. I heard his testimony before the committee and I also read his testimony. I do not remember what that is; but here are definitions prescribed by the Agricultural Department as to grades of corn which they have established and which now are generally being recognized throughout the United States, and they are specific. They are not like the conditions prescribed in the grades of the New York Produce

Exchange or of the Boston Chamber of Commerce or of the Philadelphia Commercial Exchange, such as—

No. 2 mixed corn shall be sound, dry, and reasonably clean.

That does not mean anything. It means that a person can contend either that the sample which he produces complies with standard or that it does not comply with it, depending upon the interest of the party, as to whether he wants to buy at a low price or whether he wants to sell at a high price.

Now, take No. 2 corn as prescribed by the Agricultural Department. It says that where the moisture exceeds 15½ per cent it is lower than No. 2. In other words, No. 2 must have no more moisture than 15½ per cent in it. It is tested and easily ascertained to a fraction, and consequently there can be no doubt as to whether the corn comes within that prerequisite of the department or not. There the damaged corn can not exceed 4 per cent; and that, by sampling, can be found out to exactness in the same manner. Also, the foreign material, including dirt, cob, other grains, finely broken corn, and so forth, shall not exceed 1 per cent; and that can be ascertained by sampling and by weight just exactly as in the other case. The "cracked" corn, not including finely broken corn, shall not exceed 3 per cent.

So it goes down through six grades of corn. In fact, it goes to the seventh, which is "sample corn." Every lot of corn that contains more than 23 per cent of moisture falls below No. 6 and consequently is called sample corn, which must be sold by sample or upon inspection. Then in the case of No. 6 the damaged corn must not exceed 15 per cent. That is easily ascertained with certainty, and the foreign material, including dirt, cob, other grains, finely broken corn, and so forth, must not exceed 5 per cent; and the allowance of "cracked" corn, not including finely broken corn under rule 9, must not exceed 7 per cent. Everything that goes beyond those exact provisions goes into what is called sample corn, and is sold on the market as sample corn.

It seems to me that when you consider the terms that are prescribed as to the character of corn under the standard adopted by the Government of the United States, there can be no comparison as to certainty with the standards that have been adopted by these commercial organizations and produce exchanges. No. 1 corn in the New York Produce Exchange must be a "mixed corn, sound, dry, and reasonably clean." Whenever you present a sample of that kind for the purpose of having it graded the buyer is there to say that it is not No. 1, because it is not reasonably clean. The seller is there continually to say that it is reasonably clean and that it should be classed as No. 1.

Mr. President, it is said that the opposition to this bill now comes from the markets at the four great ports at which grain leaves the United States; and it is said that that objection arises by reason of the fact that the middlemen there buy upon a lower grade and sell upon a higher grade, thereby making an undue profit on the person from whom they buy. Of course, that ultimately goes back to the farmer, because if the middleman buys at a less price in New York for foreign shipment he must correspondingly reduce the amount which he pays to the farmer himself.

I want to say that this is admitted in the testimony. There are statements here that they buy at a lower price and sell at a higher price. It is admitted in the testimony by persons who say they have bought corn as No. 3 and No. 4 and have shipped it abroad as No. 2 corn; and that has produced a condition of affairs as to our foreign trade that has led to great complaint. Complaint has been made continually in recent years that the corn and the wheat shipped from this country to Europe are not of the grade specified, and for that reason there is great dissatisfaction.

The United States Government is the only Government in the world whose certificate, final as to the grade of grain, is accepted in Europe. All other countries, notably the South American countries, have to ship their grain and have it inspected there; and while they may have a right to dispute the grade fixed and perhaps a right of appeal, it is in a foreign country. Of course, the exporter from this country would be, if we were in the same condition, at a great disadvantage. It is on that account that it is so important that we should have our grades clearly fixed, that they should be clear in definition, so that there can be no dispute, and so that when shipments are made they will receive the confidence of the foreign markets in a way that will cause them continually to trade with us in preference to other people.

Now, I want to call attention to some of these objections that have been made.

On page 37 of the hearings before the Senate committee the chairman says:

The CHAIRMAN. I have heard this urged as a complaint that lack of any standard of nationalized grades of grain in this country has destroyed the reputation of our grain abroad, or has impaired its reputation, and that as a result they pay the lowest prices possible.

Mr. DUVEL. I think that is the situation exactly. That is covered in a little statement that was put out and will appear in the next issue of the Weekly News Letter. These complaints have been coming in for many years.

The CHAIRMAN. I base that statement on consular reports I had examined.

Mr. DUVEL. Yes, sir. I should like to read just one or two of these. This is from the Italian Embassy.

One of the most recent complaints (Mar. 8, 1916) reads in part as follows [reading]:

"The Italian Embassy begs to inform the State Department that in the last few months there have arrived in Italy from the United States quite a number of shipments of wheat which were found to be in very poor condition, largely unfit for consumption, notwithstanding the fact that they were accompanied by regular inspection certificates issued by competent State authorities. * * * These occurrences have created a most unfavorable impression in Italian commercial circles, where it is felt that some American exporters of wheat have not been dealing with that degree of correctness customary in commercial transactions."

From another, under date of October, 1913, we read [reading]:

"The certificates of the inspectors of the grain exchanges of the United States shipping places (———, ———, and others) are considered on our side with the greatest possible distrust, as they are not giving the slightest security for the good condition of the grain shipped. From year to year the standard seems to have been lowered, just as it suited the shippers or members of the exchange."

The secretary of the Hull Corn Trade Association, under date of October, 1913, wrote [reading]:

"Since December, 1911, there have been practically no arrivals of American maize at Hull, one of the reasons being that buyers here do not care to take the risk of condition."

The department received last December through the American ambassador at London a long summarized complaint of the London Corn Trade Association, the Liverpool Corn Trade Association, and the National Association of British & Irish Millers, from which I take the following [reading]:

"For many years European buyers of United States grain shipped from Atlantic and Gulf ports have expressed grave dissatisfaction with the conditions of trading in respect of the quality of grain exported on certificate. Matters have now reached a climax. * * * Large quantities of No. 2 hard winter wheat, 1915 crop, * * * inspection, have been sold and shipped in the last few months. A large proportion of this wheat was neither dry, nor sound, nor sweet, nor did it weigh 59 pounds per bushel, nor even was it in any degree hard on its arrival in this country. * * * By the later export of grossly inferior and improperly graded wheat some United States shippers have secured an immediate advantage on contracts then existing, but the loss of good repute is serious and deplorable. Buyers can not be fleeced with impunity. * * * It is hard to believe that even those sellers who are dominated by consideration of merely personal advantage can be satisfied with this state of affairs, and it must be in the highest degree unsatisfactory to honorable traders in the States who have to suffer for the misdeeds of the unscrupulous ones. * * * The want of uniformity in a system of grading must result in a lowering of the value of the whole crop, for buyers naturally base their price on the poorest quality they may receive."

Now, Mr. President, I do not wish to read any more, but there are other extracts which are contained in these hearings to practically the same effect.

Mr. McCUMBER. Mr. President——

Mr. SHAFROTH. I yield to the Senator.

Mr. McCUMBER. If the Senator desires, he could get volumes of the same material in the testimony that has already been taken before the Senate Committee on Agriculture and Forestry in the last 10 years on bills I have had before the Senate. I think all must agree that the statement made in the testimony read is correct, and what we want to arrive at now is some way to avoid it. How can we do it under the bill that has been introduced? How can we reach this?

I am satisfied that we can not reach it till we have not only Federal grading but supervision and inspection in the same person; that we can not arrive at the end desired by simply providing for Federal standards and assuming a supervisory right where there is no provision in the bill as to how that supervision is to be conducted or how it is to be enforced.

I wish that the Senator who has arrived at the same conclusion as I do as to the necessity for making a change would give us a bill that would be effective in bringing about the change that we all desire.

Mr. SHAFROTH. Mr. President, I concede that a bill which provides for supervision only can not be as accurate and as certain as one that provides for inspection also. There is no doubt about that. But in the one instance it takes in thousands of employees. Success is not absolutely certain, and for that reason we ought to take definite steps slowly. You would have to have an appropriation here of a good many million dollars to establish the system which the Senator desires. Probably it would pay in the end, and probably we can work up to that consummation. It seems to me when we have State inspection in a great many of the States and we have not the standards we ought to fix the standards and try to attach to that State inspection a supervision on the part of the Federal Government

so that there will be uniformity, not perhaps as perfect as it would be under the Senator's bill, but which would be much more satisfactory than that which exists now.

I put aside the question of inspection which the Senator proposes, because it is impracticable at this time to do it by reason of the state of the Treasury, by reason of the fact that we do not know how this is going to operate, nor how it would operate absolutely. For that reason, it seems to me, it would be better to establish the standard and the supervision, and then if we find that will not work we can try the inspection also by the Federal Government. But it is appalling to me to say that we are going to have thousands and thousands of employees of the Government as inspectors of the Federal Government scattered all over the country, one at every elevator in the United States.

Mr. McCUMBER. Mr. President, I wish to correct the Senator, and I know that he is willing to stand corrected, as we both desire to accomplish the same result. The method now for inspecting grain provides that a charge is made for every inspection, and that charge takes care of the entire expenses. The same inspectors who are now used could be used under a Government system and without the cost of one penny to the Treasury of the United States.

I will agree with the Senator that it is not because of lack of funds in the Treasury but because from the very strong opposition by all the boards of trade and exchanges throughout the United States we can not muster up a sufficient number of votes to put any bill through which would be a better bill.

I am willing to compromise. I would be very glad to do it, and take the first step that the Senator suggests, namely, Federal standardization and Federal supervision, but I hope that we can draft such a provision as will secure that end. What I fear is that the bill which is proposed here has a number of provisions which will make it unworkable and will be worse than having no bill at all.

Why could we not just have our Federal standardization and then Federal supervision without many of the matters of appeals, and so forth, which you can not put into force? Let the appeals go on just the same as you have them now. If you are dealing with a Chicago exchange or a Minneapolis exchange, provision is made in the laws of Illinois and the laws of Minnesota for an appeal to inspectors and chief inspectors.

Now, let us appeal to them and let them apply the Government standard to protect their own system of appeals. But you have another system of appeals. You are attempting to recognize them and at the same time to ignore the immense machinery that they have built up. You have made a complex matter out of something that could have been made very simple, and in that complexity you have destroyed the workability of your provisions.

Mr. SHAFROTH. Mr. President, nearly everyone believes in standardization. Some people believe in supervision without Federal inspection. Other classes of people believe in inspection and supervision and will take nothing less. It is true that this machinery upon the part of the Government in establishing an inspection would be very great, and while the fees no doubt, to some extent, would carry it on, I apprehend there would be a great bureau down here, with agents radiating from Washington, that would have to be paid by the Government in order to supervise it more thoroughly.

Mr. POMERENE. Mr. President——

Mr. SHAFROTH. In just one moment. Before I leave the question that I was discussing I want to read a statement made by Mr. RUBEY, of the House of Representatives, before our committee in which he said:

> Before our committee in 1914, Mr. Eddy, a representative of one of the big markets, an exporter, testified that they bought No. 3 corn, and even No. 4 corn, and shipped it to Europe as No. 2 corn. They have been doing that and they want to continue to do it.

That is one of the reasons why these exporting places are opposed to any standardization or any supervision or any inspection on the part of the Government. I now yield to the Senator from Ohio.

Mr. POMERENE. It appears from the discussion both to-day and at other sessions of the Senate that there has been a good deal of investigation of the subject of grain standardization, and in some of the States it would seem that they have already established grades.

Mr. SHAFROTH. In eight States.

Mr. POMERENE. In eight States. Now, under the bill as it is drawn the power is given to the Agricultural Department to establish grades, and so forth, and define them.

Mr. SHAFROTH. Yes, sir.

Mr. POMERENE. Has not the subject been sufficiently investigated so that you could define the grades in the bill itself rather than leave it to a Secretary of Agriculture, which means, of course, that the practical operations are wholly under the control of subordinates in the department?

Mr. SHAFROTH. I will state to the Senator that that is possible. Of course, we could specify in the statute these very things that I have read here as the definitions of corn No. 1, corn No. 2, and corn No. 3, and so forth, but it seems to me there is nothing lost by permitting the Secretary to do it; and the bill provides that he shall give 60 days' notice of exactly the elements that enter into the standard and shall publish it to the world before it becomes a standard.

Mr. POMERENE. Of course I am not on the committee and I have not given the subject the attention it deserves; there has not been time to do it, but I take it that the committee has investigated the matter to such an extent that they ought to be able to give to the Senate some definite idea as to what would constitute the standard, how many different grades there should be, and to define them. If the committee have such information or if the Department of Agriculture has that information or if it is obtainable from experts who have given to this subject a life study, why may we not have it?

Mr. SHAFROTH. It has not been worked out as to the other grains. It has as to corn. I do not know whether the Senator was here when I read the specifications stating the standards of the various grades of corn.

Mr. POMERENE. Yes; I heard the Senator's statement.

Mr. SHAFROTH. It is easily done. They may be somewhat arbitrary, but it is a question which experts ought to determine. Then there are conditions arising in different events that would make it so that there perhaps ought to be a change. There may be some conditions that would make necessary a change in some of the standards.

I say that there is no wrong going to be done either to the farmer or anybody else if it is left to the Secretary of Agriculture to define these grades and give 60 days' notice before they shall take effect.

Mr. President, the condition of our foreign trade in this respect is something that shows the necessity of some action on the part of the Congress of the United States, and while that action might not go to the extent which the Senator from North Dakota desires, and which I must say contains a great many admirable features, yet notwithstanding that something ought to be done. The intense opposition that would be raised to Federal inspection would hazard perhaps the enactment of any law at all, yet we all admit that standards are right and proper, and there should be one standard in the United States established by the Government. Let us take the step, next, of supervision. That does not put the farmer at any disadvantage. He can operate through the State inspection if he wants to, as now. There is no requirement that he should come and have his grain graded at all. He can sell it on sample; he can sell it on inspection; and he need not grade it. When it is graded, then, of course, it is subject to appeal. He will have it graded because he will not be apt to sell it to New York, Philadelphia, and Baltimore exporters unless it is graded. It is to his advantage, because, as I have read right here, they have bought at a lower grade and sold at a higher grade, much to their profit.

Mr. POMERENE. May I ask the Senator another question?

Mr. SHAFROTH. Certainly.

Mr. POMERENE. The Senator said a moment ago that different States have adopted grain-inspection rules. May I ask the Senator whether those grades are fixed by statute in those States or are they fixed by some department of the State?

Mr. SHAFROTH. I do not think they are fixed by statute.

Mr. POMERENE. May I ask the Senator further, then, is there any similarity between the gardes established in the different States?

Mr. GORE. Mr. President——

Mr. SHAFROTH. I yield to the Senator from Oklahoma.

Mr. GORE. I should like to state in this connection that there are about 35 markets in the United States, and each of the markets handles more than 5,000,000 bushels annually. There are about 600 different grades prevailing in the United States. It is the paramount object of the bill to standardize those grades, so that a grade in one place will be a grade everywhere, just as a dollar is a dollar everywhere and a yardstick a yardstick everywhere. It is the object to get a unit of measurement, and that is the preliminary step to any real reform in our system of markets.

Mr. SHAFROTH. Mr. President, I will state that the Liverpool importers, for instance, have a great deal more confidence in Canadian wheat than they have in American wheat. It is due to the fact that the Dominion of Canada passed a grade-standard act, and the wheat of that country is sold on those

standards, and they pay higher prices, of course. The foreign buyer of necessity, when he has once been deceived, when fraud has been perpetrated upon him, will bid a less price, no matter how it is graded at the exporting places.

Mr. GORE. There is a difference of 2 to 4 cents.

Mr. SHAFROTH. There is a difference of some 2 to 4 cents, I think the testimony shows, between the price paid for wheat from Canada and that which is paid for American wheat.

Mr. GORE. And purporting to be of the same grade.

Mr. SHAFROTH. And purporting to be of the same grade. That being the case, it is evidently to our detriment that we have not these standards. It is evidently to our detriment that we have not supervision, and it may also be to our detriment that we have not inspection. But inasmuch as it is claimed that there is such powerful objection to inspection, we ought to go as far as we can to get the grades established, and also get the supervision. That supervision is considerable when you take into account the appropriation of $250,000 contained in the bill.

As the Senator from Oklahoma has said, there are 35 markets in the United States, where more than 5,000,000 bushels of wheat are sold. There will unquestionably be a supervisor appointed at each of those places, and consequently there will be an opportunity for all wheat which is intended for export to be graded under an inspection, if there is any dispute on the part of the persons who are buying and selling the grain. For that reason it seems to me that with 35 inspectors ready to entertain appeals, ready to pass upon questions, there can not be any such frauds perpetrated upon the foreign buyers as have been perpetrated in the past.

It is the intention under this bill to license the State inspectors, as they will have to operate under the United States statute, to the extent, at least, of good conduct, on penalty of a revocation of their license.

If that is true, that is almost equivalent to an inspection by the United States Government. Here each State inspector becomes a United States inspector without any salary. He goes and inspects the grain just as if he were a United States inspector paid by the United States Government. When that is done the certificate should go. But there is a right of appeal, and that right should exist. It may be a little cumbersome, but, nevertheless, you can not deprive a person of his right to say that the inspection is not correct and that the grading has been wrong.

Mr. President, I will say that the Moss bill, which was in the House of Representatives in the Sixty-third Congress, was practically the bill which is presented in the amendment to the Apricultural appropriation bill. It has been ventilated; it has been discussed; a large amount of testimony has been taken concerning it, and it will be making no experiment other than the experiment which is incident to all legislation, even the very best. As I recall, when that bill passed the House of Representatives there were only 17 recorded votes against it, which is an indication that the farmers and the people who are interested in grain grading want this bill. Under those circumstances it seems to me, Mr. President, that we ought to have this provision in the shape in which it is now before the Senate.

The amendment which has been offered by the Senator from North Dakota [Mr. GRONNA] would keep the conditions practically as they are, with, perhaps, the exception of the standard. The section which he proposes to add provides:

SEC. 13. That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law or in which public warehouses are regulated by law: *Provided, however*, That the Secretary of Agriculture is authorized to cooperate with the officials charged with the enforcement of grain inspection and warehouse regulation in such States, and through that cooperation to secure the enforcement of the provisions of this act as far as practicable and in such manner as not to conflict with the laws of such States.

Mr. President, we are trying to get a Federal supervision of grain; we are trying to get standards established. We hope that some day it may result even in Federal inspection in each case; but that step it seems impossible to take at this time. It seems to me that we ought to make these changes, and with these changes I believe it will be better for the farmer and better for the honest dealer in grain.

The PRESIDING OFFICER (Mr. THOMPSON in the chair). The question is on the amendment offered by the Senator from North Dakota [Mr. GRONNA]. [Putting the question.] The noes seem to have it. The noes have it, and the amendment is rejected.

Mr. SHEPPARD. I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 80——

Mr. GRONNA. Mr. President, let us have a division on the amendment just voted upon. I think there are Senators interested who did not understand that a vote was being taken. I ask that the question be again put, and I think it would be well to have the amendment again stated.

The PRESIDING OFFICER. The result has been announced.

Mr. GRONNA. I move to reconsider the vote by which the amendment was rejected.

The PRESIDING OFFICER. Other business has intervened.

Mr. GRONNA. I move to reconsider the vote by which the amendment was rejected.

The PRESIDING OFFICER. The Senator from North Dakota moves to reconsider the vote just taken.

Mr. GORE. Mr. President, of course if the Senator insists on it I shall not resist.

Mr. GRONNA. Mr. President, I will say to the chairman of the committee that I believe there are Senators here who are very much interested in this amendment who were not aware that a vote was being taken upon it.

Mr. SWANSON. I suggest to the Senator that the bill is still being considered as in Committee of the Whole, and that another vote can be taken in the Senate when the bill is reported to the Senate, just as well as it can be taken now. The vote just taken is not conclusive in the matter at all, and I suggest that he make objection when it gets into the Senate, and then ask for a separate vote. That will save time.

Mr. GRONNA. Mr. President——

Mr. GALLINGER. Mr. President, if the Senator will permit me, I was about to suggest that it is half past 5. It has been a long day from 11 o'clock until this hour, and it is impossible to get a quorum now. I think the Senator from Oklahoma ought either to move an adjournment or a recess, as best suits his convenience.

Mr. SWANSON. Mr. President, if we delay the appropriation bills in this manner, we will not be able to pass them before September; and it seems to me we had better proceed until 6 o'clock.

Mr. SMOOT. If the Senator can get a quorum, we are perfectly willing to proceed until 6 o'clock; but I am quite sure it will be impossible to get a quorum.

Mr. SWANSON. There is no vote pending, is there?

Mr. SHAFROTH. Yes; there is a vote pending.

Mr. SWANSON. I think the Senator from North Dakota has withdrawn the request and will take the matter up when the bill reaches the Senate.

Mr. GRONNA. I do not believe it is necessary to have a quorum in order to have the vote reconsidered. There were not more than one or two Senators who voted when the question was put. I do not believe half a dozen Senators knew what was going on. I simply ask, as a matter of common courtesy, that the vote by which this amendment was rejected be reconsidered. I know the Senator from Minnesota [Mr. NELSON] is very much interested in the amendment, and he was not aware, I think, that it was being voted on.

Mr. GORE. I shall not resist the motion to reconsider.

The VICE PRESIDENT. The question is on the motion of the Senator from North Dakota to reconsider the vote by which his amendment was rejected.

The motion to reconsider was agreed to.

Mr. GALLINGER. I suggest the absence of a quorum. This is an important matter, and there ought to be a quorum here.

Mr. SHEPPARD. I have offered an amendment; but in view of the fact that a point of no quorum has been raised, I ask leave to withdraw it.

ESTIMATES OF APPROPRIATIONS.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting a letter from the Secretary of the Navy submitting a supplemental and additional estimate of appropriation in the sum of $683,000 for arming and equipping the Naval Militia for the fiscal year ending June 30, 1917, etc. (S. Doc. No. 487), which, with the accompanying papers, was referred to the Committee on Naval Affairs and ordered to be printed.

He also laid before the Senate a communication from the Secretary of the Treasury, transmitting a letter from the Secretary of War submitting an estimate of appropriation in the sum of $7,000,000 required for the services for the fiscal year 1917 by the Medical and Hospital Department (S. Doc. No. 486), which, with the accompanying papers, was referred to the Committee on Military Affairs and ordered to be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House agrees to the amend-

ment of the Senate to the bill (H. R. 14725) authorizing the Secretary of the Interior to subdivide a part of the town site of Plummer, Idaho, and for other purposes.

The message also announced that the House agrees to the amendments of the Senate to the bill (H. R. 8351) to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and, further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice President:

S. 2986. An act to provide capital for agricultural development, to create standard forms of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create Government depositaries and financial agents for the United States, and for other purposes;

S. 3346. An act conferring jurisdiction on the Court of Claims to adjudicate the claims of the State of Massachusetts; and

H. R. 13486. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

PETITIONS AND MEMORIALS.

Mr. LIPPITT presented a memorial of the Chamber of Commerce of Providence, R. I., remonstrating against restricting the use of scientific methods of promoting the efficiency of employees in the Government service, which was ordered to lie on the table.

Mr. WORKS presented a memorial of sundry citizens of Burroughs and Pine Ridge, in the State of California, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

Mr. WADSWORTH presented petitions of sundry citizens of New York, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Binghamton, N. Y., remonstrating against appropriations for sectarian purposes, which was ordered to lie on the table.

He also presented memorials of sundry citizens of Buffalo, N. Y., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a petition of sundry citizens of Sullivan County, N. Y., praying for the enactment of legislation to found the Government on Christianity, which was referred to the Committee on the Judiciary.

Mr. PHELAN presented a petition of the Woman's Home Missionary Society of the Methodist Episcopal Church, of Oakland, Cal., praying for prohibition in the insular possessions of the United States and also to prohibit the exportation of intoxicating liquor to Africa, which was referred to the Committee on the Judiciary.

He also presented a memorial of the Board of Supervisors of Sacramento County, Cal., remonstrating against the proposed inheritance tax, which was referred to the Committee on Finance.

REPORTS OF COMMITTEE ON CLAIMS.

Mr. CATRON. I am directed by the Committee on Claims, to which was referred the bill (H. R. 9621) for the relief of J. W. Dellinger, to submit an adverse report (No. 597) thereon. I ask that the bill be placed on the calendar.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. CATRON, from the Committee on Claims, to which was referred the bill (H. R. 8318) for the relief of De Barbieri & Co., of Valparaiso, Chile, reported it without amendment and submitted a report (No. 598) thereon.

ROAD FUND OF CRITTENDEN COUNTY, ARK.

Mr. CLARKE of Arkansas. From the Committee on Commerce I report back favorably, with an amendment, the bill (H. R. 10251) authorizing the Kansas City & Memphis Railway & Bridge Co. to make settlement with Crittenden County, Ark., and for other purposes, and I ask unanimous consent for its present consideration.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendment was, on page 2, line 1, after the words "the sum of," to strike out "$12,000" and insert "$25,000," so as to read:

That the Secretary of War is hereby authorized and empowered to release the Kansas City & Memphis Railway & Bridge Co., a corporation, from the duty now imposed upon it by the act entitled "An act to authorize the construction of a bridge across the Mississippi River at Memphis, Tenn.," approved April 24, 1888, and all acts amendatory thereof, to maintain approaches to its bridges at Memphis, Tenn., and a way over and across said bridge for wagons and other vehicles, animals, and foot passengers upon its payment to the road fund of Crittenden County, Ark., the sum of $25,000.

The amendment was agreed to.

The bill was reported to the Senate as amended and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. FLETCHER:

A bill (S. 6570) for the relief of W. H. Overocker; to the Committee on Post Offices and Post Roads.

By Mr. TAGGART:

A bill (S. 6571) granting an increase of pension to Isaac Rinehart;

A bill (S. 6572) granting an increase of pension to Robert A. Edwards;

A bill (S. 6573) granting an increase of pension to Frank W. Ogden;

A bill (S. 6574) granting an increase of pension to William Delvin; and

A bill (S. 6575) granting an increase of pension to Harry W. Stephenson; to the Committee on Pensions.

By Mr. HARDING:

A bill (S. 6576) for the relief of the Buckeye State Building & Loan Co., of Columbus, Ohio; and

A bill (S. 6577) for the relief of the Franklin Loan & Savings Co., of Columbus, Ohio; to the Committee on Claims.

Mr. BRANDEGEE (for Mr. PENROSE):

A bill (S. 6578) for the relief of Ellen M. Willey; to the Committee on Pensions.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. SMOOT submitted an amendment proposing to appropriate $15,000 for the proportionate share of the amount required to construct an interstate wagon road or highway through the Mukuntuweap National Monument, Utah, approximately 15 miles, intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. STERLING submitted an amendment proposing to appropriate $150,000 for communicating and distributing to citrus-fruit growers in the United States the results of such investigations together with such recommendations as to the eradication or control of such diseases as in the judgment of the Secretary of Agriculture may be necessary, etc., intended to be proposed by him to the Agricultural appropriation bill (H. R. 12717), which was ordered to lie on the table and be printed.

He also submitted an amendment providing that no part of the appropriation shall be available for investigations and experiments in the dairy industry in any State until assurances satisfactory to the Secretary of Agriculture shall be given that such State or the proper county authorities or other agencies within the State will provide and contribute a sum equal to 50 per cent of the amount required for such work, etc., intended to be proposed by him to the Agricultural appropriation bill (H. R. 12717), which was ordered to lie on the table and be printed.

He also submitted an amendment providing that no part of the appropriation shall be used in the purchase of materials for or in the construction of dipping vats or for the purchase of materials or mixers for use in dipping vats, but that the expense of such construction and of the purchase of all such materials shall be borne by the State, etc., intended to be proposed by him to the Agricultural appropriation bill (H. R. 12717), which was ordered to lie on the table and be printed.

Mr. GORE. I move that the Senate adjourn until to-morrow at 11 o'clock.

The motion was agreed to; and (at 5 o'clock and 28 minutes p. m., Thursday, July 6, 1916) the Senate adjourned until to-morrow, Friday, July 7, 1916, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

THURSDAY, *July 6, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Eternal Spirit, our heavenly Father, look with favor, we beseech Thee, upon us, and so move upon our hearts that we may be inspired intellectually, morally, spiritually to do the work Thou hast called us to do wisely, conscientiously, faithfully, that we may be reckoned among the potent influences Thou art ever calling to aid in the betterment of mankind; that in spite of the untoward circumstances so appallingly and overwhelmingly evil, out of it all may come larger life and nobler living for all Thy children.

No act falls fruitless; none can tell
How vast its power may be,
Nor what results enfolded dwell
Within it silently.

Work, and despair not; bring thy mite,
Nor care how small it be;
God is with all that love the right,
The holy, true, and free.

In His name. Amen.

The Journal of the proceedings of yesterday was read and approved.

QUESTION OF PERSONAL PRIVILEGE.

Mr. GARNER. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. GARDNER] have until the 25th of this month in which to speak to a question of personal privilege concerning the remarks of my colleague [Mr. CALLAWAY]. I will say in this connection that this is with the consent of the gentleman from Massachusetts. He is good enough to postpone it until my colleague gets through with his campaign in Texas.

The SPEAKER. The gentleman from Texas asks unanimous consent that the gentleman from Massachusetts [Mr. GARDNER] shall have up to and including the 25th of this month to speak on a question of personal privilege relating to the remarks of the gentleman from Texas [Mr. CALLAWAY]. Is there objection?

There was no objection.

LEAVE TO EXTEND REMARKS.

Mr. McKELLAR. Mr. Speaker——

The SPEAKER. The Senator from Tennessee. [Applause.]

Mr. McKELLAR. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by correcting some remarks that I made heretofore on rural credits. I got some of the figures wrong, and I want to get them right.

The SPEAKER. The gentleman asks unanimous consent to correct some remarks heretofore made by him on the subject of rural credits. Is there objection?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 2845. An act authorizing the sale of the marine hospital reservation in Cleveland, Ohio.

The message also announced that the President had approved and signed bills and joint resolution of the following titles:

On July 1, 1916:

H. J. Res. 242. Joint resolution to authorize the President to draft members of the National Guard and of the Organized Militia of the Several States, Territories, and the District of Columbia and members of the National Guard and Militia Reserves into the military service of the United States under certain conditions, and for other purposes;

H. R. 13383. An act making appropriations for the Diplomatic and Consular Service for the fiscal year ending June 30, 1917;

H. R. 15836. An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1917, and for other purposes; and

H. R. 16678. An act making appropriations to supply urgent deficiencies in appropriations for the Military and Naval Establishments for the fiscal year ending June 30, 1916, and for other purposes.

On July 3, 1916:

H. R. 393. An act to authorize an exchange of lands with the State of North Dakota for promotion of experiments in dry-land agriculture, and for other purposes;

H. R. 8654. An act to amend an act entitled "An act to provide for an enlarged homestead," approved February 19, 1909, by adding a new section to be known as section 7; and

H. R. 11286. An act for the issuance of a patent for certain Government land to Benjamin F. Robinson and John Dows.

REVENUE.

Mr. GARRETT. Mr. Speaker, by direction of the Committee on Rules, I submit a privileged resolution.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 291 (H. Rept. 923).

Resolved, That immediately upon the adoption of this resolution the House shall resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 16763; that the first reading of the bill shall be dispensed with; that general debate shall continue on the bill until not later than Friday next at 6 o'clock p. m., the time to be controlled one-half by the gentleman from North Carolina [Mr. KITCHIN] and one-half by the gentleman from Michigan [Mr. FORDNEY]; that while the bill is under consideration the House shall meet at 11 o'clock a. m.; that the bill shall be the order for all legislative days except Calendar Wednesday; that at the expiration of general debate the bill shall be read in full by the Clerk without interruption; that upon conclusion of the reading of the bill amendments may be offered to any paragraph of the bill and considered and disposed of under the five-minute rule until Monday next at 5 o'clock p. m., when all pending amendments shall, without further debate, be voted on.

After all pending amendments shall be disposed of the committee shall rise and report to the House the bill and all amendments that shall have been recommended by the Committee of the Whole House on the state of the Union, whereupon the previous question shall be considered as ordered upon the bill and amendments to its final passage; and the House shall immediately proceed to vote on amendments, engrossment, third reading, and final passage of the bill without intervening motions, except one motion to recommit.

Mr. GARRETT. Mr. Speaker, extraordinary conditions, with which gentlemen here and the country generally are familiar, have required expenditures going beyond the usual and ordinary expenditures of Congress. In order to make those expenditures the Treasury must have the money. The majority party, recognizing its responsibility under our system of government, and being willing and ready to meet that responsibility, has, through its committee, formulated plans for the raising of this additional revenue. Those plans are contained in H. R. 16763, reported from the Committee on Ways and Means on yesterday.

This rule, which I present by direction of the Committee on Rules, is presented in accordance with the suggestion of the Committee on Ways and Means, acting through its chairman, the gentleman from North Carolina [Mr. KITCHIN]. Its purpose is to expedite the consideration and passage of this revenue measure. It is plain, simple, and liberal in its terms. I trust that it may meet with the approval and support of the membership of the House.

Mr. Speaker, I yield 30 minutes to the gentleman from Kansas [Mr. CAMPBELL].

Mr. CAMPBELL. I yield seven minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Speaker, the presentation of this rule shows the evil effect of persistence in bad habits. There is absolutely no necessity for this rule. The bill to which it relates is a privileged bill. It is not two weeks since the gentleman from Illinois [Mr. MANN] rose one afternoon here about half past 4 or 5 o'clock and called attention to the fact that a bill which was under discussion collaterally was a privileged bill, and by a simple motion took the House into the Committee of the Whole House on the state of the Union, and passed that bill on the morning of the next legislative day. This bill could have been taken up in the same way, and time for general debate, if not agreed upon, could have been fixed by motion; and the only purpose and effect of this rule—we might as well be frank about it—is to prevent the minority from offering amendments effectively. The other day the gentleman from Alabama [Mr. HEFLIN] said, in substance, that there was nothing in the Republican Party to attract Progressives back. I want to say to him and to his party that so long as they persist in what the politicians in the Progressive Party denounced, which is the practice of this House to cut off the right of amendment, they will effectively prevent Progressives who understand parliamentary procedure—and there are a good many of them—from even thinking of going into the Democratic Party. [Applause.]

We could have taken up this bill in the regular way by sections, read it under the five-minute rule, to which we are accustomed, and I think we would have gotten more effective legislation, probably, if, instead of giving two days to general debate, we had given one day to general debate and three days for debate under the five-minute rule, and put ourselves more nearly on a level with the other body. Why is it that this House continually goes down in the popular estimation? It is because we continue to deprive ourselves of the right to exercise the same powers as the other half of the Congress of the United States. We have just as much right to offer a legitimate amendment to an important measure as has the body at the other end of the Capitol, but we persist in limiting our own power to offer amendments until we bind, shackle, and deliver ourselves helpless and

hopeless to the body at the other end of the Capitol. The record of this session of the Sixty-fourth Congress is that it has reported more special rules than any similar session of Congress in over 20 years, despite the protestations of gentlemen on the other side out of power when they claimed that we had fallen into the habit of reporting special rules. I will tell you what habit this House has got into. Five or six months ago, when we started in our sessions of the Committee on Rules, a gentleman came in one day when I happened to be there a little in advance of the quorum. I asked him what he was doing there, and he said, "I have some legislation and I want a rule from your committee." I said, "A rule! What kind of a rule?" He said, "Why, I am not particular, just a rule." And that is the condition into which the House has fallen. We have that blind adherence to the idea that it is necessary to have a rule in order to pass bills. This sort of procedure encourages the House in that belief.

I want to congratulate my colleague from New York [Mr. FITZGERALD] that when he brings in a privileged bill from the Committee on Appropriations he does not ask for any rule. He gets up in his place as a Member of the House, and with his superb knowledge of the rules, in which he has no superior, he carries his bills through without special rules.

With this bill, a similar privileged bill, with no greater or less privilege than the sundry civil bill, you must have a rule, and we are driven to the conclusion that the rule is for no purpose except to prevent making effective amendments. Why can not we make effective amendments? Because the whole bill is read through at one time, and no man dares to offer an amendment to a later section for fear that amendments offered after that to earlier sections will make the amended subsequent sections perfectly ridiculous. When we pass this rule, when the House adopts it, they will take one more step to demonstrate the absolute incapacity of the party in power in this House to do business under the ordinary rules of the House which they themselves adopted.

Mr. FITZGERALD. Will the gentleman yield?

Mr. BENNET. Yes.

Mr. FITZGERALD. As a matter of fact, is it not necessary to have a special rule in order to pass this bill?

Mr. BENNET. It is not.

Mr. FITZGERALD. Does not the bill contain a provision for a tariff commission?

Mr. BENNET. It is a privileged bill, and no point was made that it was not a privileged bill. It was reported from the floor by the chairman as a privileged bill.

Mr. FITZGERALD. That makes no difference; it has a provision in it for a tariff commission.

Mr. BENNET. Which is under the jurisdiction of the committee.

Mr. FITZGERALD. A bill providing for a tariff commission is not a privileged bill, and this bill could not have been taken up without the rule.

Mr. MANN. Will the gentleman from New York yield?

Mr. BENNET. Yes.

Mr. MANN. The bill was reported to the House yesterday as a privileged bill and no point of order was reserved upon it, and no one can make a point of order against anything in the bill now.

Mr. BENNET. I called attention to that.

Mr. FITZGERALD. The question could be raised when the attempt was made to consider it as a privileged bill. The House does not waive its rights to raise that question, although it might be precluded, if it came up as a privileged bill, from making a point of order.

Mr. MANN. If the gentleman is correct, which he is not, you can make the point of order now.

Mr. FITZGERALD. No; you could not.

Mr. MANN. Then it is a privileged bill.

Mr. FITZGERALD. Mr. Speaker, notwithstanding the didactic manner in which the gentleman says I am not correct, I know that I am correct, and I appeal to my colleague from New York that I know the rules. [Laughter and applause.]

Mr. BENNET. When two experts disagree and put it up to me, I agree with the gentleman from Illinois. [Applause.]

The SPEAKER. The time of the gentleman from New York has expired.

Mr. CAMPBELL. Mr. Speaker, one of the most useful rules of the House of Representatives is the rule for debate under what is known as the five-minute rule. That privilege is denied the membership of the House by the rule now under consideration on one of the most important bills that has been before the House during this Congress. But it is not my purpose to discuss the rule. I prefer to take the time that I shall occupy in a discussion of the bill itself. The title is a bill increasing the revenue. The title should be changed. It should be "A bill to impose direct rather than indirect taxes for the purposes of raising the necessary revenue to defray the expenses of the Government in a time of peace."

Mr. Speaker, we are confronted with almost every variety of taxation; almost all the sources of taxation in the country have been and will be resorted to by this administration before it has expired. The extraordinary conditions to which the gentleman from Tennessee referred in presenting this rule does not now exist. There are no such extraordinary conditions existing in this country as will justify the Nation in resorting to all the resources of taxation that it possesses.

Mr. STEPHENS of Texas. Will the gentleman yield?

Mr. CAMPBELL. I would rather not yield.

Mr. GARRETT. Will the gentleman yield; the extraordinary conditions to which I referred were the increase of appropriations for the Army and Navy, for which I believe the gentleman from Kansas voted.

Mr. CAMPBELL. There have been increased appropriations for the Army and the Navy. I voted against many of them. Mr. Speaker, there has never been a time of peace in the history of our country that we have not produced sufficient revenue to pay all of our expenses, great or small, when the Government has imposed customs taxes on importations high enough to protect the industries of the country. There has never been a time, on the other hand, when our customs taxes on importations have been so low as to give freedom of trade, in which the revenues have not been insufficient to defray the expenses of the Government.

These two statements are supported by our experience. Our first customs tax was imposed in a law enacted on July 4, 1789. Under that law we paid the interest and a part of the principal of the debt of the Revolutionary War; we paid the expenses of a second war with England by doubling the customs and adding 10 per cent.

And I call the father of the Democratic Party to testify as to the conditions of our revenue under that law. He says in his first annual message:

> Other circumstances, combined with the increase of numbers, have produced an augmentation of revenue arising from consumption in a ratio far beyond that of population alone; and though the changes in foreign relations now taking place so desirably for the whole world may for a season affect this branch of revenue, yet weighing all probabilities of expense as well as of income, there is reasonable ground of confidence that we may now safely dispense with all the internal taxes, comprehending excise, stamps, auctions, licenses, carriages, and refined sugars, to which the postage on newspapers may be added to facilitate the progress of information, and that the remaining sources of revenue will be sufficient to provide for the support of the Government, to pay the interest of the public debts, and to discharge the principal within shorter periods than the laws or the general expectations had contemplated.

We had a customs tax on importations then, on everything that came into competition with like articles that we produced in America, that built up industries, provided employment for labor, gave markets to farmers, and gave spirit and prosperity to business on every hand and at the same time produced an abundance of revenue. At the close of the second war with England a regular old-fashioned Democratic tariff was placed upon the statute books. It was so low that a flood of importations flowed in from Europe. The Napoleonic wars had just ended, and let me say to my Democratic friends that during the time that we were producing an abundance of revenue to defray the expenses of a war with a foreign country, Europe was then at war, but notwithstanding that, European manufacturers were paying a sufficient revenue into our Treasury to enable us to pay the expenses of a war with the greatest power upon earth, except the United States, at that time. At the end of the second war with England the Napoleonic wars were over. Europe was then in the condition it will be when the present European war shall close. Industries then revived. They sprang up where they had existed before the war. They flooded this country, and our revenues under that low tariff, notwithstanding our large importations, fell off just as they did upon the adoption of the Underwood tariff law. The same condition that produced a deficit the first 10 months of the Underwood tariff law produced a deficit from 1816 to 1824, a deficit that is referred to by another Democratic President when he, with great lamentation, calls attention to the fact in his annual message of 1821 and says:

> At the close of the last session it was anticipated that the progressive diminution of the public revenue in 1819 and 1820, which had been the result of the languid state of our foreign commerce in those years, had in the latter year reached its extreme point of depression. It has, however, been ascertained that the point was reached only at the termination of the first quarter of the present year.

Our revenues were diminished from year to year under a low tariff along with our languishing industries. In 1824 the Government imposed a customs tax upon importations—upon every-

thing that came from Europe that competed with a like article produced in the United States, and immediately revenues poured into the Treasury in abundance, so much so that Andrew Jackson, in his annual message in 1832, congratulated the country and the Congress upon the fact that upon the 1st day of January the Nation would pay off the last dollar of the national debt of two wars, all as a result of a customs tax imposed upon importations from foreign countries from 1824 to 1832, a period of eight years. President Jackson said:

I can not too cordially congratulate Congress and my fellow citizens on the near approach of that memorable and happy event, the extinction of the public debt of this great and free Nation. Faithful to the wise and patriotic policy marked out by the legislation of the country for this object, the present administration has devoted to it all the means which a flourishing commerce has supplied and a prudent economy preserved for the Public Treasury.

But in 1832 John C. Calhoun led the Democratic Party into the theory of free trade, and a diminishing tariff produced a diminishing revenue from 1832 until another Democratic President called the attention of Congress and the country to the fact that he had been unable to sell the bonds of the Government either at home or abroad—and these bonds drew 12 per cent interest. The purpose of issuing the bonds and offering them for sale was to raise sufficient revenue to pay the expenses of the Government in a time of profound peace. President Tyler said that of the loan of $12,000,000 which was authorized at the last session of Congress, only $5,432,726 had been negotiated. He goes on to say:

Of the loan of $12,000,000 which was authorized by Congress at its late session, only $5,432,726.88 have been negotiated. The shortness of time which it had to run has presented no inconsiderable impediment in the way of its being taken by capitalists at home, while the same cause would have operated with much greater force in the foreign market. For that reason the foreign market has not been resorted to, and it is now submitted whether it would not be advisable to amend the law by making what remains undisposed of payable at a more distant day.

Mr. Speaker, under Democratic free trade the Government of the United States could not sell its bonds at 12 per cent interest to get money to defray the running expenses of the Government immediately following a period of eight years in which it had raised a sufficient revenue from a tax on importations to pay off the last dollar of the national debt of two wars.

In 1846 we had another Democratic tariff, and the Speaker of this House has said frequently that that was the greatest tariff in the history of the Republic; but under that tariff, supplemented by the tariff of 1857, which had been in operation but a few months, another Democratic President called attention to the fact that not only were the industries of the country prostrated but that the Treasury of the United States was empty, and that it would be necessary to sell the bonds of the Government to get the necessary money to defray its running expenses, then also in a time of profound peace. This is what President Buchanan said about the condition of the country and the Treasury under that free-trade law:

We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country in its monetary interest is at the present moment in a deplorable condition. In the midst of unsurpassed plenty in all the productions of agriculture and in all the elements of national wealth we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want.

The revenue of the Government, which is chiefly derived from duties on imports from abroad, has been greatly reduced, whilst the appropriations made by Congress at its last session for the current fiscal year are very large in amount.

Under these circumstances a loan may be required before the close of your present session; but this, although deeply to be regretted, would prove to be only a slight misfortune when compared with the suffering and distress prevailing among the people.

That period was followed by a period of thirty-odd years under which the Government imposed customs taxes on importations. We raised revenue to pay the interest on the debt of a great war. We paid our increasing expenses—expenses that were increasing from year to year—without resorting to a bond issue, without resorting to extraordinary taxation. That condition continued until 1892. From March 4, 1889, to March 4, 1893, the last four years in that period under Benjamin Harrison as President, we paid off $365,000,000 of the national debt. The next four years were under a Democratic administration and under a Democratic tariff that permitted importations from foreign countries without the imposition of a sufficient tax, and under that administration our industries were not only prostrated but our revenues were insufficient to pay the running expenses of the Government, then also in a time of profound peace, and we had to sell the bonds of the Government to the amount of $265,000,000 to raise money to pay the ordinary expenses of the Government. That was immediately followed by a period in which the Government imposed customs taxes on importations high enough not only to revive the industries of the country, to make employment for our own laborers, a market for our own farmers at home, but also to supply the Treasury with revenue to pay its vastly increasing expenses. With a small additional tax on a few articles we paid the expenses of a foreign war and its results. We paid for the construction of the Panama Canal in large part out of our ordinary revenues. We multiplied over and over again many of the activities of the Government, increasing these activities in many directions, and more than doubled the expenses of the Government; and yet until the adoption of a Democratic tariff law by our country we did not have to impose any extraordinary taxes upon the people of the country in order to defray our vastly increasing expenses. When we turned the Government over to the Democratic Party on March 4, 1913, there was a handsome balance of nearly $150,000,000 cash in the Treasury of the United States.

You have brought in this tax bill in which you resort to almost every extraordinary sort of taxation to meet increased expenditures; but, mark you, the expenditures of the Government from 1897 to 1912 were doubled. The expenditures of the Government have not been doubled since you came into power. Only a few hundred millions have been added within the last few years. But you have abandoned the best source of taxation that is known to the people of the country—that source of taxation which has been in all our history the least burdensome and the most productive of revenues.

Mr. Speaker, if there were no other reasons for imposing a sufficiently high tax on importations than those I have just given, the Committee on Ways and Means should report a bill placing a higher customs tax on imports and reserve for most extraordinary occasions an extra source of revenue. While it is the boast of the Democratic Party that it has maintained the peace of the United States with all the nations of the earth, it is resorting to every variety of taxation that other nations resort to when they are at war. You could have produced by increasing customs taxes on importations in this bill a hundred million dollars of revenue without increasing the importations into the country one dollar.

Mr. GOODWIN of Arkansas. Will the gentleman yield?

Mr. CAMPBELL. Briefly, for a question.

Mr. GOODWIN of Arkansas. Does the gentleman prefer a tax upon the necessities of life rather than upon the great wealth of the country?

Mr. CAMPBELL. That is as old as anything the Democratic Party has ever produced and as useless. It is the oldest piece of demagogy that has been indulged in by American statesmen.

Mr. GOODWIN of Arkansas. But the gentleman has not answered the question.

Mr. CAMPBELL. I prefer to make foreign nations pay for the privilege of selling their products in our market than to let them sell their products here free of tax, and then tax our own people to make up the necessary revenues to pay the expenses of the Government. [Applause on the Republican side.]

Mr. SABATH. Will the gentleman yield?

The SPEAKER. Does the gentleman from Kansas yield?

Mr. CAMPBELL. No; I can not yield.

The SPEAKER. The gentleman declines to yield.

Mr. CAMPBELL. There has been considerable speculation in the last few months as to the condition in which our country will find itself at the close of the European war. Our country will find itself at the close of the European war that is now on in the same condition in which it found itself at the close of the Napoleonic wars. The conditions are on all fours. Then we had a low tariff; now we have a low tariff.

The SPEAKER. The time of the gentleman has expired.

Mr. GARRETT. I yield the gentleman five minutes.

The SPEAKER. The gentleman from Kansas is recognized for five minutes more.

Mr. REILLY. Will the gentleman yield?

Mr. CAMPBELL. I wish to finish this line of thought; I am sure the gentleman will excuse me. President Monroe called the attention of the country then to the fact that nearly all our industries were swamped by importations from foreign countries. I assert there never has been a time in the history of this country when we have had a low tax on importations in which our industries have not languished, in which our mills and factories have not closed, and our laborers have not gone out of employment, our business been prostrated, enterprises of every character have gone into the hands of receivers, and our farmers been without a market. That was true under the tariff of 1816, under the tariff of 1832, under the tariff of 1846, under the tariff of 1894, and under the tariff of 1913. [Applause on Republican side.]

Mr. FITZGERALD. Will the gentleman yield?

Mr. CAMPBELL. I will, briefly.

Mr. FITZGERALD. Does the gentleman seriously mean to state——

Mr. CAMPBELL. Oh, well——

Mr. FITZGERALD. Let me put the question.

Mr. CAMPBELL. The gentleman is taking up all my time.

Mr. FITZGERALD. No; I will not take up too much of the gentleman's time. Does the gentleman mean to seriously state that the farmers of the country have no market and that the enterprises are languishing now?

Mr. CAMPBELL. Let me finish the statement.

Mr. FITZGERALD. Answer the question.

Mr. CAMPBELL. I will answer the question.

Mr. FITZGERALD. The gentleman has not started it yet.

Mr. CAMPBELL. I have the floor. The first 10 months of the Underwood tariff law produced the same condition in the country that was produced under the tariff of 1816 or the tariff of 1832 or the tariff of 1846 or the tariff of 1894. [Applause on the Republican side.] And that condition existed in the country until the war in Europe, that has imposed greater protection for the industries of the United States than any of our tariffs have imposed and given us a great market in Europe and a great market at home. The war in Europe has protected our people against competition from European manufacturers. They are manufacturing arms and munitions of war for their Governments and we are manufacturing arms and munitions to sell them and producing food and clothing for their use during the war; but when the war is over the same condition will exist in this country that existed at the close of the Napoleonic wars and that existed here prior to the beginning of the present war in Europe under the Underwood tariff law, when not only were our industries closed and our labor was out of employment but our Treasury was absolutely empty.

The SPEAKER. The time of the gentleman has expired.

Mr. GARRETT. Mr. Speaker, I yield one minute to the gentleman from Pennsylvania [Mr. BAILEY].

Mr. BAILEY. Mr. Speaker, I wish to utilize the privilege merely to remind the gentleman from Kansas that he is very greatly at variance with one of the great leaders of the Republican Party in the testimony he gives regarding the tariff of 1846. And I shall extend my remarks by including some statements of James G. Blaine on that subject.

Mr. CAMPBELL. Will the gentleman put it all in?

Mr. BAILEY. I will put all in that relates to that.

Mr. MANN. The gentleman will if he gets unanimous consent.

Mr. BAILEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. BAILEY. Mr. Speaker, James G. Blaine bears very different testimony concerning the effects of the low tariff of 1846 from that just given by the gentleman from Kansas [Mr. CAMPBELL].

The Walker tariff was adopted in 1846 and, with slight modifications in favor of lower prices, it remained in operation until the outbreak of the War between the States, in 1861. So satisfactory was this low tariff that the issue disappeared from politics. It was no longer a bone of contention between the parties. Even protectionist manufacturers had been silenced by the results which lower duties had brought. And it is a safe assumption that the tariff would never again have been an issue in our politics but for the outbreak of war and the necessity this created for extraordinary resources for revenue.

In this connection the gentleman from Kansas is invited to remark that in enacting the war tariff soon after the opening of the conflict between the States care was taken to offset customs taxes by excise taxes, which were intended to absorb any protective benefits accruing to manufacturers from the tariff, and consent to the higher duties was obtained even then only after solemn assurance had been given that they would be repealed the moment the emergency they were designed to meet had been passed. Faith with the country was broken, however, by the manufacturing interest, the excise taxes being removed while the high duties on imports were continued, a party favoring protection for its own sake meanwhile having been built up.

The gentleman from Kansas should read the history of his own party. By doing so he will learn that the Republican Party at its birth was not a protectionist party. It ignored the tariff altogether. It seemed to regard that question as removed from the realm of controversy. And it was not until after the close of the great war that it found itself gripped in the toils of protectionism. While it had been absorbed in carrying the war to a successful conclusion and later in dealing with the vital issues growing out of the war a sinister influence had been at work within its fold, the party discovering about the time the war issues were in the way of satisfactory adjustment that it was dominated irrevocably by a bold and resourceful element which was in position to commit it absolutely to a tariff policy which was a clear denial of the high professions it had made in its beginnings, professions which were of the very essence of democracy and which found their inspiration in the teachings of Thomas Jefferson. If the gentleman from Kansas does not believe this, let him turn back to the earlier platforms of the Republican Party and note therein that not even a remote hint is given of the doctrine which it has since made the very basis of its faith and the supreme test of fealty.

But, Mr. Speaker, I do not ask the gentleman from Kansas to accept my testimony on this subject. Let me call as a witness a former leader and idol of his own party. In his "Twenty Years of Congress" the late James G. Blaine wrote regarding the low tariff of 1846 as follows:

> The Whig victory of 1848 was not sufficiently decisive to warrant any attempt, even had there been a desire, to change the tariff. Gen. Taylor had been elected without subscribing to a platform or pledging himself to a specific measure, and he was therefore in a position to resist and reject appeals of the ordinary partisan character. *Moreover, the tariff of 1846 was yielding abundant revenue and the business of the country was in a flourishing condition at the time his administration was organized. Money became very abundant after the year 1849; large enterprises were undertaken, speculation was prevalent, and for a considerable period the prosperity of the country was general and apparently genuine. After 1852 the Democrats had almost undisputed control of the Government and had gradually become a free-trade party. The principles embodied in the tariff of 1846 seemed for a time to be so entirely vindicated and approved that resistance to it ceased, not only among the people but among the protective economists and even among the manufacturers to a large extent. So general was this acquiescence that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented presidential candidates.*
>
> It was not surprising, therefore, that with a plethoric condition of the National Treasury for two or three consecutive years the Democratic Congress in the closing session of Pierce's administration enacted what has since been known as the tariff of 1857. By this law the duties were placed lower than they had been at any time since the War of 1812. The act was well received by the people and was, indeed, concurred in by a considerable proportion of the Republican Party.
>
> The free traders consider the tariff of 1846 to be conclusive proof of the beneficial effect of low duties. They challenge a comparison of the years of its operation, between 1846 and 1857, with any other period of the history of the country. Manufacturing, they say, was not forced by a hothouse process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. *Commerce, as they point out, made great advances, and our carrying trade grew so rapidly that in 10 years from the day the tariff of 1846 was passed our tonnage exceeded the tonnage of England. The free traders refer with special emphasis to what they term the symmetrical development of all the great interests of the country under this liberal tariff. Manufacturers were not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways and to the foreign market in our own ships.*

Mr. Speaker, it should be borne in mind that James G. Blaine was not always a willing witness. His testimony was extorted from him. He gave it only because the historic impulse was strong upon him and he could not resist its leadings. He told the truth because he did not choose to allow history to write him down a deliberate falsifier. And let it be said as a final word that no Republican of any standing has ever for a moment attempted to impeach the testimony James G. Blaine has given on the subject of the Walker low tariff. Not one advocate of protectionism has ever dared to challenge it or to prevent a refutation.

And, in conclusion, Mr. Speaker, let me add to the testimony already given from a great leader of the Republican Party, this from another equally great leader of that party. It is from James A. Garfield, presented on the floor of this House in the Forty-fifth Congress in the course of a debate in which he replied to statements previously made by Mr. Kelley, of Pennsylvania. From Mr. Garfield's testimony I quote one paragraph, which is a summing up of all that had gone before:

> The fact is, Mr. Chairman, the decade from 1850 to 1860 was one of peace and general prosperity. The aggregate volume of real and personal property in the United States in 1850 was, in round numbers, $7,135,000,000; in 1860 it was $16,159,000,000, an increase of 126 per cent, while the population increased but 35 per cent.

Mr. GARRETT. Mr. Speaker, how much time have I remaining?

The SPEAKER. Twenty-one minutes.

Mr. GARRETT. I yield five minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Speaker, I just want to say a word about the rule and what seems to be a growing tendency in the House to adopt a bad practice. This rule provides that under the five-minute rule the bill shall be read clear through without any consideration until after you reach the end of the reading of the bill, at which time amendments may be offered under the five-minute rule to any part of the bill. I think that is an exceedingly bad practice. Let me give you an illustration.

Yesterday we had under consideration a general dam bill, under a rule which provided for its consideration under the five-minute rule in the ordinary manner. That bill was essentially amended yesterday in some of its most important features. That represented the desire of the House to change the bill. Now, the rule allowed that, but when the gentleman in charge of the bill first introduced his rule he introduced one providing that the entire bill or substitute should be read through without amendment, and then it should be subject to amendment under the five-minute rule. In other words, the rule first introduced provided that you could offer an amendment to any part of the bill after you finished reading it, when no one knew what was up. Whether the Committee on Rules declined to report such a rule I do not know, but a new rule was introduced that gave us the right to amend. If they had been operating yesterday under the provisions of the rule first introduced, so that amendments could only be offered at the end of the full reading of the bill, we would have not known what we were doing, and the result would have been that all amendments would have been voted down. That is the invariable tendency in the House. If you read a section and propose to amend the section at the time it is read, we can give it, on our side at least, intelligent consideration. But if you read the bill through and then offer amendments to the last section, or the first section, or the middle section, you can not give intelligent consideration to it. It is a useless practice. It is not necessary to have such a proceeding. We passed the Underwood bill in the House without any rule at all. My impression is that we passed the so-called emergency tax bill without any rule at all. It is proposed now to have consideration of amendments after the entire bill has been read through, and then at a fixed hour stop the consideration of the bill—next Monday, I believe, at 5 o'clock. The House will have nothing to do next week, or the week after, for that matter, of great importance. This bill will not be acted upon in the Senate until after the Army and Navy appropriation bills have passed through that body, and they know something about the amount of money required. Why should we not take time enough under the ordinary rules of the House to give consideration to a taxing measure which proposes to raise $2,000,000 or more a year? Why should not the Representatives of the people take the time to consider this bill instead of going to their homes, as most of them will, before it is reported into the Senate? You are taking the wrong tack, my friends. You are the responsible power here. You have the power to do as you please, but it is erroneous, it is wrong, to pass a bill hastily, without consideration, imposing heavy taxes upon the people. [Applause on the Republican side.]

Mr. GARRETT. Mr. Speaker, I yield five minutes to the gentleman from Mississippi [Mr. HARRISON.]

Mr. HARRISON. Mr. Speaker, the gentleman from Illinois [Mr. MANN] opposes this rule because on yesterday, he says, the bill under consideration could not have been finished just as well if the rule introduced by the gentleman from Georgia [Mr. ADAMSON] and which allowed consideration of the bill had been reported out of the Rules Committee as originally drafted. The very fact that the rule reported out of the Rules Committee gave ample time for the consideration of the water-power bill and did not do the things he says the original rule would have done, shows that the Rules Committee considers these propositions fairly and justly, and only reports such good resolutions to the House as will provide liberality of time for their consideration and freedom of amendment. Now, this rule is not drastic and comes thoroughly within the excepted class named by the gentleman. I can imagine that if we had limited the consideration of this bill to one day or to two days, the charge that the gentleman from Illinois [Mr. MANN] makes might be justified.

But it allows four days to the consideration of this emergency revenue bill—two days for general discussion, which starts to-day and continues through to-morrow, and then the whole of Saturday and Monday can be taken up, if needed, in the consideration of the bill under the five-minute rule. Is there any unreasonable restriction in the time allotted to the discussion of the bill, with four days allowed to discuss it and two days within which amendments may be offered? If the gentleman will recall, in the Sixty-first Congress, when you brought in your Payne-Aldrich tariff bill, you allowed discussion in general debate for two weeks, and then, under the rule that you adopted, you allowed only five amendments to be offered and specified what amendments they should be. [Applause on the Democratic side.] So it comes with poor grace now for the gentleman from Illinois [Mr. MANN], the leader of the Republicans, to criticize a Democratic rule that allows freedom of amendment and most reasonable time for discussion, so to speak, when his party when it was in power restricted us to offering only five amendments to that bill, which contained every imaginable item. Not only that, but——

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. HARRISON. I yield to the gentleman.

Mr. STAFFORD. Does the gentleman recall what the effect of a similar rule was, as introduced for the consideration of the naval appropriation bill, which prevented the consideration of the various sections under the five-minute rule and caused one-half of the new legislation reported in the bill not to be considered in the House at all?

Mr. HARRISON. I will tell the gentleman what happened. There was a rule, practically the same as this, and we allowed you so much time in that rule for discussion that we frittered away the time here for a whole day before we could pass the bill, waiting for your men to come here and vote, because you had sent out notices that the vote would not be taken until Friday, and we could just as well have voted on that bill on Thursday.

Mr. STAFFORD. Is it not a fact that three-fourths of the new legislation incorporated in the naval appropriation bill was not considered in the House and four-fifths of the Members were not acquainted with it?

Mr. HARRISON. That is not a fact.

Mr. STAFFORD. It is a fact that is proven by the RECORD.

Mr. HARRISON. Those of us who were here know that the facts are as I stated them. The gentleman from New York [Mr. BENNET] said we had brought in more rules in this Congress than had been brought in in any previous session of Congress. We plead guilty to that. But let me remind the gentleman that none of them were brought in for the purpose of obstructing wholesome legislation. On the contrary, the record shows that they were for expediting public business and passing progressive legislation. [Applause on the Democratic side.]

Let me recall to the gentleman from New York [Mr. BENNET] that all these rules which, as he says, have been brought up for consideration at this time through the action of a Democratic Committee on Rules were rules that hastened the preparedness program through this House that the Nation needed and the country called for. [Applause on the Democratic side.] The naval bill, the fortification bill, the Army bill, were considered by this House through the rules that you assail; and the Agricultural bill, the standardization of grains, the cotton warehouse, and the cotton-futures bills were all passed through this House through the rules you assail. Not only that, but it was a rule reported by a Democratic Committee on Rules of this House that gave to the country a good-roads bill and rural-credits legislation. [Applause on the Democratic side.]

The SPEAKER. The time of the gentleman has expired.

Mr. HARRISON. I am sorry. I wish I had the time to state to the House and country other legislation passed through such rules as this.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Mr. GARRETT. Mr. Speaker, I move the previous question on the adoption of the resolution.

The previous question was ordered.

The SPEAKER. The question is on the adoption of the resolution embodying the rule.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. MANN. I ask for a division, Mr. Speaker.

The SPEAKER. The gentleman from Illinois [Mr. MANN] asks for a division.

The House divided; and there were—ayes 124, noes 112.

So the resolution was agreed to.

The SPEAKER. The House automatically resolves itself into Committee of the Whole House on the state of the Union, and the gentleman from Illinois [Mr. FOSTER] will please take the chair.

Mr. HARRISON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. CAMPBELL. Mr. Speaker, I make the same request.

The SPEAKER. The gentleman from Kansas makes the same request. Is there objection?

There was no objection.

The House resolved itself into Committee of the Whole House on the state of the Union, with Mr. FOSTER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 16763, the revenue bill, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 16763) to increase the revenue, and for other purposes.

The CHAIRMAN. The gentleman from North Carolina [Mr. KITCHIN] is recognized. [Applause.]

[Mr. KITCHIN addressed the committee. See Appendix.]

The CHAIRMAN. The gentleman from Michigan [Mr. FORDNEY] is recognized. [Applause.]

Mr. FORDNEY. Mr. Chairman and gentlemen. I have listened, as I always do, with a great deal of interest to my friend from North Carolina [Mr. KITCHIN], who gave some very valuable information with reference to this bill, and a great deal of polite vaudeville, all of which was enjoyed. [Laughter.]

I never have helped and I never expect to help frame a Democratic revenue bill. I am not disappointed that my Democratic friends did not call upon the Republican members of the Committee on Ways and Means to aid them in writing this revenue measure. As long as I retain my present intelligence I never expect to help write a Democratic revenue measure. I do not believe in their methods of raising revenue to pay the running expenses of this Government. I give them credit for being sincere in their ideas as to the proper method of raising revenue, and I ask that people believe that I am sincere in my ideas on the question.

The people of the United States live on a higher plane, a higher standard of living, and a higher standard of life than the people of any other country. There are no laboring people in any country in this world—I challenge any man to furnish evidence to the contrary—who receive more than half the wages paid to labor in the United States. I do not criticize my Democratic friends for reporting this bill without consulting the Republican members. I received a copy of this bill, I think, on Saturday last, the first real evidence I had of what was going into the bill. On Monday night, at half past 10 o'clock, I received by special messenger a copy of the report on that bill as prepared by our Democratic friends, and I want to read to you just one brief statement in that report, to show you what it has to say and what part Republicans had in its make-up. Remember, I received this report Monday night at half past 10 o'clock. It reads as follows:

The Committee on Ways and Means, to whom was referred the bill (H. R. 16763) to increase the revenue, and for other purposes, having had the same under consideration, report it back to the House without amendment.

[Laughter.]

I received that on Monday night, and on Tuesday morning I received a postal card stating that the Ways and Means Committee would have a meeting on Wednesday morning at 10 o'clock to consider the bill.

Mr. MOORE of Pennsylvania. Will not the gentleman explain that Tuesday was the 4th of July, and Monday was by common consent a holiday?

Mr. FORDNEY. Yes; every patriotic citizen knows that Tuesday was the 4th of July, and most of the Members, Democrats and Republicans, were out orating somewhere. I happened to be here. The committee were called together at 10 o'clock Wednesday, and about 3 o'clock the committee decided to report the bill back to the House, with the recommendation, prepared one week before, that it do pass. The Republican members of the Ways and Means Committee then had from 3 o'clock yesterday afternoon until 11 o'clock this morning to prepare a report and to prepare some statistics and memoranda to present to this House in arguments to-day. There were 101 pages in the bill, and several pages of report for the Republican members to consider within two or three hours, and prepare an intelligent report and present it to an intelligent House of Representatives. That was an impossibility. I threw up my hands in holy horror and said, "It is impossible. Intelligent men would not attempt it." Therefore we were unable to prepare a minority report on this bill, not having had the time.

I object to the Democratic method of raising revenue to run this Government for many reasons. The gentleman from North Carolina [Mr. KITCHIN] says he is going to swallow a sugar-coated pill because it has some Republicanism in it. I always have declined, and always will decline, to swallow a sugar-coated pill filled with deception, if I know it, and that is what this bill contains. My friend from North Carolina [Mr. KITCHIN] says this bill does not change any existing law. When I read this bill I am reminded of the story of a Hebrew, who said to his friend one day, "Jake, do you know there is a new religion now that greatly disturbs me?" "What now, Fritz?" "Why, Jake, don't you know, they say that when a man dies he comes back to earth in the shape of an animal, a horse, a mule, a jackass, or something like that?" "Oh, nonsense, think no more about that." "Ah, but," he said, "it disturbs me."

By and by Fritz died, and in a few days Jake went down the street, and there he saw a jackass hitched to a post. As he went by the jackass bowed and said, "Hello, Jake." "Why," said he, "you, a jackass, talk like a man! Are you the devil, or what are you?" "Oh, I am Fritz. You know I told you about this religion. I died, and now see what I am. How strange, how strange!" "Oh, yes," said Jake, "it is very strange, but I don't see any change in you." [Laughter.]

This is the same old Democratic method of raising revenue—free trade—and nothing else. This report, prepared by our Democratic friends, lauds to the sky the English revenue policy and points out that a very large amount of the revenue raised by the English Government is raised by an income tax. Before I discuss the merits of English law I want to call attention to some conditions confronting us. I have here a clipping from a Seattle paper which shows that in the last decade Japan has imported from the United States American-grown cotton and with the cheap labor in the cotton mills of Japan has wrested from the United States much of its trade in China. In those 10 years the trade of Japan in cotton goods has multiplied nine and one-half times, while the trade of the United States to-day is only one-third what it was a decade ago. If Japan, with her cheap labor, can capture the markets of China, where the cheapest labor in the world is found, Japan with her cheap labor can purchase American cotton and under free trade in this country can capture the markets of the United States. She is doing it now.

I have called the attention of some Members of this House to wages paid in the factories of Japan. I want to repeat that only a few months ago I received a report from an American consul giving the wages paid in the factories of Japan. That American consul pointed out that of the 863,000 employees in the factories of Japan men were paid 26.2 cents per day, women 13.4 cents per day, boys 9 cents per day, and girls 7½ cents per day, or a daily average of 17⅞ cents per day for the 863,000 employees in the factories of Japan.

Under free trade our laborers and the capital invested in our institutions in this country that employ labor must come in competition with that Japanese labor. Do you want it? Are you ready for it? Are you ready to surrender to the outside world our magnificent manufacturing institutions in this country? I believe you are, but I am not. Without any criticism of any man in my presence, let me point out another thing to show you what your party is doing. If you will remember, a few months ago, you, the Democratic Members of this House, appointed a lobby investigating committee. That committee called before them several men accused of lobbying in Washington in the interest of legislation. There was one lobbyist who escaped your attention, a New York attorney by the name of Beer. A full statement of the case is set forth in the New York Sun of March 28, which shows that Mr. Beer presented to a New York court the statement that he and an attorney, a member of a well-known law firm of New York, by the name of Osborn, had entered into an agreement with the importers of lemons in New York that they were to receive a certain sum of money if they would use their influence with the Democratic Party and get the duty on lemons reduced from $1.20 a box, and that if it was reduced to 35 cents a box they were to receive an extra bonus of $75,000. Strange to say, gentlemen, while the duty on lemons under the Payne tariff law was $1.20 a box, in the Underwood tariff law it is 35 cents a box, the amount agreed upon in this man's contract with the importers of lemons in New York. [Applause on the Republican side.] He sues for the balance due him from these importers of lemons from Sicily, and they ask him for an accounting of the money already placed in his hands. He makes the statement that he paid to himself and Mr. Osborn $15,000 each retainer fees as agreed upon in their contract. He paid to Mr. Glynn, ex-governor of New York, $2,000 for his campaign, and he contributed $6,000 to the campaign of Woodrow Wilson, a gentleman whom you have heard about, living down on Pennsylvania Avenue a little ways. He spent the balance of $140,000 in educating 2,000,000 Italian voters in this country to vote the Democratic ticket. [Applause on the Republican side.]

Why did not you call that man before your lobby-investigating committee and prosecute him? He must have been well known. Strange to say, the rate for which he was to receive his extra $75,000 bonus is the rate fixed in your tariff law on imported lemons. So much for another American institution.

Another thing, gentlemen, that is working against the interests of manufacturing institutions in the United States is this: I have a letter dated June 21 to the Lufkin Rule Co., of Saginaw,

Mich., large manufacturers of rules, tapes, and measures of all kinds. This letter is from John H. Graham Co., the Lufkin Rule Co.'s London representatives, and it notifies the Lufkin Rule Co. that England had placed an embargo on all such goods upon the ground that English manufacturers can supply all the tapes and rules that are needed in the market. Not a protective tariff but a prohibitive embargo on these goods. France has joined England in this embargo, and there are many articles now produced in the United States upon which an embargo is placed by Great Britain and France, and, among other things, the sugar going into France. So much for further injury to industries in this country.

Another thing, you must not forget, when legislating for the people of this country, that the laboring man can not be prosperous unless the capital employing him is prosperous. Capital can not succeed without labor, nor labor without capital. They must go hand in hand. Any law that discriminates in favor of one against the other is neither just nor equitable and should not be placed upon our statute books.

The Government of Germany owns 95 per cent of all the railroads in Germany. Therefore she controls the freight rates on goods in Germany to a greater extent than the government of any other country. If you were a manufacturer in Germany and shipped a carload of goods from an interior town to the seaboard for export, the freight rate would be just about one-half the freight rate charged on the same goods shipped to the same seaboard town for consumption in Germany. That rate is fixed to encourage German industries to export their products to foreign markets.

On the other hand, if a foreigner should send a carload of foreign products into Germany and had them shipped from a seaport town to an interior town he would pay double the freight that the same products would pay between the same two points if produced in Germany. The rates are fixed by the German Government to discourage importations and to encourage the consumption of German-made articles.

What is being done in this country? Here is a letter I received from the Interstate Commerce Commission, dated June 30, 1916. It was startling to me, as I know it will be to you. The freight rates on importers' articles made in a foreign country coming into the United States is less than on domestic goods. For instance, on leather goods—and I picked out two articles and asked the Interstate Commerce Commission to give me the freight rates on those two—if a carload of shoes or leather goods is sent to St. Louis, Mo., from Europe by the way of New Orleans, the freight rate on those imported goods from New Orleans to St. Louis would be 15.7 cents per hundred pounds less than if the goods originated in New Orleans and were sent to St. Louis. In other words, $62.80 less on a carload of 40,000 pounds, a very handsome profit.

If a carload of glass were imported from Belgium or Germany or any other foreign port to St. Louis by way of New Orleans, the freight rate on that imported glass from New Orleans to St. Louis would be 29.9 cents per hundred less than if the glass was produced or originated in New Orleans, a difference of $119.60 on a carload of glass of 40,000 pounds.

These are things that Germany takes into consideration in favoring her manufacturers, while in this country a manufacturer who dares come to Washington and ask relief from an existing discrimination is condemned as a lobbyist, and President Wilson, guided by ideals and unworkable theories and a sublime absence of business experience, contends that competition is what American manufacturers need; that it will sharpen their wits and enable them to capture the markets of the world, and that they should ask odds of no one. It all tends to make it possible for the foreigner to ship goods into this country and destroy American industries employing American labor at the American scale of wages. These things are important.

Our Democratic friends are ready to criticize the great munition plants in this country, producing articles for export to Europe to be used in the war, and ready to tax munitions of war and explosives and such like. Let me call your attention to the fact that copper and steel alone are not the articles that are going into the manufacture of munitions of war. Here is a letter dated July 5 from some people to whom I wrote, and they show that one firm in this country, since the war broke out in Europe, in August, 1914, has consumed 611,000 bales of cotton in the manufacture of explosives, and they call my attention to the consumption, in round numbers, of 300,000 bales of cotton used by other manufacturers in making explosives for export.

In round numbers, my friends, in those 23 months, $70,000,000 worth of American-grown cotton has gone into the manufacture of explosives. Why do you not put a tax on cotton, if it is fair to put a tax on copper? [Applause on the Republican side.]

Mr. STEENERSON. Is it not a fact that zinc produced here is also used in the manufacture of ammunition?

Mr. FORDNEY. Zinc, copper, lead, steel, cotton, and other things are used in the manufacture of ammunition.

Mr. STEENERSON. Why did not the gentleman's committee put a tax on that also?

Mr. FORDNEY. Is there any good reason why the committee should single out copper, one industry, and put a tax upon it, any more than they should put a tax on any other metal taken out of the ground which is used in the manufacture of ammunition? None whatever. There is no provocation, no justice that I can see in it. Again, here is a telegram from a manufacturer of copper, Mr. James McNaughton, addressed to my colleague, Mr. JAMES, of Michigan. Permit me to read it:

CALUMET, MICH., *July 5, 1916.*

Hon. W. FRANK JAMES,
House of Reprcsentatives, Washington, D. C.:

Many thanks for your telegram. Part of section 201 of revenue bill relating to copper is unfair to copper mines and strikes serious blow to copper-mining industry of Michigan. Mine doing its own smelting or refining is subject to tax on gross value of entire product; mine not smelting or refining will not be subject to tax. Most copper mines of this country smelt and refine own copper, therefore tax is directly on copper mining, discriminating against production, but small part of which enters into munitions. Great portion of smelting and refining of foreign copper is done in this country. Proposed tax will drive out this industry, and also refining of part of domestic production. Proposed tax is class legislation as applying to copper production and not to production of other metals entering into munitions. Bill should not strike at copper mining, which is old-established industry for production of a common necessity, same as iron mining or farming, and is not outgrowth of war demand, and should not be taxed any more than any other producing industry. Think every effort should be made to amend section as to avoid tax on production of copper.

JAMES MCNAUGHTON.

In this Mr. McNaughton points out the injustice of putting an excise tax on copper in any form produced without also taxing other metals used for a like purpose. There is no justice in taxing copper as is done in this bill. In the State of Michigan the miner—the man who takes the copper ore from the ground and smelts it—under the terms of this bill must pay an excise tax upon that finished product. If he converts that same copper into an alloy or a mixed metal, he pays a further tax upon that. Every point of the manufacture pays a tax under the terms of this bill. Instead of encouraging the production of copper, you seek to tax it. It is a tax on production, and there is no more justice in taxing copper as a metal, because it is a great industry of the country, than there is in taxing any other metal taken from the earth.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. HUMPHREY of Washington. Is zinc taxed in this bill?

Mr. FORDNEY. If it is put into munitions of war it is.

Mr. HUMPHREY of Washington. If I remember correctly, there has been a greater increase in the price of zinc than in any other metal, due to its use in the war.

Mr. FORDNEY. There is in this no special tax on it unless it is put in munitions of war. If it is in munitions of war in any form—when once transferred to munitions of war it is subject to a tax.

Mr. BENNET. Is copper taxed whether it goes into munitions or not?

Mr. FORDNEY. Yes; it is taxed if converted from copper ore into pig copper or billets.

Mr. BENNET. Does not that tax the same copper twice?

Mr. FORDNEY. Yes; and if you convert it into an alloy, a mixture with any other metal, it is again taxed under the terms of this bill.

My friends, I want to call your attention to some articles of production in this country, some articles of export and import. I do it for the reason that I want to prove to you that the great prosperity in this country is due to the war in Europe. There is no question about that in my mind, and I believe there is no question about that in your minds, that the great prosperity our Democratic friends are boasting about is due absolutely to the war in Europe. Here are some exports of stuff used in the war in Europe, and I give you 10-month periods, the first 10 months of the last fiscal year being the last that I could get in detail of the various items, and the country to which they were shipped, and I compared those 10 months with the same 10 months of the last year before the war, 1913–14. In the shipment of mules and horses abroad prior to the war the exports amounted to $3,533,000, and now in the 10 months of the fiscal year just closed they amount to $84,293,000. Were they sent over there for any purpose other than the war? Now, let us take the manufactures of brass, going into munitions of war chiefly. I shall leave off the odd hundred thou-

sand dollars and give you the millions. Prior to the war it was $6,000,000 and after the war $103,000,000; breadstuffs, $138,000,000 prior to the war, since the war began $366,000,000; aeroplanes, before the war $194,000 and after the war $6,270,000; automobiles and parts thereof, prior to the war $29,000,000, subsequent to the war $116,000,000.

Railway cars, chiefly sent to Russia, $10,000,000 prior to the war, $21,000,000 now; motor cycles, $911,000 prior to the war, $2,771,000 now; chemicals used in making explosives across the sea, $22,000,000 before the war, $93,000,000 after the war; cotton manufactures, articles used by the soldiers chiefly, $43,000,000 prior to the war and now $88,000,000. Explosives—and is there any doubt that they are used for any other purpose than the war?—$5,000,000 before the war, after the war started $336,000,000. Iron and steel, used extensively in the manufacture of munitions over there, $212,000,000 prior to the war, now $472,000,000. Leather and manufactures thereof, saddles, harness, boots, shoes, going in large quantities to the men on the battle fields, $47,000,000 prior to the war, now $120,000,000. Meat and dairy products, chiefly canned goods, $124,000,000 prior to the war, $231,000,000 after the war. Beans and dry peas, absolutely for the soldiers, $741,000 before the war, now $4,500,000. Wool and manufactures of wool—and we never exported any wool to amount to anything prior to the war—prior to the war $3,900,000, now $47,500,000. Zinc and manufactures thereof, before the war $328,000, now $36,800,000. Is not this convincing that our increased exports are largely due to the war in Europe?

In a speech by Roscoe Conkling in Cleveland, Ohio, on September 29, 1880, he said, in part:

> I believe you will search in vain the annals of parties in this country or any other whose history is familiar to us for a parallel to the succession, the conglomeration, the long-continued repetition of blunders which has marked for 20 years the statesmanship of the Democratic Party. Mistaking the present, forgetting the past, that party and its leaders have had a fatal felicity for preposterous prophecies.

I wish Conkling were with us to-day and could express himself on Democratic statesmanship since 1880 or since 1912. An exhibition of their fatal felicity for preposterous prophecies was given by the Democrats in 1913 when they enacted the Underwood tariff law. They predicted a great export trade; they predicted that American manufacturers were about to capture the markets of the world. What happened? Imports increased and exports decreased. The new tariff enabled foreigners to capture American markets and displace American labor, and conditions continually grew worse until after the outbreak of the war in Europe.

During the spring and summer of 1914 the Democrats gave an exhibition of "mistaking the present." They admitted a business depression, but called it psychological—that it was caused by a "frame of mind" the country was in. The country was well off, but did not know it, and the whole thing was imagination. That was a most remarkable and spectacular exhibition of "mistaking the present," and I wish Conkling could have been on hand.

It now appears that the Democrats will mistake the present again. They fail to recognize the fact that our gain in export trade is due to war orders; that war orders have caused a revival of business; and last, and most important of all, they fail to heed what is being demonstrated by this war and prepare for trade conditions when the war is ended. Imports, retarded when the war commenced in Europe, are now coming to our shores in ever-increasing volumes. Right at this time if it were not for the enormous war orders imports would greatly exceed our exports. Take a paper and pencil and figure it out. On 16 classes of products, all of which are used in large quantities by the armies in Europe, exports have increased during the 10 months ending April 30, 1916, no less than $1,480,001,000 compared with the corresponding 10 months two years ago, which was prior to the war. On 16 classes of products our exports increased from $650,855,000 to $2,130,856,000, or an increase of 227 per cent. During the same 10-month period all other exports decreased from $1,367,231,000 in 1914 to $1,213,571,000 in 1916, a decrease of $153,660,000. Do not make the fatal blunder of "mistaking the present." It is a matter of vital importance to American prosperity. The war can not last forever; how about industrial preparedness?

Prior to the war in Europe 52.7 per cent of Russia's imports came from Germany, 20 per cent of England's imports came from Germany, 18 per cent of France's imports came from Germany, and 15 per cent of Italy's imports came from Germany.

The nations named are at war with Germany, and if reports are true, after the war all of these nations will exclude German goods from their shores. Germany has left nothing undone to foster German industries and has been the most aggressive nation in the world in seeking foreign markets for exports. Germany after the war will invade this Nation's markets with German-made goods and will displace American goods and labor.

Four years ago, in the campaign, I was met frequently with this statement made by my friends: They said, "Mr. FORDNEY, Woodrow Wilson is a protectionist," and they tried to substantiate their belief by saying that he had said he would injure no legitimate industry in this land if elected, and they asked me what that meant if it did not mean that if an industry needed protection he would give it to it. It was mighty hard for me to answer that except to say that Woodrow was fibbing a little bit.

Mr. QUIN. What industry does the gentleman say this Congress has injured?

Mr. FORDNEY. Every industry in our land; name one that it has not.

Mr. QUIN. There is more business than ever being done and more work——

Mr. FORDNEY. Due to the war——

Mr. QUIN. No; to the Underwood tariff bill and this good, Democratic administration. [Laughter on the Republican side.]

Mr. FORDNEY. The gentleman is stating nonsense, and he knows it. As the gentleman from North Carolina [Mr. KITCHIN] said, the President has not consulted me very much about this bill. Since the 18th day of December last he has been too busy with other matters. Therefore I do not know his views now, but I do know what he said prior to his election in 1912. He said that any industry in this country that could not survive and prosper without protection was a hothouse industry and must go. Does the Democratic gentleman deny he said that?

Mr. HAMILTON of Michigan. Will the gentleman yield?

Mr. FORDNEY. Briefly.

Mr. HAMILTON of Michigan. Following the line of inquiry of the gentleman from Mississippi, did not that declaration in the Democratic platform, that he did not intend to injure or destroy any legitimate industry, have direct relation to Louisiana sugar, and was not that platform prepared by the President himself and carried by Mr. BROUSSARD over to the Baltimore convention?

Mr. FORDNEY. Mr. BROUSSARD says that is the substance of his understanding with the Persident when he was called from Baltimore one night to Mr. Wilson's home in New Jersey and told if the Louisiana delegates would stand solid for him he would protect the sugar industry.

Mr. QUIN. Will the gentleman——

Mr. FORDNEY. And he had no sooner warmed the chair in the White House before he sent for the two Louisiana Senators and said, "You can take free trade on sugar now or within one year. Which will be your choice?"

Mr. QUIN. May I interrupt the gentleman right there?

Mr. FORDNEY. I would be glad to have the gentleman do so.

Mr. QUIN. I want to say that I border on the State of Louisiana, and that 75 per cent of the voting population of Louisiana are as good Democrats as I am. There is only one district in the State of Louisiana that is Republican, and it was not necessary to make overtures to the people of Louisiana. They are natural-born Democrats, and have been so ever since they were born. But when the Republican Party began to run carpetbaggers and niggers in office to rule over the white people of Louisiana they were forced to hate republicanism.

Mr. FORDNEY. It is the contention of the free trader and the man believing in tariff for revenue only that when an article can not be produced as cheaply at home as abroad it should not be produced at home, but should be imported; that to compel the consumer to pay the added price for the American product was a hardship and an injustice.

The war in Europe has done much to convert many doubtful Americans to the Republican policy of tariff for protection. The war has shown the value of industrial independence; the war has shown the fallacy of a policy that would make a nation dependent upon foreign countries for agricultural and manufactured products. A nation is best prepared for all emergencies that is self-supporting in every sense of the word. This Nation has the area, soil, climate, skill, and all other requirements for being industrially independent and self-supporting. We should develop our national resources and encourage our industries. When we buy an American product we furnish employment for an American laboring man and we add to the wealth, happiness, and prosperity of America. I believe in the slogan "Made in America." Further, I believe in a policy in keeping with that slogan. To advocate that slogan and vote for free trade is an indication of insincerity or ignorance.

Mr. HILL. If the gentleman will permit, the gentleman will remember in the hearings before the Ways and Means Committee when the Louisiana sugar industry was present and they

quoted that very promise, that no legitimate industry should be injured, they were informed from the bench that it meant economically legitimate, and any protective industry was not a legitimate one, and therefore it did not apply to it.

Mr. FORDNEY. If there was any promise on this green earth ever thought of for a Democratic platform before election, it was made, and if there was anything under the heavens that was not done, it was what was in that platform. [Applause on the Republican side.]

Mr. WILSON of Louisiana. Will the gentleman yield for an interruption?

Mr. FORDNEY. I will.

Mr. WILSON of Louisiana. I just wish to state the sugar planters of Louisiana, headed by the Progressive nominee for President, have stated they preferred to support Woodrow Wilson rather than Hughes.

Mr. FORDNEY. Let me tell the gentleman something, to be frank about it, without any criticism. The people of Louisiana and of the Southern States that were the Confederate States at the outbreak of the Civil War are so angered and displeased with the Republican Party that they will not vote for any man who has the name of Republican attached to him. Let us be frank about this.

Mr. WILSON of Louisiana. They prefer to follow the President rather than the Republican candidate.

Mr. FORDNEY. They prefer to follow anything in preference to anyone with the name of "Republican" attached to him. Is not that right?

Mr. WILSON of Louisiana. That is much to their credit. [Applause on the Democratic side.]

Mr. FORDNEY. One gentleman from that State went to the Progressive Party; he is a protectionist, and he made a statement in my presence that the people of Louisiana had been following the Democratic Party for the past half century, and at last arrived at the conclusion that to live on promises they would have an empty stomach, and that he, for one, had gotten tired of promises and had gone over to some other party, with the thought that he could be elected and help save Louisiana's principal industry.

Mr. HARDY. Will the gentleman yield for a question?

Mr. FORDNEY. I will.

Mr. HARDY. Does the gentleman believe that any industry which can never compete with the outside world ought to be continually and perpetually fostered by protection?

Mr. FORDNEY. My friend and his colleagues and every man in this House are to-day shouting preparedness. How are you going to have preparedness unless you produce our principal food supplies within our own borders? [Applause on the Republican side.]

Mr. HARDY. What has that got to do with the question I asked?

Mr. FORDNEY. It has this to do with it: What kind of a condition would the people of the United States be in this very minute if we had war with Great Britain, as Germany has now, and Great Britain were to drive our ships from the sea, as she would, for she has the power? Where would we be for foodstuffs if we had to import our sugar from foreign countries? [Applause on the Republican side.]

Mr. HARDY. Does the gentleman believe that this country can not raise within its own borders all the food it needs?

Mr. FORDNEY. The gentleman believes—and not only believes, but knows—that we have the soil, we have the capital, we have the energy, we have the intelligence, not only to produce all the sugar that the people of the United States will consume but more too, if you will only give the industry the right protection to offset the difference in the cost of labor here and abroad. [Applause on the Republican side.]

Mr. HARDY. If we produce more sugar than we need, how does the gentleman think we would be starved for want of something to eat in this country?

Mr. FORDNEY. My friend, when we produce but 25 per cent of our consumption in sugar, as we now do, how could we establish an industry in one, two, or three years during war to fully supply our people? It is nonsense to suggest such a thing. We could not do it.

Mr. HARDY. The gentleman thinks rather than to try to supply the sugar we would naturally starve here?

Mr. FORDNEY. I did not say that. I say that we would suffer for one of the great food supplies of this country, just as England would do if she did not have control of the sea with her ships.

Mr. HARDY. Does not the gentleman see that England is situated differently than the United States as to supplying them with foodstuffs?

Mr. FORDNEY. Absolutely; and she supplies the people with foodstuffs brought from abroad because she has the greatest navy in the world; and Germany would long ago have had England starved out if she had had control of the high seas as England now has control.

Mr. HARDY. And then does the gentleman refuse to vote for the bill?

Mr. FORDNEY. I would not vote for a Democratic revenue measure if you covered it with sugar a foot deep. [Laughter and applause on the Republican side.]

Mr. HARDY. Will the gentleman yield for just one suggestion further? That is, the gentleman is like, as he says, some southern gentlemen are, namely, he would not vote for anything that was labeled "Democratic" any more than they would vote for anything labeled "Republican."

Mr. FORDNEY. I am speaking of your revenue bills, sir. I will say to the gentleman that I have been here for 18 years, and I know you and your policies on free trade. To-day in your report on this bill you are lauding the English revenue laws to the sky. Let me tell you something about these laws. England, since 1845, has not had a protective-tariff law on her statute books until right now during the war. She now realizes the value of domestic production, and has resorted to the highest kinds of import duties and even to embargoes.

Mr. HARDY. Will the gentleman yield for one more question?

Mr. FORDNEY. No; I beg the gentleman's pardon, but I am going to answer the other questions first. Your committee recommends the same kind of laws that England operated under prior to the war and makes mention in the report of the amount of money collected from the income tax—highly complimentary; highly meritorious. Let me call your attention to some instructive facts.

The Pilgrims, the first successful colony that landed on the shores of this country, came to New England in 1620, a little less than 300 years ago. The wealth of this country from that time down to 1861, when the Republican Party came into power in national affairs, was $16,000,000,000 in round numbers, and within the next half century, under a Republican system of protective tariff laws, giving protection to our great industries, the wealth of this country multiplied nearly twelve times, or to $187,000,000,000. [Applause on the Republican side.] That is the greatest accumulation of wealth of any people in any country in the world, chiefly due to our protective-tariff laws.

My friends, in half a century the American people under the stimulus and influence of the Republican Party's policies have accumulated and added to our total wealth $160,000,000,000 of wealth, while England has been 500 years accumulating $60,000,000,000. The wealth of this country per capita is greater than that of any other people in the world. It is due, my friends, very largely due to our protective-tariff laws that have been upon our statute books every minute, from the time the Republican Party first came into power down to the adoption of the Underwood tariff law, with the single exception of 35 months under the Wilson bill. [Applause on the Republican side.] And you know, and I know, that those 35 months of free trade under the Wilson bill brought more distress and a greater panic to the people of this country than any like period in our history.

Let us go back to England and see what she has done in this last half century. At the last census we had a population of a little less than 92,000,000 people. At that same time Great Britain had 45,000,000 people. Her laws you laud and recommend, and propose now to follow. So far as the Underwood tariff law is concerned, you have substantially duplicated the English policy of tariff for revenue only. Now you propose to adopt the remainder of English laws relating to revenues. And, gentleman, in 1910, the last census taken in England prior to the war, of a population of 45,000,000 England had 1,057,000 paupers—1 man in the poorhouse to every 45 of her population. What did we have at that same time, and what have we now? Last year, gentlemen, we had 84,189 people in our poorhouses, 1 for every 1,081 of our population, as compared with 1 for every 45 of the population of England. [Applause on the Republican side.] Further than that, gentlemen, 53 per cent of all persons in the United Kingdom over 75 years of age are in the poorhouses. O, God forbid, gentlemen, that you should visit upon the heads of your fellowmen who sent you here to legislate for them the policies of Great Britain, that brought about that great distress and poverty and suffering in that country.

ENGLAND'S REVENUE POLICY.

In England since 1845 there have been no protective-tariff duties on imports. Their duties have been levied on noncompetitive products. Their duties have been consumption taxes.

In this country, during practically all the period that England followed her free-trade policy, we have followed the policy of protection. If the tariff policy affects the welfare of a nation

it is reasonable to presume that conditions in England are due, in part at least, to their free-trade policy. Likewise, it is reasonable to presume conditions in America are the result of the policy of protection.

Prior to the war, of the total occupied population of Germany, 35.11 per cent were engaged in farming; in the United States 33.2 per cent were engaged in farming; while in Great Britain but 12.66 per cent were engaged in farming. England's tariff policy does not encourage farming, and in time of war England must look to foreign nations for much of her food supplies. Germany has encouraged farming, and although her area is very limited it is highly cultivated and very productive, and with her commerce blockaded Germany produces at home practically all the food supplies consumed within her borders. The Underwood tariff placed food products on the free list, and corn, cattle, wool, and many products of the farm came to our shores in greatly increased quantities prior to the war in Europe. When the war is ended American farmers will be forced to compete with farm products from all the world. Low prices on farm products, past experience has shown, impoverishes the farmers, and when the purchasing power of so large a percentage of our population is diminished the injury is reflected on every industry and line of trade in the Nation.

I was hopeful that the necessity for revenue would induce this administration to return to a policy of the imposition of adequate tariff rates, rates of duty that would protect the farmer and the manufacturer alike, but this revenue bill has put a blight on any such hope. This manner of producing revenue is a departure from the protective-tariff policy; it is a step in the direction of free trade and eventually may lead to an absolute free-trade policy.

The report accompanying this bill recommends that a larger proportion of our revenue be collected from incomes and inheritances, and as an illustration of what can be accomplished they refer favorably to England's revenue policy, stating that 58 per cent of England's revenue came from income, inheritance, and death taxes.

England departed from the policy of collecting revenue on competitive imports in 1845, and now 1 person of every 45 is a pauper, while in this country there is but 1 pauper for every 1,081 of our population.

I oppose this departure from the policy of collecting revenue by imposing import duties on foreign products imported into the United States and competing in our own markets with the products of American labor, receiving the American scale of wages and living like human beings and enjoying not only the comforts but some of the luxuries of life. A free-trade policy will displace American labor, decrease wages and the American purchasing power, and will increase pauperism and prevent our laborers from providing for themselves when old or caring for their parents who may be too old to work.

Mr. FERRIS. Will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. FERRIS. The gentleman does not think that this bill taxes the poor man very heavily, does he?

Mr. FORDNEY. Can you point out anything in this bill that gives any encouragement to the labor and capital—any industry of the country?

Mr. FERRIS. But you are talking about the poor man.

Mr. FORDNEY. The poor man has to look to capital for employment, does he not?

Mr. FERRIS. That is the old theory.

Mr. FORDNEY. It is past the theoretical stage. That is the proven truth, and everybody knows it. [Laughter.] Let me tell you another thing, gentlemen. In the House of Representatives the majority of its Members are Democratic.

Mr. CARAWAY. And always will be.

Mr. FORDNEY. Not on your tintype, sir. A majority of the Democratic Party come from States in the South. One hundred and twenty Members of your number are from Southern States. With all due respect, you are high-class gentlemen, but God knows, you are badly misinformed on those questions. I have no quarrel with you personally. Do not misunderstand me, gentlemen. But when you present a party measure or a party bill you go into caucus, which you criticised the Republican Party for doing before you came into power; you go into caucus, and you are bound by a majority in that caucus, and as a majority of your membership is from the South, the South dictates, and you come back with a solid front and pass legislation in this House and in the other branch of Congress.

How many Democrats from the North are chairmen of important committees of this House? One lone star, the gentleman from New York [Mr. FITZGERALD], the chairman of the Committee on Appropriations. Not another important committee in this House is headed by a Democrat from the Northern States.

What does this bill do for you? Let me show you what was paid in corporation and income taxes by those 12 States of the South, from which comes the majority on that side of the House. Of the corporation tax last year your people in those States paid only 10.9 per cent of all the corporation tax collected. The State of New York alone paid more than twice as much as you, twice as much as all the people of the South.

And how about the individual income tax? Your States—and I will name them: Virginia, North Carolina, South Carolina, Florida, Georgia, Alabama, Kentucky, Tennessee, Louisiana, Arkansas, Missouri, and Texas—with 27 per cent of our total population, paid 6.4 per cent of the individual income tax. So it does not worry you how much the individual pays upon the individual income tax. You do not have to pay it. [Laughter on the Republican side.]

Mr. PLATT. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Certainly.

Mr. PLATT. Can the gentleman tell what percentage of troops on the border those States have at the present time? The South has sent out 3,000 men and New York has sent 7,000.

Mr. FORDNEY. I do not know about that. I will give them credit for scrapping here. [Laughter.] I do not know what they will do down there. [Renewed laughter.] But, as I said, they are good fellows personally.

Gentlemen, those are important things for you to consider. You are imposing a tax upon the people of the North because you can. You have the power; you have the votes. Votes count here; argument does not count for much. [Laughter on the Republican side.]

I do not know of anything in this bill, after careful consideration, which any Republican can stomach, taking it as a whole. You say there is Republicanism in this bill. Where is it? We had a tariff board, created by a Republican administration, which you abolished. Why? Oh, I do not know. You declined to appropriate money for it and it went out of business by starvation. You framed a tariff law after that tariff board had made reports on four great industries of this country—paper, cotton, wool, and steel; a partial report on steel. You wholly ignored all those reports. They were no good to you, so you said. You did not want them. No. Any man with brains enough to grease a gimlet knows enough to reduce the duties below the protective point without a tariff board to guide him. He does not need the information of a tariff board to do that. [Laughter.] Just reduce it. That is enough. [Laughter.]

There is not a rate in the Underwood tariff law to-day that is protective on any industry in this land. You may say it is not free trade. I say it is. If I am producing in this country an article that costs me $2 to produce, and if a foreigner can produce that article and lay it down here under free trade at $1, he will put me out of business pretty quick. If you give me 90 per cent protection, he still has the advantage of 10 per cent over me, and I will drown just as readily under 1 foot of water as under 10 feet. [Laughter.]

Mind you, when you write a duty that is below the point that offsets the difference in the cost of production in this country and abroad, it is free trade in every sense, because the foreigner can put out of business his competitor in this country with our standard of wages. [Applause on the Republican side.]

Point out if you will, then, anything in this bill that is Republican. I say your tariff board is a farce and an absolute fraud on its face. Why? It fixes a tenure of office of from 2 to 12 years for Democrats who need jobs badly, and you propose to pay them wages of $10,000 a year; that is the only merit in it, and that is entirely too high. You exclude from that board many men of intelligence. You propose in that law that no man who has ever served in either branch of Congress shall be eligible for appointment on that board.

That is a slam and a slander on your colleagues and the men who have passed out of Congress, and it shuts them out, no matter how intelligent they may be. You further say that no man can be a member of that board and have any other business. Let me tell you. You make it possible for the professor of some college, or some doctor, or some lawyer, who can not live on his practice at home, to have a job on that commission. [Applause on the Republican side.] You exclude from the membership of that board the intelligent men of this country, the most able men to perform duties on that board. Why do you do it? Yesterday in the committee I offered some amendments to this bill, and lo and behold, I made a discovery! One member of the committee, who is my dear friend, whom I love as a brother, whispered to me, "FORDNEY, do not offer your amendment here. We employed a bureau of experts to frame this law, and we do not want to change the language without submitting it to them to see whether the language would be proper." [Laughter.] He said, "File your amendment with us, and we will submit it to these experts and let you know whether it is proper to go into the

bill or not." Why not dismiss this body of school children here and send for that bureau of experts, who framed this law, and let them enact it for us? "We do not know enough!" So say the Democratic members of the Ways and Means Committee. They were unable to prepare a law and bring it in here and have it constitutional, and they had to employ experts from the outside.

You have asked what I would raise revenues on. You can raise revenue on a whole lot of things. How much wool do you suppose came into this country in the 10 months of this fiscal year ending with April, under the Underwood tariff law, under free trade? If you had placed upon wool the same rates of duty provided in the Payne tariff law, on the wool imported in the first 10 months of the last fiscal year you would have collected $41,420,000 in 10 months. And let me say that since December last our imports have increased every month, one over the other, until in May our imports reached the enormous sum, in round numbers, of $229,300,000.

Never before in the history of the Republic have our imports reached $184,000,000 in any one month until January last. Now in round numbers they are $230,000,000 per month. If you had collected the same rates of duty last year as were provided in the Payne bill, and if we had had the same amount of imports, you would have collected $400,000,000 instead of $210,600,000 as you did. [Applause on the Republican side.] You would have no need to raise this $210,000,000 that you are raising in this bill. You would have the money in the Treasury. But you would not have had so many imports if you had had the Payne rate of duty I presume. Prior to the enactment of the Underwood Tariff Act the record month for imports was October, 1912, $177,987,000. This record was broken in December, 1913, with imports amounting to $184,025,000. For a period imports were retarded by the war in Europe, but in January, 1916, imports amounted to $184,350,000, surpassing any previous month. In February imports were $193,935,000, breaking the January record by $9,600,000. In March imports were $19,600,000 greater than February, and in April $4,700,000 greater than March, and in May $10,900,000 greater than April. Comparing the fiscal year ending June 30, 1913, under a protective tariff with the fiscal year just ended we find that although imports have increased over $360,000,000 customs receipts have declined $106,276,000.

Imports 1916	$2,181,000,000
Imports 1913	1,813,000,000
Gain	368,000,000
Customs receipts 1916	210,866,222
Customs receipts 1913	318,142,344
Loss	106,276,122

Average ad valorem 1913, 17.6 per cent.
Average ad valorem 1916, 9.7 per cent.

During the entire life of the Payne law the average ad valorem rate of duty collected on the total importations was approximately 18.5 per cent. If we had collected that rate of duty during the past year instead of 9.7 per cent our customs receipts for the year ending June 30, 1916, would have amounted to some $403,000,000. I do not contend that had the Payne tariff law been in force our customs receipts would be that great, for some of the imports would not have come to our shores. We would have produced some of those products in America by American labor, but I do contend that it is very conservative to say the Payne tariff law would have produced over $100,000,000 more in customs receipts than was raised by the Underwood law, and with a protective tariff law in force American industries would have no dread of the period to come when the war is ended.

Mr. CANNON. How much has the cost of living, to the poor man or the rich man, been reduced since the Underwood law was enacted?

Mr. FORDNEY. I do not know how much of that increased cost the Democratic tariff has been responsible for, but I do know this: That prior to the enactment of the Underwood tariff law, when there was a duty of 1.685 cents per pound on sugar, my family could go into the stores in my home town and buy 22 pounds of granulated sugar for a dollar. Now they get 11 pounds for a dollar, with the reduced duty on sugar. This morning I picked up the Statistical Trade Journal, published in New York by Willets & Gray, and found that the differential between the cost of raw sugar and refined is $1.20 a hundred pounds. There is no domestic sugar on the market now, none at all. There is no competition at all with the seaboard refiners. They have full sway. I remember when we were on the sugar investigating committee the refiners at New York reported so much sugar imported from Europe at $6.40 a hundred pounds, and on that import value was based the price of all the refined sugar sold on the market. That was in July and August, 1911. I went to the Treasury Department and had a very exhaustive statement prepared for me, showing all the imports of sugar from every country in the world and the amount coming into each port. I presented that statement, certified by the Treasury Department as being correct, to the Hardwick investigating committee; and to the great surprise of Mr. Willets, of Willets & Gray, sugar statisticians, who was on the witness stand, proved to him, notwithstanding the statement of the importers, that not one pound of sugar had come in from any European country of the world in 16 long months, although the refiners were basing the prices of sugar on European imports. There were none coming in, and their statements to that effect were absolutely false. I venture to say, that if the truth were known, to-day the seaboard refiners are purchasing sugar from Cuba and from the Philippine Islands and from Java and from the West Indies at from 1 to 2 cents a pound below the market price quoted here to-day. I can not prove that just now, but I firmly believe it is correct.

But, my friends, whether our Democratic friends are responsible for the high cost of living or not, let me say in all fairness that some time ago one Member of the other body of Congress—thank Heaven, he is not a Member of that body now, and I hope he never will come back—said he was in favor of a law to reduce the hours of labor per day and in favor of a law to increase the wages paid to labor per day with the shorter hours, and in favor of a law to reduce the price of the product of that labor, and that if he could have his way such a law would be enacted. Well, up in Michigan we have just such fellows as that, talk just like that, but they are in our asylum for the insane at Kalamazoo. [Applause and laughter on the Republican side.] Every time any law is passed that adds to the cost of the production of an article you fix a higher price on the consumer, and that must be so. It makes no difference how you do it, there is no article produced by any manufacturer in the United States in which the labor cost is less than 90 per cent of the total cost of production. Point out one if you can; and when our labor cost is double the labor cost in any other country in the world there is no way to protect the laboring man and pay the American scale of wages except through a protective tariff law to offset the difference between our cost here and the cost abroad. [Applause on the Republican side.] There is no getting around it. I have been in business long enough to know that is so.

Mr. KELLEY. Will the gentleman yield?

Mr. FORDNEY. Certainly.

Mr. KELLEY. The chairman of the committee [Mr. KITCHIN], in his speech preceding my colleague, practically challenged any member of the committee or of the House to point out how the $200,000,000 can be raised. Did I understand the gentleman from Michigan to say that if the Payne rates had been applied to the imports received during the past year it would have increased the revenue by $200,000,000?

Mr. FORDNEY. The Payne rate of duty on the amount of imports would have doubled the amount collected, because their rates are about 9 per cent ad valorem, while in the Payne bill the rate was 18 per cent ad valorem.

Mr. KELLEY. If the Payne rate had been applied to the importations during the past year the $200,000,000 they now propose to raise would have been raised by that revenue?

Mr. FORDNEY. Yes, sir.

Mr. CLARK of Missouri. If it will not interrupt the gentleman too much, I would like to ask him three or four questions.

Mr. FORDNEY. The gentleman from Missouri can ask me all the questions he desires.

Mr. CLARK of Missouri. Because I have always considered the gentleman from Michigan the only simon-pure protectionist in the House. [Laughter.]

Mr. FORDNEY. Without apology.

Mr. CLARK of Missouri. Without apology. I will ask the gentleman if his statement, taken in connection with the question asked by the other gentleman from Michigan [Mr. KELLEY], does not end in a misleading conclusion. The gentleman from Michigan [Mr. FORDNEY] does not mean to say that if the Payne bill had been continued it would have brought in $210,000,000 more than was collected last year?

Mr. FORDNEY. What I said, and I do not wish to be misunderstood, is that on the same amount of imports it would, but I did say—the gentleman from Missouri perhaps was not present at that time—I did say that we would not expect the same amount of imports under the Payne law that came in under the Underwood law.

Mr. CLARK of Missouri. In order to get the extra $210,000,000 you would have to project the Payne rate not only on the articles that the duty was on but other articles imported. You would have to extend the scope of the Payne bill?

Mr. FORDNEY. No, sir.

Mr. CLARK of Missouri. It would not bring in $510,000,000, and never did.

Mr. FORDNEY. The Payne tariff law during the year 1912 brought in $333,000,000 and the last year it brought in $318,000,000. The Underwood bill last year brought in $210,600,000. Now, the amount of imports for last year under the Underwood tariff law exceeded the imports during the last year of the Payne tariff law by $368,000,000 in value. Computing the customs receipts on that sum on a basis of 18 per cent ad valorem and you have a little over $66,000,000 and would have a total of about $480,000,000.

Mr. CLARK of Missouri. I want to ask the gentleman three or four questions about wool. His memory is fresher than mine. Wool is higher now in price than under the Payne bill, is it not?

Mr. FORDNEY. I think it is.

Mr. CLARK of Missouri. Wool is higher now than it ever was at any time when money was at par?

Mr. FORDNEY. No.

Mr. CLARK of Missouri. Except, perhaps, once.

Mr. FORDNEY. Under the Payne tariff law wool in the grease sold one year in Michigan for 33 cents a pound.

Mr. CLARK of Missouri. I know, that is one time; but is not this true about wool, tariff or no tariff, high tariff or low tariff, tariff or free trade, wool is never going to be cheap again?

Mr. FORDNEY. I do not expect that it will be as cheap as if we raised it all in this country, and that we can not do.

Mr. CLARK of Missouri. Is it not a fact that the high price of wool is due to the fact that there is a shortage of wool the world over, and that while the wool clip does not increase materially, the population of the world increases from 2 to 3 per cent per annum. And is not the same thing true of leather? Men who make shoes are hunting out every substitute they can find for leather in order to keep the price of shoes down.

Mr. FORDNEY. Let me answer the gentleman. Prior to the war in Europe we produced in the United States out of the 540,000,000 pounds of wool consumed in this country 300,000,000 pounds and imported 240,000,000 pounds. That wool chiefly came from Australia and New Zealand. Australia and New Zealand the year before the war produced 800,000,000 pounds of wool. The consumption in Australia and New Zealand in round numbers was 100,000,000 pounds and the exportation 700,000,000 pounds. We imported 240,000,000 pounds at that time, chiefly from Australia and New Zealand, the Faulkland Islands, South America, and some English class 2 wools.

Since the war England put an embargo on wool going out of any of her colonies to any people in the world that would not enter into an agreement that the product of that wool should not be exported to any nation in the world not agreeable to England. Therefore the embargo on wool from English colonies put up the price.

Mr. CLARK of Missouri. But the gentleman has not answered my question.

Mr. FORDNEY. Let me conclude. We imported, the first 10 months of the last fiscal year, 339,000,000 pounds of wool of class 1, 12,000,000 pounds of class 2, and 90,000,000 pounds of class 3, or carpet wool. We have exported in 10 months $45,000,000 worth of manufactured goods, chiefly to England and France. Therefore, because of the abnormal conditions throughout the whole world, the price of wool has been high. Since the war the price of woolen goods has increased, and exports have gone up from $3,900,000 in 10 months prior to the war to $45,000,000 now, and that affects the price of wool and woolen goods in this country.

Mr. CLARK of Missouri. But the gentleman has not answered my question, and that is this: Whether or not the wool clip of the world is practically stationary while the population of the world increases at the rate of 2 and 3 per cent a year, and that is really the cause of the high price of wool. Is not that true?

Mr. FORDNEY. If it is true, and I believe it is, that the production of wool in the world does not keep pace with the increase in population of the world, then the price of wool must go up, certainly. The law of supply and demand will regulate the price, largely.

Mr. CLARK of Missouri. One other question. Is it possible to keep woolgrowing going on in this country on high-priced land? Does it not take to the cheap land everywhere, and is it not true that just in proportion as we settle up this country for some unaccountable reason we get out of the wool business?

Mr. FORDNEY. Mr. Chairman, I am unable to answer that as intelligently as I would like to, for this reason: I can not tell whether there ever was a time when the State of Ohio produced more wool than it is now producing, but it is producing the highest-priced wool produced in the world. It is the cleanest wool in the world. For instance, it is shown that the Ohio wool shrinks 50 per cent. In other words, 100 pounds of wool in the grease, shorn from the sheep's back in Ohio, washes but 50 pounds of wool and 50 pounds of dirt. As you go west and get on to the great sagebrush country in the West, in Nevada and Utah, 100 pounds of Utah and Nevada wool will wash out 20 pounds of wool and 80 pounds of dirt.

Mr. CLARK of Missouri. If the gentleman will permit, he does not extend that statement of his about Ohio wool quite far enough, though I do not want to take his time.

Mr. FORDNEY. I am very glad to have the gentleman take my time.

Mr. CLARK of Missouri. It embraces southeast Ohio, and the panhandle and a few counties of West Virginia and the southwest corner of Pennsylvania. When the gentleman and I were both on the Committee on Ways and Means some gentleman came into that committee one day and asserted exactly what the gentleman has asserted. I had heard that tale for 10 or 15 or 20 years, and I did not believe a word of it. I said that we had as good climate and grass and water and shade and everything else in Indiana and Illinois and Missouri and Iowa as we did there, and I did not believe it. I thought it was a fiction that they had evolved for their own benefit. This man said to me, "What will convince you?" I said, "If you will bring me the price currents for 10 years and they show that they got a higher price down in the corner of the three States than anywhere else, I will believe it and put it in the RECORD." He said, "How long will you give me? I have not got them with me." I said, "Ten days." He produced the price currents, and it is true, and it grows out of some climatic influence—I do not know what it is.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes; but I first want to answer the gentleman from Missouri. Let me say to the distinguished gentleman in all candor—he is sincere and so am I—the reason why your Ohio wool and your Michigan and Wisconsin and Indiana wools are cleaner than any other wools in the country is because of the nice, clean pastures on which the sheep graze, whereas in those new countries where there is a great deal of sand and where the wind blows the sand into the wool and the sheep carry it away, and where there are lots of burrs and dirt that get into the wool, the wool necessarily carries a larger amount of dirt. For that reason they have cleaner wool and they have higher-priced wool per pound in the grease than in any State in the Union.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield to me?

Mr. FORDNEY. Yes.

Mr. LONGWORTH. I want to state further to the gentleman that one of the reasons why the Ohio wool brings the highest price is that the sheep there are of a purer blooded strain of merino.

Mr. FORDNEY. That is correct. It is the finest grade of wool produced in this country or in any other country in the world.

Mr. FESS. I wanted to inject this remark, that I think the suggestion of the gentleman from Missouri [Mr. CLARK] would leave the House under the impression that the wool-producing section of Ohio is a hilly section that is not adapted to agriculture, and therefore not quite so high priced per acre. That is not the situation. The largest woolgrower in Ohio is Mr. Harper, as you know, and he lives 40 miles from Columbus. Columbus is in the center of the State, and his place is 40 miles north of Columbus. He has there acres upon acres of level country, with not a hillock a foot high, the best land of the country; and in my county of Greene, one of the largest sheep-growing counties in the whole State, land sells at from $150 to $175 per acre, and wool and sheep are two of the most profitable products of the farm. [Applause on the Republican side.]

Mr. FORDNEY. I want to say further that in the State of Michigan in my opinion we have a greater number of sheep to-day than was ever raised in the State, in the history of the State, but they are owned in small numbers by each of the good farmers of the State.

The passage of the bill now before the House will be a further departure by this administration from the policy of a protective tariff. While the bill does not reduce any tariff rates, it ignores the revenue producing possibilities of a protective tariff measure. Never before in American history did a greater necessity appear for the enactment of a protective tariff than at present. The war has demonstrated in many ways the great value and necessity of industrial independence, but this revenue bill ignores all this. What will become of the American markets when the war in Europe is ended and when the armies now engaged in destruction return to work? Where will the product of their labor find a market? The markets of practically all of Europe, according to every indication, will be

closed to German products. German goods will invade American markets as never before unless we recognize the merits of the policy of protection.

In the report accompanying this bill, all import duties are condemned as consumption taxes. I can construe only one meaning to that report and that is that it is an indorsement of the policy of free trade.

The majority of the people of this country favor the protective tariff policy, but some of them have been misled to believe such a tariff can be secured from a Democratic administration. In the campaign four years ago I was confronted time and time again by people who claimed that Mr. Wilson was a protectionist, that he had said that he favored a tariff policy that would injure no legitimate industry. They were misled at election time and realized it after election when the President assumed the position that any industry that could not thrive in this country without some artificial advantage, was a hothouse industry and must go.

The report accompanying this bill should disillusion every believer in protection who at any time in the past has put his faith in a Democratic administration. This report refers to import duties as consumption taxes and nowhere in the report is the compensating feature of a protective tariff recognized. If there is no compensating feature to an import duty on any article and a consumption tax is a burden on the people and the income tax is so just and equitable, why not absolute free trade? It appears to me that under this administration the Nation is drifting rapidly to an absolute free-trade policy.

To mislead the voters of the country at the coming election a provision is contained in this bill for a tariff commission. I sincerely trust, however, that protectionists will not be misled again to place their hopes in a party believing in free trade. There is a great popular demand for a tariff commission. This demand, however, is for a commission to gather facts regarding cost of production here and abroad, so that American industries can receive adequate protection. The only object of this bill, so far as I can discern, is to satisfy the popular demand and at the same time give absolutely no assurances that the policy of protection will be recognized or that an adequate tariff will be enacted.

I would like to have the Democratic Members of this House admit that there will be some compensation to the American people for the tax imposed by this bill on dyestuffs. If there is no compensating feature to the tax, why is it levied? Is it a consumption tax?

It is not a consumption tax, and they know it and the country knows it. It is no more of a consumption tax than any duty imposed for the purpose of protecting an American industry. A duty on imports is a consumption tax only when levied on an article that can not be produced in this country, an article that we must import. A duty, then, is a consumption tax, pure and simple. A duty on any article would be a consumption tax, unless the duty was high enough to permit that article to be produced in America; then the duty is no longer a consumption tax, for it has a compensating feature. When the duty is high enough to protect an American industry, the benefit of having the industry in America far offsets any increase in prices, and it very frequently transpires that competition at home reduces the price to a mark lower than prior to the time of the enacting of the protective rate, when foreigners controlled our markets.

Before the Payne tariff was enacted fully 90 per cent of the post cards sold in America were imported. Before the Payne law there was a slight rate of duty on post cards, but as it did not protect the American industry it was serving only as a consumption tax; it had no compensating features. The Payne law imposed a rate on post cards that furnished protection to the American industry, and the American manufacturers soon produced nearly all the post cards sold in America. Being permitted to produce in large quantities, the cost of production was decreased. Before that protective tariff we paid 5 cents for a post card that we now can purchase for a penny. Will any man in this House contend that the tariff levied in the Payne tariff law on post cards was a consumption tax?

Our protective policy has encouraged and built up our great agricultural production, our—

Tin industry.
Lumber industry.
Woolen industry.
Cotton industry.
Sugar industry.
Rice industry.
Tobacco industry.
Rubber-manufacturing industry.

Did the import duties that fostered these industries serve only as consumption taxes? Were there no compensating features to those tariff rates? If you will say no, if the Democratic Party will say no, I disagree with you, and every protectionist disagrees with you, and I would gladly stake the future success of the Republican Party on the verdict of the people of the country as to whether you are right or wrong.

Mr. AUSTIN. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. AUSTIN. I want to ask the gentleman from Michigan a question respecting the tariff commission and its reports in Germany. Is it not a fact that the tariff commission there is largely made up of business men and experts?

Mr. FORDNEY. In Germany it is true that when they revise their tariff a committee of 48 business men are called together, and they prepare a tariff law and submit it to the authorities that make the tariff laws in Germany. That is the way the tariff laws are made in Germany.

Mr. AUSTIN. Then they do not exclude business men from membership on the tariff board?

Mr. FORDNEY. No; they invite the intelligence of the country. They invite the men in the very great industries of the country, men who are skilled in their particular lines.

Mr. AUSTIN. Is it not a fact that President Wilson in his Indianapolis speech last year stated that this country did not need a tariff commission; that he had a Trade Commission that served the purpose?

Mr. FORDNEY. I do not know. Perhaps he did. He has said so many ridiculous things I can not keep up with him. [Laughter on the Republican side.]

Mr. COX. Is not this also true, that every member of that German tariff commission, consisting of 48 members, serve the German Government without pay?

Mr. FORDNEY. I do not know that that is so, though I will accept the gentleman's statement.

Mr. COX. It is true, for I looked up the question.

Mr. FORDNEY. Let me say to the gentleman, you Republicans who are inclined to vote for this bill, how can you expect to get any credit for it from the American people?

This is a Democratic measure; that party is in power in this House. [Applause on the Democratic side.] As I say, that party is in power in this House, and if it is a meritorious bill, and the people of this country are going to approve of it and applaud you for voting for it, the Democrats get the credit and not you.

Mr. COX. They ought to have it.

Mr. FORDNEY. If there is any criticism to heap upon anybody's head for passing this law, and I believe there will be, and I will do my share, it will go to the Democratic Party. You must and do assume responsibility for this law, my friends. You are entitled to the credit and you should take the criticism, and I warn Republicans who plan to vote for this bill, because it has a makeshift for a tariff board or a bit of political sop on dyestuffs, or any leaning toward Republican principles, to look and see what is behind it. It is antagonistic to the principles of protection from beginning to end, and will tend to pave the way for free trade for the American laboring man and the American manufacturer. Gentlemen, I thank you. [Applause.]

Mr. Chairman, I yield 30 minutes to the gentleman from Connecticut [Mr. HILL]. [Applause.]

Mr. HILL. Mr. Chairman and gentlemen of the committee. I just this moment received a telegram from the president of the American Chemical Society, a society composed of 10,000 American chemists. He is a resident of Chapel Hill, N. C. I have hardly had time to read the telegram. I am not going to speak to-day either on the tariff commission or the dyestuff proposition or the antidumping bill, but will reserve that for discussion under the five-minute rule, or at some time later. I am going to make a statement in a nonpartisan, impartial way on the Underwood tariff bill and its relation to the present condition of things, first, and then take up the financial side of this question, for it is a financial question as well as a political one.

The telegram confirms my absolute opinion of the dyestuff proposition as submitted to this committee, that the bill as drawn injures and harms the cotton and woolen industries of the United States and will not develop the dyestuff industry of this country, and in so far as it does not develop that trade it will be at the expense of the cotton and woolen industries, the leather industries, and the general textile industries of the United States. I shall develop that idea somewhat in discussion of the effect of the Underwood tariff bill up to the 1st day of July, 1916. The telegram reads as follows:

CAMDEN, ME., *July 6, 1916.*

Hon. E. J. HILL,
House of Representatives, Washington, D. C.:

Your letter and copy of revenue bill, addressed Chapel Hill, just received here in camp. Happy to note all now recognize necessity of protection for dyestuff industry. Regret to note reduction by one-third

of special duties recommended by New York section; such reduction means no appreciable saving to the individual American consumer, and may result in restricting the entries into this line of manufacture to the financially stronger and more experienced groups instead of opening the door wide to all. Regret I am not familiar with the reasons for the unexpected exclusion of alizarin and indigo from the special duty. My address to-morrow and Saturday, Chemists Club, New York City.

CHARLES H. HERTY, *President.*

I will go more fully into the details of the telegram and dyestuff industry later in the discussion.

There are in this bill five separate and distinct systems of taxation. They carry in this bill a burden of three hundred and eighty to four hundred million dollars annually that is to affect the future of the American people. I recognize that some of it is a reenactment of present taxes, but changed in form and changed in amount, and you have to take the responsibility, my Republican friends, as well as my Democratic friends, of explaining to your constituents the necessity and the reason why you this day or next Monday vote to put a burden of taxation of about $400,000,000 a year upon our people in time of peace, for bear in mind that you have had the statement made to-day that every dollar that has been appropriated thus far for mobilization and expenses in Mexico and what will come hereafter are to be carried in a bond issue. Now if you take that out from this, how are you going to explain to the men who sent you here why you add to their burdens of taxation for all time to come so long as this party is in power $400,000,000 a year?

Mr. Chairman, this bill probably puts a heavier burden of taxation upon the American people than any other one measure ever presented to Congress in the history of the Republic, and yet it would not be a serious matter if the taxation was equitably distributed, for the enormous aggregate of the taxable property of the Nation has never been even scratched.

For half a century the aristocracy of England and the democracy of the United States have not realized the necessity of industrial independence as the first reliance for the Nation's safety and general welfare.

Here a minority of the people have failed to learn that national prosperity can not exist when labor is unemployed and when our own market place is made an auction shop for our own raw materials and a dumping ground for the finished product of foreign factories. [Applause on the Republican side.]

There an hereditary aristocracy and a purchased-title class are willing to pay the expenses of a Government which gives to them exclusive privileges, and the remainder cringe and bow to my lord and lady, and have been content with an industrial system which has made Great Britain the sweatshop of the world and which compels one-half of all her people who reach the age of 60 years to become inmates of the poorhouse and to fill a pauper's grave.

This bill marks the inauguration of the English free-trade system here at the very time when England's fearful struggle to preserve her life compels its abandonment there and forces her into a commercial union with her allies for the adoption of a policy of protection and preferential trade among themselves when peace shall have been restored.

The death knell of English free trade and tariff for revenue only was sounded when Reginald McKenna, the chancellor of the British exchequer, recently said:

> The experience of the war has shown that the strength and safety of the British nation in time of peril lies in the possession by this nation of the power to produce its requirements from its own soil and its own factories, rather than in the possession of values which may be exported and exchanged for products and manufactures of foreign countries.

[Applause on the Republican side.]

The system of protection and national industrial independence which Bismarck taught to Germany, which France has been practicing for many years, and which Britain has now accepted is thrown into the discard by the Democratic Party of the United States under the leadership of Woodrow Wilson. [Applause on the Republican side.]

A CONFESSION OF FAILURE.

This bill in its scope and plan is a confession of the complete failure of the Underwood tariff law.

Under Republican control, in the fiscal year of 1913, the ordinary receipts of the Treasury were $724,111,230, derived from customs, corporation-income tax, and internal revenue. The receipts from customs were $318,891,396, and from corporations $35,006,300.

The ordinary expenses of the Government were $682,770,706, and the resulting surplus for the year was $41,340,524. It was a good, healthy financial condition not only for the Treasury but for the people as well. Prosperity reigned throughout the land. Everybody was busy. No man lacked work who wanted it.

The average rate of duty on all importations was 17.69 per cent, and 54.47 per cent of practically noncompetitive importations was coming to our ports free of any tax whatever.

In the four previous years, under the Payne law, the natural and normal increase of imports had been $256,060,804, and the exports $720,899,429.

On April 15, 1913, there were but 67,498 surplus railroad cars in the United States.

On June 30, 1913, there was an available cash balance in the Treasury of $165,960,984. It was the high tide of the Nation's welfare, and the task for the incoming Democratic administration was to match it if they could.

RESULTS OF THE CHANGE OF CONTROL.

With a confidence born of inexperience they planned to increase income and have dismally failed. They assumed that expenses would increase and gamboled like lambs on the hillside at the glorious prospect before them.

A tariff for revenue only was their reliance for current expenses, and an estimated income tax of $70,000,000 was to provide for all emergencies. All protection features were eliminated from their customs law, and the comparative cost of production of competing importations was wholly ignored, and distinctly stated so by Mr. UNDERWOOD in the House report, and the statement was confirmed by Senator SIMMONS in the Senate.

And so the bill passed, and was signed on the evening of October 3, 1913. On October 4 Mr. UNDERWOOD was quoted by the Washington Post as saying:

> This bill will do four things—
> First. It will reduce the cost of living.
> Second. It will not disturb the business of the country.
> Third. It will increase our foreign trade.
> Fourth. It will collect revenues sufficient to run the Government.

I submit to this House that from that day to this there has not been one minute when any of these prophecies have been fulfilled. [Applause on Republican side.]

THE COST OF LIVING.

The purpose of the authors of the revenue tariff which we now have was, by reducing the rates of duties, to encourage larger importations of competing products, and so force down the price of like domestic products and thus secure a lower cost of living.

My reply to that is that competition can not be controlled by a rate of duty, if that rate is below the difference in the cost of production. [Applause on Republican side.]

The inevitable result is the ultimate abandonment of the industry here and an ultimate higher price, because of the destruction of domestic competition and complete dependence upon a foreign supply.

Second. The cost of living will always be increased by putting a duty for revenue on articles which are not produced here, for there is no domestic competition to regulate the price, and the tariff tax is added to the cost. For example, raw silk, if not on the free list would invariably sell at the foreign price with the duty added.

Third. The cost of living will not be reduced in proportion to tariff reduction, because in many cases the reduction can not be distributed to the ultimate consumer. For example, take matches: Under the Payne law, the duty was 6 cents per gross on 144 penny boxes. It is now 3 cents. It is impossible for the consuming public to get the benefit of the reduction of one forty-eighth of a cent on a penny box. As a result the Treasury will lose $90,000 on the 3,000,000 gross imported and the foreign manufacturer, or importer, or American jobber will put it in his pocket. There is a large class of similar items.

It follows, therefore, that if the price of domestic products is not decreased to the ultimate consumer to the full amount of the reduction of duty on the imported product, to that same extent the additional taxes in other forms, as in the pending bill, imposed to offset the reduction in import duties, tend to increase the cost of living.

The increased imports of competing products simply decrease the earning power of the importing nation by taking away the opportunity of earning a living by providing for its own requirements.

DISTURBANCE OF BUSINESS.

Second. From October 4, 1913, the Underwood law ran and was glorified until August 1, 1914, when half the world springing to arms revolutionized the economic condition of the entire globe.

In those 10 months, and with the Underwood law in partial operation, the rate of duty was about 13.62 per cent, and imports increased above the previous corresponding period by $101,977,779, and exports shrank by $158,888,363.

On April 15, 1914, the surplus railroad cars had increased to 212,869, or more than three times as many as the year before, and on April 15, 1915, to 313,073, or nearly five times as many as in 1913. Much of the railway capital of the country was in receivers' hands, and 4,000,000 wage earners in American industries were said to be unemployed.

Societies for the relief of the unemployed began to be organized all over the land, and a department of the Government began to act as an employment agency.

In 1915, for the first time in American history, the board of health of New York City amended the sanitary code by permitting the slaughter of horses for food. Health Commissioner Emerson said:

Hereafter old horses instead of being sold for their bones can be fattened up and disposed of for meat. While the department does not precisely recommend the eating of horse meat, we can see no harm in its use.

Comment is unnecessary.

Mr. QUIN. Is not horse meat good meat? Do they not eat it in France all the time in preference to beef?

Mr. HILL. I am not ready to vote for such a policy as will compel American citizens to eat horse meat. [Applause on the Republican side.] I would give every American workingman a good porterhouse steak if I had my way. The gentleman from Mississippi can offer horse meat to the workingmen of his State if he wants to. [Applause on the Republican side.]

A like disturbance of business had followed the passage of the Wilson bill in 1894, so that the conditions of 1914 were not a surprise to those whose memories had held good for 20 years.

The only business which I know of which was undisturbed was that of those who were asleep or dead.

Mr. HAMILTON of Michigan. Does not the gentleman remember that they opened up the morgue in New York City as a place of lodging for those who had no place to sleep?

Mr. HILL. I do not remember that.

Mr. HAMILTON of Michigan. That is a fact.

Mr. HILL. Those were people whose business was undisturbed during that time. [Laughter.]

INCREASE OF FOREIGN TRADE.

Third. The prophecy of an increased foreign trade is nullified by the figures already given, showing that up to the beginning of the European war, notwithstanding the large increase in imports, the net shrinkage in the volume of foreign business was $56,910,564.

What the relation between war supplies and normal exports has been since August 1, 1914, no man knows.

One bureau of political activity has estimated 5 per cent of the total as due to war supplies, or in round figures about $250,000,000 for one year. But the majority of the Ways and Means Committee have estimated receipts of $71,000,000 from an average tax of 5 per cent in the pending bill on four branches of war supplies, which would indicate an export in these articles alone of $1,420,000,000 for 1916, and if the vast volume of other war exports is added the probabilities are that the normal exports, compared with the peace exports of 1913, are materially below those of that year, which aggregated $2,465,884,149 and broke all previous records.

He is a bold man who would claim now that the enormous increase of exports due to the war is to be credited to the present tariff, and my only reply is, "God help the nation and people whose sole salvation is due to the blood and slaughter of their fellow men." [Applause on the Republican side.]

A FAILURE AS A REVENUE PRODUCER.

Fourth. The last prophecy was that the Underwood bill would collect revenues sufficient to run the Government.

It was to that bill, as signed by the President on the evening of October 3, 1913, that Democracy pinned its faith. It was of that bill that Senator SIMMONS said on June 10, 1914:

There will be no change in the present tariff during this administration.

It was of that bill that Representative UNDERWOOD said on the same day:

If Congress should attempt to change the tariff provisions relating to sugar, or any other item in the present tariff law, President Wilson would veto the measure in whatever form it might appear. I talked with the President to-day.

It was of that bill that Secretary Redfield said on the same day:

The press of the country could do no greater service than to emphasize the fact that there will be no change in any feature of the tariff laws while President Wilson is in office. I talked with the President to-day.

It was of that bill that President Wilson said on December 8, 1915:

The Underwood-Simmons Act is not in the slightest degree a failure.

The first real, positive shock to this sublime confidence in their own handiwork came in August, 1914, when the war broke out. Few believed it would last three months and nobody knew what the effect on the United States revenues would be, and yet on September 21 the Secretary of the Treasury appealed to Congress for a war-revenue act, which it was estimated would add $100,000,000 to the receipts from the Underwood bill; and this notwithstanding that they had had three months and four days of Payne bill duties on all importations, five months Payne duties on wool, six months Payne duties on woolen goods, and eight months Payne duties on sugar, and yet the receipts from customs for 1914 had fallen off $26,571,381. The reason given was "that it was due solely to the falling off of importations," when, as a matter of fact, importations had largely increased, and the very month of October, 1914, which Secretary McAdoo cited in proof of his statement in his annual report for 1914, showed an excess of importations of $5,131,218 over October, 1913.

In the year 1915 customs revenues fell $109,104,723 below those of 1913, and a renewal of the war-revenue act was made.

The committee said in their report:

This act was enacted as an emergency measure to cover the reductions of revenue, due mainly to the loss of customs receipts caused by the disturbed conditions resulting from the war in Europe.

And added:

But the end of the war is still beyond sight and the Treasury will need the additional revenue contemplated by the extension of this act.

That was absolutely true, but not for the reason given.

For the year ending July, 1916, the customs receipts fell off as compared with 1913 to the amount of $107,025,174. This makes for the fiscal years of 1914, 1915, and 1916 a total loss of customs revenue of $242,701,278, and yet during these years there has been a total increase of importations above 1913 by the sum of $330,023,275.

With Belgium, Germany, Austria, Turkey, Poland, and practically all of the Balkan States barred from our market by the war, still the increase of our imports for 1916, with June estimated, are nearly four hundred million in excess of 1913, which gives us a slight foretaste of what will be done to us in the way of a flood of foreign products when peace is restored.

And what wonder, when present rates of duty are in force.

They have been as follows for the fiscal year of 1916:

	Per cent.
July, 1915	10.04
August, 1915	11.10
September, 1915	9.85
October, 1915	11.65
November, 1915	10.75
December, 1915	9.45
January, 1916	8.49
February, 1916	9.92
March, 1916	9.79
April, 1916	8.69
May, 1916	8.81
June, 1916 (estimated)	8.81
Or an average for the year of	9.78

If the duty on sugar had not been restored, the rate now would be about 7.34 per cent. Compare this with an average duty of 21.9 per cent under the Wilson law and 20.1 per cent under the Payne law.

The probabilities are that unless the rates in the Underwood law are revised before the war closes the United States will be wide open to the products of every competing country in the world, and their markets closed to us by higher average duties maintained by nearly all of them on like competing products.

Under these circumstances I commend to the consideration of my Democratic brethren a recent speech of Chairman Hurley, of the Federal Trade Commission. I quote from a newspaper dated December 1, 1915:

Mr. Hurley warned exporters against assuming that the European war would insure them a permanent foreign market to be retained without effort.

"The American manufacturer," he said, "should realize that not a smokestack has been destroyed in England, Germany, or Italy, and only a few in France. Unless we take advantage of the opportunity we now have, we will find that 90 days after the war is over the European nations will be on their way to a position in the markets of the world even stronger than they occupied before."

A HUGE ECONOMIC MISTAKE.

Is it not perfectly manifest from the figures I have given that the present tariff law as it was passed was not only a huge economic mistake but that it has not produced revenues sufficient to run the Government when under Democratic control?

It has been aided by $12,000,000 received from the sale of two battleships to Greece, by the utilization of $5,855,780 of postal savings deposits, and also of $29,329,934 increase of money deposited for the retirement of national-bank notes, which have not been retired.

It has absorbed to its credit $36,859,472 excess duties of the Payne law in the fiscal year 1914, aside from sugar duties; it has been bolstered up by receipts of $135,569,126, in 1915 and 1916, from an odious system of stamp and vexatious excise taxes which were wholly unnecessary, judging from any reason

ever given for their imposition; it has been fortified by $157,842,529 of sugar duties, a tax now reenacted in violation of promises made throughout the last presidential campaign that sugar should be free; it has been reenforced by increased income, corporation, and internal-revenue taxation during the years 1914, 1915, and 1916 to the amount of $275,051,527, as compared with 1913; yet, notwithstanding all this, it finds itself confronted on the 1st day of July, 1916, with an increase of the national debt under this administration by the sum of $32,014,325.37.

It has varied from the campaign promises of 1912:

First. By increased taxation, including sugar duties, over and above all reductions since July 1, 1913, by the sum of $227,052,250.

Second. By not reducing the cost of living.

Third. By disturbing business, when not held in check by a foreign war.

Fourth. By failing to provide for Government expenditures and causing an increase in the national debt.

Has it been a failure or has it not?

And yet, in the face of such a record, the administration which has been in full control of the Nation during these years now declares in its platform:

> We affirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine.

And they have actually asked from the people of this country an expression of their renewed confidence.

THE REVENUE BILL FOR 1917.

At the beginning of this Congress the President of the United States appeared before a joint session of the two Houses and set forth in clear terms the state of the Nation and the problems which confronted it. He said:

> It seems to me a clear dictate of prudent statesmanship and frank finance that in what we are now, I hope, about to undertake we should pay as we go.

To that I give my hearty approval. He added that methods and plans by which this could be done were fully and accurately set out in the report of the Secretary of the Treasury, which would be immediately laid before Congress.

Seven months have passed and a new plan has been prepared in absolute secrecy by the majority of the Ways and Means Committee, ignoring his suggestions in every particular except with reference to an income tax and that the new bills should be paid by internal taxation.

There could be but one meaning to that last phrase, namely, that duties on imports, either for revenue or protection, were not to be even considered in meeting future obligations for the Nation's defense. To that proposition I can not give my approval.

The plan of the pending measure is also in flat violation of his further suggestion that—

> In a country of great industries like this it ought to be easy to distribute the burdens of taxation without making them bear too heavily or too exclusively upon any one set of persons or undertakings.

In preparing this bill the majority of the committee, for the first time in American history, boldly announce that they have followed the example of free-trade England in its economic policy, and it is clearly manifest that they have out-Heroded Herod in doing so.

In 1620, in the cabin of the *Mayflower*, the men of New England pledged themselves to a system of government of their own choice and to frame their own policies and methods of maintaining it.

In 1789, in order to provide for a more perfect union, the Colonies surrendered to the Federal Government the right to collect duties on imports from each other and from foreign nations, and ceded that right to the new Nation in order to provide for a national defense and the general welfare.

They believed in taxing property, not men, for they wanted taxation to be just and equitable, and they had no titles to sell or aristocratic privileges to maintain.

The men of New England still have their own ideas of British methods and policies now, both in domestic affairs and colonial government, and we in Connecticut, at least, believe that we can keep better informed as to the effect of our own governmental policies upon our own people by reading American newspapers, such as the Hartford Courant and New York Sun, than by relying solely for our information upon the London Times.

But the illustration is an unfortunate one for the chairman's purpose.

ENGLISH FREE TRADE OUTDONE.

I have here statements of the net revenue from taxation of Great Britain for the years 1905, before the war, and of 1915 and 1916, during the war. In 1905 their tax receipts from all sources were $589,717,602. From customs duties alone they were $173,349,027, making a per capita tax of $4.01. The United States collected that year from customs $3.11 per capita.

In 1915, while engaged in war, their receipts from all taxes were $946,525,000, and from customs taxes $193,310,000, being a per capita tax of $4.39. The United States collected that year from customs $2.09 per capita.

For the year ending March 31, 1916, their total receipts from all taxes were $1,450,440,000, and from customs only $298,030,000, or a per capita tax of $6.77. The United States collected in 1916 from customs duties $2.08 per capita.

If the duty on sugar had not been restored and the official estimate of the Secretary of the Treasury for 1917 had been allowed to stand for our consideration, as recommended by the President, the per capita tax collected from customs, to help meet the current expenses of the Government and extraordinary expenditures for national defense, would have been $1.52 per capita.

Gentlemen of the majority of the committee, for years you have been going up and down the land denouncing protection as "robbery of the many for the benefit of the few" and trying to persuade the people that a tax on consumption, as you called it, was inequitable and unjust, and yet through all these years of peace your illustrious national example, free-trade England, to use your phrase, has been robbing her own people 90 cents per capita more than was collected from customs duties here.

CHARACTER AND PURPOSE OF THIS BILL.

And now, in their terrible struggle, when they are collecting more than three times as much from import duties per capita as we are, and additional burdens are to be borne here, you coolly propose to provide for all expenses incident to the mobilization of the National Guard and all expenses caused by our troubles with Mexico now and in the future by a bond issue, and then, to meet all of the burden of national defense, supplemented by many millions to be used for buying merchant ships, building fertilizer plants, constructing roads, paying for stock in mortgage banks, building armor-plate factories and munition plants, paying the salaries of an army of officeholders, which has increased much faster in the last three years than the Regular Army and Navy have, and many other things doubtless worthy and desirable in and of themselves, but not absolutely essential at such a time as this, you propose to unload the whole of this additional burden by a doubled income tax upon one-third of 1 per cent of our population, and, in another form, upon the graves of the dead and the surviving widows and orphans, doubling a tax already paid in 42 States of the Union, and, in still another form, upon very carefully selected industries which you think can be safely plundered, and with good results.

I ask you frankly, paraphrasing your own familiar words, Is not this robbing the few in order to pay the equitable obligations of the many, and is it in accord with the President's advice "to distribute the burdens of taxation without making them bear too heavily or too exclusively upon any one set of persons or undertakings"?

TRUE NATIONAL DEFENSE.

I have no authority to speak for any of these persons who will be exclusively affected by this law, but as a Representative of the American people I say to you that a national defense for which more than 99 per cent of our people will pay nothing under this bill is no true defense at all, for the real safety of any Nation is found in the sacrificial spirit and loyal devotion of all its citizens, and the patriotism which costs nothing will not stand the test when the supreme crisis comes; and the unfortunate conditions which existed in Great Britain at the beginning of the war are too fresh in our recollection to justify us in following her example now.

And such a policy is wholly unnecessary now.

The estimated receipts by the Secretary of the Treasury made last December in accordance with then existing laws was $603,500,000, and of expenditures $857,951,000, showing a deficiency for the fiscal year of 1917 of $254,451,000.

It included $58,000,000 for preparedness in the Military Establishment and $102,000,000 for preparedness and new and old building program in the Navy Department.

Since then the sugar duty has been in part restored, and on the basis of 1916 will yield $47,000,000.

The emergency law has been renewed indefinitely and is estimated to yield $82,000,000.

The increase of imports in the last half of 1916 over the first half was $354,948,758 and would indicate an increase of at least 25 per cent additional from customs, or $41,000,000.

I have it on the very best authority that the assessed income and corporation taxes will exceed the December estimate by $60,000,000.

Adding these increases, totaling two hundred and thirty millions, would make total receipts under existing law of $833,500,000.

On July 1, 1916, there was an available fund in the Treasury of $177,851,988, and reserving $50,000,000, the balance could well be utilized, equaling $127,851,988, making available for 1917 $961,351,988 without any change in the law, a surplus over the Secretary's estimate of disbursements of $103,400,688, or a shortage from the amount estimated by the committee to be required of about $54,000,000.

I am sure that Congress would not be severely condemned by the taxpaying public if it economized in the ordinary expenditures of the Government to cover this amount.

The administration has authority now to issue $200,000,000 of one-year 3 per cent certificates which can readily be sold at a premium, and $240,000,000 of Panama long-term bonds which can be placed at par or better, and full provision thus be made for any emergency.

With present conditions it is almost certain that a very considerable percentage of the Army and Navy appropriations can not possibly be spent in 1917 unless wars, which we all hope will not come, should unexpectedly occur.

Under these circumstances, why should we throw this enormous burden of taxation upon our people and take more than $200,000,000 out of the activities of trade and let it lie in the Federal Treasury as an inducement to legislative extravagance in the coming sessions of Congress?

I am willing to vote the last dollar to maintain the Nation's rights and to provide a complete defense against attack from any nation on earth, but I do not wish to go home to my people and carry to them a record of unnecessary, extravagant, or even doubtful legislation.

The cost of living is very high, and local taxes are constantly increasing.

The American people are cheerful and generous givers to every just and worthy cause and will gladly pay the taxes needed for all the requirements of the Government, but the Members of this House and our constituents at home have a right to a fair consideration of the differing and antagonistic propositions contained in this bill and action taken on them separately.

As it is now presented it is a combination in restraint of intelligent action, and I protest against being compelled to sacrifice the convictions of a lifetime to gain a temporary advantage. [Loud applause on the Republican side.]

Mr. Chairman, I reserve the balance of my time and will insert in the RECORD as an appendix to my remarks the official estimate of receipts and disbursements for the fiscal year of 1917, made by the Secretary of the Treasury and recommended to Congress for its consideration by the President of the United States:

Fiscal year 1917.

It is estimated that upon the basis of existing laws the receipts and disbursements for the fiscal year 1917 will be (see note below):

NOTE.—By "existing laws" is meant that the present emergency revenue act expires Dec. 31, 1915, and that the existing sugar duties expire May 1, 1916.

RECEIPTS.

[See pp. 48 to 52 on "Revenues."]

Ordinary receipts:		
From customs		$165,000,000.00
From internal revenue—		
Ordinary	$265,000,000	
Income tax—		
Corporations	45,000,000	
Individuals	45,000,000	
		355,000,000.00
From sales of public lands		2,200,000.00
From miscellaneous sources		58,000,000.00
Total estimated ordinary receipts, based on existing laws		580,200,000.00
Panama Canal:		
Estimated receipts from tolls, etc.	$9,300,000	
Public debt:		
Estimated deposits to retire national-bank notes, act of July 14, 1890, in excess of amount be to retired	12,000,000	
NOTE.—As the deposits to retire national-bank notes under the act of July 14, 1890, are estimated to exceed the redemption of the notes for retirement, the excess of such deposits, estimated at $12,000,000, is used in this statement.		
Estimated deposits for issue of postal savings bonds	2,000,000	
Total estimated Panama Canal and public-debt receipts		23,300,000.00
Grand total estimated receipts, based on existing laws		603,500,000.00

DISBURSEMENTS.

For civil establishment:		
Legislative establishment		$13,800,000.00
Executive proper		680,000.00
State Department		6,000,000.00
Treasury Department proper		54,500,000.00
Public buildings, construction and sites		12,000,000.00
War Department proper		2,400,000.00
Department of Justice		10,800,000.00
Post Office Department proper		1,750,000.00
Grants from the Treasury for postal deficiencies		8,000,000.00
Navy Department proper		900,000.00
Interior Department proper		33,200,000.00
Department of Agriculture		31,000,000.00
Department of Commerce		13,500,000.00
Department of Labor		4,000,000.00
Independent offices—		
Smithsonian Institution and National Museum		750,000.00
Interstate Commerce Commission		4,730,000.00
Federal Trade Commission		500,000.00
Board of Mediation and Conciliation		50,000.00
Arlington Memorial Commission		100,000.00
Rock Creek and Potomac Parkway Commission		200,000.00
State, War, and Navy Department Building		170,000.00
District of Columbia		13,500,000.00
Total civil establishment		212,530,000.00
For War Department:		
Military Establishment, including $58,800,000 for preparedness	$176,355,000.00	
Rivers and harbors	45,964,000.00	
Miscellaneous civil, war	9,193,000.00	
		231,512,000.00
For Navy Department:		
(Including $35,000,000 for preparedness.)		
Naval Establishment, exclusive of building program	117,700,000.00	
Navy building program, new	39,000,000.00	
Navy building program, prior years	28,300,000.00	
		185,000,000.00
For Indian Service		20,000,000.00
For pensions		160,559,000.00
For interest on the public debt		23,300,000.00
Total estimated ordinary disbursements		832,901,000.00
Panama Canal:		
Disbursements for the canal from the general fund of the Treasury		25,000,000.00
Public debt:		
Miscellaneous redemptions of the debt		50,000.00
Grand total estimated disbursements		857,951,000.00
Estimated excess of ordinary disbursements over ordinary receipts, based on existing laws		252,701,000.00
Estimated excess of total disbursements over total receipts, based on existing laws, Panama Canal disbursements from the general fund included		254,451,000.00

Mr. McGILLICUDDY. Mr. Chairman, as I view it there is no duty imposed upon this House more solemn and important under our Constitution than the duty we are now undertaking to perform. There will be no bill brought into this House that is more important or far-reaching in its effects than the one we are now considering. It is no time for excitement or narrow partisanship. We are discharging a solemn obligation to the great American people. We are exercising one of the greatest powers delegated to Congress under the Constitution, namely, the power to lay and collect taxes to pay the debts and provide for the common defense and general welfare of the United States.

This power to tax the people delegated to Congress is the most important and far-reaching in its effects of any power in the Constitution. It reaches every home in the land. It affects every family and fireside in the Nation, and brings welfare and happiness, or misery and woe, accordingly as it is used justly and equitably or unjustly and oppressively.

I believe it was Edmund Burke who once said that all the great battles for freedom have been fought around the question of taxation.

It is upon this great question that this House is now engaged.

There seems to be no difference of opinion as to the necessity of raising this revenue. A great, extraordinary, and threatening emergency has brought a program of preparedness in our country that will cost hundreds of millions of dollars. The only difference of opinion is as to what manner and from what source this revenue shall be raised. Taxes are necessary and burdensome. The only question is upon whom shall this burden fall in this extraordinary crisis of preparedness for war?

The gentleman from Michigan [Mr. FORDNEY], the ranking Republican member on the Ways and Means Committee, has clearly and frankly stated the Republican position on this great question, namely, that this vast and extraordinary revenue should be raised by a high protective tariff tax. This method of raising revenue is the old and settled policy of the Republican Party, and nobody has a better right to promulgate

it upon this occasion than the gentleman from Michigan [Mr. FORDNEY].

On the other hand, the Democratic position is that this revenue should be raised, first, by an increase in the income tax; second, by an inheritance tax; and, third, by an excess-profit tax on munitions of war. And there is precisely the issue.

It brings up again the old question of raising revenue from the people by means of a tariff tax.

As I say, it is an old Republican doctrine, the doctrine of high protection. I was brought up under the blight of it in New England, and I know what it is. I am humiliated to say that for many years they did make the people of my section of the country think that a high protective tariff tax was absolutely necessary to insure prosperity in business and high wages to our laboring people. But I am going to tell you that you can not fool the people there any more. [Applause on the Democratic side.]

Now, my friend from Michigan [Mr. FORDNEY], as all high-protectionist Republicans do, puts the whole question——

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. McGILLICUDDY. Yes.

Mr. MEEKER. I would like to have the gentleman explain in his time the increase in the number of Members on this side two years ago. If that was not the reason, what was it?

Mr. McGILLICUDDY. You did not get any increase in my State. I will say that. And you will not gain any there this year, either. You will be mighty lucky if you hold what you have. [Applause on the Democratic side.]

To return, I will say that my friend from Michigan [Mr. FORDNEY] advances as the Republican reason for a high tariff tax method of raising this revenue that such a tariff is necessary in this country for two purposes: First, to create business and industrial prosperity, and, second, to insure a high standard of wages for our laboring people.

I will frankly say that if such were the fact I would be for it, because I want to see this country prosperous as much as anybody, and I think I have as much interest in the welfare of the laboring people of our country as our distinguished friend from Michigan, and I am not discounting at all his good faith in the matter.

Now, what are the facts and what is the truth about it?

Everybody now knows that a tariff is a tax on consumption, a tax on shelter, food, clothing, and practically everything which the American workingman and his family have and use in their everyday lives. It is of course obvious that such a levy of taxation is an immense drain upon the limited yearly wages of the average laboring man. It would never have been tolerated if the American people could have seen it when they paid it. But under this system it has been taken from them through an insidious and indirect system of taxation, not seen, but there, nevertheless. Some idea of the extent of indirect taxation generally can be had when I say that it has been estimated that under our present system of indirect taxation for Federal, State, and local purposes it costs every family in this country about $180 per year.

Now, unless it can be shown that a high tariff raises wages so as to offset this burden which it obviously places upon the masses of the people as the consumers of the country, the plea for its restoration falls to the ground.

This brings us to the plain proposition of fact, whether wages in this country are higher under a low tariff like the present Underwood tariff or a high tariff like the Payne-Aldrich tariff.

I have heard a great deal to-day from the other side of the House about tariffs of former years, even to the earliest day of the Republic, the tariff of 1894, of 1863, of 1857, of 1846, of 1832, and of 1816.

These may be interesting to the political antiquarian, but I apprehend that what the people of the United States are interested in to-day is the tariff we are working under now and what the conditions are under that tariff.

I have also heard a great deal to-day from the other side about the condition of the laboring man in Japan and China and the number of poorhouses in England and their inmates. This may interest certain gentlemen who are searching for gloom and misery and can not find it at home, but what I am interested in and what I want to know about is the condition of the laboring man in the United States and not the laboring man in Japan or the number of inmates in the poorhouses in England. [Applause from the Democratic side.]

Since October 3, 1913, the date of the passage of the Underwood tariff law, we have been living and working under a low tariff. Now, what is the fact as to increase or decrease of wages? We need not grope in the dark about this matter nor guess about it. During the past year the Department of Labor, through the Bureau of Labor Statistics, have kept account of the increase in wages in the different industries throughout this country as reported by trade papers, labor publications, and otherwise. The compilation is not yet complete and does not embrace all the increases made. I hold in my hand a report sent me by the Secretary of Labor showing the wage increases in this country from July 1, 1915, to May 15, 1916, and it is as follows:

Summary of wage increases, establishments involved, and employees affected, by States, July 1, 1915, to May 15, 1916.

State.	Total number of wage increases noted.	Reports showing establishments involved.		Number of reports which do not show number of establishments involved.	Reports showing employees affected.		Number of reports not showing number of employees affected.
		Number.	Total number of establishments.		Number.	Total number of employees.

Wisconsin	16	9	9	7	4	12,584	12
Wyoming	1			1			1
Interstate [1]	33	26	82	7	13	471,250	20
Total	1,486	794	2,247	692	493	1,901,322	993

[1] Railroads, iron and steel plants, and other establishments which operate in two or more States.

It will be seen from this table that the total number of wage increases noted are 1,486, and cover almost every State in the Union; that the number of establishments involved are 2,247; that 493 of the reports show 1,901,322 employees whose wages have been increased; and that 993 of the reports while showing wage increase, do not specify the number of employees involved. In a letter of the Secretary of Labor transmitting this report as to the total number of employees whose wages were increased, he says:

The number of persons affected by wage increases was reported in 493 cases and amounted to 1,901,322. If this number be assumed to be a fair average to apply to the 1,486 reports noted, then the number of persons affected by the increase in wages would be 5,730,907.

Now, let us go one step further and see to what the wage increases amounted in dollars and cents during the past year to our wage earners.

Right here is my authority on that point. I want to read a letter from Ethelbert Stewart, chief statistician of the Bureau of Labor Statistics:

UNITED STATES DEPARTMENT OF LABOR,
BUREAU OF LABOR STATISTICS,
Washington, June 24, 1916.

Hon. DANIEL J. McGILLICUDDY,
Room 219, House Office Building, Washington, D. C.

MY DEAR MR. McGILLICUDDY: The census of 1909 on manufacturing industries shows an average number of wage earners in the manu-

facturing industries of 6,615,046. The total wages paid, and this again in manufacturing industries only, was $3,427,038,000. This gives an average earnings in manufacturing industries only of $518 a year per person employed.

The figures you have on wage increases refer, of course, alike to manufacturing industries, mining, and transportation. While transportation earnings are higher than manufacturing earnings, this would probably be offset by the mining so that it is as well, perhaps, to stick to the manufacturing industry average. Personally, I believe it is entirely within a conservative estimate to say that the increases in wages as shown by the list you have are 10 per cent. This would give, say, $51 or $52 per person affected by the wage increases.

Truly, yours,

ETHELBERT STEWART, *Chief Statistician.*

From this unquestionable and conservative authority it appears that $518 per year is a safe average earning of persons employed, and that 10 per cent is a conservative estimate of the percentage of increase in wages. This would make an increase of $51.80 per employee. For 5,730,907 wage earners this would make a total wage increase of $290,860,982.60 in the past year. [Applause on the Democratic side.]

Think of it, gentlemen, an increase in wages of nearly $300,000,000 in one year to our wage earners under our present tariff, and the reports are by no means all in yet. Surely the unanswerable logic of events has exploded the economic fallacy that a low tariff means low wages. Our working people are now enjoying the highest wages ever paid in the history of the country.

This is not political buncombe, but reliable information from the records of the great Labor Department of our Government. If I understand the temper of the American people at the present time, that is exactly what they want—facts and information. I believe there is sound, deep thinking going on among the masses of the American people, and they are determined not to be deceived or misled. You have got to play fair with the American people and you have got to play intelligently with them. Merely asserting that a thing is so or not so will not go down as easily as it once did. The people have got to be shown. And they have their eyes wide open.

But the gentleman from Michigan [Mr. FORDNEY], while, of course, admitting that we have unexampled prosperity in this country and consequent great wage increases in our industries, vigorously asserts that our prosperity is abnormal and temporary, due to war conditions and causes.

Here, again, if this were true and in accordance with the facts, it would be important. Merely asserting it, no matter how vociferously, will not fool anybody.

Of course, it would be useless to deny that war has stimulated certain of our industries and increased our products. Notably this is true of the manufacture of munitions and allied industries. To a certain extent it is true in other industries. But the real question is, What part or percentage of our total enormously increased volume of business is due to war causes? If it is a large and substantial percentage of our total increased business and prosperity, then there is force in what the gentleman says. But if only a small percentage of the total volume of increased business and prosperity is due to the war, then it is of little consequence.

Now, what are the facts and what is the truth about it? Here again we need not guess. We can get approximately the truth by a visit to the great Department of Commerce and the records of our foreign and domestic commerce there shown. The Bureau of Foreign and Domestic Commerce will tell the story. The gentleman from Michigan evidently went to this source for his information. In his speech he presented to the House a statement of certain exports, sometimes called "war exports." He selected a period before the war and compared the same exports with a period during the war. Of course these exports in the latter period showed a tremendous increase over the former period; but I submit to the House it was not fair to stop there. The inquiry should have been pursued further in order to arrive at the legitimate facts and conditions. The real point is not how much greater in volume were the exports for a certain period before the war as compared with a certain period during the war, but, rather, what percentage of our greatly increased total business was this increased export trade. If it was a large percentage of our total business, it would be important, and there would be force in the gentleman's contention; but if it was a small or negligible percentage of our total increased volume of business, then it would be of little real consequence. To merely mention that the total volume of our exports for a period during the war exceeded by many hundreds of millions our exports in a corresponding period before the war might sound very big and mean very little.

Let us get at the facts and the truth.

It is well understood and very generally agreed that our manufactures are our barometer of industry.

I hold in my hand a table, carefully prepared by the experts in the department, showing the United States exports of all articles that could fairly be considered as affected by war conditions or war causes.

I requested the experts to carefully and fairly include in this list every article that could fairly be considered as affected by the war.

The table, as you will see, takes the 10 months ending April, 1914, as the period before the war and the 10 months ending April, 1916, as the latest available period during the war. The list is as follows:

United States exports of specified articles during the 10 months ending April, 1914 and 1916.

Article.	10 months ending—	
	1914	1916
Aluminum, and manufactures of	$968,763	$4,297,666
Brass, and manufactures of	6,295,169	103,431,985
Aeroplanes, and parts of	194,001	6,270,110
Automobiles, and parts of	27,148,281	101,390,939
Cars, carriages, other vehicles, and parts of	43,215,657	141,018,915
Copper, and manufactures of copper	122,928,698	128,473,558
Electric machinery, etc	21,509,687	23,666,267
Explosives	5,471,247	336,113,157
Automobiles, tires	2,683,344	14,618,052
Firearms	3,012,237	13,315,971
Locomotives, steam	3,272,822	11,559,108
Metal-working machinery, including metal-working machine tools	11,695,959	42,913,241
Rails for railways	9,441,220	14,394,044
Wire	6,620,014	30,589,626
Manufactures of iron or steel, n. s. p. f.	15,224,228	106,268,753
Boots and shoes, men's	8,763,371	31,628,027
Harness and saddles	612,793	4,118,126
Wool wearing apparel, uniforms and blankets	1,930,031	18,841,722
Zinc spelter, and manufactures of	327,705	36,764,565
Total	291,375,227	1,169,673,842
Deduct 1914 exports	.....	291,375,227
Estimated total war exports	.....	878,298,615

These, remember, are our manufactures, which, as I have stated, are our barometer of industry.

Now, eight hundred and seventy-eight millions sounds big, but what percentage is it of the value of the total manufactures?

As you are aware, we take our census of manufactures every five years. The last completed census was for 1909 and showed the total value of our manufactures for that year to be $20,672,052,000. The census of manufactures for 1914 is not yet complete, but from the figures we have the experts in the department estimate that the total value of our manufactures for the 10 months ending April, 1916, amounted to $33,000,000,000. The $878,298,615 representing our estimated total war exports would be less than 3 per cent of this total value of our manufactures—to be exact, $2\frac{3}{5}$ per cent. This is not a mere guess, but almost a mathematical demonstration. Considering the immense volume and value of our manufactures, this war export percentage is almost negligible. If the war should stop to-morrow, it would hardly be missed.

In the light of these illuminating figures, it will hardly be possible for the gloom prophets and calamity predictors to fool or frighten the American people by the cry of "war prosperity."

Again, these figures and conditions are absolutely corroborated by the best business thought, by America's ablest and best-informed business men. I have here a copy of the Boston Herald of recent date. This is one of the most influential newspapers in New England, and strongly Republican in its politics. It publishes a financial page in its daily edition. This page is devoted wholly to finance and business conditions of the country. In this paper which I hold in my hand, under the heading "Remarkable sayings of American business men the last week," were published over their signatures certain statements referring to business conditions in this country which are illuminating and impressive upon this very point.

I will not read them all, but I will give you one or two. First is the statement of Frank A. Vanderlip, president of the National City Bank of New York, a man who was formerly an Assistant Secretary of the Treasury, and who is probably as well informed as to financial and business conditions in this country as any man living. He says:

> We are fortunate in having a great trade among ourselves. At this moment the swelling home demand would take almost the entire product of our leading industries.

Again, here is the statement of Charles M. Schwab, formerly of the United States Steel Corporation, a man who probably knows more of the iron and steel industry than any man in the world. He says:

> A great many people think that the recent great production of iron and steel is due to the war, but this is not true. The war has given a stimulus to the industry, of course, but it may surprise you to know that less than 10 per cent of the steel manufactured in the United States has been used outside of the United States.

The statements of these men absolutely corroborate the above figures as to war conditions and business in our country.

Shall we take these conservative figures and estimates from the records of our Department of Labor and our Bureau of Foreign and Domestic Commerce, corroborated by the best business men in the country, or the heated statements of politicians, whom many suspect are just now more interested in party politics than the country's business?

Mr. FARR. Will the gentleman permit me to say that of 22,000 men employed in the Bethlehem works 14,000 are engaged in the manufacture of the munitions of war?

Mr. McGILLICUDDY. In this statement Mr. Schwab is not saying anything about the Bethlehem works. He is talking about the steel industry of the United States—the whole of it—and he comes pretty near knowing about it. I do not think the people in this day and in this country are going to be fooled about this matter. [Applause on the Democratic side.]

The simple truth about it is that the tremendous prosperity of our country is not temporary and due to war causes, but is a sound, healthy, permanent American growth. The causes of it are many. It is not due to the tariff alone. In fact, it would be just as illogical and unfair for us to claim that because the present prosperity follows a low tariff it is due to it, as it was unfair and illogical for the Republicans to claim in times gone by that because a certain degree of prosperity followed high tariff it was due to that tariff.

The tariff law, with its income-tax provision, is entitled to part of the credit, but the first great requisite for sound, healthy, permanent prosperity in a country like ours is a sound financial system upon which to build. For the past 50 years our vicious financial system and resulting conditions made our prosperity a matter of uncertainty and manipulation. Businessmen outside the dominating groups did not know the day or hour financial panics would break over their heads. The reform of the banking and currency system by the passage of the great Federal reserve act has changed all this. Confidence, that great asset in business conditions, has now been restored. Small business as well as big now knows that the business of the country, commercial and industrial, as well as banking and credits, have been emancipated from the domination of the powerful few. The truth is that the prosperity of the last 30 years, such as it was, was of the abnormal variety. It was a prosperity of an artificial, hothouse variety that history shows is always followed by periods of panic and depression.

The prosperity of to-day differs in another respect from the prosperity of the past 35 years. While the past prosperity was created largely by the great productive forces of the country, the toiling millions of the Nation, it was absorbed by the favored few who in the seats of the powerful controlled legislation and manipulated business. This was forcibly brought to my mind when the gentleman from Michigan a few moments ago threw out his chest and informed us that the national wealth had grown to $187,000,000,000. Of course our national wealth has grown enormously, as everybody knows, but to the average man who helped create that wealth the question is not so much the amount of the wealth but who has it? [Applause on the Democratic side.] A few years ago, when our population was a little over 90,000,000 people, it was estimated that one-sixth of our entire wealth in this country was owned and controlled by 5,000 men, and at that same time 70 per cent of all the wealth in the country was owned and controlled by 200,000 men. The income-tax returns of last year show that approximately the same conditions exist to-day.

The satisfying feature of our present prosperity is that it is being shared in by our whole people, as the figures concerning wage increases which I have quoted show that approximately $300,000,000 in increased wages have gone into the pockets of the wage earners during the past year. While this was being done, increased dividends and profits went into the pockets and treasuries of the employers of labor.

I feel that every word my friend FORDNEY said is true, that if the manufacturers and the employers of labor are not prosperous in this country, then the laboring people can not be prosperous. Of course that is true. That is just exactly the condition in this country to-day. Our industries are prosperous, and they are paying these wages to our workers because they can well afford to do so. [Applause on the Democratic side.]

Laborers and employers, big business and small business, have all been sharing in this new prosperity. It is the prosperity of the "new freedom" and will last as long as the blighting hand of favoritism and special interests is kept off of it. [Applause.]

Mr. FORDNEY. Mr. Chairman, I yield 30 minutes to the gentleman from Ohio [Mr. LONGWORTH].

Mr. LONGWORTH. Mr. Chairman, I am sensible of the courtesy of the gentleman from Michigan in yielding to me time this afternoon because he knows that I am going to take a somewhat different attitude than he himself has taken on this bill. I do not find it a particularly agreeable task to voice a difference of opinion on a matter of party policy with either of the gentlemen who have preceded me, the gentleman from Michigan [Mr. FORDNEY] or the gentleman from Connecticut [Mr. HILL], whose judgment and opinion I value most highly. But after all it is a comfort to think that our differences are largely superficial. They do not go to the bedrock principle. We would not differ if we ourselves had been engaged in making a revenue bill. Our only difference is as to the course we should now pursue with reference to a bill that other gentlemen have made without the benefit of any consultation with us.

We have before us a bill of vast importance, a bill designed to meet in part the extraordinary expenditures that this Congress has authorized and proposed to further authorize. The day of the billion-dollar Congress has passed. The day of the billion-and-a-half-dollar Congress is here.

Before we adjourn this summer—or in the fall, as the case may be—we will have spent or authorized the expenditure of more money by $400,000,000, or it may be $500,000,000, than any Congress in history. The liabilities have been contracted and, whether for a good or bad purpose, they must be met. The money must be raised to meet them. The treasure of the American people has been spent with a lavish hand, and the day of reckoning has come. In wastefulness and in reckless if not wanton extravagance the party in power has broken all records. Millions upon millions of dollars have been dumped into projects which can be of no possible benefit to the people at large, but only to a favored few in a continuously favored section of this country. Cotton and pork have been the kings of this House and of the body on the other side of the Capitol. They have exacted and received their tribute in the shape of nitrate plants and powder plants and other grabs too numerous to mention. In boldness of conception, in effectiveness of execution, in brazen disregard of the popular interest, the $50,000,000 fertilizer nitrate scheme, for which $20,000,000 was exacted as earnest money, will rank as the most daring and successful Treasury raid in the history of the United States.

For this and other sins of omission and commission the Democratic Party will be shortly called to account and after the 4th of next March will relapse again into that state of comparative innocuous desuetude as the party of opposition, in which position alone it can be of real service to the country.

As an evidence of the good faith of this prediction, I hereby agree to furnish to each of my Democratic colleagues on the Ways and Means Committee who are returned at the next election—and I hope that they at least will be—a fine new hat in the mode of the period if the Republican majority in this House in the next Congress is less than 100.

In the interest of fairness, however, it ought to be said that the wanton and reckless extravagance of the party in power is only partly responsible for the vastly increased expenditures which we have assumed and for which this bill is intended partly to provide. The larger portion of these expenditures represents the effort on the part of Congress to place this country in a condition of somewhere nearly adequate military and naval preparedness, and in that the Republican Party has not only assisted but has successfully insisted that the Democratic program be extended and elaborated.

Being thus responsible for expenditures even larger than the Democratic Party either contemplated or desired, we of the Republican Party ought to be prepared to pay the price.

This bill is designed to settle the account to the extent of some $210,000,000, as its proponents tell us. We are informed that whatever additional may be required will be taken care of later by a bond issue. It is proposed by the party in power to force this bill through without substantial amendment if they can. The question to be decided, then, is what action we of the minority should take when the time comes for the final vote.

I do not propose to go into the question as to whether we of the minority have been treated with entire fairness by those in control or not. It may be, though I hope not, that we would have done the same thing had the situation been reversed. The fact remains, however, that during the many months that this bill has been germinating no one of us had anything but an inkling of what it would contain. The bill was only introduced last Saturday. It was not until yesterday that the Republican members of the Ways and Means Committee were called into consultation by our Democratic colleagues, and that consultation consisted in having the bill presented to us and in being told in so many words that we might take it or leave it.

It was, of course, manifestly impossible under the circumstances, and in the time that has since elapsed, that we could suggest to our Republican colleagues in the House any comprehensive alternative program or even report with any degree of

thoroughness our views upon a bill which runs, as this does, the gamut of almost every theory and chapter of political economy. Under the conditions we can not do more than take snap judgment, and it would not be surprising if there should be differences of opinion among Republicans as to the wisest course to take in the event that we are unable to amend the bill to more fully accord with our views.

I speak, then, only for myself and not for my party as a whole when I say that if the bill in the last analysis remains substantially as it is, and I shall have to choose between voting it all up or voting it all down, I shall choose the first alternative and give it my support. [Applause on the Democratic side.] I have arrived at this conclusion not without a good deal of thought. Before I had any idea what was going to be in the bill I asked myself this question: Assuming that the revenue to be raised by it is absolutely necessary, as I believe it is, to pay the cost of at least a fairly adequate program of military and naval preparation, a program for which my party has insisted and now insists, even if it should develop that the entire revenue was to be raised by methods to which I am opposed on principle, would I be justified, under the circumstances, in voting against it? The more I thought about it the more I was impelled toward the conclusion that my answer ought to be in the negative.

I am for preparedness. I am for a program decidedly more extensive than the Democratic Party offers us. I have voted a number of times for authorizations and appropriations for this purpose larger than those finally adopted. Can I, then, with any degree of consistency refused to pay the bill when the time comes, even though I disapproved many of its details, by the only method offered which is possible of enactment?

Fortunately, though, no such unattractive alternative is now offered us by this bill. The methods of revenue raising that it provides, instead of being contrary to Republican policies, in large part adopt them. Moreover, it is proposed to enact into law a number of legislative and administrative policies for which the Republican Party has stood until now against Democratic opposition. It offers us an opportunity to have made into law policies for which we have fought for years. Is this an opportunity that we can afford to overlook?

As a matter of fact, four-fifths of the bill represents a deliberate theft of firmly grounded Republican principles and policies. [Applause on Republican side.] Perhaps the term "theft" is a little too strong, and ought to be modified. Let us call it, then, a process of benevolent assimilation, for this procedure only proves that when the Democratic Party finds itself in dire straits it is forced to come to us and to our platform for help. [Laughter.]

Since I have been in Congress I do not remember any bill which has dealt with such a variety of subjects. It deals with an income tax applying both to individuals and to corporations. It provides an inheritance tax. It imposes a tax on the gross receipts of corporations engaged in the manufacture of munitions of war. It imposes a protective duty—or a duty intended to be protective—on dyes and dyestuffs. It provides for a tariff commission. It repeals the obnoxious war tax. And lastly it proposes the most stringent antidumping provision ever enacted.

Before referring in detail to these various propositions I want to speak first of what I regard as the greatest vice of the bill from the Republican point of view, and one which to those who believe as we do would constitute an insuperable objection to any permanent policy of raising revenue for the Government, instead of being a makeshift, as this bill is, avowedly temporary in its character and to provide for an emergency. This vice is that the bill proposes to raise the entire amount of additional revenue from direct taxes only, and wholly ignores the system of indirect taxes for which the Republican Party has always stood. It ignores the now peculiarly obvious method of raising increased revenues through the customhouses. It imposes customs duties in only one case, that of dyes and dyestuffs, and there not for the purpose of raising revenue but frankly for the purpose of destroying the revenue.

I have said that the wisdom of raising the revenue from imports was just now peculiarly obvious, and that is because of the literally enormous volume of imports now daily entering our customhouses. Importations for the last 10 months, beginning on the 1st of July, 1915, reached the enormous total of $1,722,403,293. No other 10 months in the history of the Nation approaches it. It exceeds any entire fiscal year by millions except only two. It exceeds the entire fiscal year of 1911 by more than $195,000,000, of 1912 by nearly $70,000,000, of 1915 by more than $48,000,000. The entire year of 1913 only exceeds it by $90,000,000 and 1914 by $171,000,000. It exceeds the corresponding 10 months of last year by more than $348,000,000.

The Democratic Party has from the outset laid the blame for the failure of the Underwood law to raise adequate revenue upon the European war, which they said had shut off imports. They justified on this ground the imposition of the obnoxious war tax, of which public sentiment has forced the repeal in this bill. Never again, in the face of these figures, will they dare to repeat this excuse. If the revenue derived from their tariff law is inadequate, it is not because of failure of importations, which are exceeding in volume any period in history, but because of inadequate duties which the Underwood law assesses on those importations. The statesmanlike thing to do to meet the expenditures for which we have become liable—the obvious thing to do—would be to put tariff duties, both for protective and for revenue purposes, on imports. Thus we could easily raise a greatly predominant part of the money that must be provided for the purposes of national defense. That is what the Republican Party would do if it were in power. That is what it will proceed as speedily as possible to do after the 4th of next March.

It is equally obvious, however, that such a policy will not be adopted so long as the Democratic Party is in control. We must take things as we find them. Though this bill fails in this one great essential of Republican policy, it does much to carry out other Republican policies for which our party has stood, both in its platforms and through its Representatives on the floor of this House.

The corporation tax was enacted originally by a Republican Congress. An inheritance tax, substantially like the one proposed, was enacted by a Republican House of Representatives. A tariff commission precisely similar in its most important details to the one proposed received the votes of every Republican in the House and Senate and was only defeated at the last moment of the session by a Democratic filibuster. The dye bill is a Republican protective measure pure and simple. We have persistently demanded the repeal of the obnoxious and oppressive war tax. We get it in this bill. We get, too, an antidumping provision more stringent than any, so far as I know, heretofore proposed.

There is one important feature of this bill to which I personally am definitely opposed, and that is the additional tax on individual incomes here provided. This does not mean that I am opposed to a tax on individual incomes. On the contrary, I favor an income tax if the revenue it proposes to raise is necessary for the needs of the Government. It does not mean that I am opposed to a high tax on big incomes, higher not only absolutely but relatively than on the smaller incomes. It means only that I am opposed to an income tax, as I would be to any direct tax, which is borne, as this is, by less than one-half of 1 per cent of all the American people.

I can not believe that it is wise statesmanship, I can not believe that it is for the good of the country as a whole to exempt entirely from taxation incomes of as high as $4,000. Certainly no precedent can be found for it in the permanent law of this or any other country. Among the multitude of income-tax laws that have been enacted in the States and nations of the world there is only one that can be remotely construed to be a precedent for an exemption of as high as $4,000. That is the income-tax law of 1894, which was afterwards held unconstitutional. In no such law theretofore enacted in this country was there ever a higher exemption than $1,000. That was the income-tax law of 1867. In the law of 1864 the exemption was only $600. Up to 1894, $1,000 was the highest exemption ever provided in any law of the United States, and, if I am not greatly mistaken, it was the highest exemption ever provided before or since in any country in the world. The $4,000 exemption in the law of 1894 was bitterly attacked at that time, and even the Populists, under the leadership of Senator Peffer, of Kansas, endeavored to have it reduced to $1,000. In every other country, in the framing of income-tax laws, the aim has always been to place the exemption somewhere about what political writers call the "minimum of existence," and that was found to be, in the vast majority of cases, very much less than even the $1,000 exemption in the law of 1867.

I have found it impossible, in the limited time that I have had since this bill was introduced, to obtain the exemption figures in the income-tax laws now in force in the greater European countries, and in the few figures I shall give I do not pretend to be absolutely accurate, but only to give the average conditions prevailing in some of the more important countries before the war.

In England for many years the exemption was about $800. In the various States of the German Empire I think the average can fairly be said to be about $500. In Japan it was $150 and in Italy $75. In very progressive countries like Switzerland and Australia the exemption was very low. In England before the war somewhere about 1,500,000 people paid an income tax. In Germany it would be safe to say that more than 6,000,000 paid an income tax. Last year in this country under the present law

less than 450,000 people paid an income tax. In other words, in this country the great mass of moderate incomes of the size which are taxed and always have been in every other country—and in this country during the Civil War period—are wholly exempt from taxation, and the tax is concentrated upon a very small number of wealthy people. This is class legislation pure and simple, as is any tax which concentrates on less than one-half of 1 per cent of the population. A reduction of the exemption to reasonable figures would not only remedy the essential injustice of this law but would increase the needed revenues by millions.

A few years ago I observed, in some investigations I made of the English income tax, that something like half the total revenue was derived from incomes between $800 and $4,000 a year. I refer to this as an indication of the revenue that would probably come from similar incomes in this country if the exemption were reduced to a more reasonable figure.

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. LONGWORTH. Yes; for a short question.

Mr. SMITH of Minnesota. Does the gentleman not think that the point of existence in this country is much higher than that in Great Britain?

Mr. LONGWORTH. Oh, decidedly.

Mr. SMITH of Minnesota. Therefore the gentleman would vote for a higher exemption?

Mr. LONGWORTH. Oh, yes. I think the ideal figure would be about $1,500. I would put a smaller tax on incomes between $1,500 and $4,000, and I believe that by so doing the amount received from the income tax would be practically double what it is now, and would accomplish the same result that this increase in the supertax does.

Mr. HULL of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. LONGWORTH. I am afraid I will have to ask the gentleman to withhold his question until I get further along. I desire to finish the thought I have in mind.

As I say, I think I would be safe in saying that the reduction of the exemption to $1,000 or $1,500 in this law and the placing upon such incomes of a tax even less than that carried here, would result in doubling the revenue the Government now derives. If the only object of this income-tax provision is to raise revenue, would not that have been the wise and statesmanlike course to have taken?

It is said that the extension of the income tax to cover a reasonably substantial proportion of the American people would be unpopular. Election day is looming large on the horizon, and so statesmanship is forced to yield to conditions of political expediency. Yet, I can not believe that there sit on the floor of this House more than a handful of thinking men who do not realize that a mistake was made in ignoring all precedents in the fixing of the exemption provision in the original law, and that an even graver mistake is now being made in not remedying it.

The proponents of this bill have swallowed the Republican tariff-commission idea at one gulp. The tariff-commission section before us, in its main and in its most essential features, conforms exactly to the legislation advocated by the Republican Party in its last two platforms and by its representatives in the House and Senate. It represents one of a series of attempts made in this bill to ward off approaching defeat by a rape of the Republican platform. The proposition before us is the so-called Rainey bill, fathered by the gentleman from Illinois because the titular head of his party in this House, the gentleman from North Carolina [Mr. KITCHIN], declined to assume its parentage, though called upon to do so by the present undisputed leader of the Democratic Party.

On January 24 of this year the President of the United States wrote to the gentleman from North Carolina in advocacy of a tariff commission, urging very strongly that the Ways and Means Committee at once take up the question and pass an effective tariff-commission bill.

That letter is as follows:

THE WHITE HOUSE,
Washington, D. C., January 24, 1916.

MY DEAR MR. KITCHIN: In common, I dare say, with every one who wishes to be thoughtful of the future economic prosperity and development of the country, I have been thinking a great deal recently about what it would be wise to do to provide the Government with the necessary data to furnish a sound basis for the policy which should be pursued in the years immediately ahead of us, years which will no doubt be full of many changes which it is at present impossible even for the most prescient to forecast; and the more I have thought about the matter the plainer it has become to me that we ought to have some such instrumentality as would be supplied by a tariff board.

I am convinced, as I suppose every disinterested person must be, that it would be a mistake to provide for such a board with the idea of serving any particular theory of fiscal policy. What we would need would be above all things else, a board as much as possible free from any strong prepossession in favor of any political policy and capable of looking at the whole economic situation of the country with a dispassionate and disinterested scrutiny.

I believe that we could obtain such a board if the proper legislation were enacted, and it is quite clear to me what the field of its inquiry and its activity should be. It should, it seems to me, *investigate the administrative and fiscal effects of the customs laws now in force or hereafter enacted; the relations between the rates of duty on raw materials and those on finished or half-finished products; the effects of ad valorem and specific duties and of those which are a compound of specific and ad valorem; the arrangement of schedules of duties and the classifications of the articles of the several schedules;* the provisions of law and the rates and regulations of the Treasury Department regarding entry, appraisement, invoices, and collection; *and in general the working of the customs-tariff laws in economic effect and administrative method.*

It could and should also secure facts which would be very useful to the administrative officers of the Government, to the Congress, and to the public at large through investigations of revenues derived from customs duties and the articles subject to duty, the cost of collection thereof, and the revenue collected from customs duties at the several ports of entry; and it should be directed to investigate and throw light from *every possible angle on the tariff relations between the United States and foreign countries,* the rates of duty imposed on American products in foreign countries, the existence and effects of discriminating duties, commercial treaties and preferential provisions, the effects of any special or discriminating duties that may be levied by the United States. *It might in this connection furnish the State Department with very valuable information regarding treaty and tariff relations between the United States and foreign countries.*

It might further be of great assistance to the Congress and to the public and to American industry by investigating the industrial effects of proposed or existing duties on products which compete with products of American industry; the conditions of competition between American and foreign producers, including all the essential facts surrounding the production of commodities at home and abroad; the volume of importation compared with domestic production; *the nature and causes of the advantages and disadvantages of American as compared with foreign producers; and the possibility of establishing new industries or of expanding industries already in existence through scientific and practical processes in such a manner as substantially to promote the prosperity of the United States.*

I think it would be very useful and, indeed, necessary to require the board to act in connection with all appropriate agencies already in existence in the several departments of the Government, and even with appropriate agencies outside of the existing departments, in order to avoid so far as possible duplications of work and to make all sources of official information available to the same end.

If broadly enough empowered, such a board might be very helpful in securing the facts on which to base an opinion as to unfair methods and circumstances of competition between foreign and domestic enterprises and as to the possibilities and dangers of the unfair "dumping" of foreign products upon the American market and the steps requisite and adequate to control and prevent it. It might in this field, as well as in others, secure very valuable information for the guidance of American consuls and for the use of the Board of General Appraisers and other Treasury officials.

I have gone into these particulars because I felt that they would make clearer than I could make it in general phrases my idea of the field of unpartisan inquiry within which such a commission could render a useful and perhaps indispensable service to the country, and I am taking the liberty of bringing the matter to your attention just at this time because I hope it will be possible for the Committee of Ways and Means of the House of Representatives to take this question up immediately, with a view of formulating some policy and action concerning it. I feel confident that you will agree with me that the situation of the whole world in the matter of economic development is so unusual and our own interest in the changes probably impending so vital that I am justified in pressing this great topic upon the consideration of the committee at this time.

With warmest regards, cordially and sincerely,

WOODROW WILSON.

I publish this letter in full in the RECORD because it contains all of the President's suggestions as to what the bill should contain with relation to the powers and duties of the commission. I also include herewith the sections of the tariff-commission bill introduced by myself on the first day of the present session—the bill which received the vote of every Republican in both the House and Senate in the last Republican Congress. A casual reading of these two documents will show that the difference between them is the difference between tweedledum and tweedledee, and that the President had become wholly converted to the Republican attitude upon this most important question:

SEC. 3. That it shall be the duty of said commission to investigate the cost of production of all articles which by any act of Congress now in force or hereafter enacted are made the subject of tariff legislation, with special reference to the prices paid domestic and foreign labor and the prices paid for raw materials, whether domestic or imported, entering into manufactured articles, producers' prices and retail prices of commodities, whether domestic or imported, the condition of domestic and foreign markets affecting the American products, including detailed information with respect thereto, together with all other facts which may be necessary or convenient in fixing import duties or in aiding the President and other officers of the Government in the administration of the custom laws, and said commission shall also make investigation of any such subject whenever directed by either House of Congress.

SEC. 4. That to enable the President and Congress to secure information as to the effect of tariff rates, restrictions, exactions, or any regulations imposed at any time by any foreign country upon the importation into or sale in any such foreign country of any products of the United States, and as to any export bounty paid or export duty imposed or prohibition made by any country upon the exportation of any article to the United States which discriminates against the United States or the products thereof, and to assist the President in the administrative provisions of the customs laws, the commission shall, from time to time, make report, as the President or Congress shall direct.

The gentleman from North Carolina, however, apparently was not willing off the bat to reverse the attitude that he had always maintained with reference to a tariff commission. The gentle-

man from North Carolina has definite views upon questions of national public policy, and while he has modified many of them to suit the varying mental processes of his leader there are some he has loyally adhered to. For this I admire him, even though, according to my lights, he is usually wrong. At any rate, the gentleman from North Carolina on receipt of this letter hurried to the White House. What ensued there I have no means of knowing, though I confess I would like to have heard the conversation. Evidently the gentleman from North Carolina spoke frankly, because two days later, on the 26th of January, the President wrote him as follows:

MY DEAR MR. KITCHIN: Our conversation yesterday made me realize that in my letter of the 24th I had not set forth as I should have set them forth my reasons for changing my mind upon the question of creating a tariff board, for I must frankly admit that I have changed my mind since I last spoke on that subject.

[Laughter.]

Once again the President had changed his mind, and that he regarded, as he always does, as a reason why the gentleman from North Carolina should change his mind and the Democratic Party its position.

Permit me here to repeat what I said in the House upon an occasion not long ago when I was commenting on the change of the presidential mind upon the question of a duty on sugar. It is only one of those instances which excite our sympathy for those generals and colonels and lieutenants of democracy who are heroically trying to adapt themselves from one day to another to the various and ofttimes contradictory positions he takes on practically every great matter of national concern. It excites our sympathy also—mine certainly—when I see my friends upon that side of the aisle who happen to be of portly habit trying to make contortionists of themselves. I am not surprised at the worried look that is upon so many ordinarily placid faces when the even tenor of their political course is interrupted by having to make themselves daily entrants in a guessing contest.

Upon the tariff-commission question, though he had changed his mind on the sugar question, the gentleman from North Carolina was evidently obdurate, because the bill framed by the Ways and Means Committee to provide a tariff commission made its entrance into this House under the fostering care of the gentleman from Illinois [Mr. RAINEY], whose attitude, as I shall show, had heretofore been identical with that of the gentleman from North Carolina.

It seems to me pertinent here to give a very brief history of the tariff-commission bill, identical in its most important provisions with this one, in the last Republican Congress.

A number of bills had been introduced to create a tariff commission, among them bills drafted by the gentleman from Wisconsin [Mr. LENROOT] and by the gentleman from Iowa [Mr. GOOD]. At the request of the President, in cooperation with Mr. Emery, then chairman of the existing Tariff Board, and with the advice of some gentlemen representing the National Tariff Commission Association, I drafted and introduced a bill incorporating what seemed to be the best features of the bills I have mentioned and others then before Congress. This bill had the indorsement of the President and of the National Tariff Commission Association. It was debated and fully considered by the Republican members of the Ways and Means Committee, and was reintroduced in a somewhat modified form by the then chairman of the Ways and Means Committee, the late Sereno E. Payne. During its passage through the House this bill received every Republican vote. It subsequently passed the Senate, there receiving every Republican vote, with two minor amendments, which were entirely acceptable to the Republican membership of the House, as was evidenced by the motion offered by Mr. Payne to concur in the Senate amendments. Unfortunately the Senate took action so late that the bill was not messaged over to the House until early in the morning of March 4, 1911. Immediately a determined filibuster was organized on the Democratic side by the gentleman from New York [Mr. FITZGERALD], and after repeated dilatory motions and roll calls the filibuster proved successful and the bill died at almost the stroke of 12.

The history of the bill would be incomplete, however, without a brief review of the attitude of the Democratic side when the bill was before the House for passage on the 30th of January. In looking over the RECORD for that day I find that 51 of the present Democratic membership in this House voted against it, and that among them are to be found the most distinguished and active leaders of the Democratic Party to-day. It is particularly interesting to note that every Democrat who is now a member of the Ways and Means Committee voted against it with but one exception, that one being the gentleman from Missouri [Mr. DICKINSON]. He followed his colleague of Missouri [Mr. CLARK], the only other Democratic Member of this House then a member of the Ways and Means Committee who voted for the bill. The attitude of our honored Speaker at that time only confirms the idea I have always held that he is the wisest statesman of you all.

Let me read to you the list of eminent Democrats, members of the Ways and Means Committee, now proponents of the Rainey bill, who voted against the same proposition a very few years ago: Messrs. COLLIER, CONRY, DIXON, GARNER, HULL of Tennessee, KITCHIN, OLDFIELD, and—Heaven save the mark!—HENRY T. RAINEY himself.

Mr. RAINEY. Will the gentleman yield?

Mr. LONGWORTH. Yes.

Mr. RAINEY. I will read——

Mr. LONGWORTH. Oh, no, please; do that in your own time.

There were many eloquent bugle calls, too, on that occasion, rallying the unterrified Democracy against this iniquitous Republican measure. The gentleman from Mississippi [Mr. SISSON] spoke as follows:

I can not, as a Democrat, subscribe to this bill to create a tariff commission. It is a concession to the Republican idea of protection. It admits that the doctrine of protection is proper.

[Laughter.]

During a speech in opposition to the bill delivered by the present Governor General of the Philippine Islands, Mr. Harrison, the present chairman of the Ways and Means Committee [Mr. KITCHIN] propounded the following interrogatory:

Mr. KITCHIN. Have you ever known a Democratic district convention, a Democratic State convention, or a Democratic national convention that ever declared in favor of a tariff board or tariff commission of any kind?

Mr. HARRISON. Not only that, but I believe it is absolutely opposed to all Democratic tariff principles.

[Laughter.]

The sweet singer from Alabama [Mr. HEFLIN] [laughter] plunged in at this point and discoursed as follows:

No wonder you demand a tariff board or tariff commission. The interests back of you have always demanded that power be placed in the smallest number of men possible, for it would be easier for them to influence a board of five members or a commission of five members than it would be to influence a House of Representatives of over 400 men coming up from all sections of the country. They favor a tariff board or a tariff commission, and, in my judgment, the American people will never submit to a tariff board or tariff commission, which is one and the same thing, the insurgents favoring one and the standpatters favoring the other.

[Laughter.]

According to the gentleman from Alabama, the interests were back of this bill at that time. Can it be that the great Democratic Party, whose purity he is ever ready to proclaim, has fallen from its lofty pinnacle of virtue and surrendered to the corrupt and corrupting interests?

But, by all odds the most earnest and eloquent diatribe against the tariff commission was delivered by the gentleman from Indiana [Mr. CULLOP], who began as follows:

I am opposed to this bill and every provision in it, because it violates a well-established and venerated principle in the doctrine of the Democratic Party. [Loud applause on the Democratic side.]

[Laughter.]

I wish I had time to reproduce in full that splendid effort, but I must content myself with culling only a few gems. In speaking of the recent campaign in Indiana, at which a United States Senator had been elected, Mr. CULLOP told us that—

The Republican candidate advocated a tariff commission and the Democratic candidate declared against it, and this question was one of the main issues between them, and upon it the battle was fought out in one of the hottest political campaigns ever waged in that State, and when the battle ended on the 8th day of last November the Democratic Party was victorious.

[Laughter on the Republican side.]

Mr. CULLOP then, with that resonant voice and impassioned manner which he alone possesses, continued:

Sir, if I voted for this bill I should consider it my imperative duty to go back to the legislature of that State, now in session, and petition it to rescind the action taken by it just two weeks ago, when it elected the Hon. JOHN W. KERN United States Senator, and in lieu thereof elect his opponent, the Hon. Albert J. Beveridge.

[Prolonged laughter.]

I can not but sympathize with the position in which the gentleman from Indiana now finds himself. The Hon. JOHN W. KERN is again a candidate for the United States Senate and is opposed by a gentleman who favors a tariff commission, though not the Hon. Albert J. Beveridge, who I understand is in temporary retirement. But the President of the United States now cracks his whip and says, "You must vote for a tariff commission." Will the gentleman from Indiana obey the big boss or will he remain faithful to the subboss? My heart goes out to him in his dilemma.

You will attempt to take credit, gentlemen of the Democracy, for the enactment of a tariff commission law, but you will not deceive the people. The Republican Party, and the Republican Party only, is responsible. [Applause.]

I wish I had the time—which I have not—to speak at some length about other features of this bill, which I regard as highly commendable and in absolute accord with Republican principles. Not long ago I argued at considerable length in favor of the Hill bill to provide a protective duty on dyes and dyestuffs. In your provision for that purpose in this bill you have not gone as far as I could have wished, but you have provided duties which I hope will prove protective and which will result in building up a substantial dye industry in this country. As I have said before, there is no one thing which will so thoroughly contribute to the adequate preparedness of the Nation for national defense as a competent dye industry in this country, because dyes and explosives are inseparable one from the other. If we have an industry in this country competent to supply the needs of our people for dyes in time of peace, we will at the same time have an industry competent to supply this Government with explosives in time of war. Without these explosives and a national capacity for turning them out in unlimited quantities battleships and armies would be but vain things.

Another commendable feature of this bill is that it contains a strong so-called antidumping clause, a measure which should do much to protect the industries of this country against unfair foreign competition; a measure which, while not sufficient in itself to guard against the fierce and ruthless competition which will come from foreign countries so soon as the European war is over, will, when supplemented by the protective tariff we propose to enact after the 4th of next March, do much to save American industries and the American wage scale from annihilation.

Last, but not least, this measure repeals the obnoxious so-called war tax, the most oppressive and unjustifiable tax ever enacted by this Government in time of peace.

On the whole, I believe this to be a good bill—in the sense that the good in it more than counterbalances the bad. Of course, I would never agree to it as a matter of permanent American fiscal policy. I would never agree to any policy which imposes nothing but direct taxes, and particularly direct taxes which are in some cases borne by only a fraction of 1 per cent of the American people. But this bill is essentially an emergency measure. It would not have been necessary unless Congress had already authorized, and intends to further authorize, immediate and extraordinary expenditures for the national defense. The very fact that it proposes to raise a large amount of the revenue from a tax on munitions proves its temporary character, for the profits on which these taxes are paid have been largely derived from exports to the warring countries of Europe. I can not assume that it is intended, after the war shall be over, to continue a tax upon articles produced only for the use of the Government of the United States.

In view, then, of the temporary character of this measure; in view of the necessity and high importance of the appropriations it is designed to pay for; in view of the fact that, in large measure, it is based upon Republican principles, I shall not hesitate to support it nor in advising its support by my Republican colleagues.

The fact that the Republican membership of this House was a unit in opposition to a former Democratic revenue measure should not be regarded, I think, as any reason why we should be a unit against this measure. The issue presented by the Democratic war tax, which the Republicans in the House and Senate opposed, was designed to supplement a deficit brought about by extravagant Democratic appropriations and an unsuccessful tariff law which had proved impotent to provide adaquate revenue for the Government. This bill on the contrary is designed to raise revenue to pay for a program of adequate preparedness for the National defense. The two questions, it seems to me, are as different as black is from white. I regret that there should be difference of opinion among my colleagues on the Republican side of this House. It is not gratifying to me to find myself in disaccord with some of my distinguished friends whose opinions I value so highly upon matters of party policy. The position I have taken is the result of careful thought, and I would feel no embarrassment in advocating it upon any Republican platform or before any Republican audience. Furthermore, I feel no embarrassment in advocating it upon the broad proposition that in times like these, when the civilized world is in turmoil, when we know not what may happen any day to menace the safety of American institutions and the honor of the American flag, we can not as a party well afford to block the payment of obligations we have assumed to provide for the adequate defense of the Nation. [Applause.]

Mr. KITCHIN. Mr. Chairman, I yield 20 minutes to the gentleman from Georgia [Mr. CRISP].

Mr. CRISP. Mr. Chairman, before beginning, I ask unanimous consent to extend and revise my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. GARLAND. Mr. Chairman, before the gentleman begins I would like to ask him a question. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. GARLAND. I notice by this bill a large amount of revenue is to be collected from war munitions. We have no guaranty that the sale of munitions will continue. The war is just as likely to stop at any day as it is to continue. Suppose the bill is enacted, how would you collect the revenue, if the war should stop?

Mr. KITCHIN. I would say to the gentleman——

Mr. GARLAND. I prefer to have the chairman answer.

Mr. KITCHIN (continuing). That they estimate the revenues from munitions will be about $71,000,000. Personally I do not think it will be that large. The inheritance tax after the first year will be $54,000,000, and this will take the place, in a large measure, of the munition tax after the war ceases.

Mr. GARLAND. Along that one point, suppose the war ceases?

Mr. CRISP. Mr. Chairman, I hope this is not to be taken out of my time.

Mr. KITCHIN. This is not to be taken out of the gentleman's time. The munition tax relates back to January 1, 1916, and we are going to collect for this year, and the following year the inheritance tax will increase from $17,000,000 the first year to $54,000,000 the second year, and when the war closes I think the dutiable imports will increase sufficiently to increase the customs to the extent at least of the munition tax.

Mr. GARLAND. The gentleman agrees that if the war stops the revenue will be insufficient; that is the point?

Mr. KITCHIN. No; I do not so agree, because the inheritance tax will be $37,000,000 more the second year, and, as I said, the dutiable imports will increase, thereby increasing the customs.

Mr. GARLAND. The gentleman has spread this revenue from munitions over the entire time——

Mr. KITCHIN. I thought the gentleman wanted information.

Mr. GARLAND. I did, but I did not get it, I am sorry to say.

Mr. CRISP. Mr. Chairman, for several years prior to the year 1914 I trusted and believed that war, with its indescribable sufferings, was to be no more. I hoped that men and women had learned the horrors of war, and that the spirit of the lowly Nazarene had so filled the hearts and minds of men that reason, equity, and justice would in the future settle all international differences without an appeal to arms, but in July, 1914, this fond hope was utterly destroyed, when Austria declared war on Servia. Within a few hours thereafter nearly all of the Christian European nations became engaged in a titanic struggle, the like of which, with its carnage and brutal horrors and sufferings, has never been equaled in all the annals of time. Solemn treaties were discarded as mere scraps of paper, and might and power alone were respected. The lesson, to a great and rich nation, is quite plain—in time of peace prepare to defend yourself, to protect your citizens and their property at home, on the high seas, and in neutral lands.

America, our beloved country, peopled by brave, patriotic, liberty-loving people, wisely decided to be prepared to defend and protect her rights against all comers. We love peace, we covet no nation's lands or wealth, but we want the world to know the rights of American citizens must be respected, and that we are prepared to enforce those rights, if any nation illegally interferes with them.

The citizens of the United States, profiting by the carnage now going on in Europe, demanded that Congress enact legislation to enlarge our Navy, to increase our Army, and to strengthen our land fortifications; and their wishes have been obeyed. I shall not go into detail as to this legislation, but suffice it to say, we have made the largest appropriations for the Navy, the Army, and coast fortifications every made in the history of our country, and our people, notwithstanding the cries of jingoes and yellow journals, need fear no power, for we are abundantly prepared to defend ourself and our shores from all comers, and we want no war of conquest or aggression. Our Navy must always be our first line of defense, and we have a right to be proud of it, for it is to-day easily the second most powerful navy in the world.

This strengthening of our land and naval forces and coast fortifications necessitates Congress raising many millions of dollars to pay for this preparedness of our country. No bill could better illustrate the difference between the Republican and Democratic Parties, as far as legislation is concerned, than

the bill before the House to provide this additional revenue. The Republican Party, ever mindful of great fortunes and the special few, raises revenue from a protective-tariff system, thus requiring the consuming public to pay the bill, while the great incomes escape taxation. On June 7 of this year the Republicans met in Chicago to nominate a candidate for President. Wall Street millionaires and other representatives of the millionaires created by class legislation were present and controlled the convention. They nominated Justice Charles E. Hughes, for they knew if they could elect him President their interests would be safeguarded and protected and that wealth would once more escape paying its just part of the taxes of the land. I make this statement having in view the fact that Justice Hughes, when governor of New York, vetoed an act of the New York Legislature ratifying an amendment to the Federal Constitution authorizing an income-tax law. The railroad corporations doubtless rejoice at Mr. Hughes's nomination, for they know this same Mr. Hughes, when governor of New York, vetoed a bill requiring the railroads to haul passengers at 2 cents per mile. The Democratic Party, while having no fight to make on wealth honestly acquired, believes that a man should contribute to the support and maintenance of the Government according to his ability to pay; that great wealth should bear its just and equitable proportion of the expense of the Government; and, Mr. Chairman, the bill we are now considering raises the entire amount necessary to pay the expenses of this preparedness from the wealth of the country.

Mr. BENNET. Will the gentleman yield?

Mr. CRISP. Yes, sir.

Mr. BENNET. Does not the gentleman think that it might be a privilege to gentlemen who earn as much as $2,000 a year or $1,800 a year if they should be permitted, as well as the man who earns over $4,000 a year, to contribute to this patriotic preparedness for which we all voted?

Mr. CRISP. The people are always willing for the other man to pay the bills.

Mr. BENNET. That is scarcely an answer.

Mr. CRISP. I think that is an answer to the gentleman's question.

The consuming masses have had no burdens added to those they are already laboring under, but, on the contrary, their load is lightened, for on the passage of this bill the stamp taxes on notes, telegrams, bills of lading, and all special stamp taxes are immediately repealed and the tobacco tax on retail dealers, levied by the recent war-revenue act, are repealed, to take effect on December 31, 1916. The bill we are considering raises the revenue necessary for the Government, principally from three sources.

First, from an income tax. In the last Congress, when the Democrats passed the Underwood tariff bill, they levied an income tax, which raised last year $124,000,000, and for the first time the idle rich were made to pay some proportion of the expenses of the Government. The Treasury officials estimate that we will raise, under the income-tax law proposed in this bill, the enormous sum of $227,000,000. The law provides a graduated income tax. As a man's income grows the tax he pays increases, and no hardship is imposed on anyone. The bill levies a tax on incomes from four to twenty thousand dollars, of 2 per cent, and levies an additional income tax—herein referred to as the additional tax—of 1 per cent per annum upon the amount by which such total net income exceeds $20,000 and does not exceed $40,000, 2 per cent per annum upon the amount by which such total net income exceeds $40,000 and does not exceed $60,000, 3 per cent per annum upon the amount by which such total net income exceeds $60,000 and does not exceed $80,000, 4 per cent per annum upon the amount by which such total net income exceeds $80,000 and does not exceed $100,000, 5 per cent per annum upon the amount by which such total net income exceeds $100,000 and does not exceed $150,000, 6 per cent per annum upon the amount by which such total net income exceeds $150,000 and does not exceed $200,000, 7 per cent per annum upon the amount by which such total net income exceeds $200,000 and does not exceed $250,000, 8 per cent per annum upon the amount by which such total net income exceeds $250,000 and does not exceed $300,000, 9 per cent per annum upon the amount by which such total net income exceeds $300,000 and does not exceed $500,000, and 10 per cent per annum upon the amount by which such total net income exceeds $500,000.

It will be seen that the more able a man is to pay the more the proposed law exacts of him; and, Mr. Chairman, a man with an income in excess of a million dollars is more able to pay a tax than is a man with a $5,000 income. A married man with a $5,000 income will pay to the Government $20 and will have $4,980 to live on, while a man with a $1,000,000 income will pay to the Government in the neighborhood of $100,000, yet he will have $900,000 to live on. It is quite clear, therefore, that the man who contributes most under this just income-tax law is abundantly able to do so. Mr. Chairman, I have never thought that the value of a citizen was estimated by the amount of money possessed, for I have ever believed that worth and character alone makes the man. But, Mr. Chairman, if war should come, and our brave, patriotic men should be called upon to bear arms in defense of our honor and our country, I venture to assert that very few of those who will pay an income tax will bare their breasts to the storm, but, on the contrary, those sturdy, patriotic, noble young men who possess character and patriotism and are not so fortunate in this world's goods would be the ones to go to the front. [Applause.] Surely under these conditions wealth should be made to pay for the preparedness of our Nation. It is gratifying to me to know that I had the privilege of assisting in the preparation of this bill, which, for the first time in the history of our country, will require the great fortunes of the land to pay their just part of the expenses of the Government.

The bill also provides for an inheritance tax. When we came into this world we brought nothing, and it is equally true that when we go out we carry nothing with us. Thus, but for society, when a man dies his earthly possessions belong to those who have the might and power to take them. As men progressed in civilization they devised systems of law and provided rules of inheritance whereby their children and loved ones can remain in lawful possession of the property they die seized and possessed of; but this is a civil right conferred by government, and is not a natural right. But for government this would not be true, and it is nothing but right and equitable that the government which permits the property a man dies possessed of going to his descendants should receive a part of the inheritance, for the government must be supported to insure this privilege.

An inheritance tax is ancient in the extreme, for in the year A. D. 222 Augustus, the famous Roman Emperor, levied an inheritance tax of 5 per cent on Roman estates, to be expended in establishing a permanent military force for the defense of Rome. To-day England, France, Germany, Italy, Switzerland, and about all the enlightened nations of the world collect an inheritance tax, as it is considered by all a legitimate source of revenue for the Government. An inheritance tax is not new in the United States. The first act imposing a tax of this character provided for a light graduated tax on inheritances other than those received by wives, children, and grandchildren. The act took effect in July, 1798, and remained in force four years. A system of inheritance taxes was recommended to Congress in 1815, but the recommendations were not adopted. In 1862 an inheritance tax was imposed as a war-revenue measure. This law was amended several times, and the rates were raised in 1864. The law was repealed on July 14, 1870, the repeal taking effect October 1. The income-tax provision of the national revenue act of 1894 contains a provision for taxing as incomes all money and the value of all personal property acquired by gift of inheritance. This law was annulled by the Supreme Court. The war-revenue bill of 1898 contained a provision for taxing legacies and distributive shares; it was amended in 1901 to exempt certain bequests, and the act as a whole was repealed in 1902. Some will urge objections to an inheritance tax that it necessitates estates being double taxed, for 36 States of the Union levy an inheritance tax. Mr. Chairman, this argument applies with equal force to the income tax, for many of the States have an income-tax law. Your committee recognized that an inheritance tax is a source from which many of the States derive revenue and your committee, having this in mind, has provided that there shall be an exemption from the inheritance tax of $50,000. Thus an estate worth $50,000 or less pays nothing under this tax. An estate worth over $50,000 pays in proportion to the amount of the estate, for we have also made this tax graduated, believing that the greater the estate the larger amount it should contribute to the Government, for this can be done without working hardships upon the heirs of the decedent.

Under this bill an estate worth $100,000 would pay a tax of 1 per cent to the Government on $50,000, the tax amounting to $500; and surely, Mr. Chairman, an estate of $100,000 is able to pay $500 to the Government that makes it possible for the property to descend to the heirs or legatees of the decedent. An estate of $1,000,000 will pay, under the proposed bill, a tax of 5 per cent, amounting to $50,000, and this can be done without working any hardship upon the beneficiaries of the estate. Under the bill the tax on inheritances ranges from 1 to 5 per cent. The Treasury officials estimate the inheritance tax when in full operation will yield the Government $54,000,000 annually.

The third source of revenue provided in this bill is a tax on the manufacture of munitions of war, and I do not believe there

will be a voice in the United States that will be raised in opposition to this tax. It is commonly reported in the press of the land that many of the munition plants are making $1,000,000 a day, and that numbers of them contribute $10,000 toward preparedness parades being held in the large cities of the country. The manufacturers of munitions are the ones who are deriving the greatest benefits from the expenditures of the millions for preparedness, and it is nothing but equitable that they should pay their part of the additional expenses entailed upon the Government. It is estimated by the Treasury Department that under the proposed bill there will be collected during the fiscal year 1917 from this munition tax the sum of $71,000,000. Mr. Chairman, some may say this is confiscatory and works an injustice upon the capital invested in the manufacture of munitions. The proposed bill provides that all honest, legitimate capital invested in plants for the manufacture of munitions of war shall receive 10 per cent dividend, and unless the profits enable them to receive 10 per cent dividend the tax levied in this bill shall not be collected. When the stockholders of munition factories are paid 10 per cent dividend, no injustice is done them if they are then required to pay a tax to the Government, especially when a very large part of the money expended under the preparedness hysteria that has swept the land will go largely to the benefit of them and kindred manufacturers. Mr. Chairman, our ancient enemy, the Republican Party, has always cried that the Democratic Party was not a party of construction but a party of destruction. It is with pardonable pride that I recall that during this administration more real constructive legislation for the benefit of the people has been enacted than ever before in all the history of our country. It is with great pleasure that I recall that I had an humble part in the enacting into law of the following great measures, all sure to redound to the benefit of our people, insuring to them more peace, happiness, and prosperity:

GOOD ROADS.

We have passed a good-roads law, recognizing that one of the ways to reduce the cost of living was to reduce the cost of transportation of products from the farm to the towns. Under our bill the Federal Government will cooperate with the States in improving the public highways, and nothing will redound more to the benefit of our people. The bill authorizes the expenditure in five years of $75,000,000 to build roads.

BUREAU OF MARKETS.

We have passed an appropriation providing for a Bureau of Markets, to enable the farmers to market advantageously and at least cost, and to the greatest profit to themselves, their surplus products.

IMMIGRATION.

We have passed through the House a bill to restrict immigration. To my mind, the greatest menace to the perpetuity of our Republic is indiscriminate immigration to our shores. Thousands of immigrants from the south of Europe have yearly flocked here who have no ideas of the duties and responsibilities of American citizens, but who come here solely for the purpose of greed. Unless legislation is enacted, when this horrible European war is ended, in my judgment, undesirable immigrants will flock here by the millions, for unborn generations who remain in Europe will toil from early morn to dewy eve to pay the tax burdens incident to the enormous expenditures of the carnage now going on. It was a fact that after the Civil War, when our beautiful, beloved Southland was prostrated and devastated, that the irresponsible, undesirable citizens, who had no patriotism, courage, or love of country, left the South, but the sturdy, patriotic, courageous, noble men and women remained to face untold hardships and began to build up our sunny South, until to-day it is the most beautiful section in the world. Mr. Chairman, history will repeat itself, and when this war is over the desirable men and women will stay at home in Europe and try to start life again, but the undesirables will flee. Therefore, to my mind, the legislation most needed to protect the welfare of our country is a strict immigration law. I voted for the bill when it passed the House, and it is now pending in the Senate, and I hope the Senate will pass it and the President sign it.

PHYSICAL VALUATION OF RAILROADS.

We have passed a law providing for the physical valuation of all the railroads in the United States, and the work of making such valuation is now going forward, and when completed it will serve as a basis for squeezing the water out of railroad stocks and bonds and for compelling fair, just, and reasonable rates for transportation.

SHIPPING BILL.

The House has passed a bill authorizing the sale of bonds for the purchase of ships, for the purpose of building up our merchant marine. I earnestly hope the Senate will pass this bill, and that it will become a law, for if we have a sufficient merchant marine the Shipping Trust can not rob our people on ocean freight rates, as they have since the European war began.

DEPARTMENT OF LABOR.

The Democratic Party, recognizing labor, has provided a place in the Cabinet, and there now sits at the Cabinet meetings of the President a special representative of the laboring interests of the United States.

LABOR LEGISLATION.

The Democrats have strengthened and put teeth in the Sherman Antitrust Act, so as to make it effective, but we safeguarded the interest of labor by providing that there should be no injunction against or punishment for laboring men or farmers who organized for mutual protection as persons of all other vocations are permitted to do without being prosecuted under the Sherman Act.

PARCEL POST.

We have enlarged the usefulness of the Parcel Post System. The parcel post is now being used at a low cost for the shipment of farm products direct to city consumers, thus bringing producers and consumers closer together for their mutual profit. As a result extortionate express rates have been forced down all along the line.

FEDERAL RESERVE ACT.

We passed the great Federal reserve act, but for which, when this horrible war was declared, we would have had the worst panic in the history of the country, but with this system on our statute books we weathered the storm, and to-day the United States is the richest and most powerful Nation in all the world, and New York is the world's financial center. Even the Republicans admit that this is a splendid law, and that but for it chaos would have reigned in this country in the fall of 1914.

RURAL CREDITS.

I have just referred to our Federal reserve act, which provides ample and adequate banking facilities for the large commercial centers for manufacturing and industrial enterprises, but this law does not meet all the requirements of our homogenous people. It needs a handmaiden, a system of rural credits, to make our banking system complete. It is with joy that I realize that this Congress a few days ago passed a law providing for a system of rural credits. It was my privilege to take an active interest in this legislation, and it will ever be a source of pleasure to me that I was enabled, in my humble way, to contribute toward its enactment.

The bill is not all that I desired, for I preferred for the Government to contribute more largely to its aid in a financial way than this bill provides, and I preferred to lend a larger per cent on the value of the land than the bill authorizes; but, Mr. Chairman, it is surely a step in the right direction. The bill in question will permit thousands of our farmers to borrow money at a rate of interest not to exceed 6 per cent for a long period of time, and will save to them millions of dollars. Personally, I favor not only credit on land, but I would like to see enacted into law a sound credit system whereby honest, industrious citizens may obtain help in a financial way at a living rate of interest to enable them to purchase land and own homes, and I am hopeful that in time we can bring about legislation of this character. As above stated, while the bill in question has its shortcomings, for the first time in the history of our Government we have on our staute books a banking system devised solely for the great agricultural class. As time shows its defects we can remedy them, and in a short while I confidently hope we will have an up-to-date rural-credit law, one that will meet all the requirements of our people, and when this consummation is brought about, then our country will prosper as never before.

Mr. Chairman, I shall not detain the committee longer. The gentleman from Michigan [Mr. FORDNEY] appealed to his colleagues to vote against this bill, calling attention to the fact that the country would give the Democrats the credit or demerit for this legislation. He correctly and truthfully stated we were in power and that we were responsible for the legislation. I cheerfully assume my part of that responsibility, and it is most gratifying to me to know that the bill is so just, so meritorious, that when the final vote is taken on it I doubt not that it will meet the approval of the majority of the Republicans of this House, and I am sure the country will say to the Democratic Party, "Well done, thou good and faithful servant." [Applause.]

RURAL-CREDIT LAW.

Availing myself of the privilege granted me by the House to extend my remarks in the RECORD, I am attaching hereto a brief analysis of the recent rural-credit bill passed by Congress, for the purpose of apprising my constituents of the salient features of the law.

FEDERAL FARM LOAN BOARD.

The bill creates a Federal farm-loan board of four members, appointed by the President, with a salary of $10,000 each, the Secretary of the Treasury being an ex officio member of the board. This board is located at Washington, and its expenses and the expenses of its employees are paid by the Government. This board will have the general supervision and control of the entire rural-credit system, just as the Federal Reserve Board controls the Federal reserve banks.

FEDERAL LAND BANKS.

The bill divides the United States into 12 separate districts, and establishes 12 district Federal land banks for the purpose of making long-term loans on real estate, on the amortization plan, in their respective districts. The capital stock in each bank must be at least $750,000. Unless this stock is subscribed for by the public within 30 days, the United States subscribes for it.

GOVERNMENT AID TO THE BANKS.

The bill appropriates $9,000,000 for the purpose of subscribing to the capital stock of the 12 reserve banks, thus insuring their organization. It also authorizes the Secretary of the Treasury to deposit money in these Federal land banks, to guarantee the interest on the bonds being promptly paid. Another provision of the bill exempts the Federal land banks and the mortgages and bonds isued by them from Federal, State, and municipal taxation. This will make the bonds in great demand by investors, creating purchasers for them at a low rate of interest, which will inure to the benefit of the borrowing farmers, for the lower the interest at which the bonds are sold the cheaper the farmers can borrow money. The law provides that the rate of interest charged borrowers can not be in excess of 1 per cent over the amount the bonds bear, this 1 per cent being allowed to cover expenses of making the loans.

NATIONAL FARM-LOAN ASSOCIATION.

The third organization for putting the rural-credits system into operation is a national farm-loan association. Local organizations are authorized and chartered. These local organizations are known as national farm-loan associations. The national farm-loan association is composed exclusively of borrowers. No person not a borrower can become a member of the farm-loan association. Ten farmers desiring to borrow can organize this association. The membership is unlimited, but must contain not less than 10. The local association shall elect five directors. The association shall also elect a president, vice president, loan committee of three, and a secretary-treasurer. No officer of the local association shall receive a salary except the secretary-treasurer.

HOW LOANS ARE SECURED.

Loans are secured by organizing a national farm-loan association composed of 10 or more farmers desiring to secure loans. The borrower is required to make application for loan, accompanied with subscription for stock in the local association. For this stock he pays $5 per share. One share authorizes a loan of $100. If a borrower desires a loan of $1,000, he must purchase 10 shares, or $50 worth of stock. When the loan is paid, the borrower is refunded the amount paid for the stock. This purchase of stock is not a cash transaction unless borrowers so desire, but is added to the loan. The application, subscription of stock, and description of land is forwarded to the Federal land bank. The Federal land bank orders an examination of title and appraisement of the land. If the appraisement is satisfactory and the title good, the loan is made and the money sent to the secretary-treasurer of the local association to be paid to borrower.

FOR WHAT PURPOSES LOANS CAN BE MADE.

Loans may be made to purchase land, equipment, live stock, general farm improvement, and pay off indebtedness on farm. If the borrower uses the money for other purposes, a penalty is imposed and the loan becomes due. No person not engaged in farming, or in good faith intending to become an actual farmer, can secure a loan or become a member of the farm-loan association.

THE AMOUNT, INTEREST RATE, AND MATURITY OF LOAN.

The borrower may secure 50 per cent of the value of the land, exclusive of improvements, and 20 per cent of the value of the improvements. The interest depends on the amount of interest the last bonds bore, but in no case can the rate exceed 6 per cent. The amount can be borrowed for a period of time from 5 to 36 years.

LIABILITY OF BORROWER.

One borrower is not legally liable for the debt of another borrower in his association. Each borrower is liable only for his own loan and the 5 per cent capital stock he subscribed when he obtained his loan and an additional 5 per cent liability on the stock owned by him. In other words, if the Federal land bank should fail, each borrower would be liable for his own loan plus 10 per cent on it. In my judgment, this liability need deter no one from going into the association, for I believe the banks will make money and this liability will never become real. Our farmers to-day borrow millions of dollars and pay a large rate of interest, and generally pay 10 per cent commission for floating the loan, which is as much as this liability.

AMOUNT OF MORTGAGES ON FARMS IN UNITED STATES.

The best available statistics place the amount of loans on farms in the United States at the enormous sum of $3,000,000,000. The estimated average rate of interest on these loans is 8½ per cent per annum. This makes the annual interest paid by the farmers of the United States about $255,000,000. If only the farmers who have mortgages on lands avail themselves of the rural-credits law they will get their money at a rate not to exceed 6 per cent, which is 2½ per cent cheaper than the average rate they are now paying, and this alone would save them $75,000,000 a year, so you can see at a glance the great value of this rural-cerdits law.

AMORTIZATION PLAN.

Under the law the borrower, when he pays his annual interest, can pay a small sum in addition on the principal, and this is known in the law as the amortization plan. This plan can be thoroughly understood by an examination of the following tables, showing a loan of $1,000 for 20 years at 5 per cent, and another table showing a loan of $1,000 for 36 years at 6 per cent:

Amortization tables.

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on principal.	Amount of principal still unpaid.
1	$80.24	$50.00	$30.24	$969.76
2	80.24	48.48	31.75	938.00
3	80.24	46.90	33.34	904.67
4	80.24	45.23	35.01	869.66
5	80.24	43.48	36.76	832.90
6	80.24	41.64	38.59	794.31
7	80.24	39.71	40.52	753.79
8	80.24	37.68	42.55	711.23
9	80.24	35.56	44.68	666.56
10	80.24	33.32	46.91	619.64
11	80.24	30.98	49.26	570.39
12	80.24	28.51	51.72	518.67
13	80.24	25.93	54.31	464.36
14	80.24	23.21	57.02	407.34
15	80.24	20.36	59.87	347.46
16	80.24	17.37	62.87	284.60
17	80.24	14.23	66.01	218.59
18	80.24	10.93	69.31	149.28
19	80.24	7.46	72.78	76.50
20	80.24	3.82	76.50	.....
Total	1,601.80	604.80	1,000.00	.....

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount of principal still unpaid.
1	$68.39	$60.00	$8.39	$991.61
2	68.39	59.49	8.90	982.71
3	68.39	58.96	9.43	973.28
4	68.39	58.40	9.99	963.39
5	68.39	57.80	10.59	952.80
6	68.39	57.16	11.23	941.57
7	68.39	56.49	11.90	929.68
8	68.39	55.79	12.60	917.08
9	68.39	55.02	13.37	903.71
10	68.39	54.28	14.11	889.60
11	68.39	53.37	15.02	874.58
12	68.39	52.47	15.92	858.66
13	68.39	51.52	16.87	841.79
14	68.39	50.50	17.89	823.89
15	68.39	49.43	18.96	804.93
16	68.39	48.29	20.10	784.83
17	68.39	47.08	21.31	763.52
18	68.39	45.81	22.58	740.94
19	68.39	44.45	23.94	717.00
20	68.39	43.02	25.37	691.63
21	68.39	41.49	26.90	664.73
22	68.39	39.88	28.51	636.22
23	68.39	38.17	30.22	606.00
24	68.39	36.36	32.03	573.97
25	68.39	34.43	33.96	540.01
26	68.39	32.40	35.99	504.02
27	68.39	30.24	38.15	465.87
28	68.39	27.94	40.45	425.42
29	68.39	25.52	42.87	382.55
30	68.39	22.95	45.44	337.01
31	68.39	20.22	48.17	288.84
32	68.39	17.33	51.06	237.78
33	68.39	15.26	53.13	184.65
34	68.39	11.07	57.32	127.33
35	68.39	7.63	60.76	66.57
36	70.56	3.99	66.57	.....
Total	2,461.21	1,461.21	1,000.00	.....

An examination of these tables will show that if a farmer borrows $1,000 for 36 years at 6 per cent interest, by the payment of $68.39 per year all the debt and interest is fully paid at the end of that period.

JOINT-STOCK LAND BANKS.

The bill also authorizes private individuals to organize joint-stock companies for the purpose of making loans on farms. The Government does not contribute to the capital stock of same. Joint-stock land banks are organized and financed by private individuals seeking investments. The capital stock of the banks must be at least $250,000. Said banks are authorized to issue bonds on mortgages the same as the Federal land banks. The interest charged by them shall in no case exceed 6 per cent.

If any of my constituents desire to organize a farm-loan association, for the purpose of borrowing money under the terms of this law, if I can be of any assistance to them, I will be glad to do so, and will cheerfully answer all inquiries and advise with them in perfecting their local organization.

Mr. KITCHIN. How much time does the gentleman have remaining?

The CHAIRMAN. The gentleman has four minutes remaining.

Mr. CRISP. I yield back that time.

Mr. FORDNEY. Mr. Chairman, I yield one minute to the gentleman from Connecticut [Mr. HILL].

Mr. HILL. Mr. Chairman, I ask unanimous consent for the extension of the remarks I intend to make in the RECORD to-night.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. LONGWORTH. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. KITCHIN. I will say to the gentleman that before the conclusion of the debate I am going to ask unanimous consent that all gentlemen have permission to extend and revise their remarks.

Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FOSTER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 16763, a bill increasing the revenues, and for other purposes, and had come to no resolution thereon.

EXTENSION OF REMARKS.

Mr. RUSSELL of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD for the purpose of inserting a speech made by Mr. Ralph Pulitzer, one of the proprietors of the New York World, at a dinner of the New York Press Club on June 30, 1916.

The SPEAKER. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD by printing a speech made by Mr. Ralph Pulitzer, of the New York World. Is there objection?

Mr. BENNET. Reserving the right to object, has there been anything of this sort done recently in regard to political speeches?

Mr. RUSSELL of Missouri. A speech made by the President on the same occasion has been printed; I do not know of any other.

Mr. BENNET. Mr. Speaker, for the present, at least, I object.

ENROLLED BILLS SIGNED.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following title, when the Speaker signed the same:

H. R. 11878. An act to amend section 99 of the act to codify, revise, and amend the laws relating to the judiciary;

H. R. 3673. An act to establish a term of the United States circuit court of appeals at Asheville, N. C.; and

H. R. 8351. An act to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and, further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto.

LEAVE OF ABSENCE.

Mr. STEPHENS of California, by unanimous consent, was granted leave of absence for five days, on account of illness in his family.

EXTENSION OF REMARKS.

Mr. HASTINGS. Mr. Speaker, I desire to ask unanimous consent to extend my remarks in the RECORD on the question of the settlement of the affairs of the Five Civilized Tribes in Oklahoma.

The SPEAKER. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 10 minutes p. m.) the House adjourned until to-morrow, Friday, July 7, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the chairman of the Federal Trade Commission, transmitting tentative item of legislation to provide for payment of salary of member of Federal Trade Commission appointed during recess of the Senate to fill vacancy existing while Senate was in session (H. Doc. No. 1276), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. GANDY, from the Committee on the Public Lands, to which was referred the joint resolution (H. J. Res. 247) extending the provisions of the act approved June 16, 1898, reported the same with amendment, accompanied by a report (No. 924), which said joint resolution and report were referred to the Committee of the Whole House on the state of the Union.

MOTIONS TO DISCHARGE COMMITTEES.

Under clause 4 of Rule XXVII,

Mr. BENNET filed a motion to discharge the Committee on the Census from the further consideration of the bill (H. R. 12642) to amend an act entitled "An act for the apportionment of Representatives in Congress among the several States under the Thirteenth Census."

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, a bill and a joint resolution were introduced and severally referred as follows:

By Mr. DAVENPORT: A bill (H. R. 16819) providing for the enactment of a credit-union law in the District of Columbia by which the officers of such credit union shall be empowered to receive deposits from and make loans to the stockholders thereof; to the Committee on the District of Columbia.

By Mr. BENNET: Joint resolution (H. J. Res. 255) prescribing an equivalent for field training under section 80 of the act of June 3, 1916; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 16820) granting an increase of pension to John E. Keys; to the Committee on Invalid Pensions.

By Mr. AUSTIN: A bill (H. R. 16821) to enable the Secretary of War to pay the amount awarded to the Malambo fire claimants by the joint commission under article 6 of the treaty of November 18, 1903, between the United States and Panama; to the Committee on Foreign Affairs.

By Mr. BOWERS: A bill (H. R. 16822) granting an increase of pension to Isaac M. Locke; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16823) granting an increase of pension to Pary McNair; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16824) granting a pension to Isaac D. Caldwell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16825) for the relief of John Edwards, alias John D. Edwards; to the Committee on Military Affairs.

Also, a bill (H. R. 16826) to remove the charge of desertion from John Lyons; to the Committee on Military Affairs.

By Mr. CARAWAY: A bill (H. R. 16827) for the relief of Henry P. Grant, of Phillips County, Ark.; to the Committee on Claims.

By Mr. CRAGO: A bill (H. R. 16828) for the relief of Jacob L. Malsberry; to the Committee on Military Affairs.

By Mr. DOOLITTLE: A bill (H. R. 16829) granting an increase of pension to Edgar Brown; to the Committee on Invalid Pensions.

By Mr. FERRIS: A bill (H. R. 16830) granting an increase of pension to Elbridge H. Benham; to the Committee on Invalid Pensions.

By Mr. FOSTER: A bill (H. R. 16831) granting a pension to David Pruitt; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16832) granting a pension to S. F. Gilmore; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16833) granting an increase of pension to John C. Truitt; to the Committee on Invalid Pensions.

By Mr. GOOD: A bill (H. R. 16834) granting an increase of pension to Herman L. Wick; to the Committee on Pensions.

By Mr. HAMLIN: A bill (H. R. 16835) granting a pension to Thomas Stephenson; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 16836) granting an increase of pension to Josephine Cardwell; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Kentucky: A bill (H. R. 16837) granting a pension to Charles W. Gunter; to the Committee on Pensions.

By Mr. KEARNS: A bill (H. R. 16838) granting an increase of pension to Leander J. Day; to the Committee on Invalid Pensions.

By Mr. KEATING: A bill (H. R. 16839) granting an increase of pension to Milton H. Rounsavell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16840) granting an increase of pension to Alice L. Burns; to the Committee on Invalid Pensions.

By Mr. KING: A bill (H. R. 16841) granting a pension to Delia Mathews; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16842) granting a pension to James M. Onion; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16843) granting an increase of pension to Milton Sperry; to the Committee on Pensions.

By Mr. LITTLEPAGE: A bill (H. R. 16844) granting an increase of pension to Gilbert Scarbrough; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16845) granting an increase of pension to John Walton; to the Committee on Invalid Pensions.

By Mr. LLOYD: A bill (H. R. 16846) granting an increase of pension to William Hodge; to the Committee on Invalid Pensions.

By Mr. NEELY: A bill (H. R. 16847) for the relief of Oakaley Randall; to the Committee on Claims.

By Mr. SMITH of Idaho: A bill (H. R. 16848) granting an increase of pension to James K. Nichols; to the Committee on Invalid Pensions.

By Mr. WILLIAMS of Ohio: A bill (H. R. 16849) to correct the military record of Noah Huckins; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. CAREW: Petition of National Association of Credit Men of New York, favoring the uniform bills-of-lading act; to the Committee on Interstate and Foreign Commerce.

By Mr. DALE of New York: Memorial of Park County, Hot Springs, Washakie and Big Horn Counties branches of the Congressional Union of Wyoming, relative to Sutherland-Mondell resolution; to the Committee on the Judiciary.

By Mr. DAVIS of Texas: Petition of sundry banks in the State of Texas, favoring amending section 16 of Federal reserve act; to the Committee on Banking and Currency.

Also, memorial of the Woman's Benefit Association of the Maccabees, San Antonio, Tex., favoring the interpleader bill; to the Committee on the Judiciary.

Also, petition of Engine and Trainmen of the United States, relative to a shorter work day; to the Committee on Labor.

By Mr. DUPRÉ: Memorial of General Assembly of State of Louisiana, regarding speedy settlement of swamp-land grants under act of March 2, 1849, and September 28, 1850; to the Committee on the Public Lands.

By Mr. DYER: Petition of Pennsylvania associated dailies, of Harrisburg, and Pottsville Daily Republican, of Pottsville, Pa., in re supply of white print paper in the United States; to the Committee on the Judiciary.

Also, memorial of the Interstate Sportsmen's Protective Association in re open spring hunting season; to the Committee on the Judiciary.

By Mr. ESCH: Memorial of National Association of Credit Men, favoring uniform bills-of-lading act; to the Committee on Interstate and Foreign Commerce.

By Mr. GALLIVAN: Memorial of Old Schoolboys' Association of Boston, favoring national defenses; to the Committee on Military Affairs.

By Mr. HADLEY: Petitions of sundry citizens of the State of Washington, opposing House bill 13778; to the Committee on the Post Office and Post Roads.

Also, petitions of sundry citizens of the State of Washington, opposing Senate bill 5677; to the Committee on the District of Columbia.

By Mr. KENT: Memorials of board of supervisors of Humboldt County, Cal., protesting against the imposition of an inheritance tax; to the Committee on Ways and Means.

By Mr. OGLESBY: Petition of citizens of Yonkers, N. Y., relative to relations between Great Britain and Ireland; to the Committee on Foreign Affairs.

By Mr. POWERS: Petition of residents of Washington, indorsing Senate bill 1082; to the Committee on the District of Columbia.

By Mr. SMITH of Idaho: Petition of citizens of the District of Columbia, favoring prohibition in the District of Columbia; to the Committee on the District of Columbia.

SENATE.

FRIDAY, *July 7, 1916.*

The Senate met at 11 o'clock a. m.

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, the Ruler of the Universe, Thy law is just and holy and good. Thy will revealed to us through Thy law is for our happiness and for our eternal life. Thou dost stand guard over the rights of men. Thou dost invite them to the ever-increasing sphere of usefulness and power in the earth and to sweeter association and comradeship with Thyself. We bless Thee that Thou dost appeal to us through our disposition to accept the truth of Thy law. Thou hast taught us that the pure in heart shall see God. So we come to Thee asking for the ministry of Thy spirit in our lives that we may have responsive hearts and minds to every approach of God to us. May we be willing in the day of Thy power; may we follow the guidance that Thou dost give to us through the providences of life and through Thy revealed will to the accomplishment of the divine end in our Nation, in our lives, and in the world. We ask for Thy continued guidance. For Christ's sake. Amen.

THE JOURNAL.

The Journal of the proceedings of the legislative day of Wednesday, July 5, 1916, was read and approved.

CALLING OF THE ROLL.

Mr. SMOOT. I suggest the absence of a quorum, Mr. President.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gallinger	McLean	Smoot
Bankhead	Gore	Martine, N. J.	Sterling
Beckham	Gronna	Nelson	Stone
Brady	Harding	Norris	Sutherland
Broussard	Hardwick	Overman	Taggart
Bryan	Husting	Page	Thomas
Catron	James	Phelan	Tillman
Chamberlain	Johnson, Me.	Pittman	Vardaman
Chilton	Johnson, S. Dak.	Poindexter	Wadsworth
Clapp	Jones	Ransdell	Warren
Culberson	Kenyon	Sheppard	Williams
Curtis	La Follette	Sherman	Works
Dillingham	Lane	Shields	
du Pont	Lippitt	Smith, Ga.	
Fletcher	McCumber	Smith, S. C.	

Mr. MARTINE of New Jersey. I was requested to announce that the Senator from Montana [Mr. MYERS] is detained at home by illness.

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present.

TARGET PRACTICE IN THE NAVY.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of the Navy, which will be printed in the RECORD, where it will give all the information desired.

The communication is as follows:

NAVY DEPARTMENT,
Washington, July 5, 1916.

The PRESIDENT OF THE SENATE.

SIR: I have the honor to forward herewith the information regarding grades assigned for elementary target practice of battleships of the Atlantic Fleet, requested by Senate resolution of June 30, 1916.

This grading of vessels was established by Admiral Mayo last year for the purpose of bringing to the attention of the individual ships the general character of their work and his estimate of their proficiency.

No such estimate was made in 1914–15.

The U. S. S. *San Diego* is an armored cruiser attached to the Pacific Fleet.

Similar information has been furnished a Member of the House of Representatives upon his personal request.

Sincerely, yours, JOSEPHUS DANIELS.

Battleships—Atlantic Fleet, 1915–16.

Arkansas, excellent.
Delaware, good.
Florida, poor.
Georgia, excellent.
Kansas, poor.
Louisiana, unsatisfactory.
Michigan, poor.
Nebraska, fair.
New Hampshire, good.
New Jersey, fair.

GOLLOS RAILWAY SIGNAL CO.

Mr. NEWLANDS. On May 31, 1916, the Vice President laid before the Senate a communication from the Interstate Commerce Commission transmitting the report of the Chief of the Division of Safety concerning a test of the automatic train-control system of the Gollos Railway Signal Co. of America, Chicago, Ill., and it was referred to the Committee on Interstate Commerce. I am directed by that committee to report back the communication and ask that it be referred to the Committee on Printing, with a view to its being printed as a public document.

The VICE PRESIDENT. Without objection, the communication will be referred to the Committee on Printing.

CALIFORNIA VALVE & AIR BRAKE CO.

Mr. NEWLANDS. On the 28th ultimo the Vice President laid before the Senate a communication from the Interstate Commerce Commission, transmitting a report of the Chief of the Division of Safety concerning a test of the air-brake system of the California Valve & Air Brake Co., of Los Angeles, Cal., and it was referred to the Committee on Interstate Commerce. I am directed by that committee to report back the communication and ask that it be referred to the Committee on Printing for action.

The VICE PRESIDENT. The communication and accompanying papers and illustrations will be referred to the Committee on Printing.

PETITIONS AND MEMORIALS.

Mr. STERLING. I have in my hand a letter received from the Secretary of the National Council of the Farmers' Cooperative Associations, which bears upon that part of the pending Agricultural appropriation bill relative to the grading of grain. I ask that it may be read.

There being no objection, the letter was read and ordered to lie on the table, as follows:

NATIONAL COUNCIL OF FARMERS' COOPERATIVE ASSOCIATIONS,
York, Nebr., July 3, 1916.

Hon. THOMAS STERLING,
Senate Office Building, Washington, D. C.

DEAR SENATOR: You will pardon me for again writing you in regard to the grain-grades act, but the grain growers of the country are so anxious that Congress take action at this session on grain grading that I feel justified in doing so. They favored the establishment of uniform grades, and now they favor the uniform enforcement of those grades by Federal authority.

We favor, almost universally, Federal inspection of grain, but since there are constitutional barriers in some of the States we will be glad to accept Federal supervision as provided for in the act mentioned as being a step in the right direction.

You are familiar with the lack of uniformity in grain grading under our present system and fully realize how a uniform system will benefit the entire country. Furthermore, the Federal system will avoid much unnecessary duplication. Grain sampled and inspected under Federal authority at Omaha, for instance, will seldom need to be again sampled and inspected at Chicago or Minneapolis. This will result in a considerable financial saving. Under Federal control grain can be inspected at interior points before it gets to the great central markets. This will relieve congestion at those markets, a condition which holding grain for inspection has helped to make acute. It is a decided step toward economy and efficiency in grain marketing.

This appeal is coming direct from the grain growers themselves through their own organization. There are about 2,400 farmers' grain companies in the Mississippi Valley, that have a membership of about 100 each, and those members will appreciate Federal control of grain grading.

Very truly, yours, J. W. SHORTHILL, *Secretary.*

Mr. WARREN presented petitions of the Congressional Union for Woman Suffrage of Hot Springs County, of the Congressional Union for Woman Suffrage of Park County, and of the Congressional Union for Woman Suffrage of Bighorn County, all in the State of Wyoming, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

Mr. PHELAN. I present a memorial of the County Auditors' Association of California on the subject of the inheritance tax. I ask that it be printed in the RECORD.

There being no objection, the memorial was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

RESOLUTIONS AGAINST FEDERAL INHERITANCE TAX.

Whereas the United States Commission on Industrial Relations in its report which was made public in August, 1915, strongly urged the imposition of a tax upon inheritances by the Federal Government; and

Whereas the Ways and Means Committee of the House of Representatives has been in correspondence with the State controller of California, John S. Chambers, and with like officials in other States of the Union, asking for data as to the collections, by the States, of revenue under their inheritance-tax laws, with the undoubted object in view of utilizing such information in connection with the plan of the Congress to enact Federal legislation of the kind; and

Whereas press dispatches and letters received by the State controller of California from Washington proclaim the determination of the Ways and Means Committee of the House of Representatives to recommend to the Congress the enactment of a Federal inheritance-tax law; and

Whereas further information is to the effect that the States will be requested to abandon their inheritance-tax systems to the end that all such revenue may be collected by the Federal Government, with the understanding that a certain percentage of such collections, less overhead costs, shall be returned to the States on the basis of collections within each State: Now, therefore, be it

Resolved, That the county auditors of California in State convention assembled in the city of Yreka, on June 1, 1916, do disapprove of such proposed legislation by the Federal Congress and hereby protest; that the States, and more particularly California, would be done a grievous injury by such legislation; that under the State of California's system of taxation it is essential not only that the State derive revenue from inheritance-tax sources, but also that the average annual collections of about $3,000,000 should not be materially reduced without just cause; that the proposed plan of a partial return to the States by the Federal Government, even if 50 per cent, less the cost of collection, would reduce California's revenue from this source to less than $1,500,000 a year; that as a consequence the revenue of the common schools of the State would be imperiled to the extent of $250,000 annually, the sum now given them under the present average revenue; that the teachers' retirement fund, commonly called the teachers' pension fund, which receives 5 per cent of the total inheritance-tax collections each year, would suffer a loss of more than half the revenue derived from this source; that the general fund of the State treasury would lose approximately $1,000,000 annually; that the State can not spare this revenue and would be forced to obtain it from a higher tax upon corporations or a general property tax upon the people—the people under either plan carrying the additional burden; that the States have developed the inheritance-tax system with remarkable success; that they need this revenue and that the Federal Government, if in need of more revenue, has many sources upon which to draw, far more than have the States, and therefore should not encroach upon the rights and the needs of the States in the matter of inheritance-tax revenue; and be it further

Resolved, That the secretary of this association send a copy of these resolutions to each member of the California delegation in Congress.

Mr. McLEAN presented memorials of Local No. 50, Order of Railway Conductors, and of Charter Oak Lodge, No. 285, Locomotive Firemen and Enginemen, of Hartford, Conn., remonstrating against compulsory arbitration of railroad matters, which were referred to the Committee on Interstate Commerce.

He also presented a petition of the Women's Relief Corps of Connecticut, praying for the enactment of legislation to increase the pensions granted to widows of veterans of the Civil War, which was referred to the Committee on Pensions.

Mr. BRADY presented a memorial signed by sundry citizens of Orofino, Idaho, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

REPORTS OF COMMITTEES.

Mr. BRYAN, from the Committee on Claims, to which was referred the bill (S. 3743) to reimburse John Simpson, reported it without amendment and submitted a report (No. 601) thereon.

He also, from the same committee, to which was referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 10931. An act for the relief of Drs. Blair and Blake, Dr. W. J. Maxwell, Dr. R. C. Evans, and J. B. Blalock (Rept. No. 602);

H. R. 9378. An act for the relief of Ella Slone (Rept. No. 603);

H. R. 11293. An act for the relief of the Barkhausen Coal & Dock Co., of Green Bay, Wis. (Rept. No. 604);

H. R. 8325. An act for the relief of Borden H. Mills (Rept. No. 605);

H. R. 3896. An act for the relief of John H. Janssen (Rept. No. 606).

H. R. 9172. An act for the relief of the M. Kondo Fisheries Co. (Rept. No. 607);

H. R. 9377. An act for the relief of Cyntha Ramey (Rept. No. 608);

H. R. 13785. An act for the relief of Sarah S. Plank (Rept. No. 609);

H. R. 6180. An act for the relief of Lillie B. Randell (Rept. No. 610);

H. R. 6181. An act for the relief of Letitia W. Garrison (Rept. No. 611);

H. R. 11261. An act for the relief of Mary S. Corbin (Rept. No. 612);

H. R. 9994. An act for the relief of Samuel H. Walker (Rept. No. 613);

H. R. 11749. An act for the relief of the administrator of the estate of John M. Waples (Rept. No. 614); and

H. R. 5411. An act for the relief of Olaf Nelson (Rept. No. 615).

Mr. BRYAN, from the Committee on Claims, to which was referred the bill (H. R. 15635) for the relief of the Eastern Transportation Co., of Baltimore, Md., reported it with amendments and submitted a report (No. 616) thereon.

Mr. BRYAN. I am directed by the Committee on Claims to which was referred the bill (H. R. 6156) for the relief of the heirs of George W. Croft, to report it adversely, and I submit a report (No. 617) thereon.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. BECKHAM, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 1161. An act to pay Cowden & Cowden, of Amory, Monroe County, Miss., for the loss of a horse while being used by the Department of Agriculture (Rept. No. 618);

H. R. 2554. An act for the relief of Mrs. Joseph Cameron (Rept. No. 619);

H. R. 5185. An act for the relief of George H. Hammond (Rept. No. 620); and

H. R. 5729. An act for the relief of Dr. E. E. Johnson (Rept. No. 621).

Mr. CATRON, from the Committee on Claims, to which was referred the bill (H. R. 9173) for the relief of the Union Oil Co., reported it without amendment and submitted a report (No. 622) thereon.

Mr. HARDING. I am directed by the Committee on Claims, to which was referred the bill (H. R. 1975) for the relief of C. E. Anderson, to report it adversely, and I submit a report (No. 627) thereon.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. HARDING, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 11377. An act for the relief of Thomas J. Bye (Rept. No. 623);

H. R. 2209. An act for the relief of W. W. Blood (Rept. No. 624);

H. R. 8108. An act for the relief of the legal representatives and heirs of Elizabeth Bruce, deceased, widow of the late John H. Bruce (Rept. No. 625); and

H. R. 12267. An act for the relief of Wallace L. Bell (Rept. No. 626).

Mr. LANE. I am directed by the Committee on Claims, to which was referred the bill (H. R. 2814) for the relief of George W. Gamble, to report it adversely, and I submit a report (No. 631) thereon.

The VICE PRESIDENT. The bill will be placed on the calendar.

Mr. LANE, from the Committee on Claims, to which was referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 2534. An act to adjust the claims of certain settlers in Sherman County, Oreg. (Rept. No. 628);

H. R. 11660. An act for the relief of Mathilda Hesterman (Rept. No. 629); and

H. R. 7423. An act for the relief of Elizabeth M. Dodge (Rept. No. 630).

Mr. WADSWORTH, from the Committee on Claims, to which was referred the bill (S. 4277) for the relief of George B. Hughes, reported it with an amendment and submitted a report (No. 633) thereon.

He also, from the same committee, to which was referred the bill (S. 2704) for the relief of Albert L. Ream, reported it with an amendment and submitted a report (No. 632) thereon.

He also, from the same committee, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 5096. An act for the relief of Nabor and Victoria Leon (Rept. No. 634);

H. R. 3255. An act for the relief of James Houyde (Rept. No. 635);

H. R. 10858. An act for the relief of William A. Hutson (Rept. No. 636);

H. R. 9082. An act for the relief of Frank P. Sammons (Rept. No. 637);

H. R. 11304. An act for the relief of Martha A. Moffitt (Rept. No. 638);

H. R. 10642. An act for the relief of Louis Jones (Rept. No. 639);

H. R. 5864. An act for the relief of Thomas P. Sorkilmo (Rept. No. 640); and

H. R. 12742. An act for the relief of Gottlob Schlect and Maurice D. Higgins and for the relief of the heirs and legal representatives of Valentine Brasch (Rept. No. 641).

Mr. CHAMBERLAIN, from the Committee on Commerce, to which was referred the joint resolution (S. J. Res. 110) providing for method of improving channels giving access to military reservations or fortifications, reported it without amendment and submitted a report (No. 642) thereon.

Mr. FLETCHER, from the Committee on Commerce, to which was referred the bill (S. 6540) to repeal section 4411, Revised Statutes, reported it without amendment and submitted a report (No. 643) thereon.

Mr. KENYON, from the Committee on the District of Columbia, to which was referred the joint resolution (H. J. Res. 91) authorizing and directing the Department of Labor to make an inquiry into the cost of living in the District of Columbia and to report thereon to Congress as early as practicable, reported it without amendment.

Mr. RANSDELL, from the Committee on Public Lands, to which was referred the bill (H. R. 540) for the relief of settlers within the limits of the grant to the New Orleans, Baton Rouge & Vicksburg Railroad Co., reported it with an amendment and submitted a report (No. 644) thereon.

Mr. DU PONT. I am directed by the Committee on Military Affairs, to which was referred the bill (S. 3650) to convert the premises connected with Fort Johnston, in the town of Southport, N. C., into a public park, to submit an adverse report (No. 645) thereon, and I ask that the bill be postponed indefinitely.

The VICE PRESIDENT. The bill will be postponed indefinitely.

Mr. SHEPPARD, from the Committee on Commerce, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 16097. An act to extend the time for constructing a bridge across the Missouri River near Kansas City, Mo., authorized by an act approved June 17, 1914 (Rept. No. 647);

H. R. 16287. An act granting the consent of Congress to the county of Sumter, or to the county of Dooly, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River (Rept. No. 648); and

H. R. 16641. An act granting the consent of Congress to Julian B. McCurry, A. G. McCurry, P. W. Walton, and J. J. Fretwell to construct a bridge across the Savannah River (Rept. No. 649).

HEIRS OF ALBERT SIDNEY JOHNSTON.

Mr. BECKHAM. From the Committee on Claims I report back favorably without amendment the bill (S. 5441) for the relief of the heirs of Albert Sidney Johnston, and I submit a report (No. 600) thereon.

Mr. WORKS. I ask for the present consideration of the bill just reported by the Senator from Kentucky.

There being no objection, the bill was considered as in Committee of the Whole. It authorizes the Secretary of the Treasury to pay to the heirs of the late Albert Sidney Johnston, out of any money in the Treasury not otherwise appropriated, all arrears of pay and allowances for services rendered by him in the United States Army that would be due and payable if it were not for certain charges standing against him on the books of the Treasury Department, and to ignore all the said charges in making a settlement in the case.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

STEAMSHIP "AROLINE."

Mr. JONES. From the Committee on Commerce I report back favorably without amendment the bill (S. 6375) to authorize the changing of the name of the steamship *Aroline*, and I submit a report (No. 599) thereon. This is a very important bill,

which simply provides for the changing of the name of a steamship, and I ask unanimous consent for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as follows:

Be it enacted, etc., That the Commissioner of Navigation is hereby authorized and directed, upon the application of the owner, the Pacific Alaska Navigation Co., of Portland, Me., to change the name of the steamship *Aroline*, official number 211426.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BLACK RIVER BRIDGE, ARKANSAS.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (H. R. 16068) to authorize the construction, maintenance, and operation of a bridge across the Black River at or near Bennetts Ferry, Ark., and I submit a report (No. 646) thereon and ask unanimous consent for the present consideration of the bill.

The VICE PRESIDENT. The Senator from Texas asks unanimous consent for the present consideration of the bill just reported by him.

Mr. TOWNSEND. Mr. President, I ask for the regular order.

The VICE PRESIDENT. Objection is made.

Mr. CLARKE of Arkansas. Mr. President, before we pass from this matter, let me ask the Senator from Michigan to withdraw his objection to the consideration of the bill. The bridge referred to is a county bridge; the court meets at that place during this month, and unless the bridge is authorized during the month, the matter may have to go over for a year. It will take but half a minute to pass the bill.

Mr. TOWNSEND. Mr. President, I understand that. The argument is made on every occasion when any Senator has a special bill that something special applies to it; and I understand the importance of it. I also understand that we should take up the calendar during the morning hour.

Mr. CLARKE of Arkansas. This is a public matter. It is not a private matter at all.

Mr. TOWNSEND. I realize that all of these bills are public matters. I should be glad to accommodate the Senator were it not that I have given notice that I would refuse to accede to such requests from other Senators who have appealed to me.

Mr. CLARKE of Arkansas. The Senator from Michigan ought not to make any such reckless and unreasonable contracts with himself.

The VICE PRESIDENT. The bill will be placed on the calendar.

BRIDGE BILLS.

Mr. SHEPPARD. Mr. President, I ask unanimous consent to withdraw from the calendar the bridge bills which I reported this morning and certain other bridge bills which have heretofore been reported and placed upon the calendar.

The VICE PRESIDENT. The Senator from Texas asks unanimous consent to withdraw from the calendar the bridge bills reported by him this morning——

Mr. SHEPPARD. And certain other bridge bills which I reported the other day and which went to the calendar.

The VICE PRESIDENT. Does the Senator desire to withdraw all bridge bills from the calendar?

Mr. SHEPPARD. Yes.

Mr. SMOOT. Mr. President, I have no objection at all to the passage of bridge bills, but it does seem to me if we are going to allow bills which are reported to the Senate to be at once considered and never reach the calendar the bills that are upon the calendar will never be passed. If, however, we allow every bill which is reported to go to the calendar there will soon be enough bills on it to interest Senators, and we can then have the calendar taken up for consideration. It seems to me that that is about the only way that we can secure the consideration of the calendar.

The VICE PRESIDENT. Is there objection to the request of the Senator from Texas?

Mr. SMOOT. I object.

The VICE PRESIDENT. Objection is made.

FLINT RIVER BRIDGE, GEORGIA.

Mr. HARDWICK subsequently said: I desire to ask unanimous consent for the present consideration of the bill (H. R. 16287) granting the consent of Congress to the county of Sumter, or to the county of Dooly, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River, reported to-day from the Committee on Commerce by the Senator from Texas [Mr. SHEPPARD].

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

SAVANNAH RIVER BRIDGE.

Mr. HARDWICK. I ask unanimous consent for the present consideration of the bill (H. R. 16641) granting the consent of Congress to Julian B. McCurry, A. G. McCurry, P. W. Walton, and J. J. Fretwell to construct a bridge across the Savannah River, reported to-day from the Committee on Commerce by the Senator from Texas [Mr. SHEPPARD].

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. NELSON:

A bill (S. 6579) conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Chippewa Indians and the several bands or tribes thereof in the State of Minnesota against the United States; to the Committee on Indian Affairs.

By Mr. STERLING:

A bill (S. 6580) granting an increase of pension to Fred A. Lyon (with accompanying papers); and

A bill (S. 6581) granting an increase of pension to George W. Ward; to the Committee on Pensions.

By Mr. BROUSSARD:

A bill (S. 6582) granting an increase of pension to Caroline E. Pratt; to the Committee on Pensions.

By Mr. LODGE:

A bill (S. 6583) to enable the Secretary of War to pay the amount awarded to the Malambo fire claimants by the joint commission under article 6 of the treaty of November 18, 1903, between the United States and Panama; to the Committee on Foreign Relations.

By Mr. SHAFROTH:

A bill (S. 6584) for the relief of Ella S. Denison, executrix of the estate of Dr. Charles Denison, deceased; to the Committee on Claims.

By Mr. SHEPPARD:

A bill (S. 6585) authorizing the Secretary of Labor to investigate and report on mortality and disability in wage-earning occupations; to the Committee on Education and Labor.

By Mr. PHELAN:

A joint resolution (S. J. Res. 149) authorizing and directing the Interstate Commerce Commission to ascertain the cost to the Southern Pacific Co. and the amounts expended by it, at the request of President Roosevelt, and under stress of great emergency, in closing and controlling the break in the Colorado River and preventing the overflow and destruction of the Imperial Valley in southern California, as well as saving to the Government the Laguna Dam and the irrigation project connected therewith in Arizona; to the Committee on Claims.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. CATRON submitted an amendment providing that vacancies now existing in the line and staff of the departments of the Marine Corps thus created below the grade of brigadier general, etc., shall be filled respectively first by promotion, by seniority, and then by selection and appointment as now provided by law, etc., intended to be proposed by him to the naval appropriation bill (H. R. 15947), which was referred to the Committee on Naval Affairs and ordered to be printed.

Mr. PITTMAN submitted an amendment providing that each and every employee of the navy yards, gun factories, naval stations, and arsenals of the United States Government is hereby granted 30 days' leave of absence each year without forfeiture of pay during such leave, intended to be proposed by him to the naval appropriation bill (H. R. 15947), which was ordered to lie on the table and be printed.

Mr. DU PONT submitted an amendment providing that hereafter the Chief of Engineers shall have the rank, pay, and allowances of a major general, intended to be proposed by him to the Army appropriation bill (H. R. 16460), which was ordered to lie on the table and be printed.

Mr. SHEPPARD submitted an amendment providing that Port Arthur, Freeport, Port Aransas, Corpus Christi, and Rockport, in the State of Texas, be included in the specific plans for improvement of the harbors and connecting channels, etc., intended to be proposed by him to the naval appropriation bill (H. R. 15947), which was referred to the Committee on Naval Affairs and ordered to be printed.

THE LIGHTHOUSE SERVICE.

Mr. BROUSSARD submitted an amendment intended to be proposed by him to the bill (H. R. 14338) to authorize aids to navigation and for other works in the Lighthouse Service, and for other purposes, which was referred to the Committee on Commerce and ordered to be printed.

COLUMBIA RIVER POWER PROJECT.

Mr. CHAMBERLAIN. Mr. President, I desire to have printed as a public document the investigations made jointly by the State of Oregon and the United States Department of the Interior, Reclamation Service, with reference to the Columbia River power project and incidentally a discussion of the nitrate possibilities there. I ask to have the matter referred to the Committee on Printing, with a view to it being printed as a public document.

The VICE PRESIDENT. Without objection, that action will be taken.

VOLUNTEER OFFICERS' RETIRED LIST.

The VICE PRESIDENT. Morning business is closed.

Mr. GORE. Mr. President, I ask that the unfinished business be laid before the Senate.

Mr. TOWNSEND. Mr. President, will the Senator from Oklahoma yield to me to submit a request for unanimous consent?

Mr. GORE. I yield for that purpose.

Mr. TOWNSEND. Mr. President, I imagine that my position in objecting to requests for unanimous consent for the consideration of bills on the calendar and bills reported but not on the calendar is considered ungracious by my brother Senators. It is not a pleasant position for me to occupy. I have felt, however, that this was the course to pursue, in order that a certain bill which was reported out of the Committee on Military Affairs several years ago and has been reported to every Congress since and to which I believe a majority of Senators are favorable should receive consideration at the hands of this body. I have never been able to get it up except during the very last days of the last session, when it passed, but too late to be considered by the House. I refer to the volunteer officers' retirement bill, S. 392.

I do not want to force discussion, which would interfere with the consideration of other pressing matters; I do not think there would be much discussion; but I would like to have a day fixed when we can have a vote on this measure. I can assure the Senate that I will not occupy 15 minutes' time in discussing it, and I am willing to fix a proper time to allow for any discussion in opposition to it. I ask unanimous consent, Mr. President, that a day be fixed for voting on this measure, and that it be two weeks from to-day; that the bill be taken up at 2 o'clock and that a vote on the bill and all amendments be had not later than 4 o'clock of that day.

The VICE PRESIDENT. The Secretary will call the roll.

Mr. SMITH of Georgia. Mr. President, I think that is a waste of time. There will certainly be objection.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gallinger	Newlands	Smoot
Bankhead	Gore	Norris	Sterling
Beckham	Gronna	Overman	Stone
Brady	Harding	Page	Sutherland
Brandegee	Hardwick	Phelan	Swanson
Broussard	Husting	Pittman	Taggart
Bryan	James	Poindexter	Thomas
Catron	Johnson, Me.	Pomerene	Thompson
Chamberlain	Jones	Ransdell	Townsend
Chilton	Kenyon	Reed	Underwood
Clapp	La Follette	Shafroth	Vardaman
Clarke, Ark.	Lane	Sheppard	Wadsworth
Culberson	Lippitt	Sherman	Warren
Cummins	Lodge	Shields	Williams
Curtis	McCumber	Simmons	Works
Dillingham	McLean	Smith, Ariz.	
du Pont	Martine, N. J.	Smith, Ga.	
Fletcher	Nelson	Smith, S. C.	

Mr. SWANSON. I desire to announce that my colleague [Mr. MARTIN of Virginia] has been detained from the Senate yesterday and to-day on account of illness in his family.

Mr. MARTINE of New Jersey. I rise to announce that the Senator from Maryland [Mr. SMITH] is absent on public business and is paired with the Senator from Vermont [Mr. DILLINGHAM].

The VICE PRESIDENT. Sixty-nine Senators have answered to the roll call. There is a quorum present. The Senator from Michigan submits a request for unanimous consent, which the Secretary will state.

The SECRETARY. The Senator from Michigan asks unanimous consent that at not later than 2 o'clock p. m. on Thursday, July 20, 1916, the Senate will proceed to the consideration of the bill (S. 392) to create in the War Department and the Navy Department, respectively, a roll designated as the "Civil War Volunteer officers' retired list," and so forth, and that at 4 o'clock p. m. on said day the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill itself, through the regular parliamentary stages, to its final disposition.

The VICE PRESIDENT. Is there any objection?

Mr. BRYAN. I object, Mr. President.

AGRICULTURAL DEPARTMENT APPROPRIATIONS.

Mr. GORE. I move that the Senate proceed to the consideration of the unfinished business.

The motion was agreed to; and the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

The VICE PRESIDENT. The pending amendment is the amendment of the Senator from North Dakota [Mr. GRONNA].

Mr. GORE. The author of the pending amendment is absent from the Chamber at the moment. Pending his return, I desire to move to strike out the proviso beginning on line 24, page 3, of the special print, and substitute what I send to the desk. It is in order to clarify the bill and make it more certain.

Mr. McCUMBER. What page?

Mr. GORE. Page 3 of the special print, on line 24.

The VICE PRESIDENT. Is there no way for the Senator to indicate the page and line of the regular print of the bill, which is the one on which the Secretary keeps the record?

Mr. GORE. Just a moment.

The VICE PRESIDENT. What language does it follow?

Mr. GORE. It is the second proviso of section 4. In the regular print it appears on page 103, line 2.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 103, line 2, in the grain-grading provision, it is proposed to strike out the second proviso, which, as amended, reads as follows:

Provided further, That any such grain sold or offered for sale or consigned for sale by one of the grades fixed therefor in the official grain standards may be shipped in interstate or foreign commence to or through any place at which an inspector licensed under this act is located, subject, under such rules and regulations as the Secretary of Agriculture shall prescribe, to be inspected at the place to which shipped, or at the place through which shipped for inspection, and subject further to the right of appeal from such inspection, as provided in section 6 of this act.

And in lieu thereof to insert the following words:

Provided further, That any such grain sold, offered for sale, or consigned for sale by grade may be shipped or delivered for shipment in interstate or foreign commerce without inspection at point of shipment by an inspector licensed under this act when shipped from a place at which no such licensed inspector is located to or through any place at which an inspector licensed under this act is located, subject to be inspected by a licensed inspector at the place to which shipped, or at some convenient point through which shipped for inspection, under such rules and regulations as the Secretary of Agriculture shall prescribe, and subject further to the right of appeal from such inspection as provided in section 6 of this act.

Mr. NELSON. Mr. President, I will inquire where that amendment comes in?

The SECRETARY. On page 103 it is proposed to strike out the proviso beginning on line 2 and going down to and including the word "act," on line 11, and to insert the matter just read.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The VICE PRESIDENT. The question recurs on the amendment of the Senator from North Dakota [Mr. GRONNA].

Mr. McCUMBER. Mr. President, before the question is put, I desire to say that it seems to me that the amendment, as I understand it, ought not to be adopted; that in effect it entirely does away with the real purpose of the bill, and that is to substitute Federal grades at the great terminals for the grades now in vogue, either by law or by the action of boards of trade or chambers of commerce. This would leave the Federal grades to apply only in States where no grades have been as yet provided for.

The VICE PRESIDENT. May the Chair inquire to what amendment the Senator is now addressing himself?

Mr. McCUMBER. The amendment offered by my colleague, the junior Senator from North Dakota. I should like to have the amendment read again.

The VICE PRESIDENT. The Secretary will state the amendment.

The SECRETARY. It is proposed to add in the bill a new section, on page 108, after section 12, as follows:

SEC. 13. That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law or in which public warehouses are regulated by law: *Provided, however*, That the

Secretary of Agriculture is authorized to cooperate with the officials charged with the enforcement of grain inspection and warehouse regulation in such States, and through that cooperation to secure the enforcement of the provisions of this act as far as practicable and in such manner as not to conflict with the laws of such States.

Mr. GRONNA. Mr. President——

Mr. McCUMBER. I yield to my colleague.

Mr. GRONNA. I want to say to my colleague that he is mistaken in assuming that this would do away with Federal inspection where they have inspection by any grain exchange. It applies only to States where they have established grades by a State law.

Mr. McCUMBER. Mr. President, let us see just what this means. It reads:

That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law or in which public warehouses are regulated by law.

There can be no possible question but that this, standing alone, continues the provisions of the State laws, because it says—

That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established.

Now, grain inspection has been already established in the State of Minnesota, in the State of Illinois, and in a great many of the States; and having been established by law, the provisions of this act are not to infringe upon those laws nor to supersede them in any way. Therefore the old laws remain, the inspection remains, and the grades remain that are provided for by the laws of those States.

Now, let us see if the next provision modifies it.

Mr. GRONNA. My colleague made the broad statement, at the outset of his remarks, that it would apply to grades established by chambers of commerce, which, of course, it would not. It would simply apply to States where they have adopted grades by State laws, and that is all it would do. That is all it could do.

Mr. McCUMBER. In Minnesota they have grades established by State law. Now, suppose we provide for grades established by Federal law. In other words, they are Federal grades, national grades, United States grades; and they would be different from those established by the State of Minnesota. Then we would have a worse conglomeration and mixture of affairs than we have now, because now we are complaining of the lack of uniformity in the several States, and we add another element of nonuniformity by providing for a Federal grade which would be applicable in our State or in certain States, but would not be applicable in the State of Minnesota, whose grades are fixed by law.

Mr. GRONNA. Mr. President, if my colleague will pardon me, he confuses the question of grading and the question of inspection. This amendment does not apply to standardization; it simply applies to inspection.

Mr. McCUMBER. Oh, no. It says:

That the provisions of this act—

That is, all of the provisions—

shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law.

If my colleague desires to provide that it shall not interfere with the inspection part, that is a different proposition; but the way it reads is this:

That the provisions of this act shall not infringe upon or supersede the provisions of the laws of States in which State grain inspection has been or may hereafter be established by law.

In other words, every State that has established a grain-inspection law will be exempt from the entire provisions of this act. That is the only construction that can be placed upon that language. I think, after reading it again, that my colleague will agree with me, and for that reason that it ought not to be adopted.

Mr. GORE. Mr. President, I merely wish to say that I hope the pending amendment will not prevail. To adopt this amendment would be about the same as saying:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following act is not an act, except in spots.

I hope it will be voted down.

Mr. NELSON. Mr. President, I have so far avoided taking up the time of the Senate in discussing the provisions of this bill. We are confronted with the most remarkable condition in this bill. Last week we spent a whole day in determining whether a matter of general legislation should be admitted into an appropriation bill; and yesterday the same question was again raised in the Senate, as to whether general legislation should be inserted in a general appropriation bill. The rule against doing so is one of the permanent rules of the Senate, intended to preserve the integrity of the business of the Senate, and intended to provide that measures of general legislation should be offered, discussed, and voted upon on their merits.

In all my experience in legislation I have never seen a bill that so violated this rule by the wholesale as does the present Agricultural appropriation bill. We have in the bill as it passed the House and came to the Senate three distinct and separate pieces of legislation. We have, first, what is known as Part A, relating to future trades in cotton. That comprises 22 sections. Then we have another part relating to the grading and inspection of grain, known as Part B. That includes a dozen sections. Then we have a warehouse bill, including the regulation and licensing of all kinds of warehouses. Here you have three distinct, comprehensive schemes of general legislation ingrafted on an appropriation bill in utter violation of the rules of the Senate. The Senate, however, because these provisions were ingrafted on the bill as it came from the House, is impotent to invoke its own rules in respect to the matter of general legislation.

Another matter that is passing strange is this: It was the doctrine of the fathers of the Republic, and so remained for many years, that the regulation and control of the business activities of the people should be, as far as possible, left to the several States. That was what might be called the old Jeffersonian doctrine. But in recent years a great change has come over the spirit of our dreams in that respect. There has been a gradual departure from the doctrine and creed of the fathers. The Federal Government has been reaching out in all directions to control the activities of the people and to manage their affairs. Everything, it seems, is now to be put under the control of the Federal Government for the purpose of getting what is called more perfect regulation. Even where the States have gone to the utmost limit in regulating and establishing business conditions in respect to important matters and have gotten them on a sane and sound basis, they are now to be destroyed and uprooted by this spirit of Federal control that is in the air.

I was much interested yesterday in listening to the discussion of my agricultural friend from Colorado [Mr. SHAFROTH] about the great things that have been accomplished in the matter of standardization of corn. For several years we have had on the Agricultural appropriation bills large appropriations—and I have the statement of my friend from North Dakota [Mr. GRONNA] on the subject—aggregating between seven and eight hundred thousand dollars, for the standardization of corn and small grain. The entire outcome of the total appropriations up to this date is a so-called standardization of corn, and when you boil down that standardization of corn you discover that after all in its essence and substance it is simply a moisture test. It takes no note of the fact that we have to raise a great variety of corn, all kinds of dent corn, red corn, black corn, white corn; and we have in the Northern States another variety of dent corn entirely different from that raised in the Southern States or in the Middle and Central States. Then, in Minnesota there is a quality of corn which some call pig corn, some Yankee corn, some 90-day corn. It is corn with a very short stalk, that will ripen in a very short time, in from 90 to 100 days.

These different varieties of corn are of such a character that they make up the quality of the corn. Aside from the moisture test, as I gathered yesterday, it related simply to whether there were any crushed kernels of corn; and if so, to what extent, and whether there was any foreign substance present. The crushed kernels of corn, as we all know, come from shelling the corn in the shelling machine. As to the foreign substance in corn, we have reached that question in the matter of grain by docking and allowing for it.

There may be a given quantity of wild buckwheat, wild oats, wild mustard, or a lot of other substances in the corn, and yet that corn may be as good as any on the market if you remove the dirt from it.

We have met that question, Mr. President, in the grading of wheat. If the wheat is good in itself, if the berry is sound and perfect, even though there may be a lot of mixture of foreign substances, like pigeon grass, wild buckwheat, wild mustard, wild oats, or anything of that kind, we simply dock and take out so much for all those foreign substances, leaving the wheat to be graded as it should be, according to its quality.

Mr. President, if we look at the wheat situation in this country, we find it to be about as I shall state. We have been raising in recent years in this country from 700,000,000 up to 900,000,000 bushels of wheat, and it is even claimed that one year we raised in the neighborhood of one thousand million bushels of wheat, in round figures. Approximately a third of

this crop is spring wheat. It varies. Sometimes it is a third; sometimes a little less. Fully two-thirds of it is winter wheat.

The winter-wheat crop is raised in nearly all of the States, except a few spring-wheat States. The great spring-wheat States in this country are the States of North Dakota, South Dakota, and Minnesota. Outside of these States a little is raised in northern Iowa, a little in northern Wisconsin, a little in Nebraska, and considerable in Montana.

It so happened last year, Mr. President, that while we had an immense crop of winter wheat and a good crop on the ground it was injured by rains at the time it was cut and while it was in the shock, and there was a great deal of damp and moist winter wheat. The millers got that wheat. It came from the Southwest.

This demand for an inspection department, this hue and cry, has come mainly from the millers of this country. From the inception the idea of Federal inspection came here from the Agricultural Department. It was inspired. These departments are so constituted—and the agricultural appropriation bill is an illustration of it—that they are reaching out in all directions from stump pulling to bug killing. Every head of a bureau desires to absorb as many activities as possible. He wants ample room; he wants to be at the head of a division; he wants to have a good many clerks and subordinates, a large force, under him, and, of course, to justify an ample appropriation he must invent new schemes, new activities, whatever they may be, that will give life and permanence to his branch of the public service.

In the State of Minnesota, one of the great wheat States of the Union, we have had a State grain inspection ever since 1885. Prior to that time our grain inspection was carried on by representatives of the chambers of commerce and boards of trade. They represented the buyers of the country; they represented the men who bought the wheat; and, of course, their interest was necessarily—I do not mean to use the term in an odious sense—adverse to the interest of the farmer.

Our farmers became restless under that system. They insisted that the State should intervene and take charge of the grain-inspection system, in order to have a body of men, separate and distinct, as umpires between the buyer and the seller of grain. We have perfected that system in Minnesota, until to-day the farmers of the State are entirely satisfied with the system. I have not had a complaint from a single farmer in the State. The clamor and the demand come from a certain class of our millers in that State, and I will tell you why it comes.

The hard wheat in Minnesota is sold all over the country. It brings a high price, and the flour made from it is claimed to be the best in the country. But these millers have found in recent years that it will be very profitable to get other varieties of wheat, to get a certain species of winter wheat from the Southwest, especially Turkey red and other varieties which they could get at a cheaper figure, and mix with the hard wheat of Minnesota, and still sell that flour as good flour made from Minnesota hard wheat. Last year, when the millers got this wheat from the Southwest and from the winter-wheat States, because of the fact that much of it had been injured by rains in the shock or in the stack, some of it was a little sprouted, some of it had a malty taste, and so when they came to mix it with the hard wheat they were somewhat disappointed.

So for the first time in our State this present year a demand has come from the millers for Federal inspection. Our Minnesota system, it is conceded, I think, is unquestionably the best, and the State of Missouri has a system analogous to the Minnesota system, which is, I think, almost as good.

Now, I wish to call the attention of the Senate to what Mr. Duvel, the author, I think, of this legislation and the great promoter of it, said. He appears to have been as active about it as some gentlemen were about the Army bill when that measure was pending.

I will give a little bit of my experience, Mr. President. One day I appeared before the Committee on Agriculture to oppose this bill and to call attention to some of its defects. The representative of the Agricultural Department sat across the table from me and looked innocent enough, but on the following morning, after I had made that little appearance before the Agricultural Committee, I received a shower of telegrams, and I found that Members on the other side of the Chamber had received a shower of telegrams. It was a good deal like the shower we had a while ago in connection with the German propaganda, with its headquarters in Chicago, from the society that was in favor of an embargo. Senators will remember that for forty-eight hours both Houses of Congress were flooded with such telegrams. So here in this matter this agitation for Federal inspection has gone on, and my innocent appearance for a few moments before the Agricultural Committee was the occasion for sending in a multitude of telegrams from all over the country.

We have two classes of agricultural societies. We have one class of agricultural societies consisting of real farmers, agriculturists. Those have not appeared in this case or demanded this legislation. We have a few agricultural societies that are quasi political bodies. Their managers and leaders are, as a rule, a set of political agitators, and they assume to themselves to claim something for the farmers that the real farmers have never insisted upon.

In reference to the Minnesota inspection, I wish to quote from the hearings on a similar bill before the House committee on January 13, 1916. Mr. Duvel, of the Agricultural Department, is, as I have said, probably the author of this grain-inspection bill, and when interrogated he made this reply:

> Mr. DUVEL. Mr. Chairman, I shall be glad to answer that in the affirmative; I shall be glad to go still further and say that the Minnesota inspection department is as good a system, and in establishing grades for smaller grains, and spring wheat particularly, we would undoubtedly want to confer and cooperate with that department before fixing those standards. We think they have got a good system—just as good as any other State—for handling spring wheat.

And, Mr. President, it is this system which is attempted to be broken up by this legislation.

Here is another evil in connection with it that will seriously affect the farmers who ship their grain by the carload. We have in connection with our grain-inspection system in Minnesota what we call a weighing department. Under our law a farmer in the interior, instead of sending his grain into a warehouse or elevator, where he has to pay charges, can requisition a car from the railroad company, have it put on the siding, load up the car, and ship it to the terminal point, to his commission merchant. When that carload of grain reaches the terminal station it is not only inspected by a State inspector, but a representative of the grain commission weighs that car and gives the farmer, the shipper, and the commission merchant the actual and fair weight. If you destroy the Minnesota system, the farmers will be deprived of that advantage.

Now, take it in the matter of grades. On paper it seems very easy to establish grades for wheat, but Senators who are acquainted with the wheat production of this country know that we have a great number of different kinds of wheat. Take, for instance, the matter of spring wheat. I can enumerate a dozen different varieties that have to be classified and graded entirely differently in order to do justice both to the buyer and to the seller. The same is true in reference to winter wheat; they have different varieties. They have the red and the white winter wheat; they have the hard and the soft winter wheat; and a good deal depends on the part of the country where it is raised as to the quality and character of the grains. It is just so with our spring wheat. As you go north you will find that in the northern part of the spring-wheat belt the wheat is strongly glutinous; there is more gluten contained in the Canadian wheat than is found in that of Minnesota or of North Dakota; and there is more in the wheat of those States than in that of the States farther south. Spring wheat raised farther south, between the winter-wheat belt and the spring-wheat belt, is of a starchy, soft character, and contains, as I have said, considerably less gluten.

So, if people imagine that our Agricultural Department can establish one uniform grade of wheat throughout the country, they are utterly mistaken. There will have to be as many grades in the different localities as the quality and kind of wheat raised in those localities. It can not be accomplished in any other way.

Senators have called attention to the importance of our foreign trade. The largest proportion of our wheat is consumed in this country. We rarely export more than from one to two hundred million bushels a year. Perhaps, on account of the war and owing to our enormous crop last year, we exported upward of 300,000,000 bushels, but in normal years our exports fluctuate between 100,000,000 and 200,000,000 bushels. The bulk of the wheat is consumed in this country. With the exception of those States that have established State grading and inspection, the grading and inspection in all the other States is conducted by boards of trade and chambers of commerce; and, as you can readily see, as I stated at the outset of my remarks, they are actually the representatives of the buyers. At all these points near the Atlantic seaboard the entire inspection system is under the control of the boards of trade. Inspectors are appointed by them and are paid by them. They have no system of weighing or handling grain such as we have in the Northwest.

Coming to the imperfections of this legislation—and they are very serious—before I proceed further, Mr. President, I will say that I have here a statement giving a brief synopsis of the system of weighing, inspection, and grading of grain prevailing in Minnesota, which I ask to have inserted in the RECORD, without reading, as a part of my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

The statement referred to is as follows:

State inspection of grain was established in Minnesota in 1885. The grain-inspection department is under the supervision of a chief inspector appointed by the railroad and warehouse commission. The department is divided into two large terminal districts, viz, Minneapolis and Duluth; but the service has also been extended to six other points in the State. Inspectors are appointed only after the most thorough examination. All new appointees are placed in subordinate positions and are promoted as vacancies occur and as their skill justifies. In addition to the grain-inspection department, there are two boards of appeals—one for Minneapolis and one for Duluth—each with three members appointed by the governor of the State. The duties of these boards are to make the official Minnesota grades each year under which the grain-inspection department must grade the grain and to consider grading decisions that are appealed from the State inspection department.

Formerly all inspections were made at the doors of the cars as they came to the Minneapolis yards. Owing to variations in light, weather, temperature, etc., the inspectors were unable to work at maximum efficiency, and indoor or office inspection was long ago substituted for car-door inspection. Under the present system samples are taken from all cars by a trained body of samplers. Some of these samples are taken from the cars as they enter the Minneapolis yards; others are taken at points a considerable distance from Minneapolis and are sent ahead of the freight trains in passenger trains. All samples of cars destined for Minneapolis are taken to the offices of the State inspection department, where the actual inspection takes place. In this way the grades on a large part of the grain are determined before the actual grain reaches the terminal market.

Samples are taken by securing small quantities of grain from different parts of the car. A tubular brass probe, which ordinarily reaches to the bottom of the car, is used for this purpose. This probe has separate chambers extending its full length. These chambers are closed when the sampler thrusts it perpendicularly through the grain to the bottom of the car; they are then opened, allowing them to fill. When the probe is removed the grain is spread out on a cloth, and by making a number of such probings in different parts of the car the sampler can tell whether the car is "set up" or "plugged"; i. e., whether dirt or screenings or any other foreign substances have been placed in the bottom or in any part of the car. The number of such "set-up" cars approximated 1½ per cent of total cars inspected for the crop year 1911–12. Besides fixing the grade, the State inspection department also determines the "dockage," i. e., the amount of dirt and foul seed in each car of wheat, rye, and flax. This is done by sifting out the dirt and weighing it, and the dockage is expressed as a certain number of pounds in a bushel.

When the shipper or any other person interested in a car of grain is dissatisfied with the grade or dockage as fixed by the State inspection department he may call for a reinspection, which is also performed by the same department. If still dissatisfied, he may appeal the case to the board of appeals mentioned above. Both of these rights are exercised very frequently. Out of 232,512 cars inspected at Minneapolis during the year ending August 31, 1913, reinspection was called on 61,205, or 26.3 per cent of the total. The results of such reinspections and appeals appear in the statement following.

Reinspections.

	Number of cars.	Per cent of total.
Original grade sustained	38,914	63.6
Original grade raised	14,476	23.7
Original grade lowered	3,888	6.3
Original dockage changed	3,927	6.4
Total reinspected	61,205	100.0

Of the 61,205 cars reinspected at Minneapolis there were 46,665, or 76.2 per cent, appealed. The results of appeal were as follows:

Appeals.

	Number of cars.	Per cent of total.
Decision sustained	36,780	78.8
Decision raised	7,792	16.7
Decision lowered	768	1.7
Dockage changed	1,325	2.8
Total appealed	46,665	100.0

Mr. NELSON. Mr. President, the great imperfection of this provision is that it authorizes the Agricultural Department to fix standards and grades of small grains—wheat, oats, barley, flax, corn, and all those. While it provides for the fixing of arbitrary standards, it makes no provision, as I shall point out, for having those standards enforced by what I call direct Federal authority.

Here is another difficulty which will be found: In Minnesota most of the spring wheat has either been handled at Duluth or at Minneapolis; that is, most of the crop that has not been ground at Minneapolis or at other mills in the State. Owing to climatic conditions, as to whether we had a dry or a rainy season, our board of grain inspection had to meet every year at the beginning of the season, examine the grain that was raised in the State, and make the grades and standards to fit the crop of that year. It was found by experience—and the Agricultural Department will find it so under this provision—that it is necessary year by year to establish a change of grades throughout the country.

The great defect of this provision, however, is that while it allows the department to make these grades—and I do not see how they can make them except practically to adopt the grades which have been adopted in the most progressive States in the Union—no method is provided by which this inspection can be carried on. The bill does not provide for Federal inspectors. An amendment has been placed in the bill—and it is a very good amendment so far as it goes—which has done more to reconcile me to the provision than any other amendment which is in the bill, authorizing the Agricultural Department to designate the grain inspectors of a State which has a State inspection system to inspect the grain; in other words, it leaves it so that while the Federal Government establishes the standard, State inspectors, who are paid by the State, will be the men who inspect the grain and see that it complies with the Federal standard; but in States where they have no such system the matter is left in the air.

Along the entire eastern seaboard, where there is no State system—and all the Federal Government proposes to do by this plan is to license inspectors—what will be the result? The result will be that the representatives of the Boards of Trade of New York, of Boston, of Philadelphia, of Baltimore, of New Orleans, of Norfolk, and of other shipping points will apply, and no one else will apply, to the Agricultural Department to appoint men who they claim are expert inspectors.

The bill makes no provision for the pay of these inspectors. Whatever inspectors are licensed under this proposed legislation in cases where States have a State system will undoubtedly be paid by the States; but in all other cases, if the inspectors are paid at all they will have to be paid by the representatives or by the members of the chambers of commerce and the boards of trade of the different cities.

So under this system, Mr. President, however good the intentions of the Agricultural Department may be, they will be jumping from the frying pan into the fire that we had in Minnesota before we got State inspection. Prior to 1885 our grain inspection was carried on by the representatives of the chambers of commerce and boards of trade, and our farmers were at their mercy. Those bodies represented the buyers; the men who dealt in grain; they represented the millers.

With the exception of the States that have a State system, you will remit all the rest of the country, under the provisions of this bill, to exactly such an obsolete system as we had in Minnesota prior to the enactment of our State system; in other words, you leave these inspectors to be merely representatives of the boards of trade. Who else is going to pay them? The bill makes no provision for paying any of these inspectors, and you will not find men engaged in the work of inspecting and grading grain and seeing that it conforms to the Federal standards who will be willing to serve without pay. Where we have a State system the States now, under the amendment which the Senator from Oklahoma [Mr. GORE] has introduced, will have to pay for this grading; but in all other cases there is no provision for paying the inspectors. If inspectors are desired somebody will have to pay them, and I can not conceive of anybody else who will pay them except the boards of trade that now control the inspection.

Mr. SHAFROTH. Mr. President——

Mr. NELSON. I yield to the Senator from Colorado.

Mr. SHAFROTH. If the Senator will yield to me, I desire to ask, is it not a fact that the inspectors now at New York, Boston, Philadelphia, and Baltimore are paid so much a bushel for inspection, and that that really comes out of the person who is selling the wheat; that it goes to make up a part of the purchase price? Is not that the way in which these expenses are paid in those places, and in every other place?

Mr. NELSON. They may charge a fee for it, but, after all, the men who are appointed and who are acting as inspectors represent the boards of trade, and the expenses that they have to pay come out of the farmer, the man who sells the wheat.

Mr. SHAFROTH. Yes.

Mr. NELSON. But I want to tell the Senator that a great deal of the spring wheat—the Canadian spring wheat and the Duluth hard wheat—is shipped to Europe, not on the inspection of the boards of trade of the seaboard, but on the Manitoba inspection and on the Minnesota inspection.

Mr. SHAFROTH. I have no doubt that the Minnesota inspection is a very good one; and it is said that the inspection of the Canadian grains is the one most favored of any in the European markets. I want to ask the Senator this question: He believes that the Minnesota law was a great improvement over the conditions that existed in that State previous to the time of the enactment of that law, does he not?

Mr. NELSON. It was a great improvement over previous conditions. We had no law on the subject before that time.

Mr. SHAFROTH. Well, an improvement over the conditions that prevailed there of inspection by boards of trade, as the Senator has described?

Mr. NELSON. Yes.

Mr. SHAFROTH. Was there not a good deal of opposition to the passage of the Minnesota grain-grading law?

Mr. NELSON. The farmers were enthusiastically in favor of it; but the millers and the men operating the boards of exchange and the boards of trade, of course, were opposed to it.

Mr. SHAFROTH. Yes.

Mr. NELSON. And here I want to call the attention of the Senator to the fact that under this bill the system along the seaboard will be exactly like the system we had in Minnesota before we had any law, with only this difference, that the Agricultural Department makes a standard. It prescribes the standard to which the wheat, the oats, and the barley shall conform, No. 1, No. 2, and so forth; but when it comes to passing upon the question of whether the grain actually conforms to that standard, that is a matter which is left to the judgment of the inspector, whoever he may be; and that inspector in the seaboard States and in all the States which have no State inspection will be the representatives of the boards of trade and of the chambers of commerce.

Mr. SHAFROTH. But the right of appeal exists in the event that the grading is not satisfactory.

Mr. NELSON. Well, how can the right of appeal be made effective under this provision? Now, let me call the attention of the Senator from Colorado to the Minnesota law. Under the provisions of that law, after a carload of wheat has been graded and inspected, the shipper or the buyer can call for a reinspection, and he can have that reinspection right then and there on the spot before the car is unloaded. Then we have a board of grain appeals, independent of the grain-inspection service, consisting of two sections, three men in each section, one at Duluth and one at Minneapolis. If the shipper or the purchaser is dissatisfied with the reinspection, he can immediately take the question before the board of grain appeals and have it adjudicated that very same day on the spot and before the car is unloaded. I do not see how such a thing will be possible under the Federal system proposed by this bill.

Mr. SHAFROTH. Well, if the State inspectors are given a license by the Federal Government, can they not do identically the same thing?

Mr. NELSON. No. They can not act as a board of appeal. Such a board is not provided for. In the first place, there is no provision here like that in our Minnesota law for a reinspection, and there is no provision for an appeal except to the Secretary of Agriculture. That is all that is provided for. In order to make the law as efficacious in that respect as is the Minnesota law, it would be necessary to have a multitude of men representing the Secretary of Agriculture at such places as Minneapolis and Duluth, on the spot, ready to hear and pass upon appeals before the car is unloaded.

Let me explain to the Senator that grain is not like any other product. If a carload of wheat has just come to the mill, it can be inspected on the track, and the shipper or purchaser can have a reinspection immediately on the track if he asks for it. If there is an appeal made from that inspection, it is essential that there should be an adjudication of the question immediately before the car is unloaded, before the grain is mixed in an elevator or a mill with other grain.

Mr. SHAFROTH. Mr. President, does not the Senator recognize that under this appropriation of $250,000 there will be inspectors of the Federal Government, or supervisors, at Minneapolis, at Duluth, and at the other 35 points from which grain is exported out of the country?

Mr. NELSON. There is no provision to that effect in the bill; there is only provision for an appeal to the Secretary of Agriculture. It does not provide that there shall be a representative of the Agricultural Department at each of these points where an appeal would necessarily be made.

Mr. SHAFROTH. The department could not dispose of the $250,000 unless they proceeded to some extent along that line.

Mr. NELSON. The $250,000 will be absorbed by the office here. It will be absorbed like the $700,000, which was appropriated for moisture tests as affecting corn. Two hundred and fifty thousand dollars would not go a great way in the direction indicated by the Senator.

As I have said, while this bill purports to allow the Secretary of Agriculture to fix grades, it is utterly defective and will prove a great impediment to the grain trade. In my opinion before it has been in existence very long, it will be found that the very men who are now advocating the passage of the bill will be the most disappointed men in the world. For illustration, take the second proviso in section 4, on page 103:

And provided further, That any such grain sold or offered for sale by any of the grades fixed therefor in the official grain standards may, upon compliance with the rules and regulations prescribed by the Secretary of Agriculture, be shipped without inspection from a place at which there is no inspector licensed under this act to a place at which there is no such inspector, subject to the right of either party to refer any dispute as to the grade of the grain to the Secretary of Agriculture, who may determine and certify the true grade thereof.

Here is the great difficulty: My friend from North Dakota [Mr. GRONNA], who is a practical farmer and raises a good deal of grain, ships a half dozen carloads of grain thrashed on his farm at Lakota, where there is no inspection. He sends that grain to a mill in the interior of Minnesota where there is no inspection and sells it there. When he contracts for the sale of that wheat he says: "I will send you so many bushels of No. 1 northern wheat." He sells his wheat, not by sample; he sells it by grade. When it comes to the mill the miller says, "This is not No. 1 northern; I can not accept it." There is a dispute, and that dispute must be settled by the Secretary of Agriculture. Where is the representative of the Agricultural Department at that interior mill, and where will you find such a representative on the spot? The wheat is there on the siding at the mill; a dispute arises in respect to it; and where is Uncle Sam visible to settle that dispute on appeal?

Mr. SHAFROTH. Mr. President, I should like to ask the Senator whether he believes that Uncle Sam ought to have an inspector at every place in the United States where there is an elevator?

Mr. NELSON. Then you ought to leave it to the man who ships his own grain and not interfere with him. In North Dakota, for instance, they have no State system——

Mr. REED. Mr. President——

The PRESIDING OFFICER (Mr. POMERENE in the chair). Does the Senator from Minnesota yield to the Senator from Missouri?

Mr. NELSON. I yield to the Senator.

Mr. REED. I do not like to see that point passed in that way. The Senator from Colorado [Mr. SHAFROTH] insists that this bill is properly drawn. The Senator from Minnesota [Mr. NELSON] has stated a case and has asked how the grain could be inspected and the dispute settled under this bill. The Senator from Colorado, instead of answering the question, replied: "Do you want a representative of Uncle Sam at every place?" That is not an answer.

A farmer to-day has the right to ship his grain from one point to another, and in case a dispute arises to have recourse to the ordinary legal methods to settle that dispute. If you are going to take away from him that right, then you must substitute for it some other means of redress.

I should like to have somebody tell me what is going to happen to the farmer the Senator referred to in his illustration if he has five or six carloads of grain on the track when there is no inspector there and a dispute arises? Is he to try that dispute before a court consisting of the Secretary of Agriculture, who is 2,000 miles away in Washington? And, in the meantime, what is to become of the grain?

That is a practical question; it is not necessarily fatal to this bill; but it certainly ought to be properly answered, or else the bill ought to be amended.

Mr. McCUMBER and Mr. SHAFROTH addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Minnesota yield, and to whom?

Mr. NELSON. I yield first to the Senator from North Dakota, and then I will yield to the Senator from Colorado.

Mr. McCUMBER. I was going to ask the Senator what provision there is now for any appeal. Suppose the Senator from North Dakota should ship a carload of grain to Austin, Minn. There is no inspector there. If he sends a carload of grain there and there is a dispute, they have to settle it in some way. There is no Minnesota inspector at Austin to look after that.

Mr. NELSON. Oh, yes, there is. It is inspected in Minneapolis.

Mr. McCUMBER. But I was saying, suppose you do not ship it through Minneapolis at all?

Mr. NELSON. It goes through Minneapolis, and it is inspected there.

Mr. McCUMBER. Not everything has to go through Minneapolis in order to get to other places in Minnesota.

Mr. NELSON. Oh, no. Some goes through Duluth.

Mr. McCUMBER. The Senator, however, has answered the question properly when he says that practically all of the grain goes to these great central places, and can be weighed and examined and graded there. I agree with the Senator from Minnesota that there is the place where the grading should be done, and we should not interfere or require the grading to be

done at any of these other places. If it is done there and an appeal taken—and I have an amendment prepared along that line—it is taken under the provisions of the laws of Minnesota, if it is in Minneapolis, as has been indicated by the Senator himself, and this ought to be so amended that the provision for the appeal is perfected. It could not be put into effect the way the bill is drawn. But if you allow the Minnesota machinery to go on and handle the grain—and I am not objecting to it—with a Federal standard, then you utilize the Minnesota law for appeal.

Mr. NELSON. That is exactly what I contend for—that if you want to make this legislation useful and effective for the farmers, the grain buyers, and the millers in our State, in addition to the establishment of the Federal grades and the inspection of the grain by the State inspectors licensed by the Federal Government, and to that extent quasi Federal officials, you should provide, as the Minnesota law does, two things in order to make the system of advantage. In the first place, you should provide for a reinspection. That is very valuable.

I want to read here, in that connection, from a statement which gives a list of the number of cars that reached Minneapolis:

Out of 232,512 cars inspected at Minneapolis during the year ending August 31, 1913, reinspection was called on 61,205, or 26.3 per cent of the total. The results of such reinspections and appeals appear in the following statement.

This will be published in my remarks. I have already asked to have it inserted. This is where reinspection was had:

Original grade sustained, 63.6 per cent.
Original grade raised, 23.7 per cent.
Original grade lowered, 6.3 per cent.

There you can see the value of the reinspection provided for.

Mr. McCUMBER. How many reinspections were there?

Mr. NELSON. Reinspection was called for in the case of 61,205 cars, and out of those, on reinspection, 23.7 per cent were raised. That was the first step. Now I want to call attention to the next step.

Mr. McCUMBER. I want to say to the Senator right here that I agree with him as to the impossibility of the Secretary of Agriculture acting on 61,000 cases that arise from Minneapolis alone; and every reinspection is in effect an appeal from the decision.

Mr. NELSON. Of course.

Mr. McCUMBER. Therefore it is an impossibility, as I said yesterday. Forty secretaries and all of their force could never take care of the inspections and reinspections provided for in this bill.

Mr. GRONNA. Mr. President——

Mr. NELSON. Why, Dr. Duvel, Mr. President, could take his entire force in the Department of Agriculture here, march them out to Minneapolis, establish his headquarters there, and his force would not have the ability to reinspect these cars where they ask for reinspection.

This is not all——

Mr. GRONNA. Mr. President——

Mr. NELSON. I stated that I would yield to the Senator from Colorado. I am sorry I did not do so before. I intended to yield to that Senator.

Mr. SHAFROTH. Mr. President, the answer that was made by the Senator from North Dakota covered practically what I was going to say. For that reason I did not care to answer the statement made by the Senator from Missouri.

Mr. NELSON. I did not want the Senator to understand that I was discourteous.

Mr. SHAFROTH. No; I did not so take it.

Mr. GRONNA. Mr. President——

Mr. NELSON. I yield to the Senator from North Dakota.

Mr. GRONNA. I certainly do not wish to be discourteous to my own colleague, but I can tell the Senator from North Dakota how the business is being transacted now in the case cited by the Senator from Minnesota.

If I or some one else should ship one carload or more of wheat to a mill, the shipper would take a sample and send it to the Minneapolis inspectors; the mill would take a sample and send it to the Minneapolis inspectors and the shipper would not be penalized under existing conditions as he would be under this proposed law, because it is provided that you could not unload the grain; you would be compelled to pay demurrage on that car of wheat or on that number of cars of wheat.

If the Senator will allow me further, referring to inspection, the records show that on an average, from year to year, 58 per cent of all the grain inspected is being reinspected, and the records further show that in the case of about 12 per cent of the reinspections an appeal is being taken from the inspectors to the appeal board.

It is true, as the senior Senator from Minnesota said, that it would be a physical impossibility for the Secretary of Agriculture to make this inspection unless we provide for boards of appeal at these terminals.

Mr. JOHNSON of South Dakota. Mr. President——

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from South Dakota?

Mr. NELSON. Certainly.

Mr. JOHNSON of South Dakota. Mr. President, for one I wanted to answer the question asked the Senator from Minnesota, as to whether he thought we ought to have a grain inspector at every point. I say that ought to be done, if it is possible; and I have an amendment, which I shall offer a little later in the day, which I believe is worthy of consideration and will bring that matter about in a consistent way. I hope the chairman of the committee having this bill in charge will accept my amendment.

I am favorable to the bill as it stands, but if in any possible way I could submit something that would be an improvement on it I should be glad to do so; and I hope this body may conclude, after consideration, that this amendment gives to many farmers advantages that the bill as it now stands does not do.

Mr. NELSON. I have seen the amendment of the Senator from South Dakota, and I am favorably impressed with it.

In section 7 of this bill the Senator from Oklahoma, the chairman of the committee, offered an amendment, to which I referred a while ago, which I regard as a very wholesome amendment. The trouble is that it does not go far enough:

Provided, That in any State which has State grain inspection, or which may hereafter have department established by the laws of such State, the Secretary of Agriculture shall issue licenses to the persons duly authorized and employed to inspect and grade grain under the laws of such State.

That is a very good provision; but you ought to adopt, in connection with that, the principle of the Minnesota law providing for a reinspection; and, in addition to that, you ought to provide for an appeal to the board of grain appeals. Now, let me call attention to the operation of the board of grain appeals:

Of the 61,205 cars reinspected at Minneapolis, there were 46,665, or 76.2 per cent, appealed.

That means appealed from reinspection, mind you. Out of sixty-one thousand and some odd cars that were reinspected out of the total of 232,000 cars, in the case of forty-six thousand and some odd cars there was an appeal from the reinspection to the board of grain appeals, and what was the result? The decision on reinspection was sustained in 78.8 per cent of the cases. The grade was raised in 16.7 per cent of the cases by the board of grain appeals. On reinspection it was raised in 23.7 per cent of the cases, and on appeal in 16.7 per cent of the cases. The decision was lowered in only 1.7 per cent of the cases, and the dockage was changed in 2.8 per cent of the cases. Of course, the question of dockage is not involved in this bill.

If you want to make this system effective in the Northwest, there is no method by which the State of North Dakota can secure inspectors unless men will apply to the department for a license to inspect, and they must show their qualifications. Naturally they would be the employees of the grain companies who were buying grain at the local elevators; and inasmuch as the State has provided no compensation, the compensation of those inspectors would be paid by the elevator companies. In other words, if you had inspectors at all in North Dakota under this law, in the absence of further legislation, they would necessarily be the representatives of the grain buyers, and they would have to be paid by the grain buyers, if paid at all.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Iowa?

Mr. NELSON. I yield to the Senator.

Mr. CUMMINS. The Senator referred some time ago to an amendment which had been adopted which in his opinion bettered the bill very greatly.

Mr. NELSON. Yes. It bettered it so far as the States that have State inspection are concerned.

Mr. CUMMINS. And the Senator has been assuming since that time that in Minnesota, for instance, the inspectors licensed by the General Government would be the inspectors who are appointed under the State laws.

Mr. NELSON. The amendment so provides.

Mr. CUMMINS. I do not quite so understand it. I was wondering whether I was mistaken about it. As I read the amendment, the Federal Government is required to appoint these State inspectors, but it can appoint just as many more as it pleases.

Mr. NELSON. Certainly; the Senator is correct in that statement.

Mr. CUMMINS. And the State of Minnesota might have a very large number of inspectors who were under no obligation whatever to the State law——

Mr. NELSON. Certainly.

Mr. CUMMINS. And who would stand, therefore, in exactly the same attitude toward this business as would an inspector in the State of Iowa, for instance, that has no State inspection law?

Mr. NELSON. The Senator's statement is correct and true, that while the Government would be required to appoint the State inspectors, who are trained men, to make the inspection, there is nothing in the bill that would prohibit them from appointing a multitude of other inspectors.

Mr. McCUMBER. I will say to the Senator that there is something lacking in the bill that would prevent them; and that is an appropriation.

Mr. NELSON. Yes.

Mr. CUMMINS. Mr. President, if the Senator will allow me, that would be no prevention at all, because under the rules and regulations the Secretary might make these inspectors would be paid, as the Senator from Minnesota has pointed out, ultimately by the grain grower; and their appointment or license would be suggested, of course, by those who were buying the grain.

Mr. NELSON. If Senators will give me their attention, I can explain why the millers are so anxious to have this system adopted. We will, for example, take a country mill in a small town of a thousand or two thousand people. There is a large gristmill there. They are buying wheat, importing it. There will be nobody there inspecting that wheat. They will have somebody connected with their mill apply to the Agricultural Department to be licensed as a Federal inspector; he will get a license; and that representative of the mill will be the Federal inspector who will grade and pass upon the wheat that is *taken in* by that mill; in other words, the millers in all those cases will have the inspection and grading of the grain absolutely in their own hands.

This bill, in section 7, provides:

> The Secretary of Agriculture may issue a license to any person, upon presentation to him of satisfactory evidence that such person is competent, to inspect and grade grain and to certificate the grade thereof for shipment.

Who would be likely to come up to the qualifications in these cases? It would be the buyers at the local elevators, the country elevators, and it would be the buyers, the men at these interior gristmills. I have had numerous letters from a certain mill in southern Minnesota, and that is a portion of our State where in recent years they have ceased to raise wheat and have gone into mixed farming, dairy farming, cattle raising, and hog raising. The owners of that mill, which is a large one, get all their wheat from the Dakotas, from northern Minnesota, the Red River Valley, and from South Dakota, and they get some Turkey red winter wheat from the Southwest which they mix in with the hard wheat. It would be a fine thing for that mill to have one of their employees appointed an inspector to pass upon the grades of wheat that were shipped to that mill and that the mill bought. That is exactly what may transpire under this bill in the case of every mill that can furnish a competent man, and I mean by that a man who is competent to pass upon the matter of grades of wheat or other small grain. If he can pass the requisite examination—and I take it a man in a mill grinding wheat or a man running a country elevator for one of the large companies would be most likely to pass such an examination—undoubtedly the Agricultural Department would give him a license.

I have not given the name and locality particularly of the mill that I referred to a moment ago, and I do not care to do so; but take the case of this mill. The owners would undoubtedly go to the Secretary of Agriculture and say: "There is no grain inspection at this point; we are buying wheat. It is shipped to us from North Dakota, from South Dakota, from Nebraska, Kansas, northern Iowa, and northwestern Wisconsin. This wheat ought to be inspected, but there is no inspector here. We have a good mill man in our employ, a trained man; we wish you would appoint him and give him a license as a Federal inspector." So, Mr. President, outside of the terminal points of Minneapolis and Duluth, in that northwestern country, you would have all these country mills inspecting and passing upon the grades of wheat they bought. If I mistake not the operation of such a law would necessarily be one-sided and unjust to the farmers.

Mr. GORE. Mr. President——

Mr. NELSON. I yield to the Senator.

Mr. GORE. I was under the impression that the amendment offered by the junior Senator from North Dakota [Mr. GRONNA] yesterday and adopted would meet the situation which the Senator describes and prevent the evil which he foresees.

Mr. NELSON. I overlooked that amendment. I heard it read hastily; but I do not think it covers the point at all as fully as it ought. If the amendment is as comprehensive as the Senator from Oklahoma, the chairman of the committee, implies, it would relieve the situation to some extent, and I hope when the bill goes to conference that provision will be kept in it.

Mr. GRONNA. Mr. President——

Mr. NELSON. I yield to the Senator.

Mr. GRONNA. I ask the Senator if he will permit the amendment to be read at this time? It may be that it does not cover the situation; and, if it does not, he can suggest an amendment to it.

Mr. NELSON. Very well.

Mr. GRONNA. I ask the Secretary to read it.

The PRESIDING OFFICER. The Secretary will read the amendment.

The Secretary read as follows:

> *Provided*, That no inspector or deputy inspector licensed by the Secretary of Agriculture to inspect or supervise the grading of grain shall, during his term of service, be interested, directly or indirectly, in the handling, storing, shipping, purchasing, or selling of grain, nor shall he be in the employment of any person or corporation financially interested in the handling, storing, shipping, purchasing, or selling of grain.

Mr. NELSON. I am not quite sure whether that entirely covers the case or whether it would cover the case of the mills. It was a long time, Mr. President, before it dawned upon me why these country mills were so anxious for Federal inspection. After studying the provisions of this bill—and that was before this amendment of the Senator from North Dakota had been offered—it became perfectly clear and obvious to me that the great interest they had in it would be that the interior country mills would be allowed to inspect and pass upon the grades of the wheat they bought.

I will again, Mr. President, though in a somewhat disjointed way, as I have already touched upon it, refer to another provision of the Minnesota law that ought to be incorporated in this bill. This bill ought to be amended so as to provide for a rapid system of reinspection. The reinspection ought to be done at once, before the car is unloaded, and an appeal to the board of grain appeals ought to be allowed and acted upon instantly, before the car is unloaded.

Under our Minnesota system the three things concur. When the car comes to the railway station it is put on the siding. It comes in the evening or at night. The first step is taken in the morning when a sampler goes out and examines the grain in the car and takes samples from all parts of it, so as to ascertain whether the wheat has been doctored, whether there is good wheat in the center and poor on the outside, or vice versa. The samples are taken and immediately brought to the inspectors. The inspectors pass upon the grade. If the grain is shipped to a miller or a commission merchant, and he is there present and is dissatisfied with the grade allowed by an inspector, he just states to the inspector, "I desire to have a reinspection." All he has to do is to indicate right then and there that he wants a reinspection. It is immediately referred to two other inspectors, not the one who inspected it in the first instance, and they reinspect it. If either the buyer or the seller is dissatisfied with that reinspection, he can appeal immediately to what is called the board of grain appeals. To make that inspection rapid, we have under our system divided our board of grain appeals into two sections. There are three men in each section sitting constantly, one section at Duluth and the other at Minneapolis. When the shipper or the buyer of the wheat is dissatisfied with the reinspection and desires to take an appeal, that appeal is taken instantly, and is heard the very same day. In other words, the reinspection and the appeal are disposed of on the same day and before the car is unloaded.

Mr. McCUMBER. Will the Senator allow me to make a suggestion how that can be met by a very small amendment right here?

Mr. NELSON. Certainly.

Mr. McCUMBER. On pages 104 and 105 we find this language:

> That whenever standards shall have been fixed and established under this act for any grain and any quantity of such grain which has been sold, offered for sale, shipped, or delivered for shipment in interstate or foreign commerce shall have been inspected and a dispute arises as to whether the grade as determined by such inspection of any such grain in fact conforms to the standard of the specified grade, any interested party may appeal the question to the Secretary of Agriculture.

I would insert after "may" these words:

Any interested party may call for a reinspection or appeal the question.

And then add these words:

In accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any primal decision rendered under such laws, rules, or regulations to the Secretary of Agriculture.

The PRESIDING OFFICER. May the Chair have the attention of the Senator from North Dakota? The Chair is advised that on page 104, line 24, the words "which has been" were stricken out.

Mr. McCUMBER. That would make no difference in the amendment. That would cover the case so that we could utilize the machinery not only of the laws of Minnesota but of the boards of exchange, and so forth, of the cities for a reinspection and appeal, with a final right of appeal under such rules as the Secretary of Agriculture may provide from the primal appeal taken at such place.

Mr. NELSON. I think the amendment of the Senator from North Dakota is a very valuable amendment, and added to the other amendments to the bill it will improve it immensely.

I have taken up more of the time of the Senate in the discussion of this matter than I had originally intended. I can not help but feel that in the State of Minnesota we have established the best grain-inspection system existing anywhere in this country. We have been for 30 years building up that system. I feel that this legislation would in part destroy the great good that we have accomplished in the State of Minnesota, and in other respects, even with the amendments already adopted and the amendment proposed by the Senator from North Dakota, the system never could accomplish what our system does in the State of Minnesota.

We have in the State, as I said at the outset, a law which compels the railroad companies to furnish cars for farmers at the sidings and stations, so that the farmers can get rid of the expense of passing their grain through elevators and paying the charges incident to it. They can have a car or several cars switched up to the siding and have those cars loaded with grain and shipped to the terminal centers. They are not only graded under our State system and the grades and qualities passed upon, but under our system we have a weighing department for the protection of the shipper and farmer, so that when that carload of grain comes to the terminal it is not only inspected and graded by the State authorities, but the farmer can have his carload of wheat weighed, so that he is not subject to any cheating or swindling in the matter of weight.

I think this system, even with all the amendments that have been proposed to it, will fall far short of the system we have existing in the State of Minnesota; and while I can not agree to the measure, I must say that it is in its entirety far better than and a vast improvement upon any grain-grading inspection bill we have ever heretofore had before the Senate.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. VARDAMAN in the chair). Does the Senator from Minnesota yield to the Senator from Ohio?

Mr. NELSON. Certainly.

Mr. POMERENE. I did not have the pleasure of hearing the Senator fully. If he has not already explained the Minnesota system, I would be very glad to have him state whether or not the standards and the grades which prevail in Minnesota are fixed by law or by some bureau or department.

Mr. NELSON. We have in Minnesota what we call the board of railroad and warehouse commissioners, consisting of three men. Every year at the beginning of the grain season, just before the farmers commence to thrash and ship their grain, that board meets with the chief grain inspector and they establish the grades for that year.

You can not very well establish by law a fixed and permanent grade, because the grades fluctuate from one year to another. In some years, when we have a dry, rainless season, the grain is of a much harder and better quality than in wet and rainy seasons. Oftentimes the grain gets more or less deteriorated, and the crops vary from year to year.

Mr. POMERENE. Do I understand that these grades are fixed by certain samples of grain rather than by definition?

Mr. NELSON. They are fixed by the board. They establish a grade and define it, and that grade established by the board holds good for that season, that grain year.

Mr. POMERENE. Does that definition have reference to some sample which is used and adopted?

Mr. NELSON. They define what constitutes those grades. For instance, we have in wheat first No. 1 hard, then we have No. 1 northern, then we have No. 2 northern, we have No. 3 northern, we have No. 4 northern, and then we have what we call rejected; and then we have no-grade wheat.

Mr. POMERENE. Are those grades susceptible of definition? If those grades are susceptible of definition——

Mr. NELSON. Yes; they define them.

Mr. POMERENE. What is the necessity of changing the definition each year?

Mr. NELSON. For the reason that the crop changes and fluctuates every year. They can not have a permanent grade year by year, because of the changes in the quality and character of the crop. They have found that necessary. Some years a part of the grading is the weight of the grain; that is, a part of the grade depends upon how many pounds there are to the measured bushel. Some years the wheat may be very good, but light in weight; in other years it may be very poor, but very heavy in weight.

Mr. POMERENE. Then, I take it, it is the Senator's idea that it would be impossible to define by law the various grades?

Mr. NELSON. Oh, it is not attempted by this bill. It is left to the Agricultural Department.

Mr. POMERENE. I realize that very fully, but——

Mr. NELSON. This bill does the same. The difference is that it leaves to the Department of Agriculture what we have a board of three railroad commissioners, with a chief inspector, to pass upon.

Mr. POMERENE. I was trying to satisfy my own mind as to whether or not it was possible to do this by law, or must it be left to some board?

Mr. NELSON. I do not see how it could be done—and it is not attempted to be done—by this bill.

I would simply say in conclusion, Mr. President, without further wearying the patience of the Senate, that I feel that this system of grain inspection will prove a great injury and detriment to the farmers of Minnesota, and while the bill is much better than any grain-inspection bill that has been pending in the Senate since I have been here, and is a vast improvement in many respects on even the best of them that have preceded it, yet I think this legislation will fall far short of giving the benefits and advantages we derive under the best system in the United States that we have in the State of Minnesota. Even such men in the Agricultural Department as Dr. Duvel, who is the inspiration and, I think, the father of this legislation, admit that the Minnesota system is the very best system in the United States.

I ask to have the matter which I send to the desk inserted as a part of my remarks.

The PRESIDING OFFICER. The Chair hears no objection, and it is so ordered.

The matter referred to is as follows:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, May 12, 1916.

Hon. KNUTE NELSON,
United States Senate, Washington, D. C.

DEAR SIR: On behalf of the export grain trade of the United States the Commercial Exchange of Philadelphia respectfully asks you to vote against and do all you can to oppose the passage of the amendment to the Agricultural appropriation bill, known as the "grain-grades act."

We ask this because the provisions of this act are calculated to injure the export grain trade, and injury to that trade will necessarily result in serious hardship to the agricultural and farming interests of the country. The farmers of this country as a rule are not advocating the passage of this bill, and they know nothing whatever of its text. A few western grain men not familiar with the requirements of the export grain trade have fathered this bill, and by the cooperation of their affiliated associations have made it appear to have a strong indorsement. Could the farmers know how much it will injure them, they would flood Congress with telegrams and letters of protest.

Your attention is invited to the inclosed communications, which recite in detail our reasons for opposing the measure.

Yours, very truly,

L. G. GRAFF, *President.*

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
May 12, 1916.

To the MEMBERS OF THE UNITED STATES SENATE,
Washington, D. C.:

In re "grain-grades act."

[The Commercial Exchange of Philadelphia was founded in 1854, and is composed of merchants engaged in the grain, flour, feed, and provisions business, both domestic and export; also the principal banks, railroads, and steamship lines of Philadelphia. It has one of the best equipped grain-inspection departments in the United States. Through this exchange was received approximately 71,000,000 bushels of grain, including flour, of which 50,000,000 bushels was exported from this port in 1915.]

The export trade of this country is the best friend of the farmer of the United States, and should it be injured, harassed, or taken away we hesitate to forecast the dire consequences to the producer of the crops. The enormous crops raised in this country leave a large available surplus annually for export, which, if not disposed of, would mean ruinously low prices to our farmers, and we can not expect to secure and hold this foreign trade if our laws regarding the grading of grain are such as to hamper and destroy fair competition with other exporting countries.

The proposed grain-grades act, should it become a law, would be especially detrimental to the export trade and the farmer, inasmuch as its provisions would prevent from competing upon equal terms with our competitors, such as the Dominion of Canada, Argentina, and other exporting countries, these competitors not being amenable to our laws. As a concrete example of this, permit us to say that the United States Department of Agriculture has adopted a standard for grading corn, requiring No 2 corn to contain not more than 15½ per cent moisture, No. 3 corn not more than 17½ per cent moisture, and No. 4 corn not more than 19½ per cent moisture, etc. In the western markets the settling price between No. 2 and No. 3 corn is 2 cents a bushel, and between No. 2 and No. 4 corn as much as 6 cents a bushel. At the present time all of the No. 3 corn can be used for export without docking the farmer or country shipper, but the Department of Agriculture, should the grain grades act become a law, would prohibit us from doing so, and would therefore legislate in favor of the foreign buyer, as well as our competitor, and against the producer in this country. Very little corn, as you may know, has as little moisture as 15½ per cent in its natural state or condition, and it is safe to say 2,500,000,000 bushels of the crop will contain a moisture above 15½ per cent. As all corn containing one-quarter or even an eighth higher percentage of moisture would necessarily, under the department's proposed moisture tests, be forced to take the grade of No. 3 corn, the Agricultural Department would thereby reduce the value of this year's crop to the farmers of the country 2 cents a bushel, which, as above stated, is the settling price between the grades of No. 2 and No. 3 corn, or $50,000,000; this is, of course, assuming it would all grade No. 3 corn, but we know a great deal of it would be below No. 3, and as No. 4 is docked 4 to 6 cents a bushel, it would be a safe estimate to say the loss to the farmer by reason of the proposed grades would be 3 cents a bushel, or $75,000,000.

Furthermore, our Philadelphia merchants, together with the efficient grain-inspection department of this exchange, by reason of their knowledge and experience in blending wheats, are producing an article which the millers of England, France, and Holland have shown a desire to purchase in preference to those of western markets. It is only within the past two years that the great State of Montana has produced wheat in large enough quantities to become a factor in the export trade. During that time the production of wheat in that State has grown from an unknown quantity to that of 33,000,000 bushels, a matter of great importance to the State, the railroads, the steamship lines, and the export merchants of the entire country. Under our present export grading system we are permitted to bring that wheat from Montana to Philadelphia, and by blending it with wheat from other sections of the United States are enabled to give to our foreign merchant millers a desired milling article, of which we have shipped millions of bushels within the past year. Under the terms of the grain-grades act this will be impossible.

Another important factor that should be considered in connection with the proposed grain-grades act is, that grain graded at western primary points frequently deteriorates in quality while in transit between the western shipping point and the eastern terminus. If the western exporter has sold such grain to the foreign buyer on western certificates of inspection, the question arises as to the attitude of the Government in case the grain arrives at the seaboard out of condition. Will it stop the shipment and compel the exporter to put the grain in good condition, or will the shipment be permitted to continue on its way across the ocean regardless of its condition? It would seem there is a responsibility on the part of the Government in such exigencies after the proposed grain-grades act should be enacted into law. If the Department of Agriculture, under the grain-grades act, permits deteriorated grain, as above referred to, to be shipped on the western certificate of inspection, this would be a serious discrimination against the seaboard exporter. Then, again, if this act becomes a law the exporters will of necessity be forced to establish their own brands, which would require every receiver, shipper, and exporter to have their grain stored in separate bins, so as to preserve the identity of the grain. This would necessitate largely increased storage facilities, for which the storage capacity of our elevators would prove to be decidedly inadequate, resulting in still further congesting the railroads and interfering with general business.

Finally, owing to the numerous varieties of grain grown in the United States, contingencies frequently arise requiring a change in the grades to meet the existing conditions and the requirements of the foreign buyer; this is especially applicable to wheat, and most generally after harvesting a new crop. In accordance with our present rules we can adopt and make effective such changes in grades as may be necessary and advise the foreign buyer of the same within a period of two weeks. Should the proposed grain-grades act become a law, it will require 60 days to make effective any changes in the grades, and usually there are unforeseen delays in all such governmental matters. This would be exceedingly detrimental to the export business, as well as to the farmer of the United States, and be especially beneficial to our competitor who is not amenable to our laws.

In view of the foregoing facts the Commercial Exchange of Philadelphia is unalterably opposed to the enactment of the grain-grades act, and solicits your earnest cooperation in bringing about the defeat of the bill.

Respectfully, yours, L. G. GRAFF, *President.*

Attest: A. B. CLEMMER, *Secretary.*

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, May 12, 1916.

To the MEMBERS of the UNITED STATES SENATE,
Washington D. C.:

In re "grain-grades act."

The committee on grain of the Commercial Exchange of Philadelphia enters this protest against the bill known as the United States grain-grades act.

We hold that the act in question not only places entirely too much power in the hands of one official of the Government, the Secretary of Agriculture, but that it will also work against the interests of the farmer as well as of the merchant engaged in the export of grain, two industries which are of vital importance to the welfare of the United States.

Any attempt on the part of the Government to force commerce to flow through certain prescribed channels and to submit to standards imposed in an arbitrary way will be injurious to trade. Under the present system there is a wholesome rivalry between different ports on the Atlantic seaboard to secure for each one its share of the export traffic and self-interest alone will dictate to the exporter the establishment of such grades as will promote business in the foreign markets and at the same time enable him to secure the proper kind of grain from the farmer in the interior. The mixture of certain grades of grain is not only a benefit in some cases to the foreign buyer as well as to the domestic buyer but is also a distinct benefit to the farmer and to the producer, because under such a system the different grades are not sacrificed in price but are so blended as to make, in the case of wheat, for instance, a good milling grade entirely satisfactory to the European buyer, without forcing the farmer or the producer to accept what might be called a slaughter price.

We hold that the export trade of the United States would be so hampered under the proposed legislation that serious injury would be done to it; and the present system, which has been in operation for years and is now giving general satisfaction both to the consumer and to the buyer, should not be disturbed. Competition between different ports will naturally tend to benefit the farmer for each port wishes its own grades to be popular with the buyer either at home or abroad, and any dishonest or unjust inspection will soon work its own cure.

We hold that the proposed legislation is largely in the direction of paternalism; that is to say, it places one of the great industries of the country under the paternal care of the Government at Washington, a process which we can not too strongly deprecate. The growth of the country in the last hundred years has been largely the result of private enterprise unfettered by oppressive legislation or by standards imposed by Government officials who know little or nothing of what they attempt to control. In the interest of the domestic and foreign commerce of the United States, as carried on in grain of all kinds, we protest against this legislation and ask you to vote against the grain-grades act.

Respectfully, yours,

GRAIN COMMITTEE OF THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
GEORGE M. WARNER, *Chairman.*

THE LURE OF THE SOUTHLAND.

Mr. RANSDELL. Mr. President, while the Agricultural bill is under consideration, I desire to address the Senate in regard to several matters which concern very closely the farmers of the United States and, indeed, the country at large. I allude to the large exodus of our best citizens into the British possessions north of the United States, and to the rapid congestion of our cities caused by the growing unpopularity of life on the farm, and by the large influx of foreign immigrants, the majority of whom settle in cities. I shall explain these questions briefly, for there is little dispute concerning them, and shall offer at some length what seems to me the best solution of these problems, which is that these people should go south and reap the benefit of its golden opportunities.

EMIGRATION TO CANADA.

Government reports show that during the past 10 years 1,200,350 people left the United States and went into Canada—an average of over 120,000 per year. This means that the number of those who emigrated to the great Dominion to the north in 10 years was almost equal to the entire population of the city of Philadelphia, and exceeds by more than 100,000 the combined population of New Orleans, San Francisco, and Washington. The commissioner of immigration at Winnipeg estimated several years ago that the material wealth brought in by each of these immigrants was $1,000. Hence, we have been contributing to Canada about one hundred and twenty millions a year in wealth. But that is not the worst of it. Most of these people are sturdy American farmers—the best brawn and blood of our land—who are leaving the farms of our Northern and Western States in order to secure cheaper lands. This is a very serious loss to us, and is not in any fair degree compensated by emigration from Canada to our country, nor by a like number of immigrants from any other country, for most of the people we are losing are full-fledged American citizens, with all that term implies, who carry away with them an average of $1,000 in money or property, while the foreigners who come to us are strangers to our institutions and language and bring with them in money an average of only about $23 per capita.

It certainly behooves the Nation to check and prevent this exodus, if possible, for it is rapidly impoverishing us and enriching our Canadian rivals.

RAPID GROWTH OF CITIES.

The increasing drift of population from the country to the city in the United States, as in other nations of the world, should cause very serious thought.

A study of the census returns shows that the growth of urban population—defined in 1910 as inhabitants of places having a population of 2,500 or more—is very much more rapid than rural. In 1880, 70.5 per cent of the population of the United States lived in rural communities; in 1890, 63.9 per cent; in 1900, 59.5 per cent; and in 1910, only 53.7 per cent. In other words, in 1910, 46.3 per cent of the population of the United States, or nearly one-half, lived in places of over 2,500 inhabitants. Between 1900 and 1910 the increase in rural population was 4,963,953, or 11.2 per cent, while the urban population increased 11,013,738, or 34.8 per cent. The cities grew more than three times as fast as the country districts. In six States, namely, New Hampshire, Vermont, Ohio, Indiana, Iowa, and Missouri, there was an actual decrease in rural population. The New England States as a whole showed a loss of rural population.

The same thing is true of our neighbor, Canada. The Canadian Year Book for 1914 comments on the striking increase of urban population at the expense of rural communities. During the decade from 1901 to 1911 the rural population increased by 17.2 per cent, while the increase in the urban population was 62.28 per cent, or nearly four times as great. In France the censuses of 1881, 1891, and 1901 show a marked increase in population of urban places ("communes" of at least 2,000 souls) and a material decrease in the number of dwellers in the country. During the past 60 years the urban population of France has doubled, while the rural population has decreased nearly 20 per cent. From 1901 to 1906 the rural districts of France lost 460,000 people, nearly all of whom had removed to the cities.

In Germany big increases in cities (places of 2,000 or more) are shown by the censuses of 1890, 1900, and 1905, while there was an actual decrease in the country people for 1890 and 1900 and a very small increase in 1905. In 1850 agriculture employed 65 per cent of the total German population; in 1870, 47 per cent; in 1899, 32 per cent; and in 1912, only 28.6 per cent.

In England and Wales a material increase in city population (places of 5,000 or more) appears for the census years 1881, 1891, 1901, and 1911, but a considerable decrease in rural districts for 1881, 1891, and 1901, with only a small increase in 1911.

It would seem, therefore, that our brethren of the leading European nations are suffering just as we are. Their cities are growing fast, while the tillers of the soil are becoming fewer in numbers. We are not exactly in that condition, for in this new country of ours there is still some increase in the number of people who live on the farm, but it is insignificant compared with the rapid growth of cities.

In my judgment this is one of the fruitful causes of the high price of living. All food products—and the food we eat is our heaviest item of expense—comes from the land or the water, and when the number of consumers who dwell in cities disproportionately exceeds the producers in the country it naturally results in high prices. If the relative growth of population in city and country remains the same for the next decade, and production of food be not materially increased in some very unlooked-for way, I see no reason why the price of edibles should decrease, but expect a large increase. Therefore, it is a matter of the greatest import to keep our people on the farms. When the number of consumers increases faster than the producers there is a smaller relative supply of food products to satisfy the demand, hence it becomes more and more active as the supply diminishes, and in consequence prices rise. This is exactly what is happening not only to us, but also to the nations of Europe.

It is a very interesting fact, not generally known, that the South is a mighty balance wheel for the Nation. As stated above, only 53.7 per cent of the population of the United States are rural dwellers, and this is approximately the average throughout the West. In the North and East, however, the proportion of country population is much less, being only about 41 per cent, and if it were not for the South, with its 77 per cent of country people, the average for the entire Nation would be high indeed. It is well worthy of noting that the South's actual rural increase in the last decade was much greater than the urban, and in this vast fertile southern region, with its large number of food producers, lies the Nation's strongest hope for solving the high cost of living.

Now, having shown our national loss by emigration to Canada of 1,200,000 citizens during the past 10 years, carrying with them material wealth in money and property valued at $1,200,000,000, to say nothing of the immense potential value of these splendid people, and having also pointed out the rapid growth of cities caused by foreign immigration, and by a desire on the part of many country people for the enticements of city life, I wish to suggest a remedy for these ills.

THE SOUTH THE NATION'S HOPE.

The eyes of the world are turned to the southern portion of our Republic, and we are witnessing a marvelous development in that section. Long retarded and checked in growth by the War between the States and its disastrous consequences, the South has arisen from her ashes a fairer and mightier land. The ravages of the war were fearful. In 1860 the value of taxable property in the South was six and one-third billion dollars, while in 1870 it had fallen to three and one-half billions, a decrease of nearly 50 per cent because of the war. In addition to this economic loss, hundreds of thousands of her sons had sacrificed their lives in her cause.

But the South was rich in the indomitable spirit of her citizens. With the same resistless energy and do-or-die perseverance that had characterized their actions during the war the men and women of the South turned their attention to the pursuits of peace. Literally they converted "their swords into plowshares and their spears into pruning hooks."

I am not here, however, to recite the disasters that befell my section in the sixties. These facts are matters of history. It is my purpose, however, to show how the South, in spite of all obstacles, has not only kept pace with but has actually outstripped the rest of the Nation.

She has laid aside her sable garments and, bedecked in a gown of bright colors, is enjoying her marvelous present prosperity and looking forward confidently to a still more glorious future, for she knows that a benign Providence has favored her above other lands, and that by virtue of her natural advantages and the enterprise and genius of her people she is becoming the most prosperous section of our great common country. Southward the star of empire takes its course.

I shall call your attention to the limitless resources of this great region; to its agricultural products, which include the best of nearly every known crop; to its live stock, which graze on land as rich as any in the world; to its inexhaustible treasuries of timber and mineral wealth; to its vast manufacturing industries; to its colossal mercantile and banking interests; to its admirable transportation system by road, rail, and river; to its golden opportunities for willing hands and honest hearts; to its crying need for men and money; and above all to its potential possibilities which make the South the Nation's greatest asset.

It has been the habit for certain gentlemen from other sections to smile tolerantly when some one from the South painted in bright colors the glories of Dixie. Some people have a sort of hazy idea that the South is a land of poetry and indolence; of romance and pretty women; of lazy negroes, who bask in the semitropical sun; and that our products are limited principally to cotton, tobacco, and lumber. I shall attempt to correct these misapprehensions.

It is not my purpose to make any boast for the South. I shall call the attention of the Senate to some plain facts which must be recognized, and the sooner the better, not only for the South but also for the North, East, and West, for in the cooperative development of all parts of our Nation alone is true prosperity to be found.

The South, consisting of the 16 States of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia, comprises an area of 945,000 square miles, approximately one-third the total area of the country. Its population in 1915 was about 35,000,000, or an average of about 37 people to the square mile. These figures show that the South comprises as much territory as France, Germany, Austria, Belgium, Great Britain, Italy, and Spain combined, but these nations have an average density of population of 338 to the square mile. Think of it, Mr. President! Thirty-seven people to the square mile in the South and in the European countries I have mentioned 338 to the square mile. The mere statement of these facts indicates the room for expansion.

Our doors are open wide to all desirable immigrants, especially those from other States. The South will gladly furnish homes to every one of our splendid citizens who has gone to Canada or contemplates such a move, and would welcome all the boys and girls who have left, or expect to leave, the hardships of northern and eastern farms to seek unfamiliar work in congested cities. We can supply farms to a great many of the foreigners who seek our shores, and we are really anxious to receive all good people from whatever land they come. We have great resources of every kind and sort which are just beginning to be developed, and in no portion of the world are there as good opportunities for success as in the land of Dixie. If Horace Greely were alive to-day, his advice to young men would be, "Go South." When he said to them, "Go West," a great field opened there, and many fortunes were made by following his sage counsels. The scene has shifted. The great opportunities of the West have been seized, but there are innumerable openings in the South awaiting fertile brains and willing hands.

THE SOUTH NEEDS MEN AND MONEY.

With all her marvelous resources begging for further development, the most crying need of the South is men and money. I can not impress too strongly upon you that the South needs labor and capital; and I assert that returns from investments there will astound even the most sanguine.

We have many advantages over Canada, where the winters are so long and severe as to make life very uncomfortable for man and beast, and to restrict agriculture to wheat, and the hardiest cereals, vegetables, and fruits.

In the South there is every variety of crop and every form of animal life thrives. Our winters are so mild that light

clothing and a small amount of fuel suffices, and one can work out of doors practically every day in the year. Our summer heats are not as great as those of Canada, and our white farmers work in the fields throughout the hottest weather with impunity.

The richest land may be purchased very cheaply, and while farm lands in many parts of the North and East cost from $100 to $250 per acre, the finest lowlands adjacent to the Mississippi River, unimproved and heavily timbered, can be bought at $10 to $20 per acre; cut-over uplands of fine quality, unimproved, at $5 to $10; virgin forest uplands at $20 to $60; and improved uplands farms at $10 to $25 per acre.

These opportunities, however, must be seized now. Farmland values are increasing more rapidly in the South than in the rest of the United States.

Mr. SHEPPARD. Mr. President, may I ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Texas?

Mr. RANSDELL. With pleasure.

Mr. SHEPPARD. I am very much interested in the able speech of the Senator, and I am glad to know that he is giving to the world a true knowledge of conditions in the South. I want to ask the Senator in this connection if it is not a fact that purchasers of southern lands are accorded the most liberal terms of payment?

Mr. RANSDELL. There is no doubt about that. They can get land practically on their own terms, with a very small cash payment, and a long time in which to pay the remainder. Every possible inducement is held out to prospective purchasers of southern lands.

Between 1900 and 1910 farm values in the entire Union increased 108 per cent, while in the South they advanced 136 per cent. I hope Senators are paying attention to some of these comparisons. Figures are a little dull, but those who listen to me will ascertain from cold facts that the South is going forward with much greater rapidity in every line than any other section of this Nation.

THE SOUTH'S VARIED FARM PRODUCTS.

Every variety of soil can be procured in the South—from the rich sugar and rice lands of Louisiana to the fertile corn, melon, and peach fields of Georgia and South Carolina; from the blue grass and limestone of Kentucky, Tennessee, and Missouri, with their wonderful horses, mules, and hogs, to the fertile plains of Texas, with its vast herds of cattle and sheep; from the tobacco and peanuts of North Carolina and Virginia to the wheat and oats of Maryland and Oklahoma; from the orange, the grapefruit, and the figs of Florida and Louisiana to the delicious apples of West Virginia and Arkansas; and from the succulent Johnson and Bermuda grasses of Alabama to the alfalfa, lespedeza, and other clovers of Mississippi, where hogs and cattle luxuriate. Cotton flourishes in 11 of them and wheat does well in many sections. If the new settler is accustomed to grain and cereals, with cattle and hogs, he need not change his crops or methods in the South, unless it be to substitute rice for wheat, should he settle in the lower half of the Gulf States, although wheat does well in northern portions. He need not become a cotton grower unless he wishes to, for corn and the cereals, with forage crops of many kinds, coupled with some branch or branches of animal industry, especially hogs, will furnish the most attractive and profitable employment. If he be a dairyman, that line is open to him with marked advantages in many respects. If he be a gardener or fruit grower, the Gulf and lower Atlantic coast sections, with immunity from cold and delightful climate, can not be excelled. Indeed, he can choose his own branch of agriculture and find ideal conditions in the South.

OTHER INDUSTRIES OF THE SOUTH.

But suppose he be a manufacturer? We are now manufacturing fully one-half of the cotton made in the United States. We are manufacturing an immense quantity of iron and steel. We are manufacturing about one-half of all the lumber in the United States, and our timber supply is immense.

Every kind and sort of manufacturing is going forward by leaps and bounds. We have innumerable manufacturing establishments converting our vast wealth of raw material from field, forest, and mine into finished products. If he be a schoolteacher, a banker, a railroad or steamboat man, we can furnish him splendid schools, banks, railroads, and navigable rivers. If he be a merchant, we have a population of 35,000,000, with many fine cities and towns and every line of mercantile business. If he be a miner, we can show him mines of everything in the mineral calendar. Our supplies of coal, iron, phosphate, marble, limestone, bauxite, salt, sulphur, oil, gas, and so forth, are inexhaustible and just beginning to be developed. He can select his own calling and find opportunities in the South, under a mild, delightful climate, and, as I shall show later, under as good health conditions as anywhere in the United States.

When a man is about to change his residence, the first question that suggests itself to him is, What are the climatic and health conditions in my prospective home? He wishes to assure himself that he and his family can live in health and comfort in the new home. Since health and climate are considerations of such primary importance to those who contemplate a change of residence, I shall go somewhat into detail on both subjects.

THE SOUTHERN CLIMATE—THE NATION'S BEST.

The climate of the South is one of its most valuable assets. While all countries may not grow cotton, corn, or wheat, they all have certain characteristic weather conditions which, in the aggregate, go to make up climate, and oftentimes the climate of a country is its blessing or its curse, fixed and unchangeable. If a blessing, it remains as a permanent asset that can never be taken away or appreciably changed by the agency of man; and if a curse, no hope for better things can ever be entertained.

Happily our southland is blessed with a climate which compares favorably with that of any other section of North America and has great advantages over many of them, especially the British Northwest, or even that of the more northern sections of our own country. This is true both from the standpoint of successful agricultural, manufacturing, and commercial enterprises and that of personal health and comfort.

In farming, as in any other occupation, the yearly profits are largely proportional to the total time during which work may be prosecuted, and herein lies the South's most important asset as an agricultural region. The farmer's profits are produced in nature's workshop, and, other things being equal, the section in which she holds open shop longest and does the largest number of hours' work during the year is the locality in which the largest profits should result. The growing season is the period each year in which the farmer's profits must be made. During the remainder of the year not only are dividend-producing farm operations practically at a standstill but many expenses must be incurred and much of the products of the growing season are necessarily consumed.

In the British possessions immediately north of the United States and also in the adjoining States of the Union the length of the crop-growing season, on the average, is from 115 to 140 days, while over the Southern States it is more than 250 days. Thus the profit-producing period is only about 35 per cent of the year in these northern districts while it is about 75 per cent in the South, and the consuming and profitless portion of the year ranges from 25 per cent in the South to something like 65 per cent in the North.

With the diversified farming operations that are rapidly being adopted in the South and the generous response of its soil to improved methods of cultivation, the factor of nearly continuous production throughout the year becomes one of great importance, and should be given weighty consideration in any comparison of the relative value of different communities for the pursuit of agricultural enterprises.

There are many other important features, from an agricultural standpoint, in which the South has great advantages, among which may be mentioned the period in which it is possible to plant crops. In the case of corn, for instance, the crop in many of our so-called great corn States, in order to mature before the usual early autumn frost, must be planted within a definite short period of time, and if unfavorable weather prevails during that period or immediately preceding it, delaying the seeding or preparation of soil, great damage is almost certain to result if the usual early frost is not delayed, especially if rapid growth be retarded by cool weather during the season. Just such conditions as these prevailed only last year in many portions of the northern corn belt, and vast damage resulted to the crop. In the South the long period in which planting may be done and the ample length of the growing season obviates such disasters and insures a crop free of frost injury.

The long growing season also makes possible such a diversity of crops that no serious and widespread disasters, due to drought or otherwise, as befall less favored one or two crop communities, are possible. In case of prospective failure of one crop, it is frequently possible to replant and grow another of the same or different character during the same season.

Next to temperature, which determines the length of the growing season as above outlined, the most important climatic element from an agricultural standpoint is rainfall, and here again the South is amply supplied and has the advantage, when compared with our neighboring Canadian Provinces and Northern States. In the latter sections the average annual rainfall is

much less than in the South and consequently damaging droughts are of more frequent occurrence. Its abundant precipitation and infrequent disastrous droughts insure the South a remarkably uniform crop production, as is evidenced by comparing the average per-acre yield of cotton year by year. A failure is unknown and the production year after year is comparatively constant.

From the facts brought out in the foregoing remarks, it appears unquestionable that from a purely business standpoint there are afforded in the South unparalleled opportunities for wide-awake, progressive farmers or business men. However, there are other considerations to be taken into account when one is deciding upon a location for a permanent home, one of the most important of which is personal comfort as determined by climatic conditions.

It has been recognized that in the Gulf country the winters are ideal, as evidenced by the large number of visitors who seek our sunshine and balmy breezes during every winter season. Unfortunately, however, the impression that the South is almost unbearably warm during the summer season seems to have much credence in some of the more northern localities, and I wish to go briefly into the actual facts of the case in order that that erroneous conception may be dispelled. A number of interesting tables and charts, showing the climatic characteristics of the Gulf States and also like information for the British Northwestern Provinces and the adjoining Northern States of the Union, have been kindly furnished me by Prof. Charles F. Marvin, Chief of the Weather Bureau. (See Appendix A.) These disclose the facts in the case, which not only emphasize the unquestioned advantage of our winter climate but also explode the popular but erroneous impression regarding the heat conditions in the summer. For example, we find in the latter that the average January temperature in New Orleans is 53 degrees, while in portions of the extreme northern Plains States and the adjoining Canadian Provinces it is from zero to about 10 degrees below. On the other hand, portions of the summers are frequently hot in the northern sections, the temperature during the day, in fact, often going higher than along the Gulf coast. These give temperature ranges frequently too great for persons unaccustomed to such variations. At Prince Albert, Saskatchewan, the average temperature for July is about 70 degrees warmer than for January, while in New Orleans the difference in the average January and July temperatures is only 28 degrees.

In North Dakota the temperature each winter, on an average, falls at some time to more than 30 degrees below zero and rises to 100 degrees each summer, making an average annual range of more than 130 degrees. In New Orleans the average of the lowest reached each year is 26 degrees, and the average of the highest 97 degrees, making an annual range of only 71 degrees, as compared with 130 in the other case. Thus while the winters are balmy and pleasant in the South and cold, bleak, and disagreeable in the North, the maximum summer heat is frequently greater in the latter than is experienced in the Gulf coast section. In this connection I desire to call special attention to the fact that while the average lowest winter temperature in Louisiana is 56 degrees higher than in North Dakota, the average highest summer temperature is 3 degrees lower in Louisiana than it is in North Dakota, these figures being from official Weather Bureau reports.

Mr. President and Senators, are not these figures very striking? Are they not remarkable? It is 56 degrees colder in winter on an average in North Dakota than it is in Louisiana, and 3 degrees warmer in summer in North Dakota than it is in Louisiana. These figures are not mine, for they are taken from the official Weather Bureau reports.

The degree of discomfort experienced in hot weather is determined not only by the air temperature but also by the relative humidity. The actual amount of moisture in the air has but little physical influence on plant or animal life, it being the relation of the amount present to that necessary to cause saturation which affects our sensibilities. Thus while the atmosphere of the Southern States contains much more actual moisture than the more northern localities previously mentioned, which insures, ordinarily, an abundant rainfall, no such variation is shown in the relative humidity, which does not differ greatly for the two localities, and the physical discomfort due to high humidity is but little more perceptible in the southern country than to the northward.

As still further evidence in refuting assertions that our summer weather is oppressively warm, I wish to call attention to the fact that sunstrokes are almost unknown in the South. During the prevalence of hot waves the daily press of other sections announces numerous cases of heat prostrations, but if you will note the headlines you will find the Southland is conspicuous by the absence of such cases.

Mr. President, I have lived all of my life in the South, and I have never known a case of sunstroke in my immediate locality. I have read of a great many cases in the northern and middle portions of this country, and I have heard of a very few in the cities of the South; but in my section of Louisiana I have never known of a single case.

In the winter we read of people perishing from cold in the North, and in the summer of their dying from heat, but throughout the year the South continues to smile and extend a welcome to all who may be farsighted enough to take advantage of the opportunity to reside where financial and commercial advantages are unlimited and where outdoor life can be enjoyed throughout the year.

HEALTH CONDITIONS IN THE SOUTH.

From the viewpoint of health the South is as fortunate as it is in climate. The greatest change effected in this section during the past decade has been accomplished through sanitation—a change which is perhaps more noticeable in the South than in any other portion of the United States. The South has had a hygienic rehabilitation, and from a condition of sanitary chaos has moved forward to the front rank of the vanguard of modern countries. The work has been performed quietly but thoroughly, until to-day life expectancy with us is the same as in the Northern States and the incidence of disease is no greater than elsewhere. This is because the South has learned the lesson of disease prevention and has put sanitary principles into actual practice.

In spite of this wonderful advancement—an advancement which is fully confirmed by our mortality tables, much misconception still remains concerning the healthfulness of the South. This misconception is due to a number of causes, fallacies which the general public know nothing about and which they do not thoroughly investigate. Erroneous impressions still prevail as to the healthfulness of this region, and many still suppose that our climate and other natural conditions are conducive to the development of disease, whereas quite the opposite is the case. Many similar erroneous impressions have arisen, most of which are based upon ignorance of all the facts. It is my desire to invite your attention in a general way to what has been accomplished in the conservation of human life, presenting certain comparative mortality tables and leaving you to draw your own conclusions therefrom.

The fact that epidemics of disease have in years gone by swept over the South is reason enough for many to suppose that those diseases are still present. This is a decided misconception. It is true that the South has been visited in the past by many frightful epidemics—epidemics which the older residents still recall. These visitations of disease often came upon us without warning and we were helpless before them, for we knew nothing of their causes and their means of prevention. Now all this has changed. We have definite knowledge of the means of dissemination of practically all of the infections to which we are subject, and their prevention is based upon the most simple facts—facts which the children master in their lessons at school. These principles have been put into practical and almost universal application, and as a result the South is freer to-day from the presence of epidemic disease than any other section of our country.

It is true that certain infections still exist, as, for instance, measles, diphtheria, and whooping cough, but their incidence is far less than in many other sections of the United States, and they are not attended with nearly the mortality of the same diseases in colder climates. For example, measles in the South is a comparatively mild and harmless affection, usually unattended with complications, whereas in the colder portions of our country it constitutes one of the most fatal diseases of children. Pneumonia is another disease which with us is not only considerably less virulent but is also far less common than in other climates, this fact being generally recognized by the public.

Influenza, commonly called la grippe, is also rarer. Epidemics of all of these diseases are far less common than in the North, apparently being held in abeyance by the favorable climatic conditions. No better proof of this could be cited than the widespread epidemic of influenza and pneumonia which swept the country during the past winter. Everywhere these infections were reported as unusually virulent and attended with an unprecedented mortality, but south of the Ohio River their severity was much less pronounced and the actual number of cases reported not nearly as great.

Practically all of the infectious diseases indigenous to the South have now been conquered, and yellow fever, malaria, dengue, and hookworm have to a great extent been robbed of their terrors. This is because the essential facts concerning

the transmission of these diseases are thoroughly established and our southern communities have adopted simple and effective measures for their control. The diseases which are more prevalent in the North, e. g., pneumonia, influenza, and the acute infections of childhood, continue there with almost unabated sway, because the knowledge concerning their dissemination is incomplete and the methods of their prevention less satisfactory. The figures relating to the presence of the infections mentioned will altogether bear out this statement.

There has not been a case of yellow fever in the South since the infection was eradicated 11 years ago under the leadership of the Public Health Service, and with our knowledge of its dissemination through the medium of the Stegomyia mosquito, an insect which is finding its habitat more and more restricted, there is not the slightest danger of its spread should by any chance an infected person happen to pass through one of the numerous efficient quarantine stations. The disease, as far as the South is concerned, is a matter of history, and as a factor in present-day problems has been relegated by sanitation to the realm of remote possibility. Similarly dengue, a disease also transmitted by a species of mosquito, has almost entirely disappeared. In going over the records for the past 10 years I was unable to find a single instance of an epidemic of this disease in any Southern State, a few isolated cases occurring only during that period. All through the South there are physicians who have been engaged in active practice for a dozen or fifteen years who have never seen a single case of either yellow fever or dengue and who probably never will.

Malaria is being rapidly exterminated and there are sections where it is no more prevalent than in many districts of the West and North. In the early days of Ohio, Illinois, and even of many Eastern States fever and ague was common enough, but as the land was settled and the swamps drained the disease disappeared, although the reason for its disappearance was not at that time recognized, for we then knew nothing of the means of transmission through the Anopheles mosquito. Every fact in connection with the prevention of malaria is now definitely established and in the majority of southern towns and cities put into actual practice. Houses are screened, the land drained, pools oiled, and personal prophylaxis instituted wherever it is necessary, so that the disease in the South is now comparatively rare and in many communities altogether absent.

The incidence of hookworm is rapidly becoming less and less. Whether it was as important a disease to the South as has been made to appear is questionable, certainly under present conditions of life it is relatively inconsequential.

Pellagra still exists, but our knowledge of the disease has rapidly widened and discoveries made within the last year by the Public Health Service lead us to believe that the condition is distinctly curable as well as entirely preventable. With the better dissemination of knowledge concerning its prevention and cure, it is confidently expected that pellagra will soon be relegated to the same position that yellow fever now occupies.

A factor of importance in producing a widespread misconception of the healthfulness of the South on the part of those unfamiliar with conditions has been the presence of the negro. It is well recognized that the mortality among negroes is naturally much higher than among whites, in some instances being more than twice that of the white race, but many people fail to consider this point when making an analysis of health conditions. Were the subject viewed with this fact in mind an entirely different interpretation would be given to the mortality figures of this region and a much more correct opinion would be formed as to the healthfulness of the South. That this is so can, I believe, be demonstrated within a very few moments.

Wherever accurate figures are maintained, the colored death rate in the United States is higher than the white death rate, this being true without exception for every section of the country. During the year 1913, the last period for which we have the complete returns, the death rate among whites for the entire registration area was 13.7 per 1,000 of population, while that among negroes was 21.9, a difference of over 60 per cent. In certain sections of the country the disparity was even more pronounced. Necessarily, then, those areas having a large percentage of negroes will show a high general death rate, the figures for the general population being distorted by those for the negro. For this reason any comparison of crude and uncorrected death rates of northern and southern communities is an unfair comparison. If the people are divided into two classes, the whites and the blacks, the comparison becomes entirely legitimate and should lead to much more correct conclusions.

Unfortunately there are but five Southern States in the registration area, Virginia, Kentucky, North Carolina, Maryland, and Missouri; therefore comparison can only be made with the white death rates of those States with the white death rates of the remaining States of the registration area. The following table indicates that the mortality among the white population of the South is certainly no more, and in most instances considerably less, than that among the white population elsewhere:

Comparative mortality tables of the white population of the States of the registration area per 1,000 population in 1913.

Kentucky	15.3
Virginia	11.8
Colorado	11.5
Indiana	13.1
Maryland	14.4
North Carolina	13.8
California	14.4
Connecticut	14.9
Maine	15.3
Massachusetts	15.0
Michigan	13.8
Missouri	11.8
New Hampshire	17.1
New York	14.9
Pennsylvania	14.4
Utah	10.9
Washington	8.4
Minnesota	10.4
Montana	11.5
New Jersey	14.1
Ohio	13.5
Rhode Island	14.8
Vermont	15.8
Wisconsin	11.4

As will be noted, there were but six States in the Union with a lower white mortality than that of Virginia.

Comparison of southern cities with northern cities is equally instructive.

Comparative death rates among the white population of southern and northern cities per 1,000 population, 1913.

SOUTHERN CITIES.	
Birmingham	12.3
New Orleans	15.6
Mobile	16.9
Montgomery	15.6
Jacksonville	15.7
Atlanta	13.5
Pensacola	11.7
Louisville	14.3
Galveston	16.7
Augusta	16.7
Kansas City, Mo	13.8
NORTHERN CITIES.	
Wilmington, Del	14.2
Indianapolis	14.8
Leavenworth	17.7
New York	14.1
Atlantic City	16.2
Columbus, Ohio	14.8
Chester, Pa	17.3
Philadelphia	15.2
Pittsburgh	16.9
Chicago	14.9
Boston	16.2

It is, of course, realized that comparative tables of this character are not altogether reliable, owing to the differences in economic and social conditions of the white population of the two sections, but the data is considered more worthy of acceptance than any tables which take no recognition of racial stock. Viewed from this standpoint these tables indicate that, as far as the white population is concerned, life expectancy in the South is no less than life expectancy in other sections.

I earnestly appeal to my brother Senators to read and study these tables, especially any of them who may have the slightest doubt about the healthfulness of the South.

A much fairer comparison, however, and one which shows that the southern region is as healthful as any other, is that contrasting the death rate among the colored population of the South with that of the colored population of other sections. In this instance we are not only comparing two identical classes, but these two classes occupy practically the same social and economic positions, the advantage, if anything, resting with the northern negro, who should therefore have a slightly lower death rate.

Comparative mortality tables of the colored population of the States of the registration area, 1913.

Kentucky	21.0
Virginia	18.2
Colorado	15.0
Indiana	23.8
Maryland	24.0
Michigan	22.9
Missouri	23.4
New Hampshire	7.4
New York	21.7
Pennsylvania	22.1
Utah	15.7

Washington	12.1
North Carolina	22.5
California	15.9
Connecticut	21.8
Maine	12.4
Massachusetts	20.1
Minnesota	21.7
Montana	23.7
New Jersey	20.5
Ohio	24.2
Rhode Island	24.4
Vermont	6.6
Wisconsin	14.2

The table indicates that the death rate among the negroes of Virginia was in reality lower than that among negroes of any other State, if recognition be not given those States where the colored population are too few for comparative purposes; that is, the negro of Virginia has a better chance of life than the negro of Indiana, Ohio, or almost any other section. While the negro death rates of Kentucky and North Carolina are not quite as favorable, they indicate that health conditions are certainly not markedly disadvantageous.

A similar table to the above one is one comparing the colored death rate in 10 representative southern cities with the colored death rate of the same number of northern and western cities.

Comparative death rate of the colored population of American cities for 1913.

SOUTHERN CITIES.

Jacksonville	22.6
Key West	17.1
Pensacola	21.8
Atlanta	25.2
Augusta	23.4
Birmingham	25.2
Charlotte	20.2
Galveston	26.4
Richmond	26.8
Asheville	23.8

NORTHERN CITIES.

Los Angeles	20.3
Boston	24.5
New York	22.9
Wilmington, Del	26.7
Topeka	27.6
Chester, Pa	26.4
Indianapolis	24.5
Chicago	24.6
Philadelphia	24.5
Columbus, Ohio	21.3

In this rating northern and western cities were selected which have a considerable colored population, in order that the figures might not be misleading. The advantage rests entirely with the southern cities, the average annual death rate for the 10 cities being 23.25 per 1,000, whereas the average annual rate for the remaining cities was 24.81. It would appear, therefore, that the South is apparently even more healthful at least for the negro, and I believe for whites also, than other sections.

Certain other facts go to prove this contention. Sanitarians state that the best index which we possess of health conditions is the infant mortality, and this is probably true. New Orleans, the largest city of the South, has an infant mortality identical with that of Baltimore, and in spite of the colored population has a smaller death rate among babies than either Cleveland, Albany, or Indianapolis. The infant mortality in Galveston, negroes included, is no more than that of Elmira and Auburn, in New York, all cities of approximately the same population.

For the year 1913 the death rate from malaria in Virginia was below the typhoid-fever death rate of either Vermont or Massachusetts—I wish the Vermont Senators were here to listen to this—which had the fewest number of typhoid-fever cases in proportion to the population of any of the States of the Union, the figures for Virginia being 7.1 per 100,000, while those for Vermont and Massachusetts were 7.8 and 7.9, respectively. In other words, the resident of Virginia has less chance of dying of malaria, concededly the most prevalent disease of the South, than the residents of the two States mentioned have of dying of typhoid fever. The figures for Kentucky are nearly as good, that State having had a mortality from malaria during 1913 of but 8.1, a rate less than one-third of the typhoid-fever rate of her neighbors, Indiana, whose rate was 24, and Ohio, with the high rate of 25.1. In New Orleans the mortality is even less, but 6.7 per 100,000, the majority of these cases being from rural districts who have come to the city for hospital treatment.

The colored death rate itself is steadily and rapidly falling, another proof of our improved sanitary conditions. In Mobile the colored death rate has been reduced 18 per cent during the past 12 years and in Jacksonville 26 per cent, while similar reductions were made in Atlanta and Louisville. At present the colored death rate is not a whit higher than the general death rate 20 years ago of Boston, New York, and other cities. In the rural sections this improvement in health conditions has been even more pronounced, and the negro rural dweller of the South has to-day the same life expectancy as the city dweller of Hartford, Conn.; Portland, Me.; or Ashland, Wis.

I can not leave this subject without referring to the magnificent work which has been done in New Orleans in the eradication of bubonic plague and the way in which that city has gone about making of itself "the city sanitary." The commercial relations of that great port made it natural that plague should be introduced there through the intermediation of shipping. When the disease appeared we did not attempt to hide it. Instead, we announced the fact fearlessly and freely to the whole world. Our State and city governments united in asking that the General Government loan us its expert officers to lead the campaign. The public and the private purse was opened freely, and there occurred a sanitary renaissance which was unexampled in this or any other country. To-day New Orleans is clean. To-day New Orleans is the most rat-proof city in America, and it will not be long before it is the most sanitary in the United States. The work which has been done has not been spasmodic or temporary in character. It has been built for all time. Stone, concrete, and masonry have been installed, and, while the danger of a great epidemic has long passed, still the work goes forward with unabated vigor to the end that the great gateway of the Mississippi Valley shall be secure against disease. Our people know the lesson of plague, and never again will the dread pestilence menace the people of Louisiana. The example of New Orleans has been followed by many of the other southern cities. Florida, Alabama, Mississippi, and many of the other Southern States have passed and are enforcing rigid antiplague laws. Even some of the northern cities have profited from this demonstration, and Philadelphia and Baltimore have fallen into line for this much-needed civic improvement.

This whole subject of the sanitary condition of the Southland is of such great importance and so dear to my heart that I could continue to give you examples of the healthfulness of our section of the country, the sanitary intelligence of our people, and the hygienic tenor of their lives. I could tell of the way we teach health and hygiene and sanitation in our schools, academies, and colleges. I could dilate on the way in which we endeavor to throw about all our people, whether they live in crowded city, obscure hamlet, or remote farm, the benefits which have come to us through the application of the principles of modern sanitary science. But the limitations of time forbid. The actual healthfulness of this section of the country is the answer to him who would controvert my statement that the South is the most healthful portion of our great Republic, and he who dwells there is assured of length of life, peace, and security from disease.

But one needs more than good health and a pleasant climate. Hence I must describe some of the other advantages of this region.

THE AGRICULTURAL HEART OF THE NATION.

The South is preeminently an agricultural section, and her strides in this direction are truly amazing. In 1915 the gain in the value of all farm crops in the United States over 1914 was $526,000,000. Of this gain $317,209,000, or a little over 60 per cent, was in the South. Remember, the South occupies only one-third the total area of the country, and this one-third produced 60 per cent of the agricultural increase. In other words, the South is advancing three times as fast agriculturally as the rest of the Nation. Nor is this increase due to cotton. The 1915 cotton crop was valued at $750,000,000, while the value of diversified crops, such as grain, sugar, hay, tobacco, vegetables, fruits, and so forth, and exclusive of live stock, was $1,957,000,000, or two and one-half times as great as cotton. If we include live stock, the total value of all southern farm products, exclusive of cotton, was $2,850,000,000 in 1915, or nearly four times the value of the cotton crop.

KING COTTON.

Cotton, the monarch of southern agriculture, is too well known to make it necessary for me to say much in regard to it. This crop has ever been, and will continue to be, the principal money crop of the Nation, for while corn has much greater actual value, it is not converted into money like cotton, but is largely consumed on the farm and sold indirectly. The southern cotton crop last year, including the seed, sold for about $750,000,000, and it is one of the greatest of our national assets.

Cotton is one of the chief instrumentalities through which the United States has attained its dominant commercial position. All the gold and silver produced in the world in any one year in the last 35 would not be sufficient to purchase last year's

southern cotton crop. In fact, the value of the world's entire production of gold and silver during the past 35 years is nearly $6,000,000,000 less than the total value of the South's cotton crops for the same period. The cotton crop ranges in value from $750,000,000 to $1,000,000,000 annually, and amounts to 60 per cent of the world's total cotton production.

Raw cotton is the commodity which gives the United States the great balance of trade in its favor. Cotton represents approximately 30 per cent in value of our annual exports, and it is this great southern staple which places the rest of the world in our debt.

But the prospective immigrant may object that cotton is distinctively a crop adapted to negro labor, and that a white man is not well fitted to grow it. This is entirely erroneous. I insert as Appendix B a census table showing the acreage, yield, and value of cotton grown by all farmers, and by colored farmers in 1909." These are the latest available figures.

It will be noted that negroes produced that year only 38 per cent of the cotton yield in bales, and only 32 per cent of its value. In other words, the white farmer grew 62 per cent of the cotton yield and received 68 per cent of the cotton value. Cotton is a crop which the white man can grow most profitably, and the prospective immigrant need have no fear on that score.

The doctrine of diversified farming, epitomized in the phrase "safe farming," has been preached and is being practiced in almost every part of Dixie. With what result we shall see. Everything produced in the temperate zone is being raised by our people in ever-increasing quantities and with great profit.

I insert as Appendix C a table showing the total yield of corn, oats, wheat, and hay in the 11 cotton States for the years 1909 to 1915, inclusive:

I ask Senators in looking over these tables to bear in mind that while there are a total of 16 Southern States only the 11 that raise cotton are included in these tables. The other five do not raise cotton, or at least only in such small quantities as not to be appreciable.

This table evidences in a striking manner the progress of diversified farming. The corn crop of these cotton States doubled in seven years, increasing from 461,536,000 bushels in 1909 to 812,883,000 bushels in 1915. The oat production trebled, climbing from 51,847,000 in 1909 to 157,714,000 in 1915; while in the same period the wheat crop increased from 28,662,000 bushels to 88,842,000, and hay kept pace by advancing from 3,108,000 to 6,269,000 tons. The true significance of these figures is not realized until we remember, for instance, that while the corn production of the cotton States doubled, that of the rest of the country increased only 5 per cent; and while the southern oat crop trebled, the oat crop of the rest of the Nation increased only 40 per cent.

CORN OUTSTRIPPING COTTON.

Corn is a crop which is peculiarly adapted to the South. The 16 Southern States produced in 1915, 1,246,945,000 bushels of corn, which was considerably more than one-third of the total crop of the Union.

The truly enormous increase in its growth shows that its value is being appreciated by the southern farmer, and although the average yield per acre is less than in some of the Western States, this is because it has not been given that intensive cultivation so necessary for the best results.

Mr. SHEPPARD. Mr. President——

Mr. RANSDELL. I yield to the Senator from Texas.

Mr. SHEPPARD. Is it not a fact that the largest yield of corn on a single acre in any State was obtained in South Carolina?

Mr. RANSDELL. I understand that is a fact. Though I have not the exact figures before me, I have a most interesting table, which I will insert later, showing the record of seven southern boys who produced over 200 bushels of corn per acre.

In the grain States of the Central West corn is the money crop, and the most intelligent attention has been given to it, while in the South to within the last few years cotton was king of agriculture and corn was neglected. This, however, is being rapidly remedied, and the statistics of the United States Department of Agriculture show that during the past seven years the average production of corn per acre in the South has increased from 25 to 90 per cent, ranging from 15 bushels per acre in Florida and Georgia to 35 bushels in Maryland. (Appendix D.)

In the light of these figures and from much study of the subject I am convinced that the people of the South are just beginning to raise corn and that the great crop of 1,246,945,000 bushels produced in 1915 by the 16 Southern States is only a moderate percentage of what may be expected in the future.

It is interesting to note that the estimated value of this corn crop was $786,646,000, or $36,000,000 in excess of the value of the cotton crop of the same year, so that cotton must look to its laurels, or corn will soon be monarch of southern agriculture, as it is unquestionably of the Nation's crops.

The largest yield of corn ever produced on a single acre by a member of a boy's corn club was 232.7 bushels, made by Walker Lee Dunson, of Alabama, at a total cost of only 19.6 cents per bushel.

The work of these boys is so remarkable that I wish to insert the following records from the reports of the Department of Agriculture:

Record of 7 boys producing over 200 bushels of corn per acre.

Name of club member.	State.	Yield per acre.	Cost of production per bushel.
		Bushels.	*Cents.*
Jerry Moore	South Carolina	228¾	42.0
Junius Hill	Alabama	212½	8.6
Eber Kimbrough	do	224¾	19.8
Ben Leath	Georgia	214⅞	14.2
J. Jones Polk	Mississippi	214 7/10	21.4
Bennie Beeson	do	227¼	14.0
Walker Lee Dunson	Alabama	232 7/10	19.9

Number of corn-club members in the Southern States who have raised 100 or more bushels of corn to the acre each year from 1909 to 1914, inclusive:

1909	52
1910	171
1911	327
1912	493
1913	374
1914	354
Total	1,771

I hope the Senators from the corn States are listening to these figures.

The greatest yield of corn per acre in the United States was made in South Carolina by a gentleman who produced 256 bushels on a single acre. However, the table I have read refers to the boys' corn-club work. These wonderful yields were made by the young boys to whom I have just alluded.

Mr. VARDAMAN. What years were those?

Mr. RANSDELL. In the years 1909 to 1914. It is the yield for several years, taken from a bulletin furnished by the Department of Agriculture. The best record was made by Walker Lee Dunson, of Alabama.

During six years, 1909 to 1914, inclusive, 1,771 boys have each produced more than 100 bushels of corn to the acre. Of that number 26 each produced more than 200 bushels per acre.

Gentlemen, those figures speak in thunder tones. Is it possible for 1,771 boys to raise an average of over 100 bushels of corn per acre in a section not an actual corn section? These facts tell the whole story. The reason why the South has not been producing corn in enormous quantities heretofore is that we have not been giving it proper attention; but now that our attention is turned to it we are raising it in the greatest quantity.

As I have just shown, the corn crop last year was 1,247,000,000 bushels. I will show you later that that great corn crop was worth $786,000,000—more than $36,000,000 in excess of the value of the cotton crop of the South.

Mr. JONES. Mr. President——

The VICE PRESIDENT. Does the Senator from Louisiana yield to the Senator from Washington?

Mr. RANSDELL. I will be delighted to yield.

Mr. JONES. It is a very interesting statement that the Senator has made. I wonder whether the Senator has any data showing the expense per acre of producing the corn.

Mr. RANSDELL. I have just read those figures. Jerry Moore raised 228¾ bushels at a cost of 42 cents a bushel; Julius Hill raised 212½ bushels at a cost of 8.6 cents a bushel; Eber Kimbrough raised 224¾ bushels at a cost of 19.8 cents a bushel; Ben Leath raised 214⅞ bushels at a cost of 14.2 cents a bushel; J. Jones Polk raised 214 7/10 bushels at a cost of 21.4 cents a bushel; Benny Beeson raised 227¼ bushels at 14 cents a bushel; and Walter Lee Dunson raised 232 7/10 bushels at a cost of 19.9 cents a bushel.

These are the official figures furnished me by the Department of Agriculture.

Mr. JONES. What States were those?

Mr. RANSDELL. Jerry Moore was from South Carolina, Julius Hill from Alabama, Eber Kimbrough from Alabama, Ben Leath from Georgia, J. Jones Polk from Mississippi, Benny Beeson from Mississippi, and Walter Lee Dunson from Alabama. So the Senator will see from the figures I have given that there was a very considerable profit in the crop raised by

all these boys, although some raised the corn much more cheaply than others.

Mr. JONES. Has the Senator any data to show how much was the cost for fertilizers?

Mr. RANSDELL. I have not those figures at hand.

Mr. VARDAMAN. What was the question asked by the Senator from Washington?

Mr. JONES. I wanted to know whether the Senator had any data showing the cost for fertilizers?

Mr. VARDAMAN. It was all very highly fertilized at the cost which the Senator from Louisiana has stated, a cost of from 8 cents to 21 cents per bushel.

Mr. JONES. The cost of one, I think, was stated at 42 cents a bushel.

Mr. RANSDELL. In one case, that of Jerry Moore, the cost was 42 cents. I have understood, I will say to the Senator, in the case of Jerry Moore he fertilized the ground very highly, and that is what made the cost so expensive, but the Senator will readily see that some of the others could not have used a very great deal of fertilizer because the cost was quite small.

Mr. OVERMAN. The Senator has given the record of the boys' corn club, which was remarkable in my State also. I will ask the Senator if he has a statement showing the yield which was made in the Southern States by States? By intensive farming I know the yield of corn has been increased. But in my State the increase generally in 10 years has been millions of bushels.

Mr. RANSDELL. I think I can turn to the table in a few moments and will be glad to do it.

Mr. OVERMAN. I wish the Senator would put that in the RECORD.

Mr. RANSDELL. I will be very glad to put it in the RECORD. I stated before the Senator came in that there had been an increase from about 400,000 bushels in 1909 to 800,000,000 bushels in 1915 in the 11 Southern cotton States, though the South as a whole, the yield in the cotton States has very nearly doubled.

Mr. OVERMAN. That includes North Carolina, of course.

Mr. RANSDELL. It included North Carolina. Taking the entire South of 16 States, it shows that there was a production last year of 1,247,000,000 bushels of corn—a colossal growth for the South as a whole. I have also shown the wonderful growth in the last few years during which we have really been beginning to raise corn. We did not do it before.

Mr. JONES. Mr. President——

The VICE PRESIDENT. Does the Senator from Louisiana yield to the Senator from Washington?

Mr. RANSDELL. I am very glad to yield to the Senator from Washington.

Mr. JONES. I also want to ask what allowance was made in determining the cost for the work done by the boys. What rate of compensation did they figure? Does the Senator know?

Mr. RANSDELL. The boys are required to charge the crop with 10 cents per hour for their own labor, and 5 cents per hour for work animals; also with $5 per acre for rent of land; also with the actual cost of all commercial fertilizers, and with $2 per ton for other fertilizers.

Mr. JONES. I suppose the labor cost would be covered.

Mr. RANSDELL. Yes, that is figured in. I will state to the Senator that in the State of Louisiana some years ago, under the auspices of Dr. S. A. Knapp, the boys' corn-club work was started, and it has been carried on so that it has spread all over the Southern States.

These boys are encouraged to take an acre and cultivate it in the most thorough and scientific manner. They are offered prizes. One of the prizes is that the boy who makes the best crop in his State will be given a free trip to the city of Washington and the Secretary of Agriculture will give him a diploma of agriculture. The expense is paid by the people of the community. This work is carried on under the auspices and watchful care of the Department of Agriculture through the farmers' cooperative demonstration work. Every item of expense is required to be kept.

Mr. JONES. These boys, I understand, are employed under the supervision of some representative of the department.

Mr. RANSDELL. That is true.

Mr. JONES. Does the representative of the department keep an account of the number of days' work put on the ground or the number of hours that the boys work?

Mr. RANSDELL. I do not imagine that that could be done with very great accuracy, because he is not there to watch it all the time. I assume that he has to trust more or less to the honor of the boy and the boy's father. These boys are usually the sons of representative farmers, and there is great rivalry, I will say, between the members of the boys' corn clubs. There are quite a number of members, and each is contending for a prize, and, of course, the rivalry between them would require them to be fair.

Mr. JONES. I suppose the boys, at any rate, would be required to turn in to some one an account or to keep an account of the number of hours they work.

Mr. RANSDELL. That is true. An accurate statement of everything is kept, and at the close of the season the correctness of this statement is certified to the department by three disinterested and reliable neighbors of the boy.

Mr. JONES. Who furnishes the tools and the horses for these boys?

Mr. RANSDELL. I imagine that they usually get from their fathers their tools and horses, and that is charged up as a part of the cost.

Mr. JONES. Does the Senator know upon what basis they determine the charge that should be made for the time or for the implements, and all that sort of thing?

Mr. RANSDELL. As stated above, they charge 5 cents per hour for work animals, and I am sure a proper charge is made for implements, but I can not give details.

Mr. JONES. Of course, the Senator knows that in determining the figures as to the cost per bushel it is very important to know what are the elements that enter into it.

Mr. RANSDELL. I will say to the Senator that all I know about it in detail is the information contained in the bulletins of the Department of Agriculture. They give these figures in detail. I shall be glad to refer the Senator to the bulletin which I hold in my hand. It goes quite into detail on the subject, but it does not give the information which the Senator seeks. I knew Dr. S. A. Knapp well, and I knew he was carrying on this work, which was a most interesting one to me. My understanding was that the boys were required to keep an accurate account and charge everything against the crop—not only their own labor but everything else—so as to know at the end of the year what it had actually cost them to raise the corn.

Mr. SMITH of South Carolina. Mr. President——

The VICE PRESIDENT. Does the Senator from Louisiana yield to the Senator from South Carolina?

Mr. RANSDELL. I yield to the Senator from South Carolina.

Mr. SMITH of South Carolina. I merely wish to remark that the only accurate way that the cost of production in this case could be arrived at would be to take what they call a one-horse crop—the number of acres that one hand can tend. That number of acres differs as to cotton and corn, which are the staple crops in the section that the Senator from Louisiana refers to. One man can tend and gather a whole corn crop, but he can not tend and gather a cotton crop, though he can tend and cultivate the same number of acres of cotton that he can of corn. The way they arrive at the cost per bushel is by taking the usual wage paid the hand, the rent for the animal with which he tends the crop, and the upkeep. There is a standard gauge—a standard price for a work animal for the work period, which is six months. Account, of course, is kept of the monthly pay, the amount of fertilizer that goes into the fertilization of the corn, and the number of days it takes to work it. If the boy only worked 2 acres of corn, then it is two-thirtieths of an average crop. So it is very easy to arrive at the cost per bushel and what compensation the boy is entitled to at the average wage.

Mr. JONES. I suppose that where they tried these special experiments they did not figure that 1 acre would be one-fortieth of 40 acres, but that they kept an actual account of the work put in on that 1 acre.

Mr. SMITH of South Carolina. They do keep such an account as to this special acre.

Mr. JONES. That is what we are talking about.

Mr. SMITH of South Carolina. Jerry Moore, who made 230 bushels of corn on 1 acre, kept an itemized statement of what it cost—the cost of seed, the cost of fertilizer that went on the acre, the number of days he put in, at what price he put them in, the gathering, and the weighing. He put in every item.

Mr. JONES. That was what I wanted to get at.

Mr. RANSDELL. In the grain States of the Central West corn is the money crop, and the most intelligent attention has been given to it, while in the South to within the last few years cotton was king of agriculture and corn was neglected. This, however, is being rapidly remedied, and the statistics of the United States Department of Agriculture show that during the past seven years the average production of corn per acre in the South has increased from 25 to 90 per cent, ranging from 15 bushels per acre in Florida and Georgia to 35 bushels in Maryland. (See Appendix C.)

I hope the Senator from North Carolina is listening to this statement. He asked me what the relative rate of increase

there had been. The Agricultural Department shows that it was from 25 to 90 per cent in the past seven years.

Mr. OVERMAN. In my own State of North Carolina the increase has been about 90 per cent.

Mr. RANSDELL. Mr. President, in the light of these figures and from much study of the subject I am convinced that the people of the South are just beginning to raise corn and that the great crop of 1,246,945,000 bushels produced in 1915 by the 16 Southern States is only a moderate percentage of what may be expected in the future.

It is interesting to note that the estimated value of this corn crop was $786,646,000, or $36,000,000 in excess of the value of the cotton crop of the same year, so that cotton must look to its laurels or corn will soon be monarch of southern agriculture, as it is unquestionable of the Nation's crops.

The largest yield of corn ever produced on a single acre by a member of a boys' corn club was 232.7 bushels, made by Walker Lee Dunson, of Alabama, at a total cost of only 19.6 cents per bushel.

I have already given the figures in regard to this matter in answer to questions, and I shall not now repeat them.

Careful experiments have demonstrated that the greatest yields of corn on small areas have been made in the South, and the best scientists are of the opinion that if the methods of cultivation followed in the corn States are applied in the South our average production will be fully as great, if not greater, than in any part of the Union.

THE SUPERIORITY OF SOUTHERN CORN.

Now, as to the quality of this corn—and, Mr. President, I hope Senators will pay strict attention to this, because I know most people think that, even if we do raise large crops of corn in the South, the corn is not half so good as that produced in the corn States. The opinion has long and widely prevailed that southern corn is inferior to that of the so-called corn States. Not only is this belief erroneous, but I shall show that the corn of Dixie is actually superior to that produced in sections famed for the quality of their grain.

The United States Department of Agriculture has made a series of scientific tests which place the stamp of superiority upon the southern product. I quote from a letter from Dr. William A. Taylor, Chief of the Bureau of Plant Industry of the Department of Agriculture under date of April 29, 1916. He says: "The moisture content of corn is one of the principal factors determining its commercial grade and value. The following table gives the average moisture content of corn raised in Louisiana compared to the moisture content of corn raised in Virginia and Illinois, in samples submitted by members of the boys' corn clubs, 1915 crop:

State.	Number of samples.	Average moisture content.
		Per cent.
Louisiana	7	13.4
Virginia	20	17.8
Illinois	16	19.1

The above table shows that the Louisiana corn was very dry in comparison with that grown in the more northern States.

In the following table is shown a comparison of the moisture content and damaged kernels in samples of corn grown in Louisiana compared to corn grown in Illinois. Both of these factors are important from a commercial point of view, and it will be noticed that the Louisiana corn shows up the best in both factors:

	Number of samples.	Average.	
		Moisture content.	Damaged kernels.
NOVEMBER, 1914.		*Per cent.*	*Per cent.*
Louisiana corn	70	14.0	5.1
Illinois corn	114	16.3	3.8
DECEMBER, 1914.			
Louisiana corn	110	14.3	2.3
Illinois corn	99	16.6	4.3
JANUARY, 1915.			
Louisiana corn	40	13.8	1.0
Illinois corn	158	17.0	4.1
FEBRUARY, 1915.			
Louisiana corn	20	13.3	.4
Illinois corn	90	17.1	4.4

This is fairly representative of conditions, and indicates that the Louisiana corn usually contains considerably less moisture than corn from the central part of the corn belt and shows a lower percentage of damaged kernels.

In a letter of May 11, 1916, in response to a further inquiry, speaking of the standard Government grades for commercial corn, Dr. Taylor says:

> In the definition of these grades it will be noticed that there is a maximum limit to the amount of both the moisture content and the damaged kernels in each of the grades and that the higher grades allow less moisture and fewer damaged kernels than the lower grades. Commercial corn is sold mostly by grade and the higher grades generally command the highest prices.
>
> Applying the maximum limits of moisture content and damaged kernels in the corn grades to the data shown in the table previously submitted, it will be seen that so far as the factors of moisture content and damaged kernels are concerned the Louisiana corn, with one exception, would grade higher on an average than the Illinois corn during the period covered in that table.
>
> In addition to the high commercial grade which corn testing low in moisture content and damaged kernels is entitled to, corn of this nature will stand up better in storage and during transportation than corn testing high in these factors. Enough information is at hand to indicate that southern-grown corn generally tests lower moisture and damaged kernels at the time of harvest than corn grown in the remainder of the country, and as the southern corn matures earlier, it has the additional advantage of an early market.

Mr. CURTIS. Mr. President——

Mr. RANSDELL. I yield to the Senator from Kansas.

Mr. CURTIS. I wish to ask the Senator whether the figures he gave in reference to the production of corn related to the general production over the State or merely to the production of one or two acres of premium corn?

Mr. RANSDELL. Merely to the production of sundry acres of premium corn raised by members of the boys' corn clubs. I do not pretend that the South yields anything like as much corn per acre as do the more northern portions of the country, but I say that the quality of the southern corn, so far as the testing is concerned, shows better in the amount of damaged kernels and in the moisture content, and I give my authority, Dr. Taylor, Chief of the Bureau of Plant Industry.

Mr. VARDAMAN. Mr. President, if the Senator from Louisiana will permit me a suggestion, the fact that the Senator from Louisiana wishes to establish, as I understand, is the possibility in the South of raising corn and other cereals which heretofore it has been thought could not be successfully cultivated there.

Mr. CURTIS. In other words, it is a showing made to induce the people of the South to go to raising more corn and less cotton, I should judge.

Mr. VARDAMAN. I do not know about that. I think the boll weevil is having something to do with inducing them to raise more corn; but the amount of cotton which the South is raising now is not as much as the world needs, and the small amount that is consumed—16,000,000 bales—is only a beginning of the amount of cotton that will be used in the future, because every year there is discovered some new use to which cotton may be devoted profitably.

Mr. RANSDELL. Mr. President, I should like to say, in reply to the Senator from Kansas, that there is no intention on my part to try to induce the people of the South to raise less cotton; but I want to induce a good many of the good people of Kansas who are flocking into the overcrowded cities from the Kansas farms to come down South; and, as they are used to raising corn, wheat, and oats in Kansas, and perhaps do not know much about any other kind of agriculture, except cattle raising, I want to make them understand from my remarks here to-day that they can go into any part of the South and have just as good advantages there for raising cereals of different kinds, and for all kinds of cattle and live stock, as they have in Kansas. They may not like to go into the cotton business, and it is not necessary for them to do so. There are a great many people in the South who are going to continue to raise cotton—probably all we need to raise—but we have millions of acres of the finest unimproved land in the South, and we need 50,000,000 more people to develop all our wonderful resources. I simply wanted to make it known to the balance of the Nation that if prospective emigrants do not care to engage in the production of cotton, but want to go South, they would not be obliged to raise cotton, but could raise corn or almost anything else.

Mr. CURTIS. Mr. President, I think the farmer of Kansas is very well satisfied with his corn production and also with his wheat, and would not desire to remove to another section for the purpose of engaging in farming. I was greatly interested in the statement made by the Senator, and I merely wanted to know why he laid so much stress on the corn proposition; that was all.

Mr. RANSDELL. I hope I have explained it to the Senator. I want to get more of the people from the Senator's State to come to the South.

Mr. VARDAMAN. If the Senator from Louisiana will pardon me——

Mr. RANSDELL. I yield.

Mr. VARDAMAN. This incident recalls to memory something that occurred in Kansas many years ago, during the formative period of that great Commonwealth. The grasshoppers had made two or three disastrous visits to the cornfields of Kansas. A farmer who had gone from the South to that land of promise and invested all of his earthly possessions in the farm after two or three ravages of the little green pest found himself unable to maintain his family longer, so, putting all of his earthly possessions together, with his family in a "prairie schooner" he started back to the Southland. A few days after his departure some of his former neighbors chanced to pass his deserted home and found the following lines stuck upon the door:

Fare thee well, dear Kansas,
I bid thee a fond adieu;
Perhaps I may go down to hell,
But I'll never come back to you.

Mr. CURTIS. Mr. President, I am glad to say that they have been coming back to Kansas. None of our farmers are leaving their Kansas farms, and those who left years ago are now sorry they can not get back; and if they have not returned to Kansas it is because they are tied by investments which, if it were now possible, they would rather have in Kansas.

Mr. VARDAMAN. Mr. President, I agree with the Senator. The advantages of Kansas as an agricultural State could hardly be exaggerated. I had the pleasure of visiting Kansas a few years ago, and I want to take this occasion to say that I found there some of the most delightful people and most beautiful agricultural land I have ever seen, with the possible exception of Iowa, which can with modesty boast of the most prosperous farmers and splendidly developed farm lands I have ever known in my life. My observations during my travels over Iowa last year compels me to say that that State is the agricultural garden spot of the Western Hemisphere. And, as great as it is now, its present is but an augury of a still greater future. And what I say of Iowa can be said of Kansas. The future of those great States of the West is a matter of hope and pride to every patriotic American citizen.

Mr. CURTIS. I thank the Senator.

Mr. RANSDELL. Mr. President, to resume, these official tests, as given by Dr. Taylor, demonstrate that southern corn has many advantages over that grown in other sections. Why not? I hope the Senator from Kansas will listen to this. In the laboratory of nature more sunshine and rain are available for the production of corn in the Southern States than in the so-called corn belt. The prospective immigrant, therefore, need have no fear if he wishes to settle in a corn country. Dixie is the place for him. His honest toil can produce from her fertile lands corn that will grade better, ship better, and therefore bring higher prices than that grown in the so-called corn belt of the United States.

SUGAR, RICE, TOBACCO, ETC.

Sugar cane also is a very interesting and profitable crop, and though it is now mainly confined to southern Louisiana, there is no reason why it should not be grown in all the Gulf States and Georgia, especially along the coasts of Texas and Florida.

Perhaps the southern crop that, next to corn and wheat, would appeal most to the northern farmer is rice, which is handled in many respects the same as wheat. This most nutritious cereal grows well on any flat land in the South that can be irrigated, and it has proved very successful in Louisiana, Texas, Arkansas, and South Carolina. It will not be amiss to say a word in regard to the great success with which rice is grown in Louisiana, which leads all other States in its production. In 1915 Louisiana produced 13,714,000 bushels of rough rice which was 47.4 per cent of the total American crop, and practically 6,000,000 bushels more than its nearest competitor. This crop was worth $12,343,000 on the farm. The yield of 34.2 bushels per acre in Louisiana that year is 1.1 bushels more than the average for the entire country during the past 10 years. In 1914 there were 41 rice mills in Louisiana, which was 55 per cent of all in the United States, while in the city of New Orleans is situated the largest rice mill in the Union. Rice also affords great opportunities to the farmer seeking a change of location.

Tobacco is a very extensive industry in Virginia, Kentucky, and Tennessee, and does well in several other States. Peanuts thrive marvelously, especially on the sandy lands of Virginia and Tennessee, and have proved a big success on the rich bottoms and sandy hills of Louisiana and Mississippi. And wheat can be profitably grown on two-thirds of our southern farms.

Indeed it would take a long time to enumerate the various crops, fruits, and vegetables which can be raised with interest and profit in the South. One can literally take his choice and find suitable conditions for it.

OUR UNEQUALED FORAGE CROPS.

Now, let me say something about our wonderful forage crops, many kinds of which do excellently, the famed blue grass and equally nutritious Bermuda being our best natural grasses. Alfalfa, Lespedeza, the clovers and vetches, cowpeas, soy beans, oats, rye, and so forth, do well in every State of the South.

On this subject Dr. Taylor, in a letter to me dated April 29, 1916, says:

The culture of forage in Louisiana in common with other Southern States has been a relatively unimportant part of the State's agriculture, but in the last few years there has been an enormously increased interest awakened in animal husbandry.

Notwithstanding the relatively small amount of live stock and consequently of forage production in Louisiana, it is probably true that at least as much forage per acre can be grown on the alluvial lands of Louisiana as in any other portion of the United States.

I should like to call this statement of Dr. Taylor to the attention of Senators from the cattle States, if there are any within the sound of my voice:

On these alluvial lands Bermuda grass and Japan clover combined form a permanent pasture which will easily carry two head of stock per acre for eight months in the year, and in some cases double this amount. When it is borne in mind that the best blue-grass pastures of the North will carry only one head of cattle to 2 acres for about six months of the year the extraordinary productiveness of the alluvial land pastures is evident.

Senators, this is not my statement. It was made by Dr. Taylor, chief of the Bureau of Plant Industry of the Department of Agriculture.

This disinterested testimony is the voice of truth. No section of the United States is more favored by nature for the production of forage crops, and our possibilities in this direction are so vast that a splendid future awaits the South as the principal cattle section of the Union. With corn and forage crops naturally goes animal industry, and our recent successes in this new field speak with prophetic voice for the future.

HOGS, THE MORTGAGE LIFTER.

There are no enemies to hogs, sheep, horses, and mules in the Southern States which do not exist everywhere, and all of these animals succeed well. Our winters are so mild that with a proper variety of crops grazing can be secured every day in the year, and animals require much less dry food and close attention than in the North. Conditions with us are especially favorable to hogs, and no State in the Republic has as many advantages for the lowly porker, called the "mortgage lifter," in the great agricultural States of Iowa and Illinois, as my own Louisiana, which is the natural home of the hog. Food crops of every kind grow in great profusion throughout the year, no housing is necessary, and the health of the pigs is fine whenever properly cared for.

The mild climatic conditions in the South make it unnecessary to invest any large amount of capital in equipment, and it is possible to raise two litters per year from mature sows much more successfully than in the so-called corn belt. In 1915 there were 20,481,000 hogs in the South, representing a total farm value of $161,111,000. The breeding of swine is an excellent investment for the farmer with small capital, for hogs multiply rapidly and give quick returns upon the money expended. No hog diseases exist in the South which are not also prevalent in the great hog States, and southern hogs are practically immune to pulmonary and bone troubles, such as pneumonia and rheumatism, and so forth, which are very common in the colder States. Beyond question southern hogs are more healthy than their northern brethren, and hog raising in the South can be made more profitable than in any other part of the Union.

Equally favorable conditions exist as to mules, horses, and sheep. Kentucky, Tennessee, and Missouri are justly famous for the best horses and mules on the continent, but I have seen as good animals raised in Louisiana as ever trod the ground, and Texas has become very noted in recent years for its horses and mules.

RAPIDLY GROWING CATTLE INDUSTRY.

The South is naturally and otherwise adapted for live stock production, especially cattle for beef and dairying, and her farmers who have made the attempt have settled into this type of farming with an ease and grace befitting the best of our corn-belt farmers. Why should not they? There is no limit to the diversity or production of their grain and forage crops. There may be a few crops that do not thrive as well in our Southern States as in colder climates, but their places are more than filled by the hundreds of varieties of grain, forage, and pasture crops farmed in this section. While the so-called corn-belt and northern farms are locked in ice and snow the South is green with winter pastures. Southern cattle, unhoused and with little attention, make gains on pasture during

the winter months that are unheard of without heavy grain feeding on northern farms.

To those who have watched southern agricultural development closely during the past few years the stride she has taken is phenomenal. This is especially true in the case of the development of the cattle industry. Pure-bred herds and flocks are springing up everywhere. Almost every county has its "better live-stock associations." Nearly every State has its corps of specialists who are fostering their particular branch of agricultural development. The work of these specialists is concerted and organized, and branches through the county agents and farmers on one side and back through the State colleges and the Department of Agriculture on the other.

The change from straight cotton to diversified and live-stock farming has not been exactly "a bed of roses" for the planters of the South. The difficulties which they are overcoming, while few in number, are large in size. The greatest drawback in the way of cattle production the South has is the Texas fever tick. The Government specialist has landed on the work of eradicating this destroyer with a vim. During the few years in which the work has been in progress about one-third of the total ticky area has been cleaned of this pest. That this work is of great value to the southern cattle industry is indicated by the following figures. The average weight of cattle in the States of Florida, Georgia, Louisiana, Alabama, and Mississippi in 1915 were 340, 419, 471, 500, and 550 pounds per head, respectively.

The cattle of Wyoming, Idaho, and Montana, which are tick-free States, averaged 985, 966, and 938 pounds, respectively, in weight. The average values of cattle in these ticky States are: Georgia, $18; Florida, $18; Alabama, $20; Mississippi, $22. In a few of the tick-free States the average values of all cattle are as follows: Wyoming, $64; Montana, $60; Ohio, $56; Illinois, $56; Indiana, $54. Not only are the prices and values of beef cattle in ticky areas reduced, but it is estimated that milk production in such areas is reduced about 40 per cent because of the bloodsucking tick. When the work of tick eradication was first taken up it moved slowly, but at the present time southern farmers are making heroic efforts toward cleaning up their respective States. It is estimated that in from five to seven years the work will be completed.

It gives me much pleasure to state that the Legislature of Louisiana passed a law last week requiring all its citizens, under heavy penalties, to eradicate the cattle tick, and I have no doubt that my State will soon be free from the pest.

Following rapidly in the wake of tick eradication is the introduction of pure-bred beef animals. The beef cattle sales which have been held in the South during the past two years are numbered among the hundreds. Southern farmers appreciate good cattle and are paying good prices for them. At the Hereford sale held in Atlanta last November 46 head of pure-bred cattle were sold at an average price of $371 per head. One bull in this sale sold for $800; several went at $600. The best feature of this sale was the fact that most of these cattle went to southern breeders.

Another sale is that of the Lespedeza farm at Hickory Valley, Tenn. In this sale 60 head of pure-bred Shorthorn cattle sold at an average of $228. The bulls in this sale averaged $318, and one bull sold for $1,600. These were southern cattle and sold largely to southern breeders.

At the Davis Hereford sale at Jackson, Miss., in March of this year, some forty-odd cattle sold for an average price of $511. More than one-half of these cattle were sold to southern breeders, which in itself shows how rapidly the southern farmers are becoming accustomed to diversified and live-stock farming. In recent sales in North Carolina, South Carolina, Georgia, Alabama, Tennessee, Arkansas, Oklahoma, and Louisiana cattle have sold at excellent prices.

More cattle have been taken into Southern States during the months since January 1 of this year than during any months previous. If this record keeps up the year 1916 will mean a great deal to southern live-stock improvement. Already cattle coming from these States are beginning to show the results of breeding, and a few goods bulls scattered here and there in counties of the South will go a long way toward the establishment of a better type of cattle.

The boys' pig and baby beef clubs should also be given due credit for the part they have played in the development of southern live-stock conditions. The pig-club idea originated a few years ago in Louisiana. Since that time it has grown to such an extent that the mere supervision of the work necessitates the employment of several hundred specialists. Some of the specialists devote all their time to the work, while others only give part of their time. The baby-beef-club work, also a southern idea, has not existed as long as the pig-club work, but boys everywhere are glad of the opportunity to take up this interesting work. The work at present is going on in Texas, Mississippi, and Georgia, with promise that it will spread over all the South in a few years.

One might ask what has the South to show for all the work which has been done there in the interest of beef cattle during the last five years. It is difficult to answer the question with justice to the work, because the data and information which we have at hand are so small and so poorly representative of the real good that has been done.

That new institution, the Atlanta Live Stock Show, is a good example of what the South has produced and can do when called upon. This Atlanta show, because of certain factors, was devoted entirely to Hereford cattle last year. Hereford breeders are responsible for the statement that this was the biggest show of their breed ever held. Over $5,000 was offered in prize money, and the best of Hereford cattle from all over the United States were in the competition. One cow imported from England, the place where Herefords are supposed to be really good, was not good enough at Atlanta to win over some of her competitors. This show was reputed to have been better than the Hereford show at the Panama-Pacific Exposition, and several breeders brought their show herds across the continent to get an opportunity at the prize money offered. Every first prize offered by the fair association at Atlanta, as well as the four championships, and last but best of all, the two grand champion animals were all owned by breeders living below Mason and Dixon line. These southern breeders did not win because of lack of competition, for the strength of this show was without precedent.

Further, southern-bred cattle have won time and again at that great Mecca of all cattlemen, the International at Chicago. It remained for a Mississippi breeder to capture the premier recognition at this show in 1913 on that greatest of all present-day Hereford bulls, Point Comfort XIV. In making this wonderful product of the South a grand champion, the greatest possible honor was bestowed on southern farmers.

The offspring of this great bull, as well as those of many others, are being scattered over all the Southern States. Already their influence is being felt in the improvement of and the better prices received for the steers that are being marketed.

The South, with her cheap feeds and her wonderful variety of winter and summer pastures, can not be equaled for cheapness of the gains made by cattle fattened there. Bermuda grass, lespedeza, bur and other clovers, paspalum, and alfalfa are a few of the many grasses which are furnishing the basis of very economic beef production. Any one given section in our Northern States may boast of one or two standard pasture crops. In some sections of the South as many as 20 pasture grasses have been found growing in one pasture. Any one of these grasses alone would have been successful as a grazing proposition. With such a variety of resources at her command, one can appreciate how easily the South meets any and all conditions.

All that I have said in regard to beef cattle applies with equal force to dairy cattle. Although as yet there are but few creameries in the South, every branch of the dairying industry has been making rapid strides. Probably no one feature represents this development more definitely than the number of silos that have been built in the South recently. A report from the United States Department of Agriculture shows that during the past nine years the department has given advice, and so forth, in the building of 1,200 silos, which represent only a very small fraction, probably about one-sixth, of those actually built. Ten years ago a silo in the Southern States was almost unknown, but to-day there is hardly a county in the whole South in which silos are not in use.

THE SOUTH A MINERAL EMPIRE.

Rapid, however, as has been the South's agricultural progress, it has been fully equaled and even surpassed by her strides in the mineral world. In 1882 the total southern mineral production was valued at only $38,000,000, and amounted to 8 per cent of the mineral output of the country; in 1890 it was 14 per cent of the Nation's production, and its value was $87,000,000; in 1900 it was 16 per cent, and brought $177,000,000; in 1910 it rose to 19 per cent, and was valued at $370,000,000; while in 1914 the South's output brought $467,000,000, and constituted 22 per cent of the total production of the United States.

The increase in value of mineral production for the whole country from 1882 to 1914 was from $452,000,000 to $2,115,000,000, or about 370 per cent; for the South the increase was from $38,000,000 to $465,000,000, or 1,100 per cent. In other words, while during the generation from 1882 to 1914 the country, as a whole, was increasing the value of its mineral

output not quite fivefold, the South increased the value of its mineral production about twelvefold. And what minerals made up this grand total of nearly half a billion dollars—more than one-half as much in value as the great cotton crop of which the South is so justly proud? Of the 57 useful minerals mined in the United States every one is produced in the South except borax and platinum, and to make up for these two not produced, nine, namely, phosphate, bauxite, manganese, sulphur, monzonite, zircon, barite, fuller's earth, and nearly all the mica and pyrite are produced nowhere outside the South. The South is indeed a mineral empire. I insert as Appendix E some statistics as to the South's mineral wealth.

INCALCULABLE TREASURES OF COAL AND IRON.

Coal and iron are two of the main foundation stones on which modern civilization is based. Economists tell us that England and Germany achieved and maintain their present position through the extent of their activity in these industries. We know in our own country something of the splendid prosperity created by the northern and eastern coal and iron fields, and yet we do not bear in mind that the South has been blessed by a bountiful providence with 88,000 square miles of coal deposits, more than twice as much as that possessed by all Europe, including Russia. The southern output of coal was valued at $9,000,000 in 1882, $25,000,000 in 1890, $54,000,000 in 1900, $135,000,000 in 1910, and $155,000,000 in 1914, an increase of seventeenfold.

Our production of pig iron in 1914 was valued at $27,000,000. The South contains 50 per cent of the total iron resources of the Nation, though it produces only 12½ per cent of the pig-iron output. I cite these figures not to show what we have done, but what is still to be done. Our iron and coal resources have barely been scratched. Mr. Edwin C. Eckel, mining geologist, estimates that at the present rate of production it will take about 4,000 years to exhaust the known southern supply of coal. The wealth of Crœsus awaits those who will delve into these treasure hoards of nature, and the mere statement of their existence unfolds opportunities which must appeal to capital and labor alike.

Mr. Richard H. Edmonds, editor of the Baltimore Manufacturers' Record, has long been emphasizing, in a series of forceful, unanswerable editorials, the necessity of establishing munition plants in the South.

I hope some of my "preparedness" friends will listen to these few remarks. At my request he has written me a splendid letter on this subject, which I insert as Appendix F and to which I invite the careful attention of all. And here let me say a word in regard to this gentleman and his great journal, the Manufacturers' Record. For many years Mr. Edmonds and his paper have been true and consistent friends of the South. In season and out of season he has pointed out the South's resources, heralded her opportunities, and fought for her advancement. His championship has not been spasmodic, but week by week in every issue of the Manufacturers' Record he has labored in the cause and has justly earned the everlasting gratitude and encomiums of the southern people.

In speaking of those to whom special credit is due I also wish to call attention to the Southern Commercial Congress, organized in 1909 to make the South known to the world. This organization has done a noble and patriotic work, which is of incalculable benefit not only to the South, but to the Nation, justifying its slogan "A greater Nation through a greater South." One of its principal achievements was its pioneering and championship of the movement for a system of rural credits, which has just culminated in the passage of the Federal farm-loan act. This is one of the most important measures ever enacted by Congress, since it establishes a financial system which will meet the needs of agriculture.

As Mr. Edmonds points out, 90 to 95 per cent of the iron ore used by the great steel plants of the East must pass through the Soo Canal from the mines of the western Lake Superior region, and a few sticks of dynamite placed in this lock canal might instantaneously cut off their supply of ores and make it utterly impossible for them to manufacture munitions of war. The South, on the other hand, offers an ideal place for the location of munition and other steel plants. In the Birmingham region, for instance, coal and iron lie side by side, and manufacturing establishments located there would be safe from foreign foe. No higher grade of steel is manufactured in the United States than that made from southern iron, and a neglect to develop the steel industry in the South may cause frightful disaster to the future. Let the patriotic capitalists of the country take heed.

SULPHUR LOUISIANA'S MONOPOLY.

Louisiana produces practically all the sulphur in the United States. Fifteen years ago the United States produced only 3,000 tons of sulphur and imported 167,000 tons. Then what are probably the largest sulphur deposits in the world were made available in Calcasieu Parish, La., and the deficit was turned into a surplus—the import into an export. In 1914 our Nation mined 327,000 tons of sulphur, of which 98,000 tons were exported. Of this more than 300,000 tons, valued at over $5,000,000, came from the South. Louisiana had put the United States on the sulphur map of the world.

In the production of petroleum, now so important in our marvelous industrial development, the South stands to the front. Her output was 52 per cent of our national production and amounted to 118,000,000 barrels in 1915. This was nearly twice as much as the total amount produced by any other country in the world. Oklahoma is second in the United States in the production of petroleum, and I have but to mention the Cushing field to recall to your minds its phenomenal output. Louisiana has the great Jennings and Caddo oil fields and ranks fifth in the production of oil. Geologists tell us that the central South from Oklahoma to Louisiana is underlain with what are probably the greatest oil deposits in the world.

PETROLEUM AND NATURAL GAS.

Oil and gas go hand in hand. The South leads the Nation in the production and value of its natural gas. The southern output in 1915 brought the colossal sum of $49,000,000, which was 52 per cent of the total amount realized for natural gas throughout the United States. Oklahoma produces more than any other State, and next to her is Louisiana. Three hundred and thirty-four thousand domestic consumers and more than 5,000 industrial consumers are supplied with natural gas from southern fields. Louisiana, Oklahoma, Texas, Virginia, and West Virginia have large deposits of salt, the annual production of which runs into the millions. The Louisiana output is only limited by the demand, for mother nature has given her salt enough to supply the world for centuries.

The South mines nearly half of all the lead and zinc produced in the United States, and these deposits bid fair to do even better in the future. The southern output of these metals was valued in 1915 at $63,000,000.

The limits of this address do not permit more than a mere naming of our other minerals. Fuller's earth, bauxite, phosphates, cement, marble, clays, building stones, and health-giving mineral waters abound in many parts of Dixie. The Newcomb pottery made at New Orleans is justly famed and has taken prizes in many exhibits.

GOLDEN OPPORTUNITIES.

My discussion of this portion of my subject would be very incomplete if I did not call attention to the magnificent opportunities to which the marvelous advantages of the South give birth. The proximity of almost every known mineral makes no prophecy as to future manufacturing industries of the South improbable.

Dr. David T. Day, formerly of the United States Geological Survey, speaks of a conspicuous instance of this in the Manufacturers' Record of February 22, 1912.

> Certain classes of chemicals should be produced in the South at least to the full limit of the southern demand.
>
> These include products coming from southern minerals shipped frequently long distances away from home to be manufactured and transported back to the South for consumption. Equally obvious are the cases where the proximity of various raw materials admit of a product cheaper than anywhere else. Attention can not too often be called to the most prominent case of the latter kind, the production of soda salts. Everyone is familiar with the vast beds of pure rock salt in southern Louisiana, as well as the brines accompanying oil and gas to the north. In close proximity to this is found the cheapest sulphur production in the world—at the sulphur mines of Calcasieu Parish, in Louisiana. With abundant cheap fuel, oil, gas, and wood, with transportation in all directions by rail and water, no one can dispute the South's claim to supremacy as to location.

Dr. Day told me several years ago that the gas fields near Shreveport, La., were the largest known to science, and would generate more electrical power than all the waters of Niagara Falls, and a great deal cheaper, although subsequently he said that, owing to later discoveries, he thought there were greater supplies of gas in Oklahoma than in Louisiana. He said that Shreveport and other localities in my State were ideal for many enterprises requiring cheap fuel, especially in view of the proximity of sulphur, salt, gypsum, and sand. He also mentioned that bauxite, the mineral base of aluminum, is found in great quantity in America only in Arkansas, near Shreveport, whence it is carried thousands of miles to the cheap electricity of Niagara, whereas an enormous saving might be effected if the Arkansas and Louisiana products, bauxite and gas, lying side by side could be worked in cooperative unison. This is a great opportunity for men of brains and capital, and many others are offered by this wonderful gas field.

Our whole Nation is aroused on the subject of conserving our natural resources. Location and ownership of water-power

sites out West cause the fiercest controversy. Cabinets tremble at the mere mention of "conservation." Captains of finance and industry are searching the world for profitable investment, and yet this marvelous wealth of gas in Louisiana and Oklahoma, better than a dozen power sites in the West for superior electrical productivity to the mighty flow of Niagara's cataract, is actually going begging for some one to conserve and use it.

The West, however, is not alone in the possession of streams with water-power potentialities. It has been estimated that there is a minimum of over 5,000,000 primary horsepower in southern streams. This potential energy is sufficient for the creation of an industrial empire. Already these giant forces of nature have been partially harnessed, and over 1,000,000 horsepower are annually developed from southern streams; and I need but mention Muscle Shoals to call to your mind 600,000 horsepower in the Tennessee River at one place, which the National Government may utilize in the production of nitrates from the air.

SOUTH'S REMARKABLE MANUFACTURING GROWTH.

The South is not generally known as a manufacturing section, but her growth in this sphere is fully keeping pace with her advancement along other lines. In 1900 the value of all manufactured products in the South was $1,289,000,000, about 11 per cent of that estimated for the entire country, while the value of her farm products was $1,354,000,000. In other words, in 1900 the farm products of the South brought about $70,000,000 more than her manufactured products.

In 1910 a marvelous change had taken place. The South's manufactured output had more than doubled in value, amounting to $2,637,000,000, or 13 per cent of the total for the United States, while her farm products were valued at $1,927,000,000. In 1910 the manufactured products of the South brought $700,000,000 more than all her agricultural products.

The Department of Commerce estimates that last year Dixie manufactures aggregated over $4,000,000,000, which was 18 per cent of that produced by the entire country, while our farm products were valued at $3,600,000,000. The South now manufactures more than half of all the cotton it grows, and there is hardly a line of industrial activity that can be mentioned in which the South is not advancing faster than the rest of the Nation. Of 262 different lines of manufacture in the entire Union, 236 are already being carried on in the South. For a long time the South was considered purely an agricultural section, but that is true no longer. Agriculture is still of the greatest importance, reaching in value every year considerably more than one-third of the total agricultural wealth of the Nation, and being over $3,600,000,000 last year; but manufactures have grown far more rapidly than agriculture, and last year reached the colossal total of $4,000,000,000, which clearly gives the palm to manufacturing rather than agriculture.

SOUTHERN BANKS.

In natural cooperation with the South's marvelous growth in agriculture, mining, and manufacturing, her banking facilities have expanded enormously. In 1900 there were only 713 national banks in the South with total deposits of $456,000,000, while on March 7, 1916, 2,147 national banks, with deposits amounting to $1,636,000,000, were doing business. In 1900 the South had 1,589 State banks with deposits of $333,000,000, while in 1915 she boasted of 6,865, whose deposits totaled the colossal sum of $1,355,000,000. To put it in another way, in 15 years the number of southern banks quadrupled, while their deposits increased from about three-quarters of a billion to nearly three billions. These figures show that the South now has banking resources as great as the entire country had as late as the year 1884. Truly, Dixie is the land of opportunities, for although her growth was retarded for a while by various circumstances, she is now going forward with startling rapidity.

OUR SPLENDID TIMBER WEALTH.

Of vast importance to the South as well as to the entire United States are the timber resources, which have contributed much to the prosperity of the region and which will continue to add to its wealth for several generations. Lumbering—a term broad enough to embrace the cutting of the timber in the woods until it has gone through a refining process and is ready for consumption as boards, planks, or timber—has always been a part of the activities of the South; it was not, however, until the 90's that it began to grow with strides that quickly outdistanced the older producing regions. The exploitation has increased year after year and the end is not yet in sight.

As indicative of the economic importance of the forests to the States of Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas, the following estimate of timber remaining after several decades of heavy cutting is made, the figures being those of the Forest Service:

	Billions of feet b. m.
Virginia	14.5
North Carolina	42.9
South Carolina	30.7
Georgia	46.0
Florida	74.1
Alabama	56.3
Mississippi	92.7
Louisiana	119.8
Arkansas	81.5
Texas	66.0
	624.5

The South, as shown in the preceding tabulation, has a total estimated remaining stand of 624½ billion feet of timber—Louisiana's 119.8 billion feet alone representing nearly one-fifth of the aggregate timber remaining uncut. The value of this timber it is difficult to even fairly approximate, much less to make a close estimate of its real worth. If its value is placed at the very low price of $2 per thousand feet, the potential value of the forests is a billion and a half dollars. This represents but about one-sixth of the aggregate value of the resource by the time the timber is manufactured into lumber and ready for distribution. All of this money goes to the South—to labor and to the producers of other products of the region.

The South has produced in the way of lumber in the last 10 years—1905 to 1914, inclusive—more than 160 billion feet of lumber. Its yellow pine is known almost everywhere that lumber is used; it dominates the markets of the great Central West and the Eastern States; from the Gulf and South Atlantic ports it is shipped in cargo lots in normal times to practically all of the countries of Europe, in addition to the Republics of South America. In 1914 an aggregate cut of 17½ billion feet was reported by nearly 12,000 mills. It is not difficult for the mind to picture what the operation of these 12,000 mills means in the way of prosperity.

Louisiana in 1904 ranked fourth in the list of lumber-producing States in the Union in the volume of lumber cut. By 1907 this Commonwealth had advanced to second place and maintained that position until 1914, when the production reported exceeded that of any other individual State. Participating in that cut were 428 sawmills which reported the quantity of lumber manufactured. Louisiana can boast of not only some of the most modern equipped sawmill operations, but can with pride point to the single largest mill in the United States, a mill at Bogalusa, La., with a capacity of 1,000,000 feet of lumber a day.

Some idea of the extent of the lumber industry in the South may be gained from the fact that this industry employs 281,704 wage earners and that the capital invested amounts to the colossal sum of $364,852,000. In this again Louisiana leads, with 46,072 wage earners and $88,973,000 of capital invested.

Not only have the forests of the South given much to the upbuilding of the country as a whole through the volume of lumber cut each year, but the returns from the naval-stores industry are enormous. The value of these products—28,988,000 gallons of turpentine and 3,263,000 barrels of rosin—was $25,295,000.

The South's economic condition has been doubly benefited through exploitation of the forests. Not only has the timber cut brought many millions of dollars into the several States, given employment to hundreds of thousands, resulted in the construction of tens of thousands of miles of railroads, and afforded to the existing railroads millions of dollars' worth of freight traffic, but it has necessitated the building of many communities, now grown into thriving towns, and at the same time afforded a market for the products of the field and factory.

EXCELLENT TRANSPORTATION FACILITIES.

Mr. President, we have noted in a hasty and inadequate manner the varied and valuable products of southern forests, mines, and farms. A study of our production, however, necessitates brief mention of the great transportation problem, and of its three agencies—road, rail, and river.

There seems to be quite widespread belief that the South is woefully lacking in improved roads. This is entirely erroneous, for, while it is true that the South did not take up State-aid highway improvement as early as New Jersey or Massachusetts, it might not be amiss to point out that Maryland was the first to practically complete a comprehensive system of State roads built entirely at State expense and reaching every county and important city in the State.

While the good-roads movement was a few years late in getting under way in the South, as compared with some other sections, the movement since that time has been, if anything, more rapid there than in any other section of equal extent. Further-

more, it may be well to note that, with the exception of the period of great railroad expansion when every section of the country came to regard the public road as merely a local utility, the South has always been at the very front in the movement for better roads.

It was during the last 10 or 12 years, however, that the South made special progress in the improvement of its highways. This was accomplished through State aid, the utilization of convict labor, and the skillful adaptation of local materials to road improvement in a way equaled by no other section of the Union. In 1904 the 16 Southern States had a total road mileage of 790,274 miles, of which only 29,853 miles, or 3.8 per cent, were improved, as compared with 7.1 per cent of improved roads for the entire United States. The total cash road and bridge expenditures for these States amounted to only $12,636,959, or an average of only $16 per mile of road, as compared with $28 of average cash road expenditure per mile of road for the Nation. (Appendix G.) The 10 years following 1904, however, worked a wonderful transformation. At the close of 1914 the Southern States had a total road mileage of 954,671 miles, of which 84,155 miles, or 8.9 per cent, were improved. This is practically three times the mileage which was improved in 1904, while the cash road and bridge expenditures in 1914 amounted to $61,680,956, or about five times the total road and bridge expenditures in 1904. In comparison with the entire United States we note that the improved roads of the South amounted to 8.9 per cent of the total in those States, with a cash road and bridge expenditure of $64 per mile, while for the Union as a whole the improved road mileage was 10.9 per cent of the total, with a cash expenditure of about $100 per mile. Thus, while in 1904 the percentage of the improved mileage in the South was only one-half of the average for the country at large, in 1914 it was almost equal to the average for the entire United States. (See Appendix G.)

The above will serve to show how erroneous is the idea that the South is far behind in the improvement of its public roads. The work is by no means as yet complete, but when we stop to consider that at the present time about 8.9 per cent of its public roads have been improved, and most of this in the short period of 10 years, and when we recall that 15 or 20 per cent of the roads of any section carry at least 80 per cent of the traffic, we see that the South is well on its way toward completion of a system of improved roads which will answer all its needs. In the wisdom shown in financing its road improvements, in utilizing convict labor, and adapting local materials so as to answer the needs of the particular traffic requirements, no section of the United States has made as great progress as have the 16 Southern States. The people know what good roads mean and have set about to secure them. While the work has in no instance been as spectacular as that of some other States, it has been no less effective in securing actual results; that is, roads adapted to the needs and traffic requirements of each of the several States.

In the South, however, as throughout the United States, the principal means of transportation is by rail, and we are very well supplied in this respect. The United States has a total of 252,000 miles of railroads, of which the South, constituting less than one-third of the country in area, has 92,000 miles, or more than one-third, of the railroad mileage. The average southern mileage is more than three times that of many of the Western States, and the enormous growth of the southern region is forcing a rapid increase in these great arteries of commerce. Our railroad officials are as enterprising and energetic as those in any section of the country, and their persevering and untiring labor is bringing our railways to a very high degree of efficiency.

In regard to waterways the South has been unusually blessed. Taken as a whole, the Southern States have a greater per cent of navigable rivers than any other part of the Union. The mighty Father of Waters sweeps through the heart of the Southland, and the Ohio, the Missouri, the Tennessee, the Cumberland, the Arkansas, the White, the St. Francis, the Red, and the Yazoo are worthy tributaries to this great parent. Pouring into the Atlantic and the Gulf are many fine streams, and my own Louisiana has nearly 5,000 miles of navigable waters. The South can boast of the second largest shipping port in the United States—New Orleans, the Queen City of the Gulf—whose commerce last year was second only to New York, while Galveston ranks third among the ports of the Union. The opening of the Panama Canal has brought to our very doors the great markets on the west coast of South and Central America, where the products of the South are in active demand.

In transportation, then, as in production, the South stands in the front rank.

Mr. CLAPP. Mr. President, will the Senator pardon an interruption there?

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Minnesota?

Mr. RANSDELL. I will be delighted to yield.

Mr. CLAPP. I should like to add something that perhaps the Senator, coming, as he does, from the South, would hardly feel that he could add. It is not so much what a man does as it is the odds against which he contends. I think in view of the complete destitution of the South at the close of the war, the almost absolute paralysis of her activities, not only has her progress been wonderful, but the fact that she has recovered from that destitution and paralysis is still more wonderful and more remarkable.

It does seem to me that in a speech covering, as it does, the growth and development of the South and its present condition that that suggestion, with the Senator's permission, is at least worthy of incorporation in his speech.

Mr. RANSDELL. Mr. President, I thank the Senator from Minnesota from the bottom of my heart for saying something that my modesty as a southern man prevented me from saying. I did speak in a brief way about the condition of the South at the close of the Civil War, but perhaps the Senator did not hear it. I have tried to show what the South is to-day in order that anyone who read my entire speech or heard it might draw the comparison and see the truly marvelous development which she has realized and attained since that awful struggle 50 years ago. Her improvement has been marvelous. No words can describe it. No one can understand it unless he should go there and see it.

I thank the Senator sincerely for his tribute, for it is truly a worthy and deserving one.

I fear, however, that the facts recited above, showing the limitless resources of the South, are not as widely known as they should be and I trust that the press of the United States will call to the attention of our people the opportunities offered by this section. In no portion of the United States is the public better served by its press than in the South. This refers to the rural as well as metropolitan newspapers. The large number of wide-awake periodicals is an indication of the progressive spirit that is sweeping Dixie from the Ohio to the Gulf, and I know that the press, not only of the South but of the entire country, will assist in giving these facts the publicity that their importance merits.

And along with this I hope, Mr. President, that they will give additional prominence to the splendid tribute made by the Senator from Minnesota.

COME TO THE SOUTHLAND.

Mr. President, in a hasty and imperfect manner I have pointed out a few of the myriad advantages that should lure men and money to the Southland, and hope my feeble words will meet with some response. I trust that many of our fine people now pouring into Canada, and the boys and girls who are leaving northern and eastern farms and villages for the exciting but dangerous life of great cities, will make their homes in the South. I cordially invite capital and labor in every branch of human endeavor to invest in Dixie and become citizens of that favored country. We will gladly welcome all who wish to come—millions of them—for the South needs 50,000,000 additional people and fifty billions of wealth to assist in developing her marvelous resources. The lure of the Southland is calling and the response will be all she desires.

APPENDIX E.

TABLE I.—*Mineral products of Southern States compared with United States, 1913–1915.*

	1913	1914	1915
Southern States	$505,363,082	$467,044,946	$490,600,000
United States	$2,439,159,728	$2,114,946,024	$2,373,280,000
Southern States, per cent of United States	21	22	20

In the above totals pig iron is used as the basis of iron valuation. (United States Geological Survey.)

TABLE II.—*Mineral products of Southern States and United States, 1914 and 1915.*

Product.	1914		1915	
	Southern States.	United States.	Southern States.	United States.
Cement	$13,434,833	$80,533,203	$12,796,395	$75,155,102
Coal (bituminous) [1]	155,464,036	493,309,244	155,860,000	504,500,000
Coke [2]	14,852,047	88,334,217	15,737,403	105,503,868
Copper	2,524,017	152,968,246	3,245,039	242,900,000
Iron:				
Ore [2]	7,252,338	71,905,079	8,308,548	101,288,984
Pig	27,398,597	298,777,429	36,970,059	401,409,604
Lead	15,633,268	39,997,932	20,529,619	47,660,000
Petroleum	104,051,228	214,125,215	88,000,000	172,000,000
Phosphate rock	9,592,553	9,608,041	5,400,836	5,413,449
Zinc	13,416,185	35,028,636	42,734,129	113,617,500
All other minerals	125,530,229	790,598,078	125,064,000	810,624,000
Total	467,044,946	2,114,946,024	490,600,000	2,373,280,000

[1] Exclusive of Pennsylvania anthracite.
[2] Value not included in total value as such inclusion would duplicate coal and pig iron values.

TABLE III.—*Mineral products of Southern States by States, 1913 to 1915.*

State.	1913	1914	1915
Alabama	$34,660,545	$30,879,288	$29,500,000
Arkansas	6,780,760	5,785,199	6,580,000
Florida	10,508,016	8,497,688	4,863,000
Georgia	6,525,792	5,695,084	5,354,000
Kentucky	26,845,579	26,668,474	27,460,000
Louisiana	21,011,828	21,890,025	18,630,000
Maryland	11,292,723	10,587,564	10,570,000
Mississippi	1,143,472	1,104,197	662,000
Missouri	54,001,088	48,597,593	74,500,000
North Carolina	3,739,696	3,519,245	3,458,000
Oklahoma	80,168,820	78,744,447	72,400,000
South Carolina	1,464,150	1,414,294	1,010,000
Tennessee	21,008,938	19,645,213	22,175,000
Texas	31,666,910	30,363,426	29,157,000
Virginia	17,178,580	16,400,347	16,895,000
West Virginia	143,591,272	134,071,803	134,100,000

In the above States totals iron ore is used as the basis of iron valuation. (United States Geological Survey.)

APPENDIX F.

MANUFACTURERS' RECORD,
Baltimore, June 28, 1916.

Hon. JOSEPH E. RANSDELL,
United States Senate, Washington, D. C.

MY DEAR SENATOR RANSDELL: As I understand you intend to make an address shortly touching on the agricultural development of the South, permit me to call your attention to a few facts that bear directly on the agricultural prosperity of this section and the general prosperity of the Nation.

Until the people of the whole country come to realize that the South is the Nation's greatest undeveloped asset they will never fully realize how its development will enrich the Nation and how everything that

helps to advance the progress of the South safeguards the business interests as well as the actual life of the Nation.

In this section, where iron ore and coal are in vast abundance, furnishing unsurpassed advantages for the production of iron and steel, and all of the products of iron and steel, which produces three-fourths of the sulphur of the world, and which has many other natural advantages unequalled in this or in any other country, industrial development is limited as compared with that of other sections.

There are many reasons for this, and one of them is that the Nation as a whole has concentrated its thought and energy, through Government circles and in other ways, upon the development of the North and the West to the exclusion of the South. Let me illustrate:

Over 90 per cent of the steel made in the United States is made out of ores that are mined in the Lake Superior district, immediately contiguous to Canada, a region which could easily be overrun and captured at any moment by an enemy assailing us through Canada. But more than that, these ores to the extent of more than 50,000,000 tons a year pass through the Soo Canal, only about 1¼ miles long. I am reliably informed by some of the best engineers in the country that two or three sticks of dynamite could be exploded in such a way as to completely block this canal. Instantaneously, the entire iron and steel industry of the country to the extent of 90 per cent of our output would collapse. A few million tons of foreign ores are imported, and, of course, all importations of ore would be instantaneously shut off by war unless we had the complete command of the sea, and that is hardly possible any time in the near future.

We are thus staking the business interests of the country and national life itself upon one ore supply, the capture of which or the blocking of the canal through which this ore passes would make impossible the production of armor plate or of munitions of war. Along the Atlantic coast, say, from Boston to Newport News, stretching back anywhere from 10 to 100 miles, but covering in the aggregate probably not over 2 per cent or 3 per cent of the Nation's area, is centered the entire munition-making business of the United States. All of this munition-making business would have to be instantaneously stopped if the Lake Superior ore supply were cut off by capture of the district or by the blocking of the Soo Canal. In such an event any effort to oppose invasion would be useless, and any Army or naval officer familiar with the situation will confirm this statement.

This mighty Nation—mighty in population and in wealth—would under such conditions be as helpless as an infant against a giant. The South is the only section of the country which can possibly provide a remedy for this situation. In the South and Southwest, back of the mountain ranges which would afford protection against invasion, there are vast stores of iron ore and coal and manganese, lead, and zinc, and all other materials needed for the making of war supplies, explosives included. The South has about three-fifths of the Nation's coast line; it produces all of the Nation's cotton and more than one-fourth of the Nation's grain; but neither the Government nor the great financial and metallurgical leaders of the country have given heed to the supreme necessity of utilizing this situation by the development of great iron and steel and munition making interests in the South and Southwest, far away from the coast and from the Lakes and not dependent upon Lake Superior or foreign ores.

Until this is done all talk of preparedness is largely a visionary dream. I suggest, therefore, that you bring to the attention of the Senate and of the country this danger, which is so vital, and which can be removed in no other possible way than by the prompt development on a large scale of munition-making and kindred industries in the South and Southwest. To permit existing conditions in iron and steel and munition making to last any longer would be as criminal on the part of national legislation and on the part of our business men as would be the failure to enlarge our Navy and our Army.

The South supplies every possible material for the making of explosives, the building of ships, the construction of armor, and the creation of great steel industries, all far from the dangers which confront these interests along the Atlantic coast or on the Lakes, dependent as they are upon supplies which could be cut off without a moment's warning.

I trust you will appeal to the patriotism of the Senate to study this situation and realize its danger before it is too late.

Sincerely, yours, RICHARD H. EDMONDS, *Editor.*

APPENDIX G.

Public road mileages and cash expenditures in the Southern States, 1904, Office of Public Roads and Rural Engineering.

State.	Total mileage.	Improved mileage.	Total cash road and bridge expenditures in 1904.

During the delivery of Mr. RANSDELL's speech,

Mr. BRADY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Idaho?

Mr. RANSDELL. I shall be delighted to yield.

Mr. BRADY. The senior Senator from Louisiana is furnishing some very valuable information. The State of Idaho, which I have the honor to represent in part, possesses a splendid climate, is healthful, her lands are productive, and her natural resources are wonderful. Idaho produces one-third of all of the lead that is produced in the United States, and the great river that passes through the entire length of our State, in connection with the Columbia, is the seventh largest river in the world. We have more productive land susceptible of irrigation and water with which to irrigate it than any other State of the Union. We are proud of Idaho, but we are also proud that we are a part of the wonderful southern country that the Senator from Louisiana represents. I believe that our country should be looked upon as a glorious whole, and I am proud of the statements he has made relative to the South. They are illuminating and beneficial.

The Senator is now discussing the question of health and sanitation and is delivering an interesting and instructive address, and it seems to me that more of our Senators should be in the Chamber at this time in order that they may have the benefit of his remarks. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Brady	Gore	Norris	Sutherland
Broussard	Gronna	Overman	Swanson
Bryan	Husting	Page	Taggart
Catron	James	Pittman	Thomas
Chamberlain	Johnson, Me.	Poindexter	Thompson
Chilton	Johnson, S. Dak.	Pomerene	Tillman
Clapp	Kenyon	Ransdell	Townsend
Clark, Wyo.	La Follette	Shafroth	Underwood
Clarke, Ark.	Lane	Sheppard	Vardaman
Culberson	Lippitt	Sherman	Warren
Cummins	McCumber	Smith, Ariz.	Williams
du Pont	McLean	Smith, Ga.	
Gallinger	Martine, N. J.	Smith, S. C.	

The PRESIDING OFFICER. Fifty-one Senators have answered to their names. There is a quorum present.

Mr. RANSDELL. Mr. President, I thank the Senator from Idaho sincerely for his very kind remarks and appreciate them more than I can describe.

After the conclusion of Mr. RANSDELL's speech,

Mr. THOMPSON. Mr. President, I have a telegram from the Farmers' Cooperative Grain Dealers' Association of Cullison, Kans., pertaining to the Federal inspection and grading provision in the Agricultural appropriation bill now before the Senate, which I send to the desk and would like to have read.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Without objection, the Secretary will read the telegram.

The Secretary read as follows:

CULLISON, KANS., *July 4, 1916.*

Senator W. H. THOMPSON,
Senate Chamber, Washington, D. C.:

On behalf of 350 farmers' elevators and more than 30,000 farmers in Kansas we ask that you support the bill providing for Federal inspection and grading of grain.

THE FARMERS' COOPERATIVE GRAIN DEALERS' ASSOCIATION,
T. L. DANIEL, *Secretary.*

Mr. THOMPSON. I will state that I have received something like 100 telegrams and letters relative to this provision of the pending bill from various citizens of Kansas. I will not take up the time of the Senate to read them nor burden the RECORD with the printing of all of them.

I wish to say generally that they come from farmers, elevator men, grain dealers, millers, and every class of citizens in my State who are interested in a fair and honest grading and inspection of grain, and they urge the support of the bill as reported by the Senate committee.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from North Dakota?

Mr. THOMPSON. Certainly.

Mr. McCUMBER. The Senator says that they are in favor of the bill reported by the committee, but the telegram which the Senator had read favored Federal grading and inspection of grain. Does the Senator realize the fact that this provision is for Federal standardization, and is not a bill for Federal inspection of grain? Under the bill as reported by the committee inspection is still left entirely in the hands of the States.

Mr. THOMPSON. Mr. President, I will say that the bill as prepared by the committee has been submitted to those who are interested in the grading of grain in my State, and the telegram I had read was received in response to the consideration of this particular bill. These parties knew the exact provisions of the bill on this subject.

Mr. President, I am aware of the fact that the farmers of Kansas and elsewhere in the United States desire both Federal grading and Federal inspection of grain. I believe they realize, as all Senators here do, that it is impossible to take such an advanced step all at once; but they are willing to accept as the best thing we can get at the present time the bill which has been reported by the Senate committee.

As bearing out that view I have here telegrams from several organizations of farmers and grain dealers and others actually interested in the honest grading and inspection of grain which I will send to the desk to be printed as a part of my remarks.

The first is from Mr. McCauliffe, president of the Farmers' Union of Kansas, a large farmers' organization composed of more than 30,000 actual farmers of the State. The next is from Mr. W. C. Lansdon, editor of the Farmers' Union, at Salina, Kans. Both of these gentlemen have seen the bill that we have under consideration and have inspected it thoroughly, and these telegrams are in response to a consideration by them individually, and also their organizations, or those managing the organizations, of the particular bill in question. I also have a telegram from Mr. L. A. Fitz, of the Kansas State Agricultural College, authorized by President Waters, one of the greatest agricultural authorities in the United States, commending this particular provision of the bill and asking my support of the bill.

I also have a telegram from G. D. Estes, president of the Farmers' Cooperative Grain Dealers' Association, of Stafford, Kans.

I also have a telegram from the Kansas Grain Co., the Hutchinson Flour Mills Co., the Lyons Milling Co., and the Border Green Milling Co., and a telegram from J. P. Adams, editor and cooperative manager, of Minneapolis, Minn. I will not take the time to read these telegrams, but will ask that they be printed in the RECORD as a part of my remarks; and I will not take up any more time of the Senate discussing this question, but will gladly give my support to the bill in compliance with the wishes of my constituents who are so deeply interested in this important subject.

The PRESIDING OFFICER. Without objection, permission is granted.

The telegrams referred to are as follows:

SALINA, KANS., *May 19, 1916.*

Senator W. THOMPSON,
Washington, D. C.:

Farmers in favor of Federal grain inspection.

M. McCAULIFFE,
President Farmers' Union of Kansas.

—

SALINA, KANS., *May 19, 1916.*

Hon. W. H. THOMPSON,
Washington, D. C.:

Farmers favor compulsory Federal grading and inspection.

W. C. LANSDON,
Editor Farmers' Union.

MANHATTAN, KANS., *May 22, 1916.*

Hon. W. H. THOMPSON,
United States Senator, Washington, D. C.:

Have gone over with President Waters the grain-grades act, Agricultural bill, and we both believe it to be a step in the right direction and a good thing for the Kansas farmer. We hope you can support the measure. President Waters authorizes this wire.

L. A. FITZ,
Kansas State Agricultural College.

—

STAFFORD, KANS., *May 22, 1916.*

W. H. THOMPSON,
2657 Woodley Road, Washington, D. C.:

Farmers' Cooperation Grain Dealers Association favor Federal inspection.

G. D. ESTES, *President.*

—

KANSAS CITY, MO., *May 18, 1916.*

Hon. W. H. THOMPSON,
United States Senate, Washington, D. C.:

As member of Senate Committee on Agriculture we urgently appeal for your help for grain-grades bill. Uniformity of grain inspection through Federal supervision is urgently required in the interests of growers, dealers, and millers.

KANSAS GRAIN CO.
HUTCHINSON FLOUR MILLS CO.
LYONS MILLING CO.
BORDER QUEEN MILLING CO.

—

MINNEAPOLIS, MINN., *May 18, 1916.*

Senator W. H. THOMPSON,
Washington, D. C.:

This winter I attended seven annual State conventions of farmer grain dealers; talked with hundreds of them personally regarding Federal grain grades and supervisions legislation; without an exception all interviewed are in favor of it. I am sure it is the voice of the farmers that proposed bills become law immediately

J. P. ADAMS,
Editor Cooperative Manager and Farmer.

The PRESIDING OFFICER. The pending amendment is the amendment offered by the Senator from North Dakota [Mr. GRONNA].

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gore	Martine, N. J.	Smoot
Borah	Gronna	Nelson	Sterling
Brady	Harding	Norris	Sutherland
Brandegee	Hardwick	Overman	Swanson
Broussard	Husting	Page	Thomas
Bryan	James	Poindexter	Thompson
Catron	Johnson, Me.	Ransdell	Tillman
Chamberlain	Johnson, S. Dak.	Reed	Underwood
Chilton	Jones	Shafroth	Vardaman
Clapp	Kenyon	Sheppard	Wadsworth
Culberson	La Follette	Sherman	Warren
Cummins	Lane	Shields	Williams
Curtis	Lee, Md.	Simmons	
Fletcher	Lodge	Smith, Ga.	
Gallinger	McCumber	Smith, S. C.	

Mr. MARTINE of New Jersey. I desire again to announce that the Senator from Montana [Mr. MYERS] is detained at his home on account of illness.

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present. The pending amendment is the amendment offered by the Senator from North Dakota [Mr. GRONNA].

Mr. GORE. Mr. President, I wish to say that I have not interposed an objection to the other amendments which have been offered to this section of the bill under consideration because they possessed more or less merit, in my judgment. The pending amendment, however, ought not to be adopted; at least in my judgment it should not be adopted. It would be rather an idle performance for the Senate solemnly to pass a measure purporting to provide for the standardization of grain and for the supervision of a system of grain-grade standardization and then to incorporate in the same measure an amendment which would virtually denaturize and emasculate the measure itself. I trust that the pending amendment will be voted down.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from North Dakota.

The amendment was rejected.

Mr. McCUMBER. Mr. President, I desire to offer an amendment. On page 105, line 4, after the word "may," I move to insert "call for reinspection or," and after the word "question," on the same line, to insert "in accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 105, line 4, after the word "may," it is proposed to insert "call for reinspection or," and after the word "question," in the same line, to insert the words "in accordance with the laws, rules, or regulations in force or pro-

vided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations."

Mr. McCUMBER. Now, I will ask the Secretary to read the provision as it would be if amended.

The VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

SEC. 6. That whenever standards shall have been fixed and established under this act for any grain and any quantity of such grain which has been sold, offered for sale, shipped, or delivered for shipment in interstate or foreign commerce shall have been inspected and a dispute arises as to whether the grade as determined by such inspection of any such grain in fact conforms to the standard of the specified grade, any interested party may call for reinspection or appeal the question in accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations, to the Secretary of Agriculture; and the Secretary of Agriculture is authorized to cause such investigation to be made and such tests to be applied as he may deem necessary and to determine the true grade.

Mr. McCUMBER. Mr. President, this section is not intended to be an inspection measure, but rather a measure providing for Federal standardization, the present system of inspection to be continued by the boards of trade and chambers of commerce or warehouse commissions provided by law by the several States in which terminals are situated. Therefore, it seems to me, that we ought not to assume in any way to interfere with those systems which have grown up and which are necessary for reinspections and for appeals.

The Senator from Minnesota [Mr. NELSON] has already shown that in Minneapolis alone the calls for reinspection have exceeded 61,000 in a single year, which confirms what I have stated, that reinspections, which are in the nature of appeals, are so great throughout the United States that they would have to be discarded entirely, or else they could not be taken cognizance of by the Department of Agriculture. We should have to have an army to take care of those reinspections and those appeals. So long as we are still left by the provisions of this bill to the inspection system of the States and of the great terminals, whether those inspections are governed by State laws or whether they are governed by chambers of commerce or boards of trade, it is but proper that we should take advantage of the systems which are provided by those laws and by those boards of trade or chambers of commerce. In this way most of the appeals would be settled, without coming to the Secretary of Agriculture at all, except perhaps as to a very small percentage of them.

In every one of these cases provision is made for an immediate reinspection and for an immediate appeal while the grain is still there. If you were to substitute an immediate inspection or an immediate regrading and submit it to the Secretary of Agriculture, you would have to keep your grain in the car perhaps for weeks before you could get a decision, and there would be an immense amount which would have to be paid out for demurrage—so great that no one would dare take advantage of the provision.

While I believe it would have been far better to have provided for both standardization and inspection by the Government, allowing the Government to appoint each one of the inspectors now qualified under the laws of the several States to do inspection—to make each one of them a Government agent and to have provided that his fees should be paid the same as they are now paid, of a certain amount upon each car inspected—the committee has not seen fit to do that. Therefore, if we are not going to have Federal inspection, let us not get the two systems mixed up or in conflict with each other, but let us take advantage of the system which we have. I am quite confident that we shall find that inspection by the State or by the boards of trade or chambers of commerce will not prove satisfactory, and that, if we have a standardization, the other will come in due time. For that reason I am willing to vote for the standardization alone.

My desire, however, is that we shall place nothing now upon the statute books which I feel absolutely sure can not be made workable and which will interfere, and grossly interfere, with the ordinary course of trade. That course of trade, with reference to the Minnesota system, has already been explained by the Senator from Minnesota [Mr. NELSON]. While I can not agree with him that that system is a perfect one, I will agree that if the Minnesota system were carried out as it is intended by the laws of the State of Minnesota that it should be carried out, and if every other State had the same system, and it was carried out fairly and honestly, there could be no complaint against the system.

In other words, I believe the Minnesota system is a perfect system so far as the system itself is concerned; but I do not believe that it is perfectly operated.

I call the attention of the Senator from Minnesota to just one thing now, to show that the Minnesota system is not perfectly operated. For instance, the board of warehouse commissioners fixes the grades each year; and I think that is perfectly proper. Those grades ordinarily are so fixed that the value of the grain for any lower grade for flour purposes would be about from 3 to 5 cents less than it would be for the next higher grade. For instance, if No. 1 northern was selling for a dollar a bushel, under the Minnesota system No. 2 northern would ordinarily sell for about 97 cents, and No. 3 northern, we will say, from 3 to 5 cents less, or about from 93 to 95 cents a bushel; and yet, without changing the grades to any appreciable extent, I call attention to the fact that the difference between No. 2 and No. 3 in the regular sales made of the 1915 crop from my State, was about 18 cents; in other words, No. 3 was about 18 cents a bushel less in the markets of Minneapolis than was No. 2. If that No. 3 measured up to the Minnesota grade, it should not have been more than 5 cents a bushel less in value than No. 2 for the manufacture of flour. I never could understand why they made that wide difference between No. 2 and No. 3. If the Senator from Minnesota can explain it to me, I shall be very glad to hear him.

Mr. NELSON. Mr. President, I am very sorry the Senator has seen fit to inject this question into this matter at this time. I carefully avoided going into it.

The trouble with the Dakota wheat, to a large extent, has been this: A great deal of their wheat is never stacked. They thrash from the shock, and oftentimes the wheat becomes damp and bleached. They thrash it from the shock, haul it to the cars, and send it in when it is in an unfit condition. That same wheat afterwards, after it is dried and fanned and put through a process, becomes in time better wheat; but when they send in that wheat in the first instance, because of the fact that it is thrashed from the shock, and because of the fact that it is bleached and has been exposed to the weather, it does not come up to the grade.

In our State, at an early day, in the Red River Valley, they used to do a good deal of what we call shock thrashing; but they are abandoning that more and more. They find that it is not profitable; that the grain is injured in the shock, becomes bleached and deteriorated, and they are unable to get the grade for it. That has been, to a large extent, the trouble with the Dakota wheat. But, as I said, I am a little surprised that the Senator has seen fit to attack the Minnesota system in this way.

Mr. McCUMBER. No; I am not attacking the system. I am attacking the method through which the system is carried out at times. I will entirely agree with the Senator that some of this wheat, because of its being bleached and because of its being wet, was worth 18 cents a bushel less than No. 2; but if it was worth 18 cents a bushel less than No. 2, it ought not to have been graded No. 3, but it ought to have been graded "rejected" and sold upon the market as either No. 4, and a poor grade of No. 4, or as "rejected" grade—that is, no grade at all.

It is with those things that we have found the most complaint. Now, if we had gotten a No. 3 price for that grain, it is probable that we would have gotten more than that grain was worth; but the chances are a thousand to one that while there was a difference of 18 cents a bushel between a No. 2 price and a No. 3 price at which it was bought in, it was sold as No. 3, the same as it was purchased as No. 3. But I doubt if there was that much spread; and it may be possible that they dried it, as the Senator says, and put it through a process that took the moisture out of it, that took the bleach out of it, and made a better grade of it.

Mr. NELSON. I want to say to the Senator, if he will allow me to interrupt him, that I do not know any instance, except in special kinds of wheat like the macaroni or durum wheat, where there has been a difference of 18 cents a bushel between wheat graded as No. 2 and No. 3.

Mr. McCUMBER. I am informed by my colleague, who was shipping grain during all of last summer, that that difference existed for a long period. I shipped no grain myself, so I have no personal knowledge of the fact; but it was stated, and without being disputed, upon the floor of the Chamber last year. But that, possibly, is of little value.

I simply wish to say that we ought either to have Federal inspection by Federal inspectors altogether, or else we ought to keep out of the inspection field entirely; and as it is determined that we shall keep out of that field let us at least take advantage of the provisions in the laws of the different States for appeals. The Secretary of Agriculture, as I stated before, could not by any possibility take cognizance of all the applications for reinspection and for appeals; but under the systems, whether they are governed by rules of boards of trade or chambers of commerce or the rules laid down by the railroad and

warehouse commissioners, all of them provide first for reinspection, secondly for an appeal from the inspectors, and finally for an appeal to some board superior to those. The amendment which I have proposed simply allows the usual course of trade in that respect to prevail, but does provide for a further appeal from the final decision in such States where the appeal is taken to the Secretary of Agriculture. Probably there would be very few cases, but those would be important cases and would help to establish the Federal grades so that all would understand exactly what they meant.

I therefore hope this amendment will be adopted, as I desire above all things to make this bill as perfect as I can.

Mr. SHAFROTH. Mr. President, the chairman of the committee is not in the Chamber just at this moment, but I believe I know his attitude with relation to the amendment. He thinks that there are some parts of the amendment that may not be good, but he is willing to let it go in the bill and go to conference in the hope that something can be worked out that will be satisfactory all around.

Mr. McCUMBER. That will be entirely satisfactory to me.

Mr. SHAFROTH. The Senator's position as to inspection, and the necessity for inspection, and the hope that inspection will come, has been ably voiced by him heretofore, and ultimately this bill may result in an inspection by the Federal Government. If it does, and it works well, of course that is all that we desire; but it is impossible now to obtain the passage of a Federal inspection bill. The moment you begin to talk about Federal inspection, there come up all of the State officers who are now in the States grading grain protesting most vigorously against it; and on that account it has been deemed wise by the committee to go as far as it can in that direction, but not to the extent of providing for inspection by the Federal Government.

So I will state that the attitude of the chairman is to let this amendment be adopted and go to conference, not, however, committing himself to it, but in the hope that something may be worked out by the conferees.

Mr. GRONNA. Mr. President, I will say to my colleague that on yesterday we adopted an amendment which I proposed, but I do not think it goes far enough. I have no objection to the amendment offered by my colleague. I just want to read, for the information of the Senate, the amendment which was adopted at my instance:

That there is hereby established in the Department of Agriculture a board of grain appeals. Such board shall consist of five members to be appointed by the Secretary of Agriculture. The salaries of the members of this board shall be $3,000 per annum. The board of grain appeals shall, under such rules and regulations as the Secretary of Agriculture may prescribe, pass on all appeals which may be taken from the inspection and grading of grain by inspectors licensed under this act; but in States where there have been established systems of grain inspection with State boards of appeals, appeals shall be considered only from the findings of such State boards of appeals. The board of appeals shall also, under the direction of the Secretary of Agriculture, pass on the qualifications of applicants for license under this act.

That would take care of appeals in States where they have a State inspection law.

Mr. McCUMBER. I will say to my colleague that there is no inconsistency between his proposition and the one I have just offered. By this amendment I connect up and bring into effect the system of appeals and reinspections already provided in the several States; and of course, with the amendment which he has already had adopted, the appeal would be taken to that board in the Agricultural Department.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. SMOOT. Mr. President, I offer the amendment which I send to the desk, to follow line 19, page 71.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 71, after line 19, it is proposed to insert:

To enable the Secretary of the Interior to investigate the existence of artesian water and other underground water supplies suitable for irrigation in the arid and semiarid regions by boring wells, $100,000.

Mr. THOMAS. Mr. President, I should like to ask if any estimate has been made for that amendment?

Mr. SMOOT. I will say that an estimate has been made for it in the exact words of my amendment.

Mr. THOMAS I do not care for the words. The Senator's word is perfectly good.

Mr. SHAFROTH. Mr. President, I should like to have the amendment stated again.

The Secretary again stated the amendment.

Mr. GORE. Mr. President, I desire to say, in regard to the amendment, that I fully appreciate the importance of the work which it contemplates. If there be artesian water available in any part of the great arid West it ought to be ascertained and the fact brought to the attention of the settlers, so that everything possible can be done to rescue that country from the desert and to make the waste places rejoice.

An amendment similar to this has been twice reported to the Senate by the Senate Committee on Agriculture and Forestry. It has been twice agreed to by the Senate. It has twice gone out in conference.

My own view of the subject has been this: In the committee, I may say, I have never voted for the amendment. First, I should say that the amendments reported heretofore have authorized and directed the Secretary of Agriculture to carry on this work. I observe that the pending amendment devolves that duty on the Secretary of the Interior. I called upon the Secretary of Agriculture for a report upon the subject two years ago. He reported adversely, on the ground that the work should be carried on under the supervision of the Geological Survey, and that to devolve the duty on the Department of Agriculture would result in a duplication of service. My own judgment, I may say further, is that this work ought to be carried on by the several States.

I know there is no general principle underlying the Agricultural appropriation bill on which you can draw these distinctions. We have undertaken, however, in a general way, to prosecute those investigations where the results might be of general application throughout a large section of the country.

My own information is that the department might, at considerable expense, ascertain that there was artesian water, for instance, in a given county in Utah. It would not follow that artesian water would be available in the adjoining county, or even upon the adjacent quarter section. It is a matter that must be carried on locally and determined locally.

Now, it is an impossible task for the Government of the United States to embark generally upon this policy, to feel out and to test out the existence of artesian water all over that entire region. I may say that my own State made an appropriation to sink wells in order to ascertain whether or not artesian water was available. I think this duty ought to be devolved upon the several States; and if not, then one of two things should be done: Either the State should be required to put up dollar for dollar with the General Government in prosecuting this work or the Government ought not to embark upon a policy which has no limitations.

I may say that there is one other plan which might not be objectionable, and that would be to take from the irrigation fund the money with which to carry on this service. The Government appropriates the proceeds from the public lands to the irrigation fund. I think it amounts to some $80,000,000. In addition to that, we have issued $20,000,000 worth of bonds to supplement that fund. It amounts now to something like one hundred millions. It is devoted to the establishment of irrigation plants in the arid and semiarid portions of the country. It would be a part of that plan and connected with that system to divert a portion of the fund—if I may use the word "divert"—to test out and ascertain whether or not artesian water be available. But I can not quite see why money should be taken from the General Treasury, paid in by the people of Maine and Mississippi, in order to test out the existence of artesian water in Wyoming or Nevada, when a test made on one quarter section would not necessarily be applicable even to the adjoining quarter section.

It seems to me that the work is of such a local nature that it ought to be carried on by the State, or at least the State should put up half the money; or, if not that, then the fund already set aside—a fund originating in these States—should be utilized for this purpose.

Mr. SMOOT. Mr. President, I wish to say that this item has been in an appropriation bill, as stated by the Senator, upon two other occasions, and has been rejected in conference, but the rejection was based upon the fact that there had been no estimate made for the amount. There is an estimate made for this item, and there is a great need for demonstrating whether or not artesian water can be secured in the arid and semiarid districts in the Western States.

The other day I stated some of the reasons why that work should be undertaken by the Government. The reclamation act referred to by the Senator is an entirely different proposition than the securing of water by artesian wells, and the advances to that fund by the Government is to be refunded.

Mr. President, this money, if appropriated, will be used for demonstrating whether or not there is artesian water in the semiarid and arid districts. The Senator says there is no limit to the amount of expenditure. It can not go beyond the $100,000 appropriated, and that will go just as far as the Geological Survey can make it, and no further.

I was rather surprised to hear the Senator refer to the appropriation as being of a local nature and one that ought to be provided by the States, when, on the opposite page of the bill, and, in fact, on nearly every page of the bill, there are items of exactly the same nature. The bill is made up entirely of items which are of a local character, and which, if that position is taken, should be paid for by the States.

I notice here an item of $39,540 for inquiries in regard to systems of road management throughout the United States and for giving expert advice on the subject; an item of $142,780 for investigations of the best methods of road making, especially ordinary sand-clay and dirt roads; an item of $42,780 for investigations of the chemical and physical character of road materials; and I might go on, Mr. President, and read the whole bill through.

Why should the Senator complain of Oklahoma and Mississippi being taxed in order that the Government may demonstrate whether or not there is artesian water in the arid and semiarid lands owned by the Government of the United States and then in the same bill ask for an appropriation for the protection of the cotton fields of the South against the boll weevil or for the eradication of ticks of the South or the bugs of Kansas?

The Senator says that if the department sank an artesian well in one quarter section it would not demonstrate that the lands in the adjoining one would contain artesian water. That may be true, but——

Mr. BORAH. Does the Senator's amendment confine the investigation to public lands?

Mr. SMOOT. The amendment reads in this way:

To enable the Secretary of the Interior to investigate the existence of artesian water and other underground water supplies suitable for irrigation in the arid and semiarid regions by boring wells.

I suppose that it will be used for the purpose of demonstrating upon public lands whether there is artesian water to be found or not.

Mr. BORAH. I had supposed that the Senator intended to confine it to boring upon public lands. If it were confined to *public lands*, I should suppose perhaps from the argument of the Senator from Oklahoma that he would not object to it.

Mr. SMOOT. I do not think the Senator from Oklahoma objects to the present amendment any more strenuously than he would if it were applied only to public lands.

Mr. GORE. I think to make it apply to public lands would improve the amendment. In fact, I had in mind to offer that amendment to the amendment before it came to a final vote.

Mr. SMOOT. I was going to speak of the question of the development of artesian water upon one section and then, within a quarter of a mile or a half a mile, perhaps, it would be impossible to find artesian water on that land.

What this appropriation will be used for, Mr. President, will be to demonstrate whether there is artesian water in a given valley and what the depth of the well must be before the water is found. That can be done with the boring of only one well in a valley. I have no doubt but that private capital could be secured by the homesteader for the purpose of sinking wells if it was demonstrated that sufficient water could be secured to irrigate enough land to make it profitable and a home for himself and family.

The mere appropriation of $100,000 will go nowhere in developing wells on every section of land in the semiarid and arid region. All that the department would do would be, as I said, to demonstrate by one well the fact whether there is water in a district or not, and then after that is demonstrated the people themselves will take care of the extension of the work.

Mr. BORAH and Mr. GALLINGER addressed the Chair.

The PRESIDING OFFICER (Mr. OVERMAN in the chair). Does the Senator from Utah yield, and to whom?

Mr. SMOOT. I yield to the Senator from Idaho first.

Mr. BORAH. If the Senator from Utah will confine the operation of his amendment to public lands, which I presume would be the practical effect of it any way, I think it would have a better chance of success and it would serve the waste and arid and semi-arid regions just as well, because if they will demonstrate the existence of artesian water upon the public lands of the country it will serve the private owners in that region of country.

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from New Hampshire?

Mr. SMOOT. In just a moment.

Mr. President, at the suggestion of the Senator from Idaho I want to modify the amendment by adding after the word "wells" the words "upon public lands." I yield now to the Senator from New Hampshire.

Mr. GALLINGER. I rose to ask the Senator from Utah if no experiments have been made in this direction heretofore.

Mr. SMOOT. I will say, as far as my own State is concerned, there have been, I think, two or three experimental wells sunk by the State. In one instance it was a success; I think in two others it was a failure. But in sinking these wells sometimes it is required to go a thousand or two thousand feet, and the State has felt that the burden of taxation has been so great that they could not extend the work as far as it would like.

In this connection I wish to say to the Senator that only about 20 per cent of the lands within the State are under private ownership. The balance of it is withdrawn land, forest reserves and other classes of withdrawn land, and the taxation upon the 20 per cent is so great it does not allow the State to extend that class of work as much as they should.

Not only that, but I wish to say that in any State where there is so much public land it seems to me that it would be nothing more than just for the Government of the United States, if they want to dispose of the land, to demonstrate the fact that there is water which can be obtained from an underground flow, and after it is demonstrated then the citizens will take the chance of sinking wells but it is too expensive for an entryman to undertake the great expense with the hope and with the only possible chance of securing 160 acres of land by living on it three years, even if he is successful in securing water.

Mr. GALLINGER. I assume, Mr. President, that the Senator has in view the sinking of possibly a good many wells until water is found. The Senator says the sinking of one well will solve the problem. It would if water was reached. So I assume the Senator has in mind the fact that if the first experiment is a failure under this appropriation to the extent of the appropriation the Government may continue to sink wells with a view to finding water.

Mr. SMOOT. I should think the department would follow this plan, that it would select a valley, say one in Millard County in my own State, and would sink in the northern part of the county a well. If it was successful that would be about all that it would be expected to do in that county. If it were unsuccessful perhaps it would decide after a further investigation that it was worth the chance of sinking one in the middle or in the southern part of the valley, but I would not think it would do any more than that; having gone so far as to show that it was next to impossible to secure artesian water in that valley.

Mr. GALLINGER. I will ask the Senator if he can inform me what the character of soil is in the regions where these wells are probably to be sunk.

Mr. SMOOT. Does the Senator mean the surface?

Mr. GALLINGER. No; the character of the soil through which the pipe will be inserted.

Mr. SMOOT. As to that I could not say positively. It differs according to depth.

Mr. GALLINGER. Is it rocky? In the part of the country from which I come, of course, we expect to find rock, and all that sort of thing, which obstruct the boring process. I wondered whether that was likely to be the case in those valleys.

Mr. SMOOT. I can say that in the valleys some of the wells have been driven, and where they have secured water it is generally in the thickly settled counties. They find that that land is rocky in places, sometimes it is sandy, sometimes it is clayey, and there are strata of different classes of land as depth is reached.

Mr. GALLINGER. I assume there is no difficulty in driving these wells.

Mr. SMOOT. None whatever.

Mr. GALLINGER. Even to a depth of 2,000 feet. I remember that Artemus Ward once came across a man who was driving a well, and he had gotten down 4,000 feet. He was somewhat discouraged, but Artemus told him to keep on, that there was water in China beyond a doubt. In the northern country wells are sunk to a depth of several hundred feet.

But now just a word in answer to a suggestion of the Senator from Oklahoma. He thinks it is not right for these experiments to be tested when the people of New England and other Northern States have to pay a part of the expense. Mr. President, New England gladly pays a part of the expense of the irrigation system, and as the Senator from Utah has said, this bill is full of provisions where sections of the country contribute that get no benefit from it. So I think this can not be differentiated from other provisions of the bill calling for appropriations for specific purposes.

Mr. THOMAS. Mr. President——

Mr. SMOOT. I yield to the Senator from Colorado.

Mr. THOMAS. I was going to suggest that the public-land States receive 5 per cent of all the proceeds derived from the sale of the public lands for local public improvements. In our State we have heretofore used a good deal of that fund for

artesian-well purposes, and I see no reason why that fund should not be devoted among other things to this identical purpose. Therefore the suggestion which was made against the amendment by the Senator in charge of the bill, it seems to me, is well founded. I do not believe under the circumstances that we should make this appropriation in view of the 5 per cent which gives us a fund that can and ought to be used for this and kindred purposes.

Mr. BORAH. Mr. President——

Mr. SMOOT. I yield to the Senator.

Mr. BORAH. If this appropriation were to be used upon private lands, I do not think there would be any justification in asking for it, but I ask the Senator from Oklahoma and others to bear in mind that the Government of the United States has a vast amount of arid lands in the West which perhaps never can be irrigated except through artesian wells, some of which lands have been irrigated in that way and passed into private ownership.

That land which is now in its present condition practically without value, if irrigated in this way would increase in value tremendously. As it is, it is worth nothing to the Government or the people. If this could be expended, and successfully expended, it would be worth millions of dollars to the Government. So long as it is to be expended upon property owned by the Government, it is as fair an investment as we make under these bills ordinarily, and it seems to me that it might be permitted to go in the bill in view of the other precedents established.

Mr. SMITH of Georgia. Mr. President, I was out when the amendment was offered. Does it provide that the use of the funds shall be by the Interior Department?

Mr. SMOOT. It does.

Mr. VARDAMAN. Will the Senator read the amendment?

Mr. SMOOT. I will read it:

To enable the Secretary of the Interior to investigate the existence of artesian water and other underground water supplies suitable for irrigation in the arid and semiarid regions by boring wells—

And then I have added "upon public lands"—

$100,000.

Mr. SMITH of Georgia. Can the Senator tell us to what extent, or somewhat to what extent, artesian wells have proved a success upon those arid lands? Have there been any large number of them sunk?

Mr. SMOOT. There are quite a number of artesian wells in my own State, but they are located mostly in Salt Lake, Utah, Davis, Weber, and Cache Counties.

Mr. SMITH of Georgia. Is there any average depth to which you bore?

Mr. SMOOT. The wells within those counties average about 300 feet deep. The watersheds of these counties are the most extensive in the State. What we want to get at is to go into what we call dry counties. The lands are just as good land as were ever cultivated or foot was ever placed upon, but nothing can grow there because of the fact that there is no water available. But there are mountains miles and miles back that no doubt will furnish an underground flow of water. From most of the watersheds in our States some of the water finds its way into Salt Lake. That is the bottom of the basin. If that water on traveling through its underground channel can be tapped, it will be used for irrigating arid land, and there are millions of acres of it.

Mr. SMITH of Georgia. Have you flowing wells as a rule?

Mr. SMOOT. They are. If the water is tapped by artesian wells it arrests the flow, and is used for irrigation purposes, but we have so many counties with but few people in them——

Mr. SMITH of Georgia. You have large streams that come up from your artesian wells and go away in the air?

Mr. SMOOT. Yes; sometimes they are thrown up as high as 20 feet, according to the amount of water and the pressure.

Mr. VARDAMAN. Mr. President——

Mr. SMOOT. I yield to the Senator from Mississippi.

Mr. VARDAMAN. Mr. President, I heard the name of Mississippi used in vain a moment ago with reference to this matter, and I want to say that, so far as I am concerned, Mississippi will take a genuine pleasure in paying her proportion of this tax.

I know the value of water which this money is appropriated with the hope of discovering. It is the gold that makes the rock valuable and worth the effort to acquire it.

Just at this point I wish to relate a little incident which came under my observation in my State some years ago, and which shows that you can not always rely upon the conclusions of the scientists. For many years the theory was accepted that the great Mississippi Delta was at some time in the dim and distant long ago a neck of the sea; that artesian water could not be found there, however deep one might dig for it. A book was written by Dr. Hilgard on geology, which was taught at the State university, in which he maintained stoutly that artesian water could not be obtained in that section.

An enterprising young fellow came down to Greenwood, Miss., from Illinois and established a little bottling plant.

He knew no more about geology than a prairie dog does about the nebular hypothesis, but he had good common sense and was willing to try to make the venture. He concluded that he would undertake the experiment and see if he could not find artesian water if the city would pay the expense of the pipe. It was thought by the older heads—men whose ignorance becomes wisdom by prescription—that it was an unwarranted prodigality of the public cash to spend money on so foolish a thing, but the more progressive citizens in the little city insisted that the trial should be made. He started down, and in about 48 hours, at the depth of about 400 feet, discovered an inexhaustible supply of the purest and best water I have ever known. When he penetrated the little crust or the stratum of rock down in the bowels of the earth water gushed from it and ran to an elevation of about 47 feet above the surface of the ground. That has solved the problem of health in that rich country. It has been worth millions of dollars to the people and is of inestimable value in the priceless matter of health.

Anything that is going to bring land under cultivation, to furnish homes for farmers, and, more than that, to make farmers out of the people who are living around the towns, is a benefaction, and this Government can well afford to experiment with $100,000. If water should be found, the profits that would flow from the discovery would be so great that posterity would rise up as one man and call the name of this Congress blessed. If the experiment is going to be made on the public lands, it means probably, as the Senator from Idaho [Mr. BORAH] says, adding untold millions of wealth to the property of the United States, and in addition to all that it means good homes—country homes—happiness and prosperity. So I do not think we ought to hesitate about making the appropriation.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Colorado?

Mr. SMOOT. I yield.

Mr. SHAFROTH. I want to say with relation to artesian wells, that we have had considerable experience with them in Colorado. The city of Denver is in a basin, where there are probably 300 artesian wells. They were put there perhaps 25 years ago, and some of those wells are still in existence. The very building in which my office is situated is supplied entirely by artesian water. The artesian well, of course, is sunk right in the town.

The depth at which these wells are sunk in that locality is from 250 to 350 feet. I have not any doubt that there are between strata of rock extending down the mountain side or from high levels to lower levels, immense quantities of water. Otherwise we should not have these numerous wells—300 of them—in the city of Denver. These wells flow for a limited time; they will flow for two, three, or four years, when they will become filled with sand. It is then necessary to clean them out in order to get them to again flow. If it is desired to use a well after it has once been sunk that has ceased to flow, it can easily be done by the use of pumps, which are resorted to in a number of instances. In fact, the water company of the city of Denver, for instance, has utilized the flow of artesian water by putting that water into the small reservoir which it has near the city of Denver. It had some 10 artesian wells flowing during that time into the basin from which the water was pumped.

Mr. President, I feel that the position which the Senator from Utah has taken is well taken. I feel that this is experimental, of course. There are some basins, where probably such wells will be sunk, and where there will be no return; but there are strata on the sides of mountains and in valleys, where, if water is discovered, wonderful results will be produced in the way of aiding irrigation. I remember down in Texas that I went to the town of San Antonio and found there that there was a spring which started a river 4 miles above the town. It simply gushed out in the form of three springs, which concentrated there a volume of water in each instance equal to the body of a person. It produced a river running through San Antonio for a length of some 4 miles only, but it has such a volume of water that it, of course, has produced great benefit to the town. If that water were utilized—and no doubt it is utilized—it would be of great benefit. Artesian water comes from a long stretch of water lying between strata; and it seems to me that the Government can not fail to do what is right and fair in attempting to develop this resource which is hidden in the earth.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Idaho?

Mr. SMOOT. I yield.

Mr. BORAH. Mr. President, the city of Denver is a great city and has many wonderful natural advantages; but in the matter of producing artesian wells it is not the great city of the West. There is a little city over in the State where I live where they have had artesian wells flowing for the last 25 years. Those wells so far have given no indication of drying up or of becoming depleted to any extent. We have artesian hot water. The building in which my office was situated was heated by hot water; and in almost the entire city the buildings were heated by hot water. So we have in our city a plentiful supply of hot and cold water.

I wanted to call attention to this for the benefit of the Senator from Colorado [Mr. SHAFROTH] and also for the benefit of the Senator from New Hampshire [Mr. GALLINGER], who asked if these wells had in any wise been developed to such an extent as to be called successful. So far as the artesian wells discovered in my State are concerned, they have been of long duration, of great supply, and very successful in every respect wherever they have been found.

Mr. STERLING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from South Dakota?

Mr. SMOOT. I do.

Mr. STERLING. I feel disposed to add my word of testimony as to artesian wells. For about 20 years I lived, I think, in the greatest artesian-well basin in this country, if not in the world, and that is in the famous Jim River Valley Basin in South Dakota. Beginning in the northern part of the State of South Dakota, where wells were about 1,200 feet deep, and running the entire width of the State to Yankton, S. Dak., artesian wells were sunk. The depth of those wells varies from 1,200 feet in the northern part of the State to 750 or 800 feet in the southern part of the State.

In the central part of that region wells were frequently obtained the pressure of which would be 160 or 175 pounds to the square inch. In the town of Redfield, where about the second well, I think, was put down in South Dakota, the pressure was for years 160 pounds to the square inch. It was the only fire protection which we had, and there was often such force in the flow of the water when applied with the hose that it would take the shingles from the roof in the putting out of a fire.

But now, Mr. President, relative to the amendment of the Senator from Utah [Mr. SMOOT] we have a vast region west of that and west of the Missouri River which we term a semi-arid region, in which some experiments have been made in the matter of putting down artesian wells. The formation there, however, is not, I think, thoroughly understood as yet by artesian-well diggers; it is desirable to know whether water-bearing strata from which wells can be had exist throughout that part of the State; and I think this appropriation would be most valuable in helping to determine whether or not in that great region—the Great Plains region, as it is called—artesian wells may be procured to aid in the matter of irrigation and in procuring water for domestic uses generally. I hope the amendment will prevail.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Nevada?

Mr. SMOOT. I do.

Mr. PITTMAN. I was very much interested in the artesian wells to which the Senator from Idaho [Mr. BORAH] referred which are located in his State. I desire to say that we have a great many artesian wells in the State of Nevada, where the hot and cold water are near together, but we have one well there in which the hot and cold water flows from the same well. I refer to a well sunk by Gov. Sparks on his ranch a number of years ago. At a depth of about 300 feet they struck a stream of cold water. That well was incased in a 6-inch pipe. They then put down a smaller pipe inside of the 6-inch pipe, and at a depth of 600 feet they got a flow of hot water. So on the outside pipe they had cold water flowing and on the inside pipe hot water.

Mr. GALLINGER. I will ask the Senator——

Mr. MARTINE of New Jersey. Mr. President——

The PRESIDING OFFICER. To whom does the Senator from Utah yield?

Mr. SMOOT. I yield first to the Senator from New Hampshire.

Mr. GALLINGER. I will ask the Senator if they get boiling water from any of those wells?

Mr. PITTMAN. Mr. President, I do not want to take up the time of the Senator from Utah by going into that story. I merely want to state that in one of our valleys, which is about 10 miles wide and 100 miles long, there was no sign of water at all. There were hardly any streams on either side of any of the mountain ranges. A company was organized for the purpose of trying to find deposits of potash in solution. They went to a great depth in sinking wells in the valley, and failed to find potash; but they cut five or six strata containing enormous flows of artesian water; and to-day in that valley they have four or five flowing artesian wells. The indications are not such as to justify any individual, or even private companies ordinarily, in making such experiments, and in that instance it would never have been done except that they were seeking potash deposits. It is along that line that this provision would be so beneficial to us.

Mr. MARTINE of New Jersey. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from New Jersey?

Mr. SMOOT. I yield to the Senator.

Mr. MARTINE of New Jersey. Mr. President, not to be outdone by the marvelous tales we have heard about artesian water, I want to bear cheerful testimony to the splendid results in the little Commonwealth of New Jersey along similar lines. True, we can not rival or even approach the achievements of the State of Idaho, and particularly those of the State of Nevada, where they have hot and cold water on tap from the same artesian well.

In view of the facts stated it is a mystery to me that Nevada has not multiplied in population. It seems to me that after the declaration of the Senator from Nevada population will swarm in there. It would be an ideal spot to make a hot toddy, for at any time of the year one may have hot and cold water from the same source. [Laughter.]

But, Mr. President, one does not have to go to Nevada or to Utah or to Idaho or to South Dakota to find a practical demonstration of the value of artesian wells.

Mr. VARDAMAN. Mr. President may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from New Jersey yield?

Mr. MARTINE of New Jersey. Certainly.

Mr. VARDAMAN. There is no danger of the Senator withdrawing from the race for the Senate, and moving to Nevada, is there? [Laughter.]

Mr. MARTINE of New Jersey. Oh, Lord; no! As lovely as I think the people of Nevada are, I still love my own hearthstone and heath; and, notwithstanding the general combinations which are against me, I am afraid the Senator will have to abide with me for another six years, for I shall make the fight for that term.

However, apropos the question of water, which is very near my heart, I desire to say that in the State of New Jersey are found not only one well, but scores and myriads of wells of the artesian type. My own home is in a sort of a basin, known as the Plainfield Basin, and it is a common thing to take an ordinary galvanized pipe 2 inches in diameter, properly pointed and 15 or 18 feet long, and drive it down in the soil and have the water flow nearly up to the surface and, in some instances, over the surface. It is a common thing for the housebuilder to drive such wells. I have had scores—perhaps 50—of them driven on my farm in that way; and the city of Plainfield, a splendid city, 45 miles from the corner of Broadway and Wall Street, with a population of 37,000, is supplied by a superb system of water works with artesian water, which, in some instances, gushes out and, in other instances, is pumped out.

I feel that if there is any one thing that I can approve of in this bill more than another, it is this proposition which looks to obtaining supplies of artesian water. It matters not how rich or fertile a piece of soil may be, without water it is a barren desert; and when I think of the millions of dollars we have parceled out for chasing chinch bugs, moths, mosquitoes, hookworms, army worms, and God knows what else, it seems to me that they all pale into insignificance from the standpoint of benefit to the human race as compared with this splendid proposition.

Mr. CURTIS. Mr. President, I want to ask the Senator from Utah if the amendment applies to artesian water and also to the underflow which might not prove to be artesian?

Mr. SMOOT. It applies to artesian water and other underground water supplies.

Mr. CURTIS. In the southwestern part of my State there have been sunk a number of artesian wells which go to a depth of about 800 feet. They also find an inexhaustible underflow that is not artesian; and, if the amendment covers both, I should like to see it adopted; and, if it does not, I should like to see it changed so that it will cover both.

Mr. SMOOT. I will say to the Senator that it does cover both.

Mr. President, I had no thought in my mind of resolving the Senate into a testimonial meeting upon this question, but from what has been said and the testimony which has been given of the advantages of such an amendment, I do not believe it is necessary for me to say anything further. I think now the chairman of the committee will not have any further objection to allowing the amendment to go into the bill.

Mr. GORE. Mr. President, I wish first to eliminate from this discussion this one point as to the importance of ascertaining the presence of artesian water in the arid and semiarid regions of this country. The importance of ascertaining that fact can not be overestimated. I trust that I feel as keen an interest in that subject as any other Senator upon this floor and as any Senator from any State which has the misfortune of being among the most arid. Anything which would even tend to redeem any part of our country from the desert would be not only a local blessing, but it would be a national blessing.

The importance of this question can be eliminated from the discussion; but I may say, in testimony of my own interest, that I offered in the committee an amendment directing the Secretary of Agriculture to ascertain the underground supplies of water in certain regions of the country, in the western sections of the country. That amendment was offered by me in the committee, was reported by the committee to the Senate, has been accepted by the Senate, and is found on page 71, I believe.

The acceptance by the author of the pending amendment of a provision limiting the experiment to the public lands removes my most serious objection. Whether or not artesian water exists on private lands ought to be ascertained by private companies or else by the State. An expenditure by the State for that purpose could be abundantly justified, while an expenditure by the General Government to ascertain whether there is water on private lands could not be justified; but, after I have heard Senators from the arid States blow hot and cold upon this question, it seems to me that this appropriation is unnecessary. If there is any one region under the sun where artesian water seems to be available, particularly in the localities where United States Senators live, it is in the arid section of the United States. We have had an experience meeting here. I do not think a single Senator has omitted to testify that there was artesian water in his town and county, and in several instances under his house. Therefore I see no reason why we should carry on these experiments in that section of the country.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Idaho?

Mr. GORE. I yield.

Mr. BORAH. That was my object in suggesting to the Senator from Utah that he confine the operations of the amendment to the public lands. The National Government has its lands there, and they are unavailable for settlement and for use.

Mr. GORE. I feel the force of that argument.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Colorado?

Mr. GORE. I yield to the Senator from Colorado before proceeding with the discussion.

Mr. THOMAS. Mr. President, this, I understand, is an original appropriation—that is, it has not appeared in any bill of this kind hitherto. I simply wish to interrupt long enough to venture the prediction that next year for this same purpose we will appropriate $200,000, and perhaps more, and the next year $500,000; so that this hunt for water will be like the search for a remedy for the chinch bug, like Tennyson's brook, it will go on forever. Meanwhile we have the 5 per cent fund given by the Government to the public-domain States for the purpose of public improvements available for this purpose; and, in view of the condition of the Treasury, it ought to be used for this purpose, and the other project postponed until conditions have improved.

Mr. SMOOT. Mr. President, will the Senator from Oklahoma yield to me for a moment?

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Utah?

Mr. GORE. I yield to the Senator from Utah.

Mr. SMOOT. I presume, Mr. President, it is hardly necessary for me to state to the Senator from Colorado that if such a thing as he predicted should happen I will stand with him in undertaking to defeat any such increase of the appropriation for this purpose.

Mr. THOMAS. Mr. President, if the Senator had the power to stop the flow after it once begins, I have no doubt that his efforts would perhaps be successful; but when you start a leak in the Treasury in any direction I have yet to know of a single instance, in my short experience here, where that leak has not grown.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Idaho?

Mr. GORE. I yield to the Senator from Idaho.

Mr. BORAH. The Senator from Colorado suggested that this appropriation will likely be enlarged from year to year.

Mr. GORE. Undoubtedly, if they find artesian water, it will start a leak. There is no question about that.

Mr. BORAH. Mr. President, what I was going to say was that I do not desire to disparage or discourage the great ability with which the Senator from Colorado [Mr. THOMAS] undertakes to limit appropriations; but no one knows better than the Senator from Colorado that if artesian water is found upon these lands it will be altogether the best investment the United States has made in many years in that country.

Mr. THOMAS. I think that is true, Mr. President.

Mr. BORAH. The Senator from New Jersey suggested, a while ago, that it was rather surprising that there were not more people in the State which I have the honor to represent in part. It is because, Mr. President, 70 per cent of the area of that State has been withdrawn and is dedicated to silence, and the people of the different parts of the country come there and pass on and go into Canada and seek homes where they can get them under reasonable laws. I want to call the Senator's attention to the fact that during the last five years prior to the breaking out of the European war over 100,000 American citizens passed through our country and on into Canada and acquired homes in Canada.

Mr. MARTINE of New Jersey. I will say that that is a condition that never occurs in New Jersey. No man ever comes within the borders of New Jersey but that he stops and ultimately stays. We so entrance him, so captivate him, by the very many blessings that the God of nature has bequeathed to us, that our population is multiplying by leaps and bounds.

Mr. BORAH. I am aware that there are certain splendid virtues possessed by the people of New Jersey which make them stationary [laughter], but there are a great many people in the country who move on.

Mr. GORE. Mr. President, as I was observing, if investigations on the public lands are to be prosecuted in order to ascertain the presence of artesian water, that investigation ought to be carried on by the General Government. It can not and should not be carried on by private enterprise. It can not and should not devolve upon the States where the lands are situated. That responsibility devolves upon the Government of the United States, for the reason I suggested—that if these experiments are to be carried forward the expense ought to be defrayed either out of the 5 per cent fund referred to by the senior Senator from Colorado, or else the expense ought to be met out of the irrigation fund.

The public lands of the United States are properly the public domain. They are the common property of all the people of all the States. But the people of the several States have, with generosity, dedicated the proceeds of the public lands to the establishment of vast irrigation plants in that splendid region. Everybody must commend that policy. Now, it seems to me that the amendment proposed by the Senator from Utah is in prosecution of the general scheme of irrigation. It is a hunt for water in order that irrigation may be extended and expanded throughout that region. It is a proper and a fitting charge upon the irrigation fund, upon the fund arising from the public lands in that section, dedicated by all the people of the United States to this particular and commendable purpose of irrigation.

I confess that I share the fears of the Senator from Colorado. I would be willing to challenge any man, in the Senate or out of the Senate, to disprove that 100,000 years from now the Agricultural appropriation bill will be carrying an appropriation to ascertain the presence of artesian water in the arid and semiarid regions of the United States. I hear the Senator from Utah, under his breath, say "No."

Mr. SMOOT. No; I said the boll weevil will be there, too.

Mr. GORE. I trust that will not be true, Mr. President—that the boll weevil may pass from among us. But the cultural methods that will combat the boll weevil in the State of Texas will combat the boll weevil in the State of Louisiana, in the State of Mississippi, in the State of Georgia, and in the State of South Carolina. The discoveries upon that subject are of general application. They may be applied wherever the evil exists. As I suggested before, the ascertainment of the presence of artesian water in any one county in Utah will not demonstrate its presence in any other county in Utah. If it were so, then I

assume that nobody would hesitate to make this appropriation, or to make a much larger appropriation.

Since everybody has been rendering personal testimony here, I suppose I might be in concert with the movement. I live a mile and a half from Cache Creek. Part of the town in which I reside is barren of water. Neither artesian nor surface water can be obtained in the particular part of the town where I live. Four blocks to the southward surface water can be obtained at a depth of from 15 to 40 feet. Five blocks to the east surface water can be obtained at a depth of 20, 30, or 40 feet. Two miles from where I live, across Cache Creek, there is a magnificent flow of artesian water. No man could conclude from that that there was artesian water to the westward, for it does not exist there; and if any private individual undertakes upon that assurance to sink an artesian well on his quarter section he is likely to be involved not only in loss but ruin.

I say further, reverting to the subject of the boll weevil, that the reason for my discouragement upon this subject, the reason why I fear that if this appropriation is made now it will be made next year and a thousand years from now, is this: We have been appropriating for two years, I believe, perhaps more, $5,000 to ascertain the cause of the disease affecting wild ducks in a certain State in the Union. Now, the expert testified that the cause of the disease has been ascertained. He testified that the cure for the disease has been ascertained. He testified that the game warden of the State, by the application of the remedy, could meet the situation, in his judgment. Upon the basis of that testimony the Senate Committee on Agriculture recommended that that provision be stricken from the bill. The Senate overturned the committee and restored an appropriation of $5,000 to investigate a disease where the cause has been ascertained, to investigate a disease where the cure has been ascertained, upon the theory, I suppose, that the intellectual gymnastics connected with these investigations is a paying investment.

Let me cite another instance in the State of Washington. The expert of the Government who had the work in charge stated that they had tested all of the known methods of taking stumps out of land. He modestly suggested that the future might reveal some other invention or device which might be worthy of an investigation or test. The Senate committee, in view of the fact that they had tried out all the known devices, recommended that this appropriation be dropped from the bill; but the Senate overturned the committee and brought back into this bill an appropriation to carry on an investigation that has been exhausted, to carry on an investigation where the expert himself says they have tried out all the known methods. Of course, the expert did not, and the department did not, recommend that the appropriation be discontinued. I have looked in vain for a recommendation of that sort; and I have offered an amendment to this bill, which has been adopted, directing the Secretary of Agriculture to summit to Congress when it meets in December every year a list of these investigations, and to suggest to Congress those investigations which have been completed and which may be abandoned for the future. I would be almost willing to vote a $100,000 prize for any such investigation on the part of any department, bureau, division, section, or service of this Government.

Now, only a moment more. This appropriation being limited as it is to the public lands, if the moneys were being derived from the 5 per cent or from the irrigation fund, I should interpose no protest against it.

Mr. SHAFROTH. Mr. President, the difficulty with taking this money from the irrigation fund is that the irrigation act does not apply to it. The irrigation act is constructed on the theory of having great reservoirs, and after they are constructed the cost of their construction is to be assessed upon the land. In the case of an artesian well put down for experiment on Government land you could not make it payable out of the reclamation fund. It would be absurd to contend any such thing as that; and for that reason it is not applicable to this appropriation. It could not be done unless you violated the law under which the reclamation projects are constructed.

If the Senator from Oklahoma believes that this ought not to be done by the county, that it ought not to be done by the State, but that it should be done by the National Government, since the method that he points out is a totally inapplicable one, namely, to resort to the fund of the reclamation projects, it seems to me, then, that the only alternative is to allow it out of the General Treasury for the purpose of experimentation.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. McCUMBER. Mr. President, if we are going to adopt the amendment now, I will wait; but if we are going to have any more speeches I was going to suggest to the Senator having the bill in charge that we have now been at work for nearly seven hours, and I hope we will be able to have a reprint of this bill in the morning.

I wish to say further that I shall try to prepare a substitute for the grading proposition which will be short and terse and will eliminate all matters but those which the Senator suggests should be in the bill, namely, first, a provision for standardization; second, a provision that the standardization shall apply to all grain bought and sold by grade in interstate commerce; third, a system of appeals to the Secretary of Agriculture; and, fourth, a penalty for disobedience of that law.

It seems to me that that would cover the whole thing; but I should like to have a reprint of the bill this evening or before to-morrow morning, so that we can see what amendments have been adopted.

Mr. THOMAS. Mr. President, I hope we will not adjourn. It is seven months to-day since this session began, and we have an immense amount of business before us; and we have done comparatively little except to adjourn and to discuss a great many matters of importance, and some not so important. I hope that instead of considering a recess or an adjournment at this time we will go ahead until 9 o'clock, and perhaps we can do something if we begin to hold night sessions. I doubt if we can unless we do.

Mr. SMITH of Georgia. Mr. President, we have had a great deal of experience in Georgia with artesian wells. About 40 years ago the first one was successfully sunk. Since that time there have been several thousand sunk in the State. If this is an appropriation simply for investigation, I do not object to it. If it means, however, the investigation of each acre of land, it really means for the National Government to sink the well.

Generally some kind of artesian water can be found at some depth in areas covering hundreds of square miles, but just what kind can be obtained at each spot nobody can tell until you sink the well. In our State we have artesian wells that throw water over 100 feet high, and within a quarter of mile from the same spot they have gone down much deeper and have barely obtained water that they must pump. You can not determine the question with any accuracy except by sinking the well. You can generally know that some kind of water can be obtained in a very large area of land.

I would not object to that kind of investigation. I would be glad to see it made; but if you then propose to proceed to narrow it, it simply means for the Government to sink the wells, and that would be a ruinous proposition.

I think it would be a serious matter for us to start this appropriation unless we really understand that it is a broad investigation, and that its friends are not starting out on the road to sinking innumerable wells all through that country.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Idaho?

Mr. SMITH of Georgia. I do.

Mr. BORAH. We understand it in the light in which the Senator from Georgia has suggested it ought to be carried on.

Mr. SMITH of Georgia. I believe that the expenditure of this sum might give us some information; but if the theory is that it is to go on from year to year, it can go on, and work can be found, and good can be done. Every time you sink an artesian well, if it is within half a mile of another or a quarter of a mile, you have given the facilities of water more freely to more people.

I do not object to this appropriation; but I wanted, in connection with it, to say that while I intend to vote for it I am going to resist a similar appropriation a year from now, for the department ought to be able with this to do as much as should be contributed in this direction. It is an investigation, not the obtaining of water through artesian wells, that is excusable.

Mr. SMOOT. I agree with the Senator that it should be used for investigation.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Utah. [Putting the question.] By the sound, the ayes seem to have it.

Mr. WILLIAMS. I call for a division.

The PRESIDING OFFICER. Those in favor of the amendment will rise. [A pause.] Those opposed will rise. [A pause.] The ayes evidently have it, and the amendment is agreed to.

Mr. McCUMBER. Will not the Senator from Oklahoma make a request for a reprint of the grain-grades section?

Mr. GORE. I desire to ask that a reprint be made of the grain-grades section of the bill, showing the amendments agreed to printed in italics.

The PRESIDING OFFICER. Is there any objection? The Chair hears none, and a reprint is ordered.

EXECUTIVE SESSION.

Mr. BANKHEAD. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS.

Mr. GORE. I move that the Senate take a recess until 11 o'clock to-morrow morning.

The motion was agreed to; and (at 6 o'clock and 4 minutes p. m.) the Senate took a recess until to-morrow, Saturday, July 8, 1916, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 7, 1916.

PROMOTIONS IN THE ARMY.

CHAPLAIN.

Chaplain Marinius M. Londahl, Thirtieth Infantry, to be chaplain, with the rank of captain, from July 1, 1916, after seven years' service.

INFANTRY ARM.

Second Lieut. John C. Walker, jr., Twelfth Infantry, to be first lieutenant from June 24, 1916, vice First Lieut. Charles L. Wyman, Twenty-fifth Infantry, detailed in the Signal Corps.

APPOINTMENTS IN THE ARMY.

Acting Dental Surg. James G. Morningstar, Dental Corps, to be dental surgeon, with the rank of first lieutenant, from June 13, 1916, to fill an original vacancy.

CORPS OF ENGINEERS.

To be second lieutenants with rank from June 13, 1916.

Cadet John Howard Wills.
Cadet Raymond George Moses.
Cadet Wilhelm Delp Styer.
Cadet John Woodman Fraser.
Cadet Charles Holmes Cunningham.
Cadet Dwight Frederick Johns.
Cadet William Arthur Snow.
Cadet Thomas Dewees Finley.
Cadet William Hamilton Britton.
Cadet Elroy Sandy Jackson Irvine.
Cadet Notley Young Du Hamel.
Cadet Wilburn Henry Henderson.
Cadet Robert George Guyer.
Cadet Edward Clark Smith.
Cadet Robert Allen Sharrer.
Cadet Ludson Dixon Worsham.
Cadet Edward Goring Bliss.
Cadet Ralph Gillett Barrows.
Cadet Holland Luley Robb.
Cadet Frederick Walker Bonfils.
Cadet Robert Reese Neyland, jr.
Cadet William Morris Hoge, jr.
Cadet Stanley Lonzo Scott.
Cadet Tattnall Daniell Simkins.

CAVALRY ARM.

To be second lieutenants with rank from June 13, 1916.

Cadet James Knox Cockrell.
Cadet William Spence.
Cadet John White Rafferty.
Cadet De Rosey Carroll Cabell, jr.
Cadet Ralph Irvine Sasse.
Cadet William Ewen Shipp.
Cadet William Hieatt Cureton.
Cadet Fay Brink Prickett.
Cadet Calvin De Witt, jr.
Cadet James Mitchell Crane.
Cadet Lucien Samuel Spicer Berry.
Cadet Victor William Beck Wales.
Cadet Joseph Merit Tully.
Cadet Pettus Harvey Hemphill.
Cadet Hugh Mitchell.
Cadet Robert Le Grow Walsh.
Cadet Clarence Scott Manlsby.
Cadet George Sidney Andrew.
Cadet Roland Paget Shugg.
Cadet Spencer Albert Townsend.
Cadet Craigie Krayenbuhl.
Cadet Arthur Marion Jones.

FIELD ARTILLERY ARM.

To be second lieutenants with rank from June 13, 1916.

Cadet Stanley Eric Reinhart.
Cadet Dean Hudnutt.
Cadet Louis Emerson Hibbs.
Cadet Jesse Frank Tarpley, jr.
Cadet Horace Logan McBride.
Cadet Hamilton Ewing Maguire.
Cadet Ray Corrigan Rutherford.
Cadet William Roscoe Woodward.
Cadet Alfred King King.
Cadet Henry Crampton Jones.

COAST ARTILLERY CORPS.

To be second lieutenants with rank from June 13, 1916.

Cadet Albert William Draves.
Cadet Benjamin Sloan Beverley.
Cadet Frederick James Williams.
Cadet Carl Lee Marriott.
Cadet James Arthur Pickering.
Cadet Hugh Allen Ramsey.
Cadet Willis McDonald Chapin.
Cadet Robert Bruce McBride, jr.
Cadet Paul Vincent Kane.
Cadet Carl Smith Doney.
Cadet James de Barth Walbach.
Cadet Richard Mar Levy.
Cadet Weir Riché.
Cadet Ellicott Hewes Freeland.
Cadet James Cornelius Ruddell.
Cadet Joseph James O'Hare.
Cadet Milliam George Patterson.
Cadet Frank Clark Scofield.
Cadet Ferdinand Francis Gallagher.
Cadet Barrington Lockhart Flanigen.

INFANTRY ARM.

To be second lieutenants with rank from June 13, 1916.

Cadet Latham Loomis Brundred.
Cadet Leslie Thomas Saul.
Cadet Charles Augustus Bayler, jr.
Cadet Fred Beele Inglis.
Cadet Richard Parker Kuhn.
Cadet John Alexander Street.
Cadet Sidney Herkness.
Cadet William Earl Chambers.
Cadet Warner William Carr.
Cadet Thomas Lyle Martin.
Cadet Geoffrey Prescott Baldwin.
Cadet John Bennington Bennet.
Cadet Kenneth Macomb Halpine.
Cadet William Rosser Wilson.
Cadet Raymond Potter Campbell.
Cadet Richard Clarke Birmingham.
Cadet Felix Rosseter McLean.
Cadet John Edward Martin.
Cadet Paul Barrows Parker.
Cadet William Edgerton Morehouse, jr.
Cadet Thomas Green Peyton.
Cadet Joseph Hamilton Grant.
Cadet Arthur Monroe Ellis.
Cadet Maurice Levi Miller.
Cadet Junius Henry Houghton.
Cadet Abram Vorhees Rinearson, jr.
Cadet Benjamin Anthony Yancey.
Cadet Douglas Jenkins Page.
Cadet James Nephew Caperton.
Cadet Charles Compton Smith.
Cadet Harrison Herman.
Cadet George Joseph Newgarden, jr.
Cadet John David Miley.
Cadet William Edwin Coffin, jr.
Cadet John Forest Goodman.
Cadet Spencer Atkins Merrell.
Cadet William Worth Dempsey.
Cadet Robert Kenneth Whitson.
Cadet Otto Frederick Lange.
Cadet Harland Leslie Mumma.
Cadet George Hollenbeck Blankenship.
Cadet Alexander Mathias Weyand.
Cadet Walter David Mangan.
Cadet Robert Rau Duncan McCullough.
Cadet Elon Albert Abernethy.

Cadet Nelson Bateman Russell.
Cadet Henry Parker Blanks.
Cadet Bartlett James to be second lieutenant of Infantry, with rank from June 29, 1916.

MEDICAL RESERVE CORPS.

To be first lieutenants in the Medical Reserve Corps with rank from June 29, 1916.

Walter Palmer Anderton, of New York.
John Clifton Anthony, of Alabama.
Abner Lowe Atwood, of Alabama.
William Lloyd Aycock, of Georgia.
Forrest Pitt Baker, of Arkansas.
Moses Horen Baker, of Pennsylvania.
Charles Eldridge Barnett, of Indiana.
Joseph Nicholson Barney, of Virginia.
Robert Woodworth Bell, of Arizona.
Peter Alfred Bendexen, of Iowa.
James Dewitt Benjamin, of New York.
Edwin Saxton Bennett, of New York.
Fred Grey Benton, of New York.
Conrad Berens, jr., of New York.
David Mayo Berkman, of Minnesota.
William Dixon Berry, of Oklahoma.
Joseph Cooper Birdsall, of Pennsylvania.
Lewis Clyde Bixler, of Pennsylvania.
Kenneth Daniel Blackfan, of Maryland.
Maurice Lamm Blatt, of Illinois.
Lewis Booker, of Delaware.
Paul Newkirk Bowman, of Pennsylvania.
Henry Boxer, of Alabama.
Karl Trueblood Brown, of Texas.
Charles Perry Burke, of West Virginia.
Sidney Rogers Burnap, of New York.
James Clark Burt, of Pennsylvania.
John Harve Carlisle, of New Jersey.
John Egerton Cannaday, of West Virginia.
Ernest Worth Cavaness, of Missouri.
Archibald Eastwood Chace, of New York.
Ralph Stephen Chappell, of Indiana.
Frank Samuel Child, of New York.
Joseph Patrick Cleary, of Illinois.
James Livingston Cobb, of New York.
Robert Carlyle Cochrane, of Massachusetts.
Thomas Cottrell, of Illinois.
Frederick Aloysius Coughlin, of Rhode Island.
Francis Asbury Coward, of South Carolina.
James Porter Crawford, of California.
Egerton Lafayette Crispin, of Minnesota.
John Mulchinock Cruice, of Pennsylvania.
John Homer Cudmore, of New York.
Condict Walker Cutler, of New York.
Channing Ellery Dakin, of Iowa.
Robert Edward Davison, of Pennsylvania.
Raymond Rudolf Decker, of Pennsylvania.
Leon Ephraim DeYoe, of New York.
Heman Laurence Dowd, of New York.
Allison Harold Dugdale, of New York.
Arthur Storer Driscoll, of New York.
Charles Daniel Easton, of Rhode Island.
John Robert Espey, of Colorado.
Harold Clarence Ernst, of Massachusetts.
William George Eyman, of Pennsylvania.
Roy Edwin Fallas, of Maryland.
Merton Almond Farlow, of Kansas.
Burr Ferguson, of Alabama.
Karl Dean Figley, of New York.
Charles E. B. Flagg, of Washington.
James Murray Flynn, of New York.
Allan Adams Foster, of Illinois.
Matthias Lauckton Foster, of New York.
Willard Clyde Foster, of Wyoming.
Harry Freudenberger, of Ohio.
William Dixon Fullerton, of Ohio.
Arthur Howell Gerhard, of Pennsylvania.
Ninde Troy Gillette, of Pennsylvania.
Thomas Wray Grayson, of Pennsylvania.
Evan Henry Montgomery Griffiths, jr., of Illinois.
Harold Louis Hall, of New York.
Josiah Newhall Hall, of Colorado.
Jacob Roscoe Harry, of Illinois.
Eugene Henderson Hayward, of Maryland.
Julius Goodwin Henry, of Alabama.
William Eugene Hervey, of Illinois.
William Henry Heuschele, of Kansas.
Ernest Levi Hicks, of New York.
Carl Albert Hoberecht, of Missouri.
John Homans, of Massachusetts.
Alfred William Hornbogen, of Michigan.
Allen Richmond Howard, of Pennsylvania.
Frederic Hollis Howard, of Massachusetts.
Frederick Brown Humphreys, of New York.
Francis Brattie Hutton, jr., of Virginia.
Henry James, of New York.
William Benjamin Jones, of New York.
Mortimer Harvie Jordan, of Alabama.
Arthur Matthew Kane, of New York.
Evan O'Neill Kane, of Pennsylvania.
Peter Laurence Keough, of Rhode Island.
Paul Ernest M. Kersten, of Wisconsin.
Theodore Anthony Kreuser, of Illinois.
George Benjamin Kunkel, of Pennsylvania.
William Edwards Ladd, of Massachusetts.
Lucian Hyppolite Landry, of Louisiana.
William Raphael Larkin, of Illinois.
Willis W. Lasher, of New York.
Cornelius Arthur Leenheer, of Illinois.
Raymond Williams Lewis, of New York.
Fred Bates Lund, of Massachusetts.
William Clifton Lyle, of Georgia.
Douglas Macfarlan, of Pennsylvania.
Norman Earl McBeath, of Wisconsin.
Malcolm McBurney, of New York.
Benjamin Rush McClellan, of Ohio.
Charles Buckley Maits, of Pennsylvania.
Jacob Ludwig Mathesheimer, of New Jersey.
William Fewell Merchant, of Virginia.
Evan William Meredith, of Pennsylvania.
Charles Howard Miner, of Pennsylvania.
Harry Staats Moore, of California.
Jacob E. K. Morris, of New York.
Myron Louis Morris, of New York.
Alexis Victor Moschcowitz, of New York.
Frank George Murphy, of Illinois.
Howard Christian Naffziger, of California.
Robert Nelson, of Alabama.
Thomas Walter Nuzum, of Wisconsin.
Mahlon Dickerson Ogden, of Arkansas.
Theodore Eugene Oertel, of Georgia.
Lester Joery Palmer, of Illinois.
Alwin Max Pappenheimer, of New York.
Francis LeJau Parker, of South Carolina.
George Platt Pilling, jr., of Pennsylvania.
Maurice Charles Pincoffs, of Maryland.
Henry Pleasants, jr., of Pennsylvania.
William Alexander Quinn, of Ohio.
Thomas Ragan, of Louisiana.
Joseph Louis Ransohoff, of Ohio.
Maurice Snowden Redmond, of Pennsylvania.
Charles Benjamin Reitz, of Pennsylvania.
Charles Barnett Reynolds, of Pennsylvania.
Frederick Talmage Rice, of Wisconsin.
Ezra Clark Rich, of Utah.
Waldemar Tissot Richards, of Louisiana.
William Humes Roberts, of California.
Oswald Hope Robertson, of New York.
Roy Thomas Rodaway, of Illinois.
Gaston Wilder Rogers, of Alabama.
George Gorgas Ross, of Pennsylvania.
William Patrick Ryan, of Massachusetts.
Ernest Sachs, of Missouri.
David E. Schmalhorst, of Missouri.
Walter Francis Scott, of Alabama.
Jerome Selinger, of New York.
Nicholas George Lynn Shillito, of Pennsylvania.
Francis Wayles Shine, of New York.
Samuel Ruff Skillern, jr., of Pennsylvania.
Arthur Ralph Smeck, of Michigan.
Marshall Ashby Smith, of Missouri.
Robert Baylor Shackelford, of Virginia.
Donald Benjamin Steenburg, of Nebraska.
Raymond St. Clair, of Nevada.
Fordyce Barker St. John, of New York.
Walter Leonard Stranberg, of Illinois.
Norman Brown Tooker, of New York.
Leo Stewart Trask, of Washington.
George Albert Traylor, of Georgia.
Percy Rivington Turnure, of New York.
Henry Johnson Ullman, of Illinois.
Vite Edgar Van Kirk, of Pennsylvania.

Allen Haines Vance, of California.
David Mayo Vogt, of Pennsylvania.
William Richard Warren, of Florida.
Charles Lee Washburne, of Michigan.
Francis Elwood Weatherby, of New York.
Edward Tubbs Wentworth, of New York.
Lawrence Richardson Wharton, of Maryland.
Rae Wygant Whidden, of New York.
Allen Oldfather Whipple, of New York.
Courtland Yardley White, jr., of Pennsylvania.
William Essex Whitson, of the District of Columbia.
Clarence Cicero Wiley, of Alabama.
Lochlin Minor Winn, of Alabama.
Rowland Daniel Wolfe, of Virginia.
Charles Henry Young, of New York.
Channing Whitney Barrett, of Illinois.
Clarence Sydney Brown, of Texas.
Daniel Nathan Elsendrath, of Illinois.
David Sturgis Fairchild, jr., of Iowa.
Arthur Henry Geiger, of Illinois.
Frank James Lemon, of California.
George Mantingh, of Pennsylvania.
Bial Francis Bradbury, of Maine.

William Elston Leighton, of Missouri, late first lieutenant in the Medical Reserve Corps.

Hugh Farber McCaughey, of Minnesota, late first lieutenant in the Medical Reserve Corps.

COMMISSIONER OF THE DISTRICT OF COLUMBIA.

Oliver P. Newman, of the District of Columbia, to be a Commissioner of the District of Columbia for a term of three years. (A reappointment.)

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 7, 1916.

APPOINTMENT IN THE ARMY.

GENERAL OFFICER.

Col. George A. Dodd to be brigadier general.

PROMOTIONS IN THE NAVY.

Capt. Thomas S. Rodgers to be a rear admiral.
Ensigns to be lieutenants (junior grade):
William H. P. Blandy,
Terry B. Thompson, and
Samuel S. Thurston.
Passed Asst. Paymaster Howard H. Alkire to be a paymaster.
Passed Asst. Paymaster Edwin M. Hacker to be a paymaster.
Gunner Harry A. Pinkerton to be a chief gunner.
Boatswain Percy H. Bierce to be a chief boatswain.
Capt. James C. Breckinridge to be a major in the Marine Corps.
Capt. Arthur T. Marix to be a major in the Marine Corps.
First lieutenants to be captains in the Marine Corps:
Albert E. Randall.
Arthur Racicot.
Tom D. Barber.
Hermann T. Vulte.
Andrew B. Drum.
Calhoun Ancrum.
David M. Randall.
Holland McT. Smith.
Second lieutenants to be first lieutenants in the Marine Corps:
Arthur J. White.
Lester S. Wass.
Charles D. Barrett.
Edmond H. Morse.
Gerald A. Johnson.
Harry Schmidt.
George C. De Neale.
Albert R. Sutherland.
Harry L. Smith.
Selden B. Kennedy.
Miles R. Thacher.
Lloyd W. Williams.
William B. Sullivan.
David S. Barry, jr.
David L. S Brewster
Midshipmen to be second lieutenants in the Marine Corps:
Edward C. Fuller,
Arnold W. Jacobsen, and
Earl H. Jenkins.

REGISTER OF THE LAND OFFICE.

John Thomas Joyce to be register of the land office at Durango, Colo.

POSTMASTERS.

ALABAMA.

W. H. Ballenger, Dora.
Vera C. Jones, Oakman.

ALASKA.

C. J. Todd, Valdez.

GEORGIA.

C. W. McAfee, Blue Ridge.
T. F. Sykes, Villa Rica.
Herschel S. White, Sylvania.

ILLINOIS.

James Fielding, Colfax.
James R. Pyne, Maywood.

NEBRASKA.

Charles E. Fanning, Omaha.

SOUTH DAKOTA.

Lynus K. Harris, Frankfort.

REJECTION.

Executive nomination rejected by the Senate July 7, 1916.

James Messer to be postmaster at Tallahassee, Fla.

HOUSE OF REPRESENTATIVES.

FRIDAY, *July 7, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Take us, O God, our heavenly Father, into Thy kind care and keeping and guide us by Thy counsels through the remaining hours of this day; check the sinful influences that may arise from within, and deliver us from the temptations from without, that by our works we may prove ourselves worthy of the intellectual, moral, and spiritual endowments with which Thou hast blest us; and to Thee we will ascribe all praise, in the spirit of the Master. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed with amendment bill of the following title, in which the concurrence of the House of Representatives was requested:

H. R. 10251. An act authorizing the Kansas City & Memphis Railway & Bridge Co. to make settlement with Crittenden County, Ark., and for other purposes.

The message also announced that the President had, on July 3, 1916, approved and signed bills of the following titles:

S. 31. An act for the relief of John L. Sevy;

S. 33. An act for the relief of Daniel M. Frost;

S. 733. An act providing for patents to homesteads on the ceded portion of the Wind River Reservation, in Wyoming;

S. 1066. An act authorizing leave of absence to homestead settlers upon unsurveyed lands;

S. 1741. An act for the relief of certain homestead entrymen for land within the limits of the Glacier National Park;

S. 1840. An act to amend an act entitled "An act to establish a Court of Private Land Claims and to provide for the settlement of private land claims in certain States and Territories," approved March 3, 1891, and the acts amendatory thereto, approved February 21, 1893, June 27, 1898, and February 26, 1909;

S. 3132. An act providing for the sale of certain lands in the State of Washington, and for other purposes;

S. 3580. An act releasing the claim of the United States Government to lot No. 306, in the old city of Pensacola, Fla.;

S. 3581. An act authorizing the Secretary of the Interior to issue patent to that portion of land, being a fractional block, bounded on the north and east by Bayou Cadet, on the west by Cevallos Street, and on the south by Intendencia Street, in the old city of Pensacola, in the State of Florida; and

S. 3764. An act to consolidate certain forest lands in the Florida National Forest.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following bill:

H. R. 13486. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

EXTENSION OF REMARKS.

Mr. RUSSELL of Missouri. Mr. Speaker, to renew an application I made last evening for unanimous consent, having an understanding with the gentleman from New York [Mr. BENNET] that there will be no objection on his part this morning, I ask unanimous consent to extend my remarks in the RECORD for the purpose of inserting a speech made by Mr. Ralph Pulitzer at the dinner given by the New York Press Club on June 30, 1916.

The SPEAKER. The gentleman from Missouri [Mr. RUSSELL] asks unanimous consent to extend his remarks in the RECORD by inserting a speech made by Mr. Ralph Pulitzer on the 30th of June before the New York Press Club. Is there objection?

Mr. KITCHIN. I shall have to object, Mr. Speaker. I think these newspaper articles, whether offered by Republicans, Democrats, or Progressives, ought not to be printed in the RECORD. We print in the RECORD too many propositions. I do not think they ought to go in.

The SPEAKER. The gentleman from North Carolina objects.

Mr. DIXON. Mr. Speaker, my colleague Mr. BARNHART is detained at home on account of the illness of his wife. I ask unanimous consent to extend his remarks in the RECORD on the subject of a tariff commission.

The SPEAKER. Is the gentleman from Indiana [Mr. DIXON] going to extend the remarks?

Mr. DIXON. No, sir. I am going to ask that my colleague Mr. BARNHART shall be allowed to extend his remarks.

The SPEAKER. The gentleman from Indiana [Mr. DIXON] asks unanimous consent that his colleague Mr. BARNHART, who is detained at home on account of the illness of his wife, may extend his remarks in the RECORD on the subject of a tariff commission. Is there objection?

Mr. STAFFORD. Reserving the right to object, I think that would be establishing a precedent that has never been followed of having the RECORD show that a man is present delivering remarks when he is not in fact present.

Mr. DIXON. This is an extension of remarks, to be so indicated in the RECORD.

Mr. MANN. The gentleman from Indiana [Mr. BARNHART] is the author of a tariff-commission bill, and I think he ought to be accorded that privilege.

Mr. STAFFORD. But it will appear that he is in the House delivering remarks when, in fact, he is absent.

The SPEAKER. No; it will be inserted in the back part of the RECORD, where it ought to be.

Mr. STAFFORD. Well, it will be inserted in the back part of the temporary RECORD, but when the permanent volume is made up it will be inserted in the proceedings in the regular place.

The SPEAKER. Is there objection?

Mr. STAFFORD. I object.

The SPEAKER. The gentleman from Wisconsin objects.

LEAVE TO PRINT.

Mr. MANN. Mr. Speaker, I do not often make this suggestion, but it seems to me it might be desirable, if somebody does not object, to give general leave to print in the RECORD.

Mr. KITCHIN. I gave notice yesterday that I was going to ask for that privilege.

Mr. MANN. This is the time to ask for it.

Mr. KITCHIN. Then, Mr. Speaker, I ask that all gentlemen may be allowed to revise and extend their remarks——

Mr. MANN. To extend their remarks——

Mr. KITCHIN. In the RECORD on the revenue bill.

Mr. MANN. For how many days?

Mr. KITCHIN. For five days after the completion of the bill.

The SPEAKER. The gentleman from North Carolina asks unanimous consent that all gentlemen shall have the right to extend their remarks in the RECORD on the revenue bill five legislative days after the bill leaves the House. Is there objection?

There was no objection.

REVENUE.

The SPEAKER. The House automatically resolves itself into Committee of the Whole House on the state of the Union for the consideration of the revenue bill, with the gentleman from Illinois [Mr. FOSTER] in the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 16763, the revenue bill, with Mr. FOSTER in the chair.

The CHAIRMAN. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. FORDNEY. Mr. Chairman, I yield 30 minutes to the gentleman from Pennsylvania [Mr. MOORE]. [Applause.]

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] is recognized for 30 minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, it was momentarily pleasing yesterday to listen to the Macedonian cry of our friend from North Carolina [Mr. KITCHIN], chairman of the Ways and Means Committee, calling upon Republicans, who have never been so honored before, to come into the Democratic Party and help pass a Democratic revenue deficiency bill. But to some of us who have watched the trend of Democratic legislation and who have had our misgivings about the competency of the Democratic Party to raise revenue upon a free-trade basis it was a siren song, though sweetly sung. It was unexpected, in view of the insistence of the gentleman from North Carolina and his Democratic colleagues four years ago and more, that they could raise all the revenue needed to run the Government with the Underwood tariff bill plus an income tax, and that they could do this especially without the aid of a protective tariff measure. It was the argument of the Democratic leaders at that time that they could overthrow the protective system and still raise enough money to keep the Government going without imposing taxes upon the people, except the income tax, which they said would be all sufficient. They had a great deal of confidence in themselves those days, because the Public Treasury, thanks to a Republican administration, was in ample funds and in ripe condition for experimentation.

It was long before the war in Europe that the Democrats first broached their scheme of substituting an income tax for the revenues derived from a protective tariff. Discussing the revenue problem in the Canadian reciprocity debate of February 14, 1911, Mr. CLARK of Missouri, the present distinguished Speaker of the House, unfolded a scheme for universal peace, which he saw coming through the annexation of Canada to the United States. He thought reciprocity of that kind would stop war and help to "put an end to this high protective tariff system." Thereupon this colloquy took place:

Mr. MOORE of Pennsylvania. Would these reciprocal treaties with European countries contemplate the raising of revenue sufficient to run this Government?

Mr. CLARK of Missouri. Oh, if we did not get enough money in that way we would collect it by a graduated income tax, and that would bring in enough. [Applause.]

Mr. MOORE of Pennsylvania. One more question and I am done. Then, the gentleman, if he could not raise sufficient revenue by the new system of tariff for revenue, would raise it by direct tax upon the people of the United States?

Mr. CLARK of Missouri. I would raise it by a graduated income tax, with about six or seven thousand dollars exemption, and I think it would be the justest tax that was ever levied. [Applause.]

Now, that was an expression from one of the great leaders on the other side who had no faith in protection which makes the foreigner pay our taxes for doing business in the American market, but who believed that the people would prefer to pay direct taxes for the maintenance of their Government. In view of the House's preparedness attitude during the last few months, it is not altogether fair to recall the Speaker's devotion to "the dove of peace," except to remind the new Members of the House, who have heard a great deal lately about war, that the House still stands committed to the so-called Hensley resolution, which came up from the State of Missouri on a newspaper report that Mr. Winston Churchill, of England, had seriously proposed a world cessation of naval construction for one whole year. Our Democratic friends, and some Republicans too, were carried away with the notion that Congress ought to adopt Mr. Winston Churchill's reported idea, and this House actually did so, with leading Democrats loudly proclaiming the wisdom of it. This was only a few months before Mr. Winston Churchill's country and several others of the nations of Europe were locked in the deadliest struggle of all ages. This House, under Democratic direction, was tremendously for peace at that time, even though every foreign nation was armed to the teeth.

But I want to quote one or two other gentlemen on the destruction of the Republican tariff and the substitution of the income tax. Let us take the intellectual income-tax giant of the Ways and Means Committee, the indefatigable gentleman from Tennessee, Mr. CORDELL HULL, who is now doubling his original tax scheme in order to catch up with the rapidly disappearing tariff revenue. Winding up an eloquent speech under the subhead of "Republican tariff humbuggery," on July 12, 1909, Mr. HULL said:

When that veteran showman P. T. Barnum gave utterance to his life experience to the effect that the people like to be humbugged, he must have had in mind also the painfully cruel manner in which the Republican Party, with its high protective tariff, deceives, humbugs, hoodwinks, and defrauds the American people. The truth of this statement could not be better illustrated than by that party's present so-called revision of the tariff. How long will or can the country endure this system? Until we can secure the imposition of an income tax and thereby destroy it? "We shall see what we shall behold." [Applause on the Democratic side.]

Yes; the gentleman from Tennessee [Mr. HULL], who is now the acknowledged champion of the income tax, and who writes the finest legal phrases in this great bill, was then so confident as to his party's policy, and as to its effectiveness, that he was prepared to "destroy" the Republican system of protection in the United States, and substitute for it the income tax, and the Democrats applauded him.

That was not all. The gentleman from Indiana [Mr. CULLOP] and a number of others, oh, so many of them that it is impossible to recall them all at this time, made similar speeches, denouncing tariff commissions, denouncing boards that had anything to do with the tariff, denouncing even "in the name of the Constitution of the United States" everything that tended to protect the American workingman against unfair competition from abroad.

But there was another spokesman upon that occasion—July 12, 1909—whom I would like to quote, the eloquent, the omnipresent, the forceful gentleman from Alabama [Mr. HEFLIN], who at that time was an ardent defender of the pocketbooks of the people against "the raids of the Republican Party." In an earnest and pathetic plea for the wage earners of America against the protection they were receiving in the Payne tariff bill, Mr. HEFLIN, in words of burning eloquence, said:

The struggle is unceasing. No field is cleared in the battle for bread; no bugle sings truce to the toiling millions; and yet, under this miserable bill, the industry and skill of the man who toils are taxed, but the fortunes of the idle rich escape the scrutinizing eye of the Republicans.

And at that there was tremendous applause upon the Democratic side. The gentleman from Alabama [Mr. HEFLIN] is one of the spokesmen of the Democratic Party. He was prominent in the convention that renominated President Wilson at St. Louis a few weeks ago, and his utterances deserve our attention.

I am indebted—

Said he, this friend of the downtrodden wage earners of America—

to the Barfield-Green Mercantile Co., of Lineville, Ala., in my district, for sending me this notice:

"NOTICE.—With no duty on sugar, sugar would be 2 cents per pound cheaper.

"Write your Senator and Congressman that you favor 'free sugar.'"

It is possible that our friend from Alabama may have been misinformed by his Lineville constituents, whose mercantile hearts beat so throbbingly for the unfortunate purchasers of sugar, but the fact remains that during the last stages of the Payne protective tariff bill, sugar was sold to the consumer at 4 or 5 cents a pound, whereas it rose to as high as 10 or 11 under the Underwood free-trade tariff law, and now, after the Democrats have restored the duty, which they at first voted to take off, is hovering round about 8 cents a pound. Wonderful, indeed, is the confidence of the Democratic orator in his free-sugar informant. [Laughter.]

Reflecting upon that cocksure spirit of Democracy, when there was a strong Republican balance in the Treasury, when there was no deficit facing the country, when all men were profitably employed, and contrasting it with the damage wrought to all the industries of the United States during the first six months of the Underwood tariff law, followed by oppressive war taxes in time of peace, with the Treasury deficit piling up until it is now necessary to raise $400,000,000, in addition to the other great Democratic burdens of the past three years, it seemed as if to follow the gentleman from North Carolina into his Democratic Macedonia would call for a display of Republican nerve and generosity at least equal to that of the gentleman making so magnanimous a tender on behalf of an embarrassed administration. [Applause on the Republican side.]

And I am persuaded that the nerve of the gentleman from North Carolina was even more sublime than his generosity, having reference of course to his vicious political, rather than his amiable personal, qualities. And for these reasons: The Democratic members of the Ways and Means Committee having labored over this greatest of all American deficiency bills for many months, having shaped it up to suit their own purposes and to cover their party's tracks, injected it into the House overnight, as it were, and then imposed upon their eloquent chairman the delicate task of convincing Republicans who had not been consulted about it at all that there was enough in the bill to their liking, to induce them to vote for it—Democratic tariff commission, free-trade Underwood law, and all. I do not believe the Republicans intend to walk into any such carefully woven Democratic spider web [Applause on the Republican side.] Nor do I mind saying, in passing, that this bill ought to be called "the Democratic spider web." [Laughter.]

Mr. Chairman, there is no need to mince words about this measure. The Democratic Party is fighting for a continuance of power, and is playing every game known to the skillful politician, from publicity to patriotism. It is still a minority party, as it was in 1912, when the combined vote of Taft and Roosevelt was 1,300,000 over that of Wilson. Being in accidental but complete control of the country, because of Republican dissensions in 1912, but finding itself confronted now, in 1916, by a reunited Republican Party, there is Machiavellian cleverness in this effort to divide with Republicans—I say it advisedly, to divide with Republicans—the responsibility for the accumulated blunders of the Democratic Party. [Applause on the Republican side.]

The design of the bill, as evidenced by the success of the majority in keeping the minority ignorant of its contents until Monday last, is clearly to embarrass Republicans, upon the pretense that preparedness for war demands it. There is enough of absorption of Republican policies in the bill to sugar coat it for tender Republican stomachs; but on the one great issue of protection and free trade this bill is as uncompromisingly Democratic as is the Underwood law itself. And it is because of this partisan make-up of the bill that Republicans should vote against it.

I do not care what the advantages of a dubious dyestuffs tariff section may be, nor whether the imposition of certain new taxes is due in part to Republican votes to increase the Army and Navy; none of them, nor all of them, are sufficient to warrant a continuance of the existing Underwood tariff law, nor the revision of it by a tariff commission appointed and controlled, as proposed in the bill, by a President of the United States who is avowedly opposed to the American protective-tariff system and who thus far has not responded to the "nonpartisan" appeal even of the gentleman from North Carolina by appointing a single Republican upon any of the numerous so-called "nonpartisan" commissions which this Democratic Congress with lavish hand, and without regard to the war in Europe or the war in Mexico, has created at the expense of the taxpayers.

Neither is the sop offered to Republicans in this bill of such special or general interest as to warrant Republicans in assuming even partial responsibility for the egregious and at times cruel economic and diplomatic blunders of the administration, which blunders, while they have been played up to catch the sympathy of the people on patriotic grounds, have been so maneuvered as to distract the attention of the country from the steady increase of Democratic officeholders, who have been coming along regularly in commissions, boards, and other Government agencies at the rate of 10,000 a year in excess of the number of employees at the close of the Taft administration. I do not think it is the duty of Republicans to assume responsibility for this tremendous increase of "deserving Democrats," now numbering more than 30,000, who have been taken care of, despite the war in Europe and notwithstanding the demand for real live men to enlist for service along the Mexican border; 30,000 men for jobs, "deserving Democrats" taken care of at the expense of the people, and pleas going up from every city in the land for 30,000 and more worthy young men of rich, red blood to lay down their lives to justify the President's policy in Mexico. Let him send some of these office-seeking Democrats into the service in Mexico, and he will be doing the country a real service. [Applause on the Republican side.]

Ah, the gentleman from New York [Mr. FITZGERALD], eloquent always, parliamentarian to the core, and sometimes sarcastic with it all, tells us that the administration has performed wonders and worked many economies, and that it has done much which the Republican Party never did. Well, the first thing it has done that the Republican Party never did was to spend more money than the Republican Party ever had to spend, and it has spent it with the spirit of "the best spender on earth," who is always lavish with other people's money.

Remember the speech made by the gentleman from New York a few days ago, when he was feeling kindly toward the White House, feeling kindly now that we are approaching the November election, now when we are approaching the time to "turn them out." [Applause on the Republican side.] Remember his clever defense of the principles and the policies of his great friend in the White House, who, until recently, it must be confessed, has not been in most sympathetic touch with Tammany Hall——

Mr. QUIN. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I can not yield, because my time is limited. I would like to hit the gentleman from Mississippi good and hard, but time will not permit. [Laughter.] Look at the picture now, and look at the picture then. The gentleman from New York [Mr. FITZGERALD] rising in his place as a champion of Woodrow Wilson, the economical, the patriotic, the diplomatoc President of the United States, and defending the Democratic Party, which has "so generously" and "so cordially," according to the gentleman from North Carolina

yesterday, supported the President of the United States. What splendid cooperation there has been. So many frank conferences in which Congress leaders have participated, and all that. Oh, how they have worked together harmoniously and happily, from the time Mr. Wilson went into the White House down to the present. It has been delightful and is growing more so now that they are all seeking reelection, including Mr. Wilson.

But we were talking about the gentleman from New York and his financial defense of the administration. It was so recent no one can forget it. Yet there was another Mr. FITZGERALD and still another speech that should not be overlooked.

Mr. FITZGERALD, chairman of the Appropriations Committee, on December 16, 1914, was in sore trouble about the demands and exactions of his Democratic colleagues in the House. Not only the gentleman from New York, who is a lone Democrat with a good chairmanship north of Mason and Dixon's line, but the gentleman from Mississippi [Mr. SISSON] was equally indignant at the wild horses of Democracy who could not be held in restraint when appropriations were in sight. But, first, the gentleman from New York. What did he say? Those Republicans who did not hear it then should listen to it now:

The gentleman from Illinois [Mr. MANN] has not overexaggerated the picture as to what is likely to happen at this session of Congress. No one can tell just how much the appropriations at this session will be, but I think it is a conservative estimate to say, Mr. Speaker, that they will far exceed the appropriations that have been made at any session in the history of the Government.

I have done my part and have done my best in some way to curtail the expenditures; not to interfere with the legitimate functions and services of the Government, but to stop the expenditure of public moneys to gratify every whim and to please every fancy, either of individuals or of Members. Everyone seems possessed, however, of a determination to obtain moneys to maintain and extend that particular branch of the public service in which he or his constituents is particularly interested and then to make fragmentary, spasmodic efforts to save in some other direction in which neither he nor his constituents will be affected.

Such a condition can not long continue. I understand that the bills reported at this session of Congress will probably provide for the expenditure of the $100,000,000 which it is anticipated will be raised by an income tax. It reminds me somewhat of an incident that occurred in the Committee on Appropriations when $27,000 was requested for a certain public service in anticipation of the enactment of some legislation at the next session of Congress.

I want to say, Mr. Speaker, that unless this side of the House wakes up to a sense of its responsibility, not only will the appropriations be grossly extravagant but they will amount to so much that talk of a revision downward of the tariff will be the most hollow mockery.

I have not time to read more, but the gentleman from New York was truly alarmed and stopped for a time his criticism of Republicans for spending money, so rank a record had his own party thus far made. [Applause on the Republican side.]

BACKED UP BY EMINENT DEMOCRATIC AUTHORITY.

Now I shall quote the gentleman from Mississippi [Mr. SISSON]. He was more forceful and more eloquent than the gentleman from New York, if that be possible. He was equally indignant at the unconscionable demands of the cohorts of Democracy, for he said:

Principle has gone to the four winds of the earth, and we are writing ourselves down in the history of the country as being the most outrageously and most criminally extravagant Congress that ever sat on the American Continent * * *. I said that in a speech before, in the last session, and when I made that speech Members of the Democratic House came to me and asked me not to put it into the RECORD, because it would be used by the Republicans in their campaign book. Let them use it. * * * You may use the statement now, gentlemen, because when Democrats get to be so violently extravagant that it makes its own record look bad as compared to the very marked record of the Republicans, I must apologize to you Republicans for having ever used the words "criminally extravagant" in criticizing the appropriations that you made, for if that expression "criminally extravagant" was proper to apply to you, my God! the English language has never found an adjective strong enough to apply to Democratic extravagance.

With a record like that, self-confessed, is it not the quintessence of nerve for the Democratic Party to appeal to Republicans on the ground of patriotism to support a bill that perpetuates the most extravagant of all American administrations?

THE PRESIDENT JUMPED ON US, TOO.

Why, Mr. Chairman, the President of the United States was one of those who indulged in denunciation of "Republican extravagance." The platform upon which he ran rang the changes on that phrase. Like other Democrats, the President, for whom we are now asked to provide revenue to make up deficiencies for which Republicans are not responsible, contributed to the general hue and cry against protection, and called for the overthrow of the Republican tariff law.

He went at it vigorously and in a businesslike way. In his first address to Congress he had no hesitation in telling us what he thought we ought to do about the tariff.

It is plain—

Said he—

what those principles must be. We must abolish everything that bears even the semblance of privilege or of any kind of artificial advantage and put our business men and producers under the stimulation of a constant necessity to be efficient, economical, and enterprising, masters of competitive supremacy, better workers and merchants than any in the world. Aside from the duties laid upon articles which we do not and probably can not produce, therefore, and the duties laid upon luxuries and merely for the sake of the revenues they yield, the object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world.

That was the President's program. He was for the destruction of the protective-tariff system; he was for forcing American producers and manufacturers to compete with their foreign competitors on equal terms. The issue between Republicans and Democrats could not have been more squarely stated than it was by the President. The Underwood law, which this bill proposes to sustain by a tariff commission to be appointed by the President, was the logical outcome of the President's attitude upon the tariff question. The President was at least true to the Democratic platform at Baltimore upon the tariff issue. We must give him credit for that.

I can not use the choice expletives of the gentleman from Mississippi, but this far I can go: "Great Scott, on the tariff question the President kept his promise to stand by the Baltimore platform!" [Laughter and applause on the Republican side.]

OUR COSTLY "PEACE" WITH MEXICO.

Some of us have been accused of criticizing the President, although I do not suppose it gives him great concern. When things look peaceful the President is a man of peace, but at times the "sparks are flying" and the impression goes abroad that the President is for war. He appears to have been for war in Mexico and against it; for war on the armed-merchantmen question and against it. The President is not slow to feel the ground swell or to catch the public ear. In December, 1914, when the European war was on the front page and the Underwood tariff disturbance had been temporarily forgotten in the rush of American goods to the foreign war zone, the President addressed the House on the subject of peace. This was long before the battle of Carrizal and our "masterly retreat" from Mr. Carranza's domain.

We are at peace with all the world—

Said the President to Congress—

No one who speaks counsel based on fact or drawn from a just and candid interpretation of realities can say that there is reason to fear that from any quarter our independence or the integrity of our territory is threatened. Dread of the power of any other nation we are incapable of. We are not jealous of rivalry in the fields of commerce or of any other peaceful achievement. We mean to live our own lives as we will; but we mean also to let live. We are, indeed, a true friend to all the nations of the world, because we threaten none, covet the possessions of none, desire the overthrow of none. Our friendship can be accepted and is accepted without reservation, because it is offered in a spirit and for a purpose which no one need ever question or suspect.

Those were the President's sentiments when the spirit of war was not in evidence at the White House. The country, doubtless, was pleased to know that we were "at peace with all the world." In the discussion of the revenue-deficiency bill yesterday, however, we were brought face to face with the fact that if we are "at peace with all the world" it has been costing us heavily to maintain that peace in Mexico. You will recall that the gentleman from North Carolina [Mr. KITCHIN] asked the Republicans to indorse the proposition to let the President sell bonds to the amount of $125,000,000 in order to meet the Mexican situation—a crisis, by the way, which may be fairly attributed to the President's refusal to recognize the ruler of a neighboring country with which we were at peace. Yes, we may go further than that and say that if Huerta, the ruler of Mexico, had been recognized by the United States as other nations recognized him, it is probable we would not now be called upon to expend $125,000,000 of the people's money to protect American rights and the lives of the men whom we are sending down to the border to-day. [Applause on the Republican side.]

LESS EXTRAVAGANCE, LESS TAXES.

This all enters into the question of the revenue which we are now asked to raise. Bear in mind that Republicans are not at fault because the Democrats have deliberately thrown away more than $100,000,000 per annum of tariff revenue. Republicans are not to blame that free trade has been so encouraged by the Underwood tariff bill that if protective duties were restored there might still be sufficient revenue paid by the foreigner to meet even our war expenses. Bear in mind also that the $266,922,000 "estimated excess of disbursements over receipts" which we are asked by the Ways and Means Committee to supply might have been saved if this administration had been less reckless and extravagant with the public money. We have taken $5,000,000 to establish a war-risk insurance company. We are engaged in a $30,000,000 enterprise building railroads in Alaska. We are so anxious to "tax the rich" that we are proposing to spend $20,000,000 for a Government nitrate plant and $11,000,000 for an armor-plate plant. Yes, there is $50,000,000 for flood control. An anticipated $50,000,000—

granted a bond issue is contemplated—for the purchase of foreign-built ships. Some Republicans may not object to the rivers and harbors bill, or the public-buildings bill, or the good-roads bill, or the $15,000,000 that is to be dedicated to rural cooperative banking societies. Do not you think the administration, if it had stopped playing politics by attempting to "give everybody" the income-tax money and the corporation-tax money that is collected chiefly in the four States of New York, Pennsylvania, Illinois, and Massachusetts, could save a little money to increase the Army and the Navy if it were so inclined? Why does the administration insist upon plunging into Government ownership at the public expense when the money is needed for preparedness? Is the desire to "tax the rich" so inviting that the burden must be laid upon the residents of a few industrial States for the benefit of all the States? Why can not the party in power, if pressed for revenue, find some method of equalizing the burdens of taxation? I do not mean to be sectional in this, but the facts speak for themselves.

GREAT INEQUALITY OF TAX BURDEN.

The 12 States, Virginia, North Carolina, South Carolina, Florida, Georgia, Alabama, Kentucky, Tennessee, Louisiana, Arkansas, Missouri, and Texas, whose votes are uniformly with the President in all political matters, have an aggregate population of more than 25,000,000, or one-fourth of the entire population of the country. And yet those 12 States contribute only one-tenth of the taxes collected from corporations in all the States and one-sixth of all the income taxes. If there is even the slightest ground for the assertion that the tariff law is unjust or sectional there is certainly a world of argument against the fairness and equality of the corporation and income tax, as shown by these figures.

But the Democrats ask the Republicans to continue to pile the burden upon their own people. The Democrats are good spenders; that must be admitted. So is their President a good spender. He has done little thus far to check the tendency on the other side of the House. When he came to us with his war message of December, 1915, pleading for more battleships and an increased Army, he laid before us squarely and fairly the true condition of the Treasury. Despite the Underwood tariff bill, the income tax, and the $100,000,000 war tax that was imposed upon us when there was no war, the President told us that it might be well to continue the duty on sugar, since it would save about $41,000,000, but he plainly indicated that the deficit in the general fund of the Treasury on the 30th of June, 1917, would be nearly $235,000,000.

SIDESTEPPING THE PRESIDENT'S DIRECT TAXES.

And then, I will not say blandly but rather without apology, the President told us to go out and get the money. He even went so far as to suggest some of the means that might be used to obtain it. I quote a portion of his message:

> And there are many additional sources of revenue which can justly be resorted to without hampering the industries of the country or putting any too great charge upon individual expenditure. A tax of 1 cent per gallon on gasoline and naphtha would yield, at the present estimated production, $10,000,00; a tax of 50 cents per horsepower on automobiles and internal-explosion engines, $15,000,000; a stamp tax on bank checks, probably $18,000,000; a tax of 25 cents per ton on pig iron, $10,000,000; a tax of 25 cents per ton on fabricated iron and steel, probably $10,000,000. In a country of great industries like this it ought to be easy to distribute the burdens of taxation without making them anywhere bear too heavily or too exclusively upon any one set of persons or undertakings. What is clear is that the industry of this generation should pay the bills of this generation.

Those of you who listened to the stirring speech of my friend of North Carolina yesterday, would do well to compare his suggestions about taxation with the recommendations of the President. You observe that the President hinted that the burdens of taxation ought not to "bear too heavily or too exclusively upon any one set of persons or undertakings." Therefore a tax on gasoline, a tax on bank checks, a tax on automobiles, and explosion engines might be acceptable to the people. That was the President's view at that time. Do you remember what Mr. KITCHIN said about it? Tax gasoline; not much! Let the Republicans tax gasoline. Tax combustion engines! Oh, what a lovely prospect! Put that up to the Republicans! Tax automobiles; well, I guess not! The downtrodden farmers have automobiles and so have the cotton growers. Tax bank checks; well, "let George do it." The truth of the matter is, gentlemen, that while the President's advice looked fairly good on the surface, it would not work very well just now in advance of the November elections. Hence, put it up to the Republicans. Tax the rich! Double the income tax! Soak inheritances! Dead people do not vote. [Laughter on the Republican side.]

Mr. Chairman, it may be true, as the gentleman from North Carolina has contended, that the bill contains some provisions that look good to Republicans, but Republicans will observe on perusing the 101 pages of the bill that they can not vote only for such things as they want; in the wind-up they must vote for or against everything in the bill, good or bad, first, the income-tax provision, which makes many changes from existing law and increases the rate; second, the inheritance or estate tax, which is a new feature of Federal taxation and involves State rights; third, the tax on munition manufacturers, all of which may be justified as war taxes if separately considered from politics; fourth, miscellaneous taxes, which include changes in the rates on wines, beer, and whisky and the continuance of certain taxes on manufactures; fifth, a duty on dyestuffs, not in accordance with the expert recommendations, this being the first sop to Republicans; sixth, a tariff commission, which, under the circumstances, is a dangerous feature of the bill and the real pitfall for Republicans who may support it; seventh, unfair competition or antidumping clause, which the gentleman from North Carolina contends should catch Republican support because it is a protection measure.

All of these seven provisions look innocent enough, Mr. Chairman, but all of them are certainly not war-tax measures for which Republican support can be asked. On the ground of stress or emergency we might be asked to vote for the income-tax increase, the inheritance tax, the munitions tax, and some of the special taxes, but there is no chance to so vote. That is the trick in this bill.

The dyestuffs tariff, upon which a separate vote might have been had any time during the last six months, has been before the Ways and Means Committee since Congress opened; the tariff commission bill is also of long standing before the committee. Either of these bills, brought in separately at any time, might have commanded Republican consideration. Why were they held up for this revenue-deficiency bill? Republicans were ready—and some Democrats, too—to act upon these bills. It was the administration that was not ready. [Applause on the Republican side.]

The administration did not want "to eat crow" on the dyestuffs bill, any more than it relished the dose of crow it had to swallow when it restored a protective-tariff duty on sugar. Having consistently and persistently opposed a tariff commission and having destroyed the Taft tariff board, the Democratic committee did not dare to bring the so-called Rainey tariff commission bill before the House as a separate proposition. True, the President was reported to be for it after the gentleman from North Carolina declined to sponsor it, but the President stood committed in his Indianapolis speech to the happy thought that having "put one over on the Republicans" in the trade commission act, he had ample authority to collect all the tariff data he needed. At any rate, no separate action was had in the House on any of these measures. They were deliberately held up until after the Democratic national convention at St. Louis. And "thereby hangs a tale."

Republicans may be willing to support the tax bills for preparedness, they may even go so far as to submit to the issue of Panama Canal bonds to the extent of $125,000,000 to pay for the President's failure to recognize Huerta as the ruler of Mexico, but I question whether they will go so far as to vote into the President's keeping a Democratic tariff commission to perpetuate the Underwood tariff law. [Applause on the Republican side.] In my judgment that is exactly what Republicans will do who vote for this revenue deficiency bill with these riders attached. To those of my colleagues who have any doubt upon this subject let me commend the tariff commission paragraph of the majority report (p. 9). Read carefully the brief but frank statement of the committee recommending a tariff commission, a committee which hitherto has spurned a tariff commission as a thing of evil. Note the authority upon which it relies for the chairman's assurance of a "nonpartisan commission." The committee quotes, and quotes only, from the platform of the Democratic national convention at St. Louis. And this is what it quotes:

> We affirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine. We recognize that tariff rates are necessarily subject to change to meet changing conditions in the world's production and trade. The events of the last two years have brought about many momentous changes. In some respects their efforts are yet conjectural and wait to be disclosed, particularly in respect to our foreign trade.

The only comment which the majority committee makes upon this tariff commission quotation, and it is their only argument for the commission, is—

> That the reason for the same is so well stated in the Democratic national platform at St. Louis, June 16, 1916, that nothing additional is necessary.

This means that we are to have a Wilson-Underwood tariff commission. The Democratic national convention says so. Are Republicans to stand for that?

It is evident, upon the face of the returns themselves, that a Republican vote for this deficiency taxation bill, apart from indorsing the President's Mexican policy to the extent of a bond issue of $125,000,000, is a straight-out indorsement of the Underwood tariff law as indorsed by the Democratic convention at St. Louis. The Democrats are certainly not yielding anything to the Republicans on this score.

Mr. Chairman, if the administration honestly desired Republican support for a preparedness tax measure, why did it tack onto this bill the tariff-commission bill, the dyestuffs bill, and the antidumping provision? These are tariff matters involving policies upon whch the parties have been at issue. If, in addition to the two annual war taxes already imposed and the income tax which was to make good all losses due to the passage of the Underwood bill, the Democrats honestly desired Republican assistance in raising revenue to meet the exigencies of war, why did they not submit a revenue measure pure and simple upon which Republicans could have cast a patriotic vote without offense to their party principles?

The truth is, Mr. Chairman, that this administration, which rejected all Republican doctrines in the beginning, which insisted that Republican policies led to thievery, extravagance, and corruption, has bitten off more than it can chew and is in such a deep political and economic morass that, like misery, it "loves company." In the attempt to execute its bombastic Baltimore platform it has been obliged to "turn tail" upon almost every promise it made. It subjected the business people of this country to every possible indignity that could be heaped upon them through unnecessary and inquisitorial investigations, which have made our boasted "new freedom" a mockery. It has plunged headlong into Government ownership, necessitating a terrific increase of the Government pay roll, and has proven itself so extravagant as to merit the criticism and condemnation of some of its own leaders. It now puts forth the hand that smote the people and asks the Republican Party to indorse its unusual and remarkable performances. It does not take back a single word or act leading up to its present confusion. Having spent the people's money with the recklessness of a prodigal, it does not even ask for forgiveness, but insists that the people shall continue to furnish money to keep it in power under the same old system.

There is no other way of interpreting this bill. The underlying scheme of it all is to drag Republicans into the vortex on patriotic grounds. I assume that Republicans are ready to vote upon any fair emergency war-tax measure that is brought into this House, but it is unbelievable that they will accommodate themselves to the purposes of an administration which refuses to Republicans the right to vote for such a measure unless they indorse the failures and the extravagance of the Democratic Party and swallow the Mexican policy and the Underwood free-trade law at one gulp.

Gentlemen on the Republican side, we should not be asked to do any such thing. If they want us to vote on a revenue bill to increase the Army and the Navy, let them bring in that bill. That is the honest and proper thing for them to do. If they want us to vote on tariff bills, let them bring in tariff bills; then we can join issue and fight it out on this floor as we have done heretofore. We do not have to vote for the riders they impose upon us in this way. [Prolonged applause on the Republican side.]

[By unanimous consent, Mr. MOORE of Pennsylvania was granted leave to extend his remarks in the RECORD.]

Mr. KITCHIN. Mr. Chairman, I yield 25 minutes to the gentleman from Mississippi [Mr. COLLIER]. [Applause on the Democratic side.]

Mr. COLLIER. Mr. Chairman and gentlemen, I take it from the remarks of my genial friend from Pennsylvania [Mr. MOORE], a member of the committee, that he is one of the Republicans who is really opposed to this bill, and it is as refreshing as it is astonishing to find a man who, ever since I have been associated with him in Congress, has had both hands clear to the armpits in the Public Treasury trying to drag therefrom every cent he could to build real and imaginary canals all over Pennsylvania and everywhere the Delaware River touches, now attempting to criticize anybody about extravagance. Why, if our Democratic bill had met with the approval of the gentleman from Pennsylvania, I think I for one would have voted to reconsider the bill and recommit it, for something surely would have been wrong with it.

My genial friend the minority leader on the committee, the gentleman from Michigan [Mr. FORDNEY], stated yesterday in opening the debate for the minority that since he had been a Member of Congress he never had, and as long as he expected to be a Member of Congress he never would, participate in the framing of a Democratic tariff bill. The gentleman from Michigan is honest and sincere in his views. He is honest and consistent in believing in the theory of taxation for which he has stood ever since he has been a Member of this House, and I trust that neither he nor any of his friends will consider my remarks offensive when I say that in the interest of the great masses of the American people I hope that the gentleman from Michigan and anyone else who entertains the views of taxation that he does never will participate in the framing of a Democratic or any other revenue bill which will tax the American people. [Applause on the Democratic side.]

The gentleman from Michigan believes in a system of taxation which permits one man to become enormously rich at the expense of ninety-nine others. He believes in a system of taxation which is a legitimate offspring of privilege and favoritism, a system of taxation which has in its wake a long line and endless chain of perpetual lobbyists. He gets his inspiration from the patron saint of Republican protection and Republican favoritism, Alexander Hamilton, a man who believed that the rights of the people should be vested in the hands of the aristocracy and that the wealth of the country should control in all the workings of national legislation. I want to say to my Democratic colleagues that it is an inspiring thought to us that nowhere among the great masses of the people—those people whom Hamilton was afraid to trust—do we find any of his disciples. It is only the man who wants a privilege, who expects a governmental favor, and who is seeking special protection that invokes the departed spirit of the dead Federalist.

Mr. Chairman, we have to raise a certain amount of money to take care of the necessary expenses for our national defense. There was only one question before the Committee on Ways and Means. That question was, How could this money best be raised with the burdens falling lightest upon the American people? We have accomplished that by increasing the normal rate on income taxes. We have accomplished that by bringing in a tax on munitions of war and by an inheritance tax.

This bill is expected to raise approximately $197,000,000 of additional revenue. It repeals nearly all of the stamp taxes, increases the amount to be collected from incomes, provides for the collection of an inheritance tax, levies a tax on munitions of war, takes care of the dyestuff situation, creates a tariff commission, and in other ways provides revenue for the purpose of meeting the extraordinary expenses to be incurred in preparations for our national defense.

The normal tax upon net incomes has been increased from 1 per cent to 2 per cent. In addition thereto a tax of 1 per cent shall be paid upon the amount by which the net income exceeds $20,000 but does not exceed $40,000; 2 per cent by which the net income exceeds $40,000 but does not exceed $60,000; 3 per cent by which the net income exceeds $60,000 but does not exceed $80,000; 4 per cent by which this income exceeds $80,000 and does not exceed $100,000; 5 per cent by which this income exceeds $100,000 and does not exceed $150,000; 6 per cent by which this income exceeds $150,000 and does not exceed $200,000; 7 per cent by which this total net income exceeds $200,000 and does not exceed $250,000; 8 per cent by which this income exceeds $250,000 and does not exceed $300,000; 9 per cent by which this income exceeds $300,000 and does not exceed $500,000; and 10 per cent on the net income in excess of $500,000. It is estimated that on incomes alone we will for the year 1917, as provided in this bill, collect about $227,000,000 or an increase of about $107,000,000 over the receipts under the present income-tax law.

Last March when the repeal of those clauses in the tariff act of 1913 in relation to sugar was before the House for consideration, I expressed a hope that the increased taxes to carry out the ideas of an adequate national defense should be largely borne by incomes and a tax on munitions of war.

Of the $197,000,000 additional expected to be raised by this bill, about $178,000,000 comes from these two sources.

This tax on munitions is graduated and provides for a tax of 5 per cent on the gross receipts on the manufacture of gunpowder or other explosives where the amount of such receipts is not in excess of $1,000,000. If in excess of this amount, then the tax shall be 8 per cent of the gross receipts which exceed $1,000,000.

The tax on cartridges, projectiles, or shells of any kind, including shrapnel, and so forth, and firearms of every kind, including small arms, cannon, machine guns, rifles, and bayonets, and so forth, shall be 2 per cent of the amount not in excess of $250,000; 3 per cent of the amount by which such gross receipts exceed $250,000, and do not exceed $500,000; 4 per cent of the amount by which such receipts exceed $500,000 and do not exceed $1,000,000; and 5 per cent on all over $1,000,000.

There is also a tax of 1 per cent on the smelting, refining, and alloying of copper where such receipts exceed $25,000 and

do not exceed $1,000,000 and 2 per cent where such receipts exceed $1,000,000 and do not exceed $10,000,000. All over $10,000,000 this tax shall be 3 per cent.

In all instances if one of these munitions plants fails to make a net profit of 10 per cent this tax will not be collected, and if the payment of the tax would reduce such net profit below 10 per cent the tax to be paid shall be equal to the net profit in excess of 10 per cent. We expect to raise $71,000,000 by this tax for the fiscal year 1917.

We have provided for the collection of an inheritance tax. We have graduated this tax, and we expect to raise $17,000,000 for the fiscal year ending June 30, 1917. When the tax is in normal operation it is estimated that the yield will be $54,000,000 annually. This tax is a fair tax, an honest tax, and one that should have been on the statute books long before now. It is perhaps the only way some of the largest estates worth millions, which have heretofore escaped Federal taxation and in many instances have paid no taxes at all either to State or Federal authority, will be reached. In determining the net or taxable estate, deductions are allowed for all valid claims against the estate and in addition thereto an additional deduction of $50,000.

The committee after much discussion placed a tax of 1 per cent on the amount of a net estate not in excess of $50,000, 2 per cent of the amount by which the net estate exceeds $50,000 and does not exceed $150,000, 3 per cent of the amount by which the net estate exceeds $150,000 and does not exceed $250,000, 4 per cent of the amount by which the net estate exceeds $250,000 and does not exceed $450,000, and 5 per cent of the amount by which such net estate exceeds $450,000. In view of the fact that the enormous estates have been escaping taxation for so many years, the committee did not think that 5 per cent was too large a tax on those estates which exceeded $450,000. This bill provides that the tax shall be due one year after the decedent's death, and if it is paid before it is due a discount of 5 per cent per annum, calculated at the time the payment is made to the date when the tax is due, shall be deducted. In the case of a resident of the United States, there is an exemption of $50,000. This exemption was made for two reasons. One is because, by reason of the number of heirs, the estate might be divided into many parts, which estates might be so small as to make the payment of a Federal tax a burden. Another reason is that nearly all of the States have taxed estates by the adoption of an inheritance tax, and it was thought best to leave the smaller estates to the States.

There are other additional taxes in the bill which will raise about $2,000,000. All of the stamp taxes except those on wines have been repealed, and the bill as presented to the House represents the earnest labor of the Committee on Ways and Means for many months. We have gone into these matters with the utmost care; we have investigated wherever investigation was possible. It is no easy matter to raise the amount of money to be collected. We feel, however, that we have presented to the House a bill in which the burdens will fall lightest on those of little means and heaviest upon those whom fortune has favored, and who, after all, are only paying in proportion to the benefits they have received in protection from the Government.

Of course some of our Republican friends criticize this bill. They criticize every act of omission or commission by the Democratic Party. They criticized us before we were in power 60 days in not undoing all Republican misgovernment of nearly half a century. They criticized us for not bringing prosperity upon the country, and then after prosperity began to be apparent, and all over the country wages were being raised, the gentleman from Washington [Mr. HUMPHREY], that morbid gentleman, got up and said that all that prosperity was blood soaked, and he and other Republican Members criticized us because there was prosperity in the country. They criticized the Mexican policy; they criticized us for sending troops to Vera Cruz; they criticized us for taking troops out of Vera Cruz; they are criticizing the Mexican policy now; they have criticized us as a party of obstruction and not of construction. Why, the genial gentleman from Ohio [Mr. LONGWORTH] yesterday said the only real service the Democratic Party could perform was that of opposition, yet before half the Democratic platform, with its wise policy, had been put in shape and enacted into law the gentleman from Tennessee [Mr. AUSTIN] on one occasion got up and criticized us for being a party of too much construction. Why, my friends, they have got the habit of criticizing, and, like most bad habits, it is hard to break. I feel that criticism from such a source means praise in the minds of the great majority of the American people. [Applause on the Democratic side.]

We are upon the eve of another presidential campaign, and it might be interesting at this time to review some of the achievements of the Democratic Party—a party which has enacted in less than four years more real substantial legislation than the Republican Party has put into law in the last 50 years.

There were peculiar conditions confronting the Democratic Party when it assumed control of the Federal Government on March 4, 1913. For nearly 50 years the Republican Party had been in almost uninterrupted control. It had shaped the legislation of the country for nearly half a century and that party alone was responsible for the conditions, good or bad, which existed when the Democrats went into office. During those 50 years many of the resources of the country had been developed and the wealth of the Republic had increased by leaps and bounds. But the general prosperity of the people of the United States had not kept pace either in the proportion that our natural resources had been developed or that the wealth of the country had increased, for the greater part of this wealth was found to be concentrated in the hands of a few men. Over Democratic protest and Democratic opposition laws were enacted which directly contributed toward a system of trusts and combines in industrial and financial institutions which had completely paralyzed all legitimate competition.

Under the guise of protecting American industry and American labor prohibitive and confiscatory tariff rates were placed on many articles of necessity, which prohibited their importation to this country and so enhanced their value that they were almost out of the reach of the average wage earner. Refusing to share even a portion of their enormous earnings with the employees who had helped them amass their wealth, the manufacturing industries, arrogant, secure in the promise of Republican protection, were indifferent and uneasiness and discontent arose among the great army of industrial toilers.

Forming a partnership with the corporate interests of the country, a partnership in which the American people furnished the capital, the Republican Party secured the campaign contributions and the protected interests received all the profits. The Republican Party, flushed with the intoxication of victory after victory, enriched by the liberal contributions of the trusts their policies had created, swollen with the conceit of repeated and continued indorsement, and confident in the fancied assurance of their strength and power, disregarded the rights of the people of the United States and, completely surrendering to the powers of privilege and class, became the creature of those protected industries they themselves had created.

But the tolerance of the American people had its limitations and they decided that they had had enough of Republican policies and Republican legislation. So, in November, 1912, the grand old party, hopelessly divided and helplessly drifting on a sea of broken promises, was completely wrecked and shattered on the rocks and shoals of duplicity and deception.

These were the conditions which confronted the Democratic Party when it took control of the Federal Government a little over three years ago.

We gave the American people an honest revision of the tariff downward and enacted into law the best tariff bill in the history of the Republic; a tariff act which, notwithstanding Republican contradiction, in normal and natural times not only decreased the cost of living but at the same time provided ample revenue to carry on the ordinary expenses of the Federal Government.

For years the American people had been longing for an income-tax law, so that the wealth of the country should pay its proportionate share of the burdens of government.

They looked to the Republican Party in vain, for the party of protection has never believed that the wealth of the country should contribute anything except campaign contributions. We have already taxed those incomes, which were immune under Republican administration, about $275,000,000, and at the end of the fiscal year 1917 we will have raised since 1914 over $500,000,000 from the incomes of this country, which for so many years the Republicans refused to tax.

Every four years the Republican Party in convention assembled would solemnly promise the American people that it would repeal the clumsy, antiquated system of currency then in operation throughout the United States, a currency system which in time of stress always failed to give relief, and which in the past so often failed to prevent financial panics which paralyzed industry, destroyed commerce, and left ruin, failure, and disaster in their wake. Notwithstanding their solemn promise, they repudiated their platform pledge because they were loth to disturb the financial interests of Wall Street. The money from the four corners of the United States was gathered up and sent to Wall Street and there controlled by less than a dozen men.

Three banking institutions in New York, with their affiliations, held 341 directorships in 112 corporations, having aggre-

gate resources of over $24,000,000,000, which were considerably more resources than enough to control the money market of the United States and the Republican Party.

We replaced the antiquated currency law with a sound, economic system of currency reform, the stability and success of which has far exceeded the most sanguine expectations of its most earnest advocates. If the Democratic administration had done nothing else other than the enactment of the present currency system, it would deserve the undying thanks of the American people.

In this connection, it is a significant fact, and a proof evident of the success of the new currency law, that notwithstanding the Republican Party at Chicago, in the convention recently held, attacked the Democratic Party from every conceivable standpoint, yet for the first time in years the Republican platform is silent on the subject of currency reform; for none knew better than they that this question was settled, and that the American people were satisfied with the law and would not tolerate the Republicans attempting to amend it in any particular.

The Republican platform did, however, denounce our new rural-credits bill. It recites that it favors an effective system of rural credits as opposed to the ineffective law proposed by the Democratic administration. This sounds like some of the arguments our Republican friends across the aisle used to make on the currency bill. You favor an effective system of rural credits. You were in power for nearly 50 years; why did not you give the people some kind, any kind, of rural-credit legislation then? Was it because of that same partnership between you and the money changers of Wall Street? Was it because you did not want to interfere with the enormous profits made by those financial institutions, which controlling the money market fixed the interest rate to suit themselves? Now, after you have been repudiated by the American people and the money is no longer gathered up and concentrated in Wall Street, but, according to the provisions of the new currency law, is distributed throughout the United States in the various communities where it belongs, you say in convention assembled that you favor an effective rural-credits system. I wonder if that convention knew that of all the large Republican membership of this House only 10 Republicans had the courage to vote against our rural-credits bill. [Applause on the Democratic side.] If it were not effective, why was it that over 96 per cent of the Republican membership of this House voted for the bill? If it were not effective, why was it you made no motion to recommit and substitute a bill of your own?

But the Republican platform now declares that this partnership between the Republican Party and the protected interests has been dissolved. Almost the opening sentence of the platform, if not in so many words, yet in effect, states this to be a fact. It portrays a betrayal of friendship and an act of ingratitude unparalleled in modern politics. The sentence to which I refer recites that the Republican Party knows no allegiance except to the Constitution, to the Government, and to the flag of the United States.

I grant you that you have been loyal to the flag. I have no fault to find with you on that score. [Applause on the Republican side.] In spite of all your sins and manifold wickednesses, you are Americans, and that flag is as dear to you as it is to us. But when, Mr. Chairman, did anybody ever hear of a Republican letting the Constitution stand between him and a friend, especially if that friend was a campaign contributor or a beneficiary of the protected interests?

Mr. DENISON. Will the gentleman yield?

Mr. COLLIER. Yes.

Mr. DENISON. Would the gentleman mind stating his views on the tariff commission?

Mr. COLLIER. Does the gentleman want my personal views on the tariff commission?

Mr. DENISON. Yes.

Mr. COLLIER. Of course, that breaks up the continuity of my remarks at this particular stage, regarding the sins of the Republican Party. Of course, the gentleman does not like to hear of them, but I will tell him about the tariff commission. I have the same views now that I had four or five years ago, and they were to the effect that there are plenty of avenues of information and ways by which we can secure all that is necessary to carry on and find out all we can about the tariff. But I do not believe that the creation of a tariff commission is the abandonment of any principle. If we are going to have a tariff commission, I should not be the one to stand in the way of getting any kind of information. We all want all the information we can have. A great many of my Democratic brethren and a great many of my Republican friends seem to think this commission will give them additional information. For myself, personally, I think that we can get that information from other sources.

It not being a Republican principle or Democratic principle but a vehicle by which information can be obtained, I am perfectly willing to allow my views to be merged in those of the great majority of my colleagues, and I will support this bill heartily with the tariff-commission provision in it.

Mr. HARDY. Will the gentleman yield to me for a suggestion along that line?

Mr. COLLIER. Yes, sir.

Mr. HARDY. It is to the effect that the Republican Party during its 50 years of leasehold of power did not try to use a tariff commission in order to enable them to revise the tariff, but that they only got interested about a tariff board when the Democrats sought to revise the tariff.

Mr. COLLIER. I think that the first Republican speech I ever heard in my life was when I first came to Congress. In that Republican speech, made by the distinguished and able chairman of the Republican Committee on Ways and Means, who has now gone to his reward, I heard him state that the Ways and Means Committee for months had been looking into every phase of the tariff, and they were prepared to answer any question coming from any source. Other members of the committee stated the same thing. But as soon as the Republican Party found that the reins of government were slipping from them, they talked about a tariff commission. You never heard anything about it when they were in power and putting these taxes on the backs of the people as heavily as could be borne; you never heard then about a tariff commission; and at that time I opposed the tariff commission. I am not enthusiastic about a tariff commission now, but I shall support the provision in the bill.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. COLLIER. I will.

Mr. GREEN of Iowa. Is the gentleman aware that a tariff commission was appointed as far back as 1882 by the Republican Party?

Mr. COLLIER. I am aware of my views on the tariff commission.

Mr. CULLOP. Will the gentleman yield there?

Mr. COLLIER. I yield to the gentleman.

Mr. CULLOP. The tariff commission that the gentleman from Iowa refers to recommended a general reduction of 20 per cent in the duties, and the Republicans ignored it and immediately revised the tariff and raised it 20 per cent. [Applause on the Democratic side.]

Mr. COLLIER. The Republican platform recites that the Republican Party knows no allegiance except to three things—the Constitution, the Government, and the flag.

Have you severed your allegiance to the railroad corporations you tried to exempt from the antitrust laws, while at the same time you voted that labor organizations should be subject to its provisions?

Have you severed your allegiance to the railroad corporament Trust? Nearly every one of you on a roll call voted to tax every implement the farmer uses 15 per cent.

Have you severed your allegiance to the great financial institutions which by the aid of Republican legislation had cornered the money market of the world and controlled the credit of the Republic?

Have you severed your allegiance to the Lumber Trust when you placed the taxgatherer between an American citizen and the building of a home for his family, a schoolhouse for his children, and a church for his God?

You may fool some of the people with that high-sounding phrase, but you will never fool the manufacturing trusts of this country. They know you too well to believe that you mean what you say. They know that you have never been true and loyal to but one platform pledge. That pledge in which you insured by law out of the taxpayers' earnings a reasonable profit to the American manufacturers. These manufacturers know that this policy of insurance is still in force, and that the only premium such insurance has to bear is a generous campaign contribution to the Grand Old Party.

The Republican platform declares for the reestablishment of our merchant marine. Why is it that we have not a merchant marine? When you took control of the Government nearly 50 years ago we had a magnificent merchant marine. It was at the zenith of its prosperity, and the American flag was seen on every sea and in every port. The policies of the Republican Party have destroyed our merchant marine. The pen which records the upward progress of your tariff rate has written the melancholy epitaph of American shipping on the high seas.

When you took control we had two and a half million tons of American shipping and we were carrying in American bottoms over 65 per cent of our exports. When the American people

turned you out in 1912, there were less than 1,000,000 tons of American shipping and we were carrying less than 10 per cent of our exports.

When you took control, American vessels were carrying over $500,000,000 of our commerce annually; when you retired, American vessels were carrying less than $275,000,000 of a commerce which had increased over 500 per cent.

As the tariff rate went up our merchant marine went down. Clinging over Democratic protest and Democratic opposition to the antiquated law of 1792, which forbade registry to an American vessel not built wholly within the United States, American shipping perished between "the two fires of high-priced construction material and the walled-out return cargoes."

It comes with a bad grace from those whose policies have destroyed our merchant marine to criticize our shipping bill. The country is facing a great emergency. We are in the midst of an almost world-wide war. We are the great export country of the world. The Shipping Trust, with its affiliations at home and abroad, taking advantage of the extraordinary situation, raised transportation rates beyond all reason. Cotton, which had formerly been moved for $2 a bale, was now transported to the same place at from eighteen to twenty dollars a bale. Other commodities and products were carried at the same extortionate rates. Lumber could not be moved at all. Tidewater ports were crowded with American commerce awaiting transportation, while the freight yards of the great transcontinental railroads were congested with cars loaded for shipment. If we wish to preserve prosperity in this country, we must send American products to market. The situation which confronted us was intolerable. We were at the mercy of a rapacious and conscienceless trust. The only way to meet this trust was by competition, and the only way to do that was to get ships and put them in this trade. The Democratic Party does not intend for the Federal Government to go permanently in the shipping business, but we do believe in relieving a situation which means bankruptcy to so many of our citizens.

We have passed a shipping bill through this House which will enable the American people to send the fruits of their labor to the markets of the world without being held up by any Shipping Trust either at home or abroad.

The Republican platform criticizes the foreign policy of the Democratic administration. I would like to know what the President of the United States has done that they, with their self-admitted superior wisdom and undiluted Americanism, would have done better. Are they disappointed because the policies of Mr. Wilson have not led us to war with some of the European powers? Every international diplomatic controversy has resulted in a triumph of diplomacy for the United States. No President of the Republic has ever had as many grave problems to solve as the present occupant of the White House. Events of tremendous international importance have been happening almost daily, and it is beyond the knowledge of mortal man to know what grave consequences may follow the happening of any one of these events. We have had serious controversies with nearly all of the belligerent nations of Europe—nations which were meeting in a shock of conflict unparalleled in the world's history; nations which were fighting for their very existence, and which were little disposed to regard the niceties of a treaty compact or the rights of a neutral, if powerful, interest should point the other way. Every day seemed to bring new complications, new troubles, new worries from across the water, while at home the administration was nagged and sneered at by those who were jealous of the growing popularity of President Wilson. Was this a time to abridge the rights of American neutrals? Was this a time to surrender one statute of international law—law by which for hundreds of years neutral nations in times of war regulated their official acts one with the other? Standing upon the firm foundation of international law, President Wilson has met each complication, each controversy, as it arose with consummate skill and wonderful ability. While other countries are engaged in the horrors of a war almost impossible to describe, yet we are at peace with all the world, American honor remains untarnished, American traditions have been preserved, American ideals have been maintained, while prosperity and plenty, like the rainbow of promise blazing across the skies, are reflected everywhere.

The Republican platform may criticize the foreign policy of President Wilson. Your standard bearer may sneer, and in his pharisaical conception of undiluted Americanism charge by innuendo this great man with ulterior motives, but I say to you Republicans and to the standard bearer whom you have in your desperation selected to lead a forlorn hope, and I say to the American people, that "truth ever faithful to her trust is mighty and will prevail," and thus inspiriting the genius who will record with impelling force her own imperial soul, he, the future historian, when he comes to recount the life and character and the wonderful achievements of the greatest President of the Republic since the days of Andrew Jackson [applause on the Democratic side], he will say that the crowning glory of Woodrow Wilson's life was the masterly way in which he conducted the foreign affairs of our country while all the rest of the world was at war. [Applause on the Democratic side.]

We accept the challenge laid down by you at Chicago, and we care not upon what lines the battle may be fought. If you want to make this fight on the tariff, we will point you to the reflection of the furnace fires which are blushing red against the skies. We are ready to match the Underwood bill, with its honest downward revision, against the confiscating and exorbitant rates of the Payne bill, which you yourselves have never had the courage to defend.

If you want to make this fight on the repeal of the income tax, we are ready and more than willing. We will match President Wilson's declaration that the wealth of this country should pay its proportionate share of the burdens of government against Gov. Hughes's message to the New York Legislature protesting against an income tax. [Applause on the Democratic side.]

If you want to fight the battle along the lines of currency reform, come out in the open field and we will meet you on that issue. We will match the Federal reserve act, with its sound economic principles, against the broken promises you have been making to the American people for over a quarter of a century to revise the currency laws.

If you want to make this fight on preparedness, we will not shrink from the contest. We have done more for the American Navy in the last three years than any Republican administration has ever done in six years. [Applause on the Democratic side.] We have placed the Army on a substantial basis, increased our coast fortifications, and made more real progress toward genuine preparedness than Republican administrations have done in 10 years.

We will match you on patriotism and tradition. It was a Democratic President who gave us the Louisiana Purchase and by the stroke of a pen added more real territory to his country than any conqueror had ever done by the sword. It was a Democratic President who first guaranteed the territorial sovereignty of our neighbors, the South and Central American Republics. It was a Democratic President who gave us Florida. It was a Democratic President who gave us the gold-veined lands of the Montezumas. It was a Democratic President who sustained the honor and dignity of our country in the Venezuelan controversy. And it will be a Democratic President who is going to be elected in November next by a greater majority than before. [Prolonged applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. FORDNEY. Mr. Chairman, I yield 30 minutes to the gentleman from Iowa [Mr. GREEN]. [Applause.]

The CHAIRMAN. The gentleman from Iowa [Mr. GREEN] is recognized for 30 minutes.

Mr. GREEN of Iowa. Mr. Chairman, while I do not think I will use all the time, I shall be obliged if you will call my attention to the fact when I have used 25 minutes.

The CHAIRMAN. Very well.

Mr. GREEN of Iowa. Mr. Chairman, the Government needs money. It is always short under a Democratic administration. That funds must be provided to meet the appropriations made is quite evident. The question is as to how they shall be provided at this particular time and under present conditions. As to this, I regret to be compelled to differ in any degree from the distinguished gentleman from Michigan [Mr. FORDNEY] and others, for whose judgment and ability I have so much respect, but the difference is not as to principles but as to their application. In the course of my remarks I shall criticize the method of raising revenue adopted by the bill, but I wish to call to your notice in advance that we are living under extraordinary conditions caused by the war in Europe, and that these criticisms apply not so much to the present as to the past and the future.

The appropriations already made for the fiscal year aggregate the staggering sum of $1,500,000,000. The bill before the House is intended to increase our taxation $266,922,000, to meet these appropriations.

Mr. Chairman, as I examine this bill, with its provisions for every kind of governmental expenditure, with its provisions for a tarff commission and for a protective tariff upon dyestuffs, I am impressed with the thought of what a wide burying ground and what a comprehensive cemetery it makes for Democratic pledges of economy and Democratic tariff theories.

The report which accompanies the bill states that the necessity for this legislation grows out of the extraordinary increases in the appropriations for the Army and Navy and the fortifications of our country. Of course, this is true to a large extent, but the report makes no mention of the manner in which our other expenses have been increased under a Democratic administration. It makes no analysis of the items which make up the huge sum which it is proposed to raise. It makes no mention with reference to the $30,000,000 or $40,000,000 appropriated in the river and harbor bill; it has nothing to say with reference to the $20,000,000 which was appropriated for the nitrate plant which was graft pure and simple. It tells us nothing about the $50,000,000 which was carried in the Mississippi flood bill, for the reason that if it had been added to the river and harbor bill it could not have possibly passed the House; and the $50,000,000 of the shipping bill is apparently not even considered. So far as the extraordinary expenses incurred by the Mexican situation it is proposed to take care of them by an issue of bonds, so that a large portion of this huge burden of taxation is in reality made necessary by the increase of expenditures not connected with national defense.

Mr. Chairman, it is not strange that the purpose of this bill is not fully explained and so much is said about Army and Navy expenditures.

DEMOCRATIC PLEDGES REPUDIATED.

Coming into power as the Democratic Party did under a platform which denounced the "profligate waste of money and oppressive taxation of Republican Congresses," the country now finds that the appropriations of the Sixty-third Congress were $235,000,000 more than those of the Sixty-first Congress—the last Congress in which the Republicans had control of this House and that the appropriations for the present fiscal year, outside of those for national defense, will be on even a larger scale. The country also find that after having promised a reduction in the number of offices and demanding a return to economy and simplicity that in 1915 alone the number of officeholders were increased over 14,000 and the salary list for new officials over $14,400,000.

But why should anyone be surprised at this? The Democratic Party had thrown overboard one plank after another of its platform of 1912 until the economy plank was about the only one left. Why should there be any worry about the bills when the increase can be lumped with Army and Navy expenditures. Let this pledge of economy go where the tariff plank went when the sugar duty was restored—into the discard; let it go where the single presidential term plank went—into the cave of political bankruptcy; let it go where free tolls on the Panama Canal went—to the bottom of the sea; where the plank for extension of the civil service went when practically all the new officeholders were exempted from its rules; where the promise to reduce the high cost of living went; where the planks for enforcing the antitrust law have gone; where the plank against encroachments by the Executive went—with the President dictating every proceeding in Congress; where the declaration favoring competitive bidding for public funds have gone; where the final statement of the platform has now gone, that statement which reads:

Our pledges are made to be kept when in office as well as relied upon during the campaign.

Let us pass this for the moment. The Democratic Party has been profuse and explicit in its promises, but short and evasive in fulfillments. In its platform recently adopted at St. Louis it has profited by experience and makes no direct promises. Its glittering generalities and the smooth phrases so much resemble "watchful waiting" and "too proud to fight" point clearly to the author of the greater part of the platform. That part which asserts that its record as to achievement and keeping of pledges, however, must be credited to the press bureau which has been so effusive in proclaiming the benefits of Democratic legislation.

THE BILL ADOPTS REPUBLICAN PRINCIPLES.

The bill has been referred to by the Democratic leader [Mr. KITCHIN] as "nonpartisan," and it must be admitted that every principle or theory in it has been used by Republicans. In some other bills introduced by our Democratic friends, such as the Federal reserve act, there was evidences of petty larceny. This bill is so framed that was there such a thing as grand larceny of political principles the Democratic majority could be sent up for 1,000 years. It appropriates bodily the Republican methods for the creation of a dyestuff industry, a plan which can only be justified on Republican theories. It abolishes the stamp tax, the so-called war tax imposed in a time of peace, which we have always opposed and for which there never was any justification. It appropriates, without any credit, our principles with reference to a tariff board and proposes to establish such a board without any regard to the question of how it can be made to fit with Democratic theories in regard to the tariff. It will raise more than $100,000,000 additional by the income tax and inheritance tax which the Republican Party used more than half a century ago, and approved in the administration of President Taft. I highly approve, and I am satisfied that the country approves, the tax on the war profits of munition makers—profits which have been swollen beyond the dreams of avarice. Its great defect is the same that has always characterized Democratic revenue bills, namely, that there is no effort to so arrange a plan for raising revenue as to compel the foreigner to pay for the privilege of entering our markets and thus, while lessening the burden upon our own citizens, sustain our manufacturers, broaden the opportunity for labor, and maintain a high standard of wages for the workingman. This bill, except as in a small way it attempts to benefit the dyestuff industry, will help no business or occupation. In fact, like all other direct levies, the tendency of its taxes with reference to business must be depressing. To some extent, owing to the extraordinary demands now made upon us for preparation for national defense, this can not be avoided. On account of the expenditures for that purpose I do not claim a sufficient amount could be raised through a reasonable protective tariff, but I do assert that more than $100,000,000 could be raised, and in ordinary times should be raised, in such a manner that the foreigner would pay the greater portion of it and a great stimulus be given to our industry.

It is easy to demonstrate that this might be done and also to show the superiority of the Payne law over the Underwood bill as a revenue producer.

Mr. HILL. May I ask the gentleman a question on that?

Mr. GREEN of Iowa. Yes.

Mr. HILL. The gentleman realizes, of course, that the present tariff produced $125,000,000 less than was produced by the tariff in 1912. Why does he say that possibly $100,000,000 can be raised? He is speaking now of a protective tariff. It is just as easy to raise money on a revenue tariff as it is on a protective tariff. Why should the burden be put on one-third of 1 per cent of all the people in the United States and the tariff not touched at all?

Mr. GREEN of Iowa. If the gentleman will wait until I get a little further on, I will give him my views in full on that. Of course you can get money on a revenue tariff, if you do not care how burdensome you make it. All you would have to do would be to cut down the free list, put a duty on tea and coffee, and so forth. But I am not in favor of a revenue tariff. I want to say also that although there is only one John D. Rockefeller in the 100,000,000 people of this country that is no reason why he should not pay taxes according to his wealth.

Mr. HILL. All right; I will wait.

Mr. GREEN of Iowa. The gentleman from North Carolina [Mr. KITCHIN], the distinguished chairman of the committee, in opening the case said it was impossible to raise more than about $17,000,000 to $20,000,000 in this manner. I can, however, give a concrete example to show that a much larger sum can be raised, and perhaps $125,000,000, as has been stated by the gentleman from Connecticut [Mr. HILL]. Our imports for the calendar year of 1915 were only $14,000,000 less than the imports for the calendar year 1913, but the duties collected for 1915 were $113,000,000 less; and this comparison is too favorable to the Underwood law, for the greater portion of that law was in force during the last three months of 1913; otherwise the revenues for 1913 would have been larger still. A better comparison can be made by taking the imports for the month of last May, which were over $229,000,000, being $96,000,000 larger than in May, 1913, yet the revenue collected was about the same, being a little over $20,000,000 for each month. Yet it is difficult to say how much could be raised under present conditions by a change in rates on protective principles. For example, importations from Germany and Austria are practically cut off. Importations from Germany have heretofore been very large. Just now we could get no revenue from that source. Besides this, the war has greatly changed the nature of the importations.

Mr. HULL of Tennessee. Will the gentleman yield right there?

Mr. GREEN of Iowa. I will yield to the gentleman from Tennessee with pleasure.

Mr. HULL of Tennessee. The gentleman is aware, is he not, that $125,000,000 of this increase of imports is on articles that were free not only under the present law but under the Payne law?

Mr. HILL rose.

Mr. GREEN of Iowa. I am aware of that, and allowance must be made for it, but I do not want the gentleman from Tennessee

[Mr. HULL] and the gentleman from Connecticut [Mr. HILL] to get into a discussion in my time.

Mr. HULL of Tennessee. The gentleman is also aware of the fact that the increase in the value of importations of sugar alone is $82,000,000, and the gentleman counts that increase in the increased imports.

Mr. GREEN of Iowa. I would explain the effect of that if I had the time, but the gentleman from Connecticut [Mr. HILL] will discuss it later, and I do not propose to be turned aside from the point I desire to make here. I would say that a proper tariff would require some readjustment of the schedules of the Payne bill and lessen the importations to some extent, but allowing for all this and the matters which the gentleman from Tennessee mentions, it would be easy in *normal* times to raise $110,000,000 to $115,000,000 per annum more than the Underwood bill produces. It may not be generally understood that the imports for the last 11 months have been the largest in the history of the country, and for the fiscal year ending June 30, 1916, will aggregate over $2,100,000,000. The fiscal year ending June 30, 1913, the last fiscal year under which the Payne bill was in force, the total importations were only $1,813,000,000. Enormous as is the amount of our imports at present, what can we expect under present tariff conditions when the dam which has been erected by the present war shall finally break. Keeping this in mind, it is evident that we shall in the future most vitally need a defense for our industries against the conditions which will prevail when the war in Europe ceases.

CONDITIONS WHICH WILL PREVAIL AFTER WAR CEASES.

At this point I hope I will be pardoned if I indulge in a few prophesies. A little over three years ago, when the Underwood bill was under consideration, I predicted that under its operation our balance in trade with foreign countries, which was then about $500,000,000 annually, would disappear, and that gold would be shipped to Europe to pay the balance against us, while the manufacturers would see their market slipping from them, and the laborer in consequence would find little opportunity for employment, that the wages of the workingman would be decreased, and with their purchasing power reduced the same blight that spread over our industry under the Wilson bill would again paralyze them. All these predictions and more have been realized. As early as April, 1914, the balance turned against us.

In the seven months ending with August 1, 1914, we had lost $240,000,000 in the balance on our foreign trade in comparison with the same months of the preceding year, and before the end of July nearly $90,000,000 in gold had been sent abroad to help to pay this balance. The story of the depression in our industries which followed a time of unparalleled prosperity continued until the war broke out is too familiar for me to again recite. What I wish to emphasize is that at the end of the war we will pay dearly for the blood-bought prosperity that we are now enjoying unless some measures are taken to protect us against a recurrence of former conditions.

I shall not stop here to give statistics as to the exports of war materials and supplies which have caused our present fictitious prosperity. Gentlemen may talk about the percentage of our total trade that this figures, but when they talk to the Iowa farmer he will remember that when the war broke out wheat went up 40 cents a bushel, corn went up 15 cents a bushel, oats went up 10 cents a bushel, and other produce in proportion. Those who are not aware that the present prosperity of the farmer and the high prices which he receives for his stuff are the result of the war which is now raging in Europe, had better not indulge in board of trade speculation, for when the war ends corn and oats will drop to the prices prevailing before it began and all other farm products accordingly. Gentlemen who think that the prosperity of our manufacturers is not due to war conditions may talk if they please to the mechanic who was walking the street in the early part of 1914 trying to find employment at any price, but they will talk to deaf ears. The present prosperity among our manufacturers is due solely and entirely to war conditions. It is not merely that there will be a stoppage of the enormous exportation of munitions of war and supplies of all kinds so necessary for the war. This alone would be enough to cause the frail bubble of our present prosperity to burst. Do not forget that our imports are now the largest in history. For the 11 months of this fiscal year, 1916, they have exceeded the imports of a similar period of 1913 by over $300,000,000, and this in spite of the barriers that have been erected by war conditions. Look then for a moment into the future and see the millions who are now engaged in armed strife once more devoting themselves to productive industry in competition with our workingmen.

Consider the fact that their Governments will be staggering under a load of debt which in the long run the manufacturer and wage earner of Europe will be compelled to pay. Borrow more they can not. Sell their products they must at whatever price can be obtained for them. How easy would our present low tariff, with its long free list, make it for them to take away our trade in manufactured goods from us not merely abroad but also at home; and when once more the laborers now soldiers in the warring armies are released to cultivate fields now harrowed by shot and shell and supply themselves with food, then again the farmers of Canada and Argentina, the sheep grazers of Australia, the meat producers of South America, having lost their European market, will take one in its place away from our farmers, just as they were doing in 1914 before the war. But here again the misfortunes of others come to the rescue of the country and the Democratic Party. There is no reasonable expectation that the war will end before there will be a change of administration, when a tariff will be constructed upon Republican principles, which will anticipate, if necessary, a change of conditions, and protect our country against an industrial invasion as well as against any which might be made with warlike purposes.

THE TARIFF COMMISSION.

At this point I wish to speak with reference to what may be expected from a tariff commission and briefly review the experience of our own country and others with such commissions. The gentleman from Mississippi [Mr. COLLIER] says that no Republican proposed a tariff commission until the Democrats came into power.

The first tariff commission was appointed by President Arthur in 1882. While all of its members were avowed protectionists, the special object of the commission at that time was to make recommendation as to reductions in the tariff, although the commission was also directed to plan for its more equal distribution. Strange as it may seem in these Democratic times, for many years there had been a large surplus—over $100,000,000 for 1881 and in 1882 over $145,000,000. The statesmen of that day feared that this surplus would lead to extravagance and waste. If their theory on this matter was correct, viewing the preparation made by the Democratic majority when there was an annual deficit, imagination could not be stretched far enough to know what our expenditures would have been if we had had a surplus, but this is digressing.

The next tariff commission, as everyone knows, was appointed by President Taft, and I quite well remember the day when the commission presented its report on wool to Congress with numerous documents and exhibits. The Democratic majority viewed it much as we would now if some one should bring in a contact mine taken up from the North Sea. They were afraid to touch it and did not know what to do with it. For the time being they objected to the report being printed, doubtless in fear that in that it would eventually injure the Democratic position, as it did. The next day they plucked up courage, however, and the report was printed; but until its worth had been so demonstrated as to be put beyond discussion and argument they continued to depreciate its value and talk about the uselessness of tariff commissions in general, and as soon as an opportunity offered they abolished the tariff commission by refusing longer to provide any appropriation for it.

The inconsistency of their present position is quite apparent, but our friends across the aisle have progressed much since that day. They concluded at first that it would be sufficient to have the clerks in one of the Government bureaus assigned to the task of collecting data. Then another shift was made and the Bureau of Foreign and Domestic Commerce was created. Finally the burden of the present tariff situation became too much for them to bear, and bills began to be introduced on the Democratic side for the creation of a tariff commission. Of course, it was to be a very different thing from the previous tariff commission, because it was to report to Congress instead of being reported to the President and having the reports transmitted to Congress—a distinction without a difference in the character of the work and none that I know of in the results to be obtained.

Some reference may properly be made here to foreign tariff commissions, which have so often been pointed out as an example. The most prominent of these was the tariff commission of Germany, which assisted in framing the present German tariff. It was made up, however, largely of interested parties and its judgment largely controlled by the manufacturers and those who represented them in the commission. Much fault has heretofore been found with the Republican Party because parties interested in maintaining a protective tariff were given a hearing before the Ways and Means Committee when the Re-

publican tariff bills were being prepared. That the German system would not be at all satisfactory in this country is perfectly evident, and yet arguments might be made in its favor.

Congress has been flooded with petitions from manufacturers and business men of all kinds in favor of a tariff commission. Many of the petitioners evidently think that the commission would take the tariff out of politics, and I understand that some claim was made to that effect by our Democratic brethren who are now supporting this bill. A little reflection will show that this can not be the effect unless our Democratic friends should accept the principles of a protective tariff. Of what use or effect will it be for the tariff commission to inform Congress that a certain line of goods can be made cheaper in Germany than in the United States if those that receive this information believe in the language of previous Democratic platforms—that a protective tariff is robbery of the many for the benefit of the few, that such a tariff is simply a tax paid by those who use the articles upon which it is levied without any corresponding benefit to the country at large, that the foreigner pays no part of the duties that are levied by a protective tariff, that it does not serve to maintain a high standard of American wages, and that it does not stimulate business. All this has been asserted over and over again by Democratic leaders in this House; and if true, then any protective tariff levied for the purpose of equalizing the cost of production abroad with that in this country becomes an oppressive and burdensome tax; and we would have no more use for a tariff commission than we would have for a bureau to discover what could be produced in the arctic regions. If, on the other hand, the Republican principles were to prevail with reference to the articles which this country was adapted to produce, and duties are to be levied sufficient to equalize the difference in the cost of production at home and abroad, then a tariff commission becomes highly necessary in order that a proper body may ascertain what that difference is and that the country may be satisfied that its conclusions are correct and just. For myself I have no fear that the politics of the men who are selected for this board, provided they have suitable capacity and training, will influence their findings of fact. I have little confidence in Democratic tariff theories, but have all confidence in the integrity of my Democratic colleagues, and never distrust any statement of fact which they put forward as a result of their own personal knowledge after having made adequate investigation. The reports issued by the tariff commission before were unanimous, although its members differed in politics. It is not the politics of the appointees that I fear, but political appointments. If proper appointments are made upon the proposed commission, they will be unanimous again. The conclusions which will be drawn from the facts which they report will differ widely according to whether Republican or Democratic principles, with reference to a tariff, are applied in determining what rates or duties shall be levied.

I have long advocated the creation of a tariff commission. Through this bill we shall have both parties committed to its permanent existence. This is a distinct advance, and I do not wish to lose its benefits. I welcome the recognition by our Democratic friends of Republican principles in proposing a protective tariff on dyestuffs, even though it may not be all that that industry ought to have. I approve of the tax on munitions, and when necessary to pay the unavoidable expenses of the Government I commend the placing of a surtax upon incomes received from great fortunes. The antidumping clause of the bill, which protects our manufacturers against unfair foreign competition, is another adoption of protective principles. The bill embraces to a surprising extent Republican principles, and if our Democratic friends advance as far in another three years as they have in the last we may finally expect them to come over to us in a body, adopting a general protective tariff.

DEMOCRATS NOW SUPPORTING REPUBLICAN DOCTRINES.

Some gentlemen on the other side take some comfort in the fact that a large number of Republicans will vote for this bill. They are welcome to it. Let me assure them that their pleasure is nothing compared to the satisfaction which we upon our side will take when the chairman of the Ways and Means Committee [Mr. KITCHIN] and the gentleman from Mississippi [Mr. COLLIER], along with others on the Democratic side who have declared heretofore, and admit now, that they have no use for a tariff commission, vote for that feature of the bill. We are especially delighted to find practically all the Democratic Members supporting the good old Republican doctrines that are embodied in the provisions for a tariff on dyestuffs and the antidumping clause, but we are wondering whether this is merely a temporary charge of heart or a permanent repentance. We are certain of one thing—that it is the exigencies of the political situation and the overwhelming demand of the American people that has compelled them to support these measures; but we fear that if an extension of power be obtained by the Democratic Party through the adoption of Republican principles, that such principles will not be long preserved.

BILL A TEMPORARY EXPEDIENT AND NOT PERMANENT POLICY.

Mr. Chairman, if this bill was intended to create a permanent fiscal policy, it would under no circumstances receive my vote, but it is proposed merely as a temporary expedient to meet unusual conditions. In ordinary times the passage of such a bill, which makes no attempt to protect our industries, would be a blunder approaching a crime; but while present conditions continue the war creates a tariff wall higher than we ever thought of, or at least higher than I ever thought of building. It has been suggested on our side of the House that we could raise the needed money by an additional tariff, but this does not solve the problem presented by the present extraordinary situation. I am well known to be one of the strongest protectionists in the House, but I would not want to increase tariff duties merely for revenue purposes, for that, to my mind, would be applying Democratic instead of Republican principles and would make the bill less Republican than it is now. Unless the war ceases before the 4th of March next, which is sooner than anyone anticipates, another and very different administration will be in charge of this Government before the present conditions terminate [applause on the Republican side], and a different policy will control our financial affairs. The Republican members of the Ways and Means Committee have been given no time or opportunity for the construction of a new tariff bill, which would necessarily contain 800 or 900 sections, affecting thousands of different articles. The Government needs the money now, and the bill is to a certain extent an emergency measure. I shall vote for a motion to recommit the bill to the Ways and Means Committee in order to more equitably apportion the revenues necessary to be raised and to prepare for conditions inevitable at the close of the present European war, which motion will be presented by the ranking Republican member on the committee [Mr. FORDNEY]. If this motion is defeated, then I shall feel inclined to vote for the bill as the best that I can obtain under the circumstances. I shall leave the responsibilities caused by unnecessary expenditures where they belong—upon the shoulders of the Democratic Party. The country at large will judge that party not by these days of artificial and fictitious prosperity, but by its record under normal conditions, and, looking into the future, will return to power that party which experience has shown best qualified to maintain national prosperity and national honor. [Applause.]

Mr. DIXON. Mr. Chairman, I yield 40 minutes to the gentleman from Illinois [Mr. RAINEY].

Mr. RAINEY. Mr. Chairman, during the time allotted to me I propose to discuss the tariff-commission provisions of the pending bill. This omnibus measure contains, with considerable modifications, the bill I introduced in March of this year providing for a nonpartisan United States tariff commission. In its present form the bill was perfected by a subcommittee of the Democratic members of the Ways and Means Committee of the House, that subcommittee being made up of those Members who come from Northern States.

In the preparation of the bill we had the benefit of suggestions made by the Tariff Commission League of the United States; we had before us all the bills introduced in the present Congress upon this subject; we had the recommendations of the United States Chamber of Commerce; we had the assistance of the Secretary of the Treasury and of various departmental heads; we had the assistance of the Cost of Production Division of the Bureau of Foreign and Domestic Commerce; we had before us the suggestions of the Federal Trade Commission and of the foreign trade advisers of the Department of State; and in its final draft we were indebted to the legislative reference bureau and bill-drafting department of Columbia University, maintained here in the city of Washington, for most valuable assistance.

Mr. CANNON. Will the gentleman yield?

Mr. RAINEY. Yes.

Mr. CANNON. Were the hearings that you held printed?

Mr. RAINEY. No, sir; there were no printed hearings.

Mr. CANNON. Were they held in the regular full hearing of the committee?

Mr. RAINEY. No; I have just described what was done.

Mr. CANNON. I beg the gentleman's pardon. I did not hear that or I should not have asked the question.

Mr. RAINEY. Through it all we had the advice at all times and the assistance of the President of the United States. We consulted with various Members of Congress, of all political parties, and were indebted for valuable suggestions to the gen-

tleman from Wisconsin [Mr. LENROOT] and the gentleman from California [Mr. KENT]; and when the bill was, as we supposed, in its final form, after consultation with the gentleman from Connecticut [Mr. HILL] and the gentleman from Ohio [Mr. LONGWORTH], we added to it other provisions tending to make the bill still more nonpartisan in its character.

Mr. HILL. Will the gentleman pardon me, inasmuch as he has mentioned my name? Mr. LONGWORTH and Mr. HILL came to Mr. RAINEY and offered amendments to make the tariff commission bill as acceptable——

Mr. RAINEY. I can not yield to the gentleman for a speech. I do not have the time for that.

Mr. HILL. But the gentleman stated that he consulted with us, and it is fair to state what that consultation was and how trivial——

Mr. RAINEY. These gentlemen made a number of suggestions, and we adopted some of them; and as the bill is considered under the five-minute rule I will point them out.

Mr. FORDNEY. Will the gentleman yield?

Mr. RAINEY. Yes.

Mr. FORDNEY. I want to say to the House that the Republican members of the Ways and Means Committee never authorized any gentleman to consult with the subcommittee.

Mr. RAINEY. Both of those gentlemen stated that they were not authorized by anyone to consult with us in this particular, and least of us all by my friend from Michigan, Mr. FORDNEY. The tariff-commission bill has been criticized by the gentleman from Michigan [Mr. FORDNEY] upon the theory, as he stated here on the floor, that it excludes intelligent men from membership on the committee, to wit, Members of Congress; and that it does not permit business men to become members of this commission. The bill does exclude from membership upon the commission ex-Members of Congress and Members-elect of Congress. Of course, Members of the present Congress, under the Constitution of the United States, would not be entitled to appointments on the commission during their terms of service here. This was put in the bill in response to the suggestions of the United States Chamber of Commerce, a nonpartisan organization extending into almost every community in the country, and the reason for excluding the ex-Members of Congress from membership upon this commission must be apparent here to-day as this discussion proceeds. There are few men ever elected to membership in this body who are not under the impression that they are elected on account of the positions they have taken upon the tariff, on account of the fights they have made either for or against certain tariff policies. There are few men who have ever been defeated in their campaigns for Congress, who have been Members of Congress, who are not laboring under the impression to-day that they were defeated because their districts did not take the proper view of their tariff ideas. There never was a Member of Congress who was not a fighting partisan upon the tariff question, and they remain throughout their lives fighting partisans upon this question; and if you put them upon a tariff commission, as long as they remain upon that commission they will be fighting partisans on that question, and the committee thinks that the Chamber of Commerce of the United States was right when it asked that ex-Members of Congress and Members elect be excluded from membership on the commission. There is nothing in this bill that excludes a business man from membership upon the commission.

The bill excludes those who are actively engaged in some other business or employment, and that provision has been approved by the great commercial organizations of the country. It would not be fair to make up this commission of business men who believe in one or the other of the theories usually advanced in connection with so-called tariff reforms; men who while members of this commission will attend to their own business which they believe depends for its success largely upon certain tariff rates and the certain amount of protection they get or do not get; who would come here only occasionally to sit as members of this commission for the purpose of directing a host of subordinates to advocate and to find reasons for advocating rates that in their judgment will help them in their business. The man who serves on this commission and who is paid the salary provided for in this bill ought to give his entire time to the discharge of the duties of his office.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. RAINEY. Yes.

Mr. MEEKER. How or where does the gentleman hope to find men who do not take one or the other side of this question amongst men who really read or think?

Mr. RAINEY. We certainly will not find that character of men among business men active in the transaction of their own business, who are taught to believe that their profits depend upon the tariff on the articles they manufacture; neither will we find that kind of men among ex-Members of Congress and Members-elect. Wherever they can be found, they can not be found among those two classes excluded by the provisions of the bill from membership upon the commission.

My friend from Ohio, my colleague on the committee [Mr. LONGWORTH] does not criticize this bill. In his judgment it presents no material difference in its features from the bill which he advocated so ably upon this floor in the third session of the Sixty-first Congress; but he consumed a large portion of the time allotted to him in a good-humored criticism of those Democrats who in the last session of the Sixty-first Congress talked against the tariff-commission idea, and he quoted numerous extracts from speeches they made at that time defending their position upon that subject as they saw it then. Mr. Chairman, things in the world have changed since then. Japan has already revised her tariff, and she has revised it with the idea in view of extending her markets and encouraging her home industries, and the Japanese bill was adopted on the 28th of February of this year. Early in March of this year England announced that she was preparing at the conclusion of this war to enact prohibitive duties upon the products of her enemies, moderate tariffs upon the products of neutral nations and friendly nations. She has already enacted a law prohibiting trade with her enemies. She has prohibited trade with the United States in wool, rubber, and tin. At the end of this year there will be new commercial treaties the world over. Germany makes her commercial treaties for 14 years, and even if there were no war every one of her commercial treaties must be renewed in 1917. Then, there comes at the present time the most important factor of all in world commerce, namely, the breaking up of the German labor system which has contributed so much to her efficiency at home and in the markets of the world. Germany admits to her territory as her common laborers, the men who pave her streets, dig her sewers, build her railroads, work upon her farms, people from Russia and Italy under a limited passport system.

There are seasonal laborers, 3,000,000, sometimes 4,000,000, coming into the German Empire every year to perform these tasks involving ordinary labor. Germany keeps her own laborers at work in her factories and makes skilled laborers of them all. At the expiration of their seasonal employment, at the expiration of their limited passports, these foreign workmen are deported and sent back again, and none of them are permitted to become skilled laborers in the factories of the German Empire. After this war is over these sources of labor supply from Italy and Russia are going to be shut off, as everyone knows, and when that is shut off, what becomes of the labor system of Germany, which has rendered her almost supreme in world trade since the days of Bismarck? At the present time England advocates, and some of the allied nations favor at the end of this war, a commercial alliance, a trade alliance, between England, France, Russia, perhaps Italy, and all of their dependencies scattered throughout the world; and it is possible that such an agreement as that may be effected. If this arrangement is perfected, it presents a commercial unit almost perfect in the commerce of the world. This would create a commercial unit in connection with a well-balanced exchange of products absolutely self-supporting. These are some of the things which confront us now. After the present war is over, after the clashing of armies ceases, after the dead are all buried, after pensions are provided for all of the maimed, then commences the real war in which we must engage, the real contest for world-trade supremacy, and this may be the unit, this combination of England, France, Russia, and all of their dependencies, against which we will be compelled to contend for the trade of the world.

Now, under these circumstances is it not time for men to change their minds if they have maintained upon this question opinions which are out of date at the present great crisis in our history as a nation? We have here no board, no group of men devoting their time exclusively to the consideration of these great world questions. A wise man, of course, changes his mind, but those who do not belong to that class never do; and my friend from Ohio [Mr. LONGWORTH], always cultured in debate, has changed his mind, and has changed his mind upon this tariff-board question more violently than any of those gentlemen whose recent speeches in this House he quotes.

The bill we were considering in the third session of the Sixty-first Congress, the tariff commission bill, was a bill drafted really by the gentleman from Ohio [Mr. LONGWORTH]. In his speech upon that occasion he said:

This bill, Mr. Speaker, is based upon a bill introduced by myself on the day before the Christmas recess. I mention this because it was the bill which was specifically indorsed by the National Tariff Commission

Association during its recent meeting in Washington, and the bill was specifically indorsed by the President of the United States.

The very best speech made upon that occasion advocating this bill was made by the gentleman from Ohio—and usually the best speech made upon any occasion when the gentleman from Ohio speaks is made by him. But he made another speech in the first session of the same Congress from which I desire now to quote, one of the very best speeches made on this floor in support of the Payne-Aldrich tariff bill, a bill which was then under consideration and which, of course, did not contain any tariff-commission proposition. And in that speech—I remember it well—I, unfortunately for some of my friends, have an excellent memory—in that speech, which he delivered standing on this floor just about where he is sitting now, amid demonstrations of tremendous approval on that side of the House—and the applause on that side was almost universal; I do not remember so much on this side—speaking of this very tariff-commission proposition which was then being discussed through the country, just a few months before he introduced this bill, he said:

We hear a good deal nowadays about the necessity for a tariff commission, a commission of experts to advise Congress in tariff matters. I venture to say that this Government has to-day the best tariff commission in the world in its various executive branches and in the extremely efficient clerk and in the assistance of the Committee on Ways and Means.

Mr. LONGWORTH. Will the gentleman yield?

Mr. RAINEY. I yield with pleasure.

Mr. LONGWORTH. Let me preface my question by returning thanks to the gentleman for the very pleasant things he has said about myself. But let me call the attention of the gentleman, however, to this: This is not the first time that remark of mine has been quoted. It was quoted some years ago by the gentleman from Texas, on which occasion I said, as I say now, that at the time I made that remark no tariff commission had been ever suggested except one which would have power not only to advise Congress but to fix rates. The difference is as absolute as the difference between black and white. I am opposed to such a tariff commission, as is the gentleman from Illinois.

Mr. RAINEY. I am afraid I can not yield to the gentleman for a speech. The gentleman's pronunciamento here is against a tariff commission, and he favors revising the tariff with the assistance of the ordinary agencies of this Government and the activities of the members of the Ways and Means Committee and the clerk of the Ways and Means Committee, and he favors no other source of information. That is the position the gentleman took in the first session of the Sixty-first Congress, and there was not any intervening world disturbance between that excellent speech of the gentleman from Ohio and the bill he introduced in the third session of that Congress, and nothing in particular was going on except that the country was trying to recover from the panic of 1907, which, at least, was not a Democratic panic, and was struggling on under the weight of the tariff bill of 1909, which was not a Democratic tariff bill.

We have never had a tariff commission in this country from 1882 down to the present time, and the Democrats never destroyed any tariff commission board. Back in 1882 by the act of May 15 a Republican Congress created a tariff commission to be composed of nine members, to be appointed by the President, with the advice and consent of the Senate, from civil life, at a compensation of $10 a day while they were engaged in active duties and their traveling expenses, and they were allowed one stenographer and one messenger.

This commission was simply authorized to take into consideration and to thoroughly investigate those questions which might lead to the establishment of a "judicious tariff or a revision of the existing tariff" upon a scale of justice to all interests, and the bill provided that only 2,000 copies of the official report of this commission should be distributed, and the activities of the commission were to end on the first day of the next session of Congress, and they did end at that time.

The Payne-Aldrich Tariff Act, the act of August 5, 1909, contained maximum and minimum tariff provisions providing that as to all nations which unduly discriminated against the United States the maximum rate—25 per cent higher than the rates specified in the bill—should be imposed, and authorized the President, in order to secure information to assist him in issuing these proclamations which under the Payne Tariff Act were to be issued after the 31st day of the following March, just a few months off—authorized him to employ persons to assist him in the discharge of his duties under this section. Under this provision of the Payne-Aldrich bill an appropriation of $60,000 or $70,000 was made, and the President selected five persons, whom he called a tariff board, whose labors were finished prior to the 31st day of the following March, and immediately after the 31st day of March the President issued his proclamation finding that no nation was discriminating in a commercial way against this Nation, and that as against no nation in the world should the maximum tariff rates be imposed, and, of course, with the proclamation by the President the duties of these five persons, whom they call now a tariff board, ended.

But on the 24th day of May, 1910, a month afterwards, the sundry civil bill was up in the House for consideration, and the gentleman from Minnesota, Mr. Tawney, not now a Member of this House, attempted to infuse some life into this alleged commission and to give them something to do, because the law provided nothing in the world for them to do. He proposed an amendment to the sundry civil bill appropriating $250,000 for the purpose of enabling the President to secure information to assist him in the discharge of the duties imposed upon him by section 2 of the tariff act, which duties had all been discharged, by the way, and to recommend to Congress matters as to the administration of customs laws and to do other things—attempting to infuse into this board some life. At that time the House of Representatives was Republican, and during these efforts to infuse life into this defunct board no Democrat presided over the deliberations of this House, but the gentleman who did preside, and he frequently presided in those days, and presided always fairly to both sides of the House, was my colleague from Illinois, the distinguished leader of the minority in this House. He held that there was no law authorizing this provision; and that nothing in the Payne-Aldrich law authorized the amendment proposed by Mr. Tawney—the attempt to infuse life into this defunct board and to give them something to do. And various amendments were offered, and finally a point of order was sustained as to all of them, not by a partisan Democrat but by a fair Republican presiding over this House, the gentleman from Illinois [Mr. MANN], and the attempt to give this commission something to do failed absolutely, and failed under the rulings of a Republican presiding officer.

But they made the appropriation. They appropriated $250,000, and the next year $250,000, and when we got control of the lower House of Congress we discontinued, in the Sixty-second Congress, this appropriation, as we ought to have discontinued it, and these men who had no authority under the law whatever, and no duties prescribed by law for them to perform, quit collecting from the Treasury the salaries they had been collecting prior to that time.

There were three sessions in the Sixty-first Congress, two of them occurred after the failure of these proposed amendments to the sundry civil bill to infuse life into a commission that never existed. In the first session the Payne-Aldrich Tariff Act passed the Congress. The place for a provision for a tariff board was in the Payne-Aldrich Tariff Act, but it passed without it, and the first session was devoted to tariff subjects. A bill could have been introduced in the first session of that Congress providing for a tariff commission board; but the proposition was opposed, and the opposition to it was led by the gentleman from Ohio [Mr. LONGWORTH]. No other Member of Congress on either side in all those long debates referred to the subject in any way. And so in the third session of that Congress, when the matter came up for consideration under the bill which was reported out by the Ways and Means Committee, my genial friend from Ohio was the only Member who had a record on this subject, and he had a record against a tariff commission. It does not make any difference what his record was then. It does not make any difference what record any Democrat or any Republican made in this House prior to the change in present world conditions. There is nothing in that argument, and it does not reflect in the least upon the gentleman from Ohio.

Now, I want to call attention to what has happened in this country in the matter of revising the tariff. In the United States we have two principal industries. The first is raising corn and the second is revising the tariff, and they are both continuous performances. Prior to 1883—when we had a revision following the report of the tariff commission of 1882—from 1860 to 1883, we had no less than five complete tariff revisions affecting every schedule and almost every article in the tariff. In 1883 we had a revision of the tariff. In 1890 there was complaint throughout the country that the tariff rates were too high. No matter what party is out, they expect to get in always by criticizing the existing tariff rates.

No matter what the rates are, men are just as unhappy; they are just as uncomfortable; they have liver trouble, and they suffer just as much with it; but 3,000 orators are turned loose upon the country every two years, and they persuade the people that if they are unhappy it is because the tariff is too low, or if they are unhappy it is because the tariff is too high, and that the remedy for it all, and for all the ills that happen and all

physical and mental discomfort, is, "Revise the tariff and you will be happy." They are like the old doctor who knew nothing in the world except how to cure fits, and who persisted in giving his patients something that would throw them into fits and then gave them something to cure them. The McKinley bill was at that time the highest tariff in all the world, and we Democrats got out and criticized the Republicans on account of the high rates of the McKinley bill. People were unhappy and men were unemployed in those days, and we charged it up to the tariff. The people then gave us a chance to revise the tariff, and our revision resulted in the Wilson tariff bill of 1894, a fairly low bill when it passed the House, not so low when it passed the Senate, but still at that time the highest tariff in all the world, although it was a Democratic tariff. And the people continued to be unhappy and uncomfortable, and 3,000 Republican orators spoke in every village in the land and in every city and charged the discomfort and unhappiness of men to the Democratic Wilson bill. As a result the political complexion of the country changed, and we elected a Republican President. This was followed by the act of 1897—the Dingley Act—which was higher than the Wilson tariff, and, of course, the highest tariff in all the world. And then we got out and charged the Republicans with boosting the rates up, so that everybody was unhappy, and we said the consumers of the country were being oppressed, and we demanded that we be given a chance again at the matter. In order to maintain the rates of the Dingley tariff bill—do you remember the provision in the Republican platform of that year?

It resulted from the fact that the Democratic Party were charging bad faith, that the revisions had all been upward. Here is what the Republican Party said:

> We declare unequivocally for a revision of the tariff by a special session of Congress immediately following the inauguration of the next President.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. RAINEY. May I have five minutes more?

Mr. DIXON. I yield five minutes to the gentleman.

The CHAIRMAN. The gentleman from Illinois is recognized for five minutes more.

Mr. RAINEY. Then we said, "That does not mean a revision downward. That is in bad faith." And they sent President Taft in a circle around the country, to Milwaukee, to Kansas City, to St. Louis, to Chicago, to Cincinnati—great circle sailing that was—declaring that this provision in the platform meant a revision downward and meant nothing else, and that he would see to it that there was a revision downward at a special session of Congress to be called immediately after his inauguration if he was elected. And upon that promise of an unequivocal revision and a revision downward, the Republicans again came into power, and the result was the Payne-Aldrich tariff bill. Just before its rates went into effect we called attention in all the Democratic newspapers of the land to the most exciting ocean race that had ever occurred in the history of commerce upon the seas—the race of nine great freighters across the Atlantic Ocean to get to New York and to discharge millions of dollars worth of merchandise before the higher rates of the Payne-Aldrich bill went into effect. As a result of the high rates of the Payne-Aldrich bill, we said—and we did our best to convince the country—the discomforts and unpleasant incidents of life had come to all of us except a favored few, and we asked for another chance, and they gave us another chance. Of course, the Payne-Aldrich rates were the highest in the world.

The result was the Underwood bill, which you on that side are denouncing now. And while the rates of that bill are lower than the Payne-Aldrich bill it is still the highest tariff in the world. Talk about this country not being committed to high tariffs when the present tariff law is higher than the tariff of Germany in its average rates and higher than the tariff of Russia.

During this period of time—from 1860 to the present day—we have had 11 complete tariff revisions and 2 attempted tariff revisions—in the Mills bill and in the Morrison 20 per cent horizontal bill disturbing business just as much as any of these other measures—a tariff convulsion on an average every four years from 1860 to the present time. Is it any wonder business has been unsettled in this country? And while we are playing this game—Democrats and Republicans—we are playing it at the expense of the business of the country. It may be a good thing for politicians, it may have been the making of politicians, but it is an awful thing for the poor unfortunate industries they have been practicing on. In Germany they have revised their tariff once in 37 years; in this country in that period of time we have revised our tariff six times. In France they have revised their tariff once in 28 years; in this country we have revised our tariff four times in that period of time. We have had six great tariff convulsions here in the last 30 years.

The bill that we champion here to-day is as nearly nonpartisan in its features as it possibly can be. It provides for six members, no more than three to belong to any one political party. It provides for a biennial selection of a chairman and vice chairman. It excludes ex-Members of Congress, partisan sometimes upon the tariff question. It provides ample salaries. It places at the disposal of this commission all the departments of the Government. All its employees, except the confidential clerks, are under the provisions of the civil service. It can conduct its investigations anywhere in the world. It reports to the President, to the Congress, to the Ways and Means Committee of the House, and to the Finance Committee of the Senate whenever requested to do so, but it makes an annual report always to Congress. It transfers the cost of production division from the Bureau of Foreign and Domestic Commerce to this commission.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. RAINEY. Can I have two minutes?

Mr. DIXON. I yield to the gentleman an additional five minutes.

The CHAIRMAN. The gentleman from Illinois is recognized for five minutes more.

Mr. RAINEY. It provides for the examination of the records of corporations and individuals, but it fully protects trade secrets. It contains an immunity clause which enables the commission to get the information it desires and exempts the person who is being questioned from prosecution and keeps him from taking advantage of the immunity provision of our laws. It is a permanent tariff commission—permanent in every particular.

All these features to which I have called attention—all of them except the investigation of cost of production, which is provided for—every one of them was omitted from the Republican bill against which we voted on this side at the third session of the Sixty-first Congress.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman yield to his colleague?

Mr. RAINEY. Yes.

Mr. BUCHANAN of Illinois. I would like to ask what is meant by the term "trade secrets"? I believe that is what the gentleman called it.

Mr. RAINEY. The gentleman knows what trade secrets are; the processes of manufacture, which perhaps have not been patented, and the like.

Mr. BUCHANAN of Illinois. It does not mean rates of wages?

Mr. RAINEY. Certainly not. Rates of wages are not trade secrets. These rates are known to the men who receive the wages and known to the persons who pay them.

This bill is indorsed by the United States Chamber of Commerce, by the Tariff Commission League, by the Merchants' Association of New York, by boards of trade and commercial bodies throughout the country, and by every trade paper of standing throughout the United States. Of course such trade papers as the Economist are opposed to it; they depend for their subscription list upon keeping alive these controversies which in the interest of business and trade here in this country ought to end.

In conclusion, I want to read something which comes to us at the present time almost as a voice from the grave. I have other matters also which I will insert in the RECORD. Here is a letter addressed to Hon. H. H. Gross, of Chicago. He is president of the Tariff Commission League. He is a Republican. The National Soil Fertility League made a campaign throughout the country for the Smith-Lever bill, which is one of the best bills ever passed. I have here a letter addressed to Mr. Gross by the late James J. Hill, one of the greatest men this country has ever produced. It is dated last April. It reads:

> DEAR MR. GROSS: Your favor of the 24th instant, with inclosures, duly received.
>
> Sound politics and sound political economy require that the tariff question be taken out of party controversy, and that such readjustments of duties as changes in business conditions may require from time to time be made only on the recommendation of a permanent tariff commission composed of experts and clothed with all necessary power.
>
> It may be that the next election could be carried on the tariff issue, although, if that be true, the same party could win without it. But if successful through a pledge to make a new tariff such action would inevitably lead to defeat later on. That is the history of the relation of politics to tariffs for the last 40 years. No party has benefited permanently; but business has suffered all the time.
>
> Alternations of high and low duties for political ends have injured everybody, and will do so while they continue. Industry runs at its highest speed, then slackens or stops, then races again, and capital and labor both suffer. The time has come for both parties and all interests to insist upon a change of method.
>
> Under the stimulus of tariffs the manufacturing industry has been so expanded that not more than two-thirds of its product can be con-

sumed at home. To sell the remainder abroad, where it must be sold, prices must be made in a world-wide competition. Tariff rates must be adjusted to this fact, instead of being based on local conditions or private considerations. For this they must be nonpolitical.

The seesaw of high and low rates gives the manufacturer a period of big profits and a season of no profits or actual losses. It reduces exporting and importing almost to a gambling proposition, where trade must bet its future on the chances of an election. It is worst of all for the laborer, who alternates between good wages and none at all. If he should work 300 days in the year at $2 per day he would earn $600, as against $375 if he works only 150 days at $2.50. This in addition to escape from the demoralization of idleness.

Industrial peace and prosperity will never be firmly and finally established until the tariff is taken out of politics and placed in charge of a properly constituted body whose conclusions are substantially final.

Yours, very truly,

JAS. J. HILL.

This is a nonpartisan measure. I have discussed it in a nonpartisan manner. There is no more reason why the tariff should be the subject of continued unfair partisan action than that our internal-revenue taxes should be the subject of unfair partisan action. The great world questions presenting themselves for consideration now as never before in the history of this country offer opportunities for statesmanship, and also opportunities for partisan action to those who prefer opportunities of that kind. The time has come for the politicians to prepare themselves for the discussion of other matters than the tariff. The time has come to give business and American business men a chance in the struggle just commencing for our fair share of the trade of the world. [Applause on the Democratic side.]

Under the general leave to print I desire to add the following to my remarks:

George W. Perkins, addressing the Illinois Bankers' Association on the 27th day of January, 1916, on "All-around preparedness," said:

Take the matter of the tariff—our mental attitude regarding the tariff is all wrong. For years we have been vacillating between a high tariff and a low tariff. We look upon the Republican Party as the high-tariff party; upon the Democratic Party as the low-tariff party. As a matter of fact, what we should have, what we must have, is neither a high tariff nor a low tariff but a scientific tariff; a tariff not made for the sole purpose of getting one political party out of power and another into power; not made on a log-rolling basis as to items in the bill, but based purely and solely on actual necessities; a tariff made after exhaustive study and public hearings by men who give their entire time and earnest effort to this great subject.

Jacob H. Schiff, in an address delivered in March of this year to the Republican Club of New York City, said:

Standing here on holy Republican ground, I say without fear or favor, if you renew in the next presidential campaign the tariff agitation of the past; if you threaten the country and show it you want a renewal of special privilege and high protection, the people will have none of it. The people have learned; the workmen and the farmers have learned, and they can not be misled any longer.

I do not say that because I love the Republican Party less, but because I love it more.

Commenting upon this speech, the New York Globe, a recognized Republican organ, said:

Mr. Schiff does his party a distinct service by thus openly speaking out. It is further notice that the Republican Party can not hope to regain the public confidence it lost by persisting in a policy that destroyed confidence in it. It must appear to the satisfaction of the country that the Republican Party exists to advance public ends; that the purposes of the organization are not the advancement of class or private ends. The once all-powerful party carried but two small States at the last presidential election. The falling away was fundamentally because of the general conviction that it had fallen under the control of a group of men who had put class interests and private interests above public interests.

I quote from a pamphlet submitted by Willard Straight, vice president of the American International Corporation, which pamphlet was submitted for discussion at the Third National Foreign Trade Convention, held at the Hotel Grunewald, in New Orleans, in January of this year:

At the time when the economists of Europe are most diligently considering what to do after the war there exists in the United States no governmental body for the study of the European tendency and its possible effect upon our own country.

* * * * * * *

The President has said that the Federal Trade Commission possesses latent tariff commission powers. A strong movement is in process organizing widespread sentiment in favor of a permanent nonpartisan tariff commission, with broader authority than possessed by the Taft Tariff Board or implied in the Federal Trade Commission act.

* * * * * * *

Congress must and will finally write the tariff laws; the true function of a tariff commission is not to direct but to aid congressional labors.

The CHAIRMAN. The gentleman from Michigan is recognized.

Mr. FORDNEY. Mr. Chairman, I yield 30 minutes to the gentleman from Nebraska [Mr. SLOAN].

The CHAIRMAN. The gentleman from Nebraska [Mr. SLOAN] is recognized for 30 minutes.

Mr. SLOAN. Mr. Chairman, I am pleased to hear the statement of the gentleman from Illinois [Mr. RAINEY] that he has discussed the tariff commission, a nonpartisan measure, in a nonpartisan manner. Were it not so labeled many of us might doubt the proposition.

But this bill that we have before us is a request that we go to the people and ask for a staggering sum of money, $210,000,000. For this all parties share to some extent responsibility. Coupled with that request for money is a statement that on account of the trouble now upon our Mexican borders, for which the Republicans share no blame, there will be a bond issue of $125,000,000.

So, in the demands of this bill and the suggestions as to what may follow, we have these two propositions—a stupendous amount of taxes and probably a large amount of bonds. This demonstrates two truths, as old as the two great political parties—that the rewards of free trade are taxes and the wages of Democracy is debt. [Applause and laughter on the Republican side.]

With this proposition we are confronted with perhaps the most remarkable and abject surrender on the part of a great political party ever witnessed since legislation was attempted in any civilized nation. Because if there is one outstanding principle that has separated the Republican Party and the Democratic Party throughout the joint existence of the two, it is their difference upon the question whether we shall protect American industries or whether we shall not.

Democracy was a long time coming to it. Five years ago, when I came to Congress, protection seemed an unpopular doctrine. Orator after orator from the Democratic side rose in his place and declared protection to be unconstitutional. During the first year I was in Congress I heard on the floor and read in the RECORD the expression "robber tariff" used 153 times. Five years have elapsed, and the Democratic Party, having taken control of the affairs of this Government, finds itself in such an abject strait, driven to bay in a political corner, that President, Cabinet officers, members of the Ways and Means Committee, and the body of this House come upon their bended knees before the country and say, "For the purpose of filling this gap in the Treasury we have looted we yield submission to the people of this country and pledge to you, for the sum of $210,000,000, that we will say to the world 'Democracy is for protection just the same as Republicans, only in a less degree.'" That is the situation as it confronts us; and I do not wonder that some men on our side view this matter from different angles and standpoints. Many insist that we should raise the money, according to the time-honored principles of the Republican Party, by a protective tariff. The expressed principle of the Democratic Party recently in St. Louis says we should raise sufficient funds by a tariff. Others look at admissions, confessions, and pleas of guilt from that side of the House and say, "We will yield something in order to have a great political party placed and tied on the right side of a great political question," so that the gentleman from Illinois [Mr. RAINEY], speaking only for his own party, need never afterwards say that it was "playing a game of politics at the expense of the business interests of this country."

The gentleman from Illinois may make the statement for the Democratic Party that it is playing politics at the expense of the business interests of this country, but nobody authorized the gentleman to make that confession for the Republican Party, which has always stood for the business interests of the American people and of labor throughout the United States. [Applause on the Republican side.]

This is a remarkable bill, no matter which way you vote upon it. It is remarkable in this: It is based, the chairman of the committee, Mr. KITCHIN, said, upon an expenditure for preparedness. I will not take the time to analyze that. It would be a very interesting task to perform. We know it is based upon that and congressional extravagance. It is based in part upon expenditures for preparedness. Why were we called upon to prepare? A disinterested foreigner in this country, reading this bill and looking at the sources of the revenue provided in it, would wonder against whom the American people were called upon to prepare. Is it against a section of the United States that we are to prepare, or is it against the commercial rivals that we have throughout the world? When I voted for the moderate—not the extreme—appropriations for the Army, and for real battle units of the Navy and not its expensive frills, I thought the possible result of friction might come with a nation beyond the Pacific; again, I thought it might be with one of the two great groups of contending powers in Europe. I hoped the party in power, when the great appropriations were being made for preparedness, would see to it that those great nations with whom the commercial friction was liable to arise would be made to pay for at least a part of this preparedness. [Applause.] But what has been the course of the Ways and Means Committee? It has been as if the great North of this

country was the offending party and we were going to tax against its people the expense of all this preparedness. I shall give that more in detail, but just suggest in passing that there has been handed to me by the Secretary of the Treasury within the last three hours a statement of the income tax for the fiscal year of 1916, the principal source of the revenue in this bill. This is what the figures show:

The Government collected $67,000,000—round numbers used—from the income tax in 1916. Of this amount, $4,000,000 was collected in that part of this country which completely dominates and controls the action of the Ways and Means Committee. In other words, ninety-four and a fraction per cent of the income tax is paid by that part of the United States which was denied a hearing before the Ways and Means Committee. Of the 435 Members of this House about 135 Members are in the group that pays $4,000,000. About 300 Members, 200 of them being Republicans, are from the North. Two-thirds of the group paying $63,000,000 of the $67,000,000 income tax were debarred from deliberations of the committee to which this House under its rules delegated the duty of drafting this law.

Mr. HELVERING. Will the gentleman yield?

Mr. SLOAN. For a question; yes.

Mr. HELVERING. I suppose the gentleman has reference to the fact that the bill was drafted by the Democratic members of the Ways and Means Committee?

Mr. SLOAN. Yes.

Mr. HELVERING. The gentleman from New York [Mr. CONRY] is one of the members who helped to draft that bill.

Mr. SLOAN. Of course, I know the gentleman from New York [Mr. CONRY] has been very ill for a number of weeks. It seems to me the gentleman ought to have remembered that. But my point is this, that of the 300 members representing the income-tax-paying part of this country, two-thirds of them are Republicans. There are eight Republican members of the Ways and Means Committee, who represent those two-thirds. Not one of those Republican members of the Ways and Means Committee was allowed to enter the Ways and Means Committee room while that bill was being considered, if ever it was considered.

This was the situation as we understand it: In a corner of this building, behind closed doors, and, I presume, with drawn curtains and muffled walls, rendered immune from the telltale dictagraph, there assembled these people for the purpose of seeing that one section of this country should pay the tax.

At the outer entrance was an Ethiopian, a piece of animated ebony, standing there denying anyone entrance unless, as is told, perhaps in jest, he gave the countersign. This is said to have been the countersign "We levy, they pay." [Laughter on the Republican side.] So this bill was organized as an assault on the North.

Now, we did not rest content with that. What are our rights? Standing first in dignity among the committees of the House is the Ways and Means Committee. Under the rules of this House, as I understand them, and I read from the rules in the practice of the House governing committees, that when the committee has a bill or a resolution before it, this shall be the course of procedure:

> The paper before a committee, whether select or of the whole, may be a bill, resolution, draft of an address, etc., and it may either originate with them or be referred to them. In every case the whole paper is read first by the Clerk, and then by the chairman, by paragraphs, Scob., 49, pausing at the end of each paragraph, and putting questions for amending, if proposed. In the case of resolutions on distinct subjects, originating with themselves, a question is put on each separately, as amended or unamended, and no final question on the whole, 3 Hats., 276; but if they relate to the same subject, a question is put on the whole. If it be a bill, draft of an address, or other paper originating with them, they proceed by paragraphs, putting questions for amending, either by insertion or striking out, if proposed; but no question on agreeing to the paragraphs separately; this is reserved to the close, when a question is put on the whole, for agreeing to it as amended or unamended.

Day before yesterday we were called into committee session. We expected, and had a right to expect under the law and the rules of the House, that the Representatives of this House on that committee would have an opportunity to the benefits of the rules under which we work. We demanded a hearing, demanded consideration. More than that, we formally asked that procedure be had, not to that extent we were fully entitled to, but merely asked that the bill be read by the Clerk and considered under the ordinary rules of the Committee of the Whole. That was our right. That is the way legislation is conducted and prescribed in the committees of this House generally, and in the committees of every legislative body on this continent.

It has been the procedure generally in the United States not only in legislative bodies but in associations of whatever name, purpose, or character throughout the country. So that every man present interested would have the right to hear read, or read himself, at length, these particular statements, so that his attention would be called to the language, purpose, and meaning of each particular part. We had a right to demand that which we were elected for should be given us. That we might take some part in the deliberation and have something to say, so far as our people are concerned, about how, when, and to what extent they were to be taxed.

I criticize this procedure because I think that the treatment rendered to this side of the House through its membership on that committee is subversive of good government. I believed that in the raising of revenue through an amendment of the Underwood law, the income tax being a part of it, we ought to have amended that part which is distinctly at fault and not so drastically that part which had been measurably successful. The income tax as we have it now brought in $67,000,000 in the fiscal year of 1916. But the Underwood tariff part of that law was not such a success. In fact, it did not bring in the amount for which it was pledged. The bill was enacted for the purpose of raising revenue and revenue alone, and in that it was an abject failure. It only raised a disturbance. More than that, the great Democratic Party at St. Louis met and adopted a platform, and in that platform they said they believed in a tariff:

> We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine.

They wanted to give the cripple another chance.

If it truly exemplifies the tariff policy, why any additional tax? One of two things our friends across the way must admit. They must in passing this bill repudiate the Underwood tariff law or make the other admission of which they stand convicted, that the affairs of this Government have not been economically administered, nor will they be economically administered until a Republican House, a Republican Senate, and a Republican President after March 4 next take charge of the affairs of the Government. [Applause on the Republican side.]

We do not need this vast sum of money on account of not having had the imports. In the three years counting from October 3, 1913, to October 3, 1916, figuring imports for the next four months to average with those now passed, the duties compared with 1910, 1911, and 1912 of the former administration, we will have imported $952,000,000 more in the later period than we did in the first. I submit there ought to be ingenuity enough in the majority members of the Ways and Means Committee to have taken that nearly $1,000,000,000 of imports and placed your own kind of revenue upon those similar to those produced in this country and which those imports compete with, not touching noncompetitive articles, to have raised enough revenue to have had your $210,000,000 in the Treasury now. [Applause on the Republican side.]

I am in favor of raising a large portion of this revenue by a tariff, not all of it, but I am willing to distribute the burdens. But I am not in favor of an isolated proposition of saying that one section of this country shall pay 93⅞ per cent of the burden and another only 6⅛ per cent. I venture the statement that under the new surtax system, assuming the business of the country for the present fiscal year to be as it was last, that the sections would stand 95 per cent as against 5 per cent.

I do not know how you feel about it, gentlemen, but I have not any particular grudge against the fairly wealthy people of this country, although I am not of that class. I rather favor them as against the foreigner who wants to become wealthy at the expense of the people of this country. [Applause on the Republican side.] I am in favor of protecting every product of every man and every woman's toil in the United States as against the product of any foreigner's toil under any flag on earth. [Applause.] I further believe in raising a large portion of our governmental expense money in that way, because in the beginning the Constitution makers set apart the ports to the United States as a nation alone, prohibiting the States throughout all time from obtaining revenue for anything that crossed their borders.

I want to say something about this nonpartisan tariff commission, of which we have heard so much. The Democratic balloon, filed with heated gas, is about to burst into flames. This tariff commission might well be called the Rainey parachute. The jump is made; we will watch the landing. I do not care so very much about the terms of that nonpartisan tariff commission. I should like to vote for it alone. When anyone upon that side or upon this votes for this bill with that tariff commission in it, he stands here before his colleagues and before his God and says that he is no longer a free trader, that he is no longer a tariff-for-revenue-only man, that he is a protectionist. [Applause on the Republican side.]

When the American people understand that the Democratic Party, in consonance with the Republican Party and the wisdom of the world, has turned to protection, it will mean much to the American people.

This tariff commission is intended for protection. A tariff commission without a protective tariff would be like a fifth wheel to a wagon. It would be like a wooden leg purchased for a foot racer. We are told down here in the Patent Office that a man in the foothills of Colorado, when he saw the prairie schooners pass in such mighty fleets through that country years ago, noted that they needed brakes. He was not a seafaring man, not the regular old sea dog that my friend from Pennsylvania [Mr. MOORE] is; so he thought that he would get up a brake for all kinds of craft. The first he picked out was a barge, and he designed a brake to be applied to a barge to curb its speed. That man who wanted to put a brake on a barge would not have anything on a man who voted for a tariff commission and stood up and said that he was for free trade or for tariff for revenue only. [Applause on the Republican side.]

There seems to have been some changes of mind respecting this tariff commission. I am inclined to think that that is demonstrated. It took just twelve and a half minutes for the gentleman from Illinois [Mr. RAINEY] to show how the gentleman from Ohio [Mr. LONGWORTH] had changed his mind on the tariff commission. Mr. LONGWORTH, he proved, changed his mind some three or four months after the passage of the Payne-Aldrich law.

The gentleman from Illinois [Mr. RAINEY] changed his mind, having so expressed himself upon the floor of this House to-day, something like five or six years later. It took him just 16 times as long to see the light as it did our friend from Ohio. Again we have there, you see, the old sacred ratio of 16 to 1—LONGWORTH to RAINEY. [Applause on the Republican side.]

Mr. QUIN. Mr. Chairman, will the gentleman yield for a question?

Mr. SLOAN. I am delighted to yield for a question from my genial friend from Mississippi, where I believe they do pay some taxes.

Mr. QUIN. Does the gentleman not think it is a wise thing for a man to change his mind and get a good thing, even if the Republicans have it?

Mr. SLOAN. Oh, yes; and as many times as you change your mind from all your Democratic heresies, the nearer you will come to being wise. And as to certain others—a man once discussing drinking said: Its all right to drink now and then; but I'll confess that it is best not to "only now and then not drink." Change may tickle the palate, but steady diet sustains the system. I do not recall of a lightning-change artist ever being reemployed as a locomotive engineer.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. FORDNEY. Mr. Chairman, I yield 10 minutes more to the gentleman.

Mr. SLOAN. Mr. Chairman, there is an estate tax provided for in this bill. I am just going to see what we give the Democrats in their dire distress, and what the country gets out of them. It is hard to wrest much good out of them; so we must watch the way the balance runs. They call on us for an estate tax. I do not believe that is a good tax, especially when it amounts to double taxation by State and Nation. The field of the estate tax, I think, should be reserved to the States. I shall present an amendment to this bill, granting to the Government the right only to have an estate tax in those States where they do not use that field to the full extent of the rate which the Government will fix in this bill.

I do not know why the inheritance tax was selected particularly, unless it was because having pledged in the Baltimore platform that they would reduce the high cost of living, and that now they are abjectly admitting their failure to do so, they have tried another tack. If they can not reduce the cost of living they demonstrate to the public their ability to raise the cost of dying. [Applause.]

In that I think they will probably succeed. This bill, with those propositions of an estate tax, an income tax, and a munition tax, is brought out here as an antidote, we will call it "the Kitchin antidote for the Underwood poison."

We can vote for a munition tax. I shall present another amendment to that feature of it. I deplore the fact that in order to pay our national expenses we have to levy a tax upon those products that are being carried beyond the seas to destroy life. If we have such a tax we can make it retroactive, as is demonstrated in the bill to January 1, 1916. I am in favor of making it retroactive to the 1st of January, 1915. Because in that year nearly all of the munitions that were manufactured, contracted for, and delivered were not for America, but were for foreign use. I do not believe it is good policy to favor the foreigner in purchasing, or the man in making munitions for the foreigner, and then tax them when he is, as he is in 1916, manufacturing munitions largely for the American people, to be paid for out of these large appropriations for which we have recently voted. We hear about looking after America first. Here we are looking after America last.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SLOAN. Yes.

Mr. MOORE of Pennsylvania. Has the gentleman noticed that the Westinghouse Co., one of the largest manufacturers of munitions, has just indicated that its British contracts have closed, and that its work is likely to cease?

Mr. SLOAN. I so understood.

Mr. MOORE of Pennsylvania. And that source of revenue will be falling off.

Mr. HAMILTON of Michigan. And 2,500 employees have been thrown out of employment thereby.

Mr. MOORE of Pennsylvania. Yes; and in consequence of that, as the gentleman says, these men are thrown out of employment.

Mr. SLOAN. Which is liable to occur and is occurring. I desire to speak of that because I have heard a great deal from the other side of the House about the prosperity of this country.

It is true that the three or four million idle men and women during the early history of the Underwood law and before war construction became so great, have been given employment, and while many millions of dollars have flowed to this country, and business and commerce seem to be prosperous, the facts are that down in the smaller businesses and the smaller industries of the United States there is a critical period. The great difference will be that the large concerns within the next few months after the war demands have ceased will be in the same condition as the smaller business interests of the country are now. It may not be generally known, but it is a fact, that the failures of this country are multiplying instead of reducing. Let me read you. The failure record of the United States shows in 1914 a record breaker, 16,759 failures, whereas 1915 far surpassed it. The failures in 1915 were 19,032. Taking the first five months of this year as an average for the rest of the year—we do not know whether it will increase or decrease—but assuming these five months to be the average, the failures then for 1916 in the United States will be 19,894, 4,000 more than have ever occurred in any Republican administration year. The failures for 1910, 1911, and 1912 were 41,192. In 1913, 1914, and 1915 there were 50,344 failures, a difference in a three-year period of 9,152, or 22 per cent. The greatest in any one year under a former administration was 15,299. The greatest thus far of years actually elapsed was 19,032 in 1915, substantially 25 per cent more than ever occurred under a Republican administration. Yet men say that we are prosperous. I am glad to see the extent of prosperity we have, but the time of reverse is coming, for which we must be prepared. This bill should have been drawn—and an opportunity was presented, you gentlemen having made your confession in the dyestuffs, you having pleaded guilty when you presented this tariff commission, and you having acknowledged your faults when you repealed the stamp tax—your opportunity was to have carried out the principles of protection generally that you were then admitting.

Now, in regard to this tariff commission, I am again reminded about somebody changing his mind. The President did change his mind. Yes; I have heard of that before, and I hear of it frequently. I suppose the President would be mighty glad to change his mind and run on the Chicago platform instead of the one adopted at St. Louis if he had anything like the assurance of election the man who is running upon the Chicago platform has from the American people. [Applause on the Republican side.]

The dyestuffs is a distinctive protective measure. One claim for it is—that is not urged for any other industry in this country—explosives. That is one of the reasons why you are going to get some votes from this side. First, a great many voted for preparedness; second, none of us really expected you would be really prudent in the matter of raising revenues. We expected not only a fly but a swarm of flies in the ointment. Of course we have to accept some of it; but it will be voting on a proposition that after all if we come to your assistance and raise this money to get you out of this difficulty, you in turn say to the world, "The principles of protection embodied in particular features of this bill, viz, dyestuffs, antidumping features, and the tariff-commission proposition, we assume and bind ourselves hereafter to support." [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SLOAN. May I have a few minutes more?

Mr. FORDNEY. How much time does the gentleman want?

Mr. SLOAN. Well, I know I have not a Monte Cristo balance with the gentleman, and I trust to his generosity.

Mr. FORDNEY. Will five minutes more be sufficient?

Mr. SLOAN. Yes.

Mr. FORDNEY. Mr. Chairman, I yield five minutes more to the gentleman.

Mr. SLOAN. I have criticized this bill for the manner of its preparation as it and its authors richly deserve. I have called attention to the elements of sectionalism and injustice with which it is fraught, but when it comes to voting upon it I must consider it in its relation to our common country and conditions as they are and not as I would have them. We are nearing the end of the session. Adjournment is desired by all of us and probably by the country at large. It would be difficult to drive the majority further into the protection field than it has been already driven, for while this measure was drawn in secrecy, yet the pressure exerted by the membership of this House in a number of ways, and the well understood wrath of the public, expressed and exerted, in fact, in different ways, have driven the majority of the Ways and Means Committee to concede as much good doctrine and legislation as it has in this bill.

Some means of meeting the heightened Government demand must be provided. Our soldiers are at the front engaged in what the world will call war, no matter what denial of that statement may be made by interested office holders. Were another nation's soldiers being hurried across our borders, with the right of occupancy insisted upon, and the friction arising as it must necessarily, there is no doubt that the American people would have little patience with anyone in authority who should say, "This is in the interest of peace; it does not mean war." There should be no question of promptly meeting necessary expenses now being incurred, because, whatever the provisions of this bill are, there is no bond issue meeting those expenses now.

While I am considerable of a partisan, I never voted against any bill or measure solely because it was sponsored by the opposing political party. During the present régime one can follow that rule and seldom have occasion to differ from his Republican colleagues. I shall probably vote for this revenue measure with and in part on account of its protective features, just as I joined with all Republicans in reinstating the duty upon sugar, a protective measure presented by the majority side of this House. In common with many Republicans and Democrats, I voted for moderate increases in the Army and Navy appropriations. I feel to some extent like joining in voting to pay for them.

I do not criticize my colleagues who may, after giving our Democratic friends, by recommittal motion, opportunity to raise this revenue in the Republican way, and they refuse. I do not criticize the Republicans for saying, then, "If you reject the proper means of grace which we offer, we will not go with you in a path we do not wholly approve."

It is suggested that several times as many votes will be cast for this revenue measure by Republicans than were cast by Democrats for the Republican revenue bill in 1898, during the Spanish-American War. Let it be so said. The votes so cast will be intended at least as patriotic ones. Of course there should be more Republican votes now than there were Democratic votes then. If I did not believe that my party had more patriotism in it than has the Democratic Party, I should not belong to it. The votes against the revenue measure of 1898 were in response to the scourge of the Democratic Party lash. The vote on this bill, whichever way cast on the Republican side, will be the free, full expression of a patriotic duty as the several individual Members shall see it.

The repeal of the war-revenue tax—the infernal stamp tax—is a distinct plea of guilty to the American people. We denounced it as an outrage when first passed, and again when it was extended—a so-called war revenue, a misnomer, passed after the first Mexican war was over, now being repeated about the time the next one begins.

Why, I could vote for a good many things, could strain my principles a good deal to have that statement made again as it was made by the distinguished gentleman from North Carolina, the chairman of the Ways and Means Committee, when he stood in this place yesterday and solemnly told this House that the stamp tax was an outrage—a plea of guilty to the American people. We have in our Treasury I do not know how many millions of dollars collected from that stamp tax. I shall give the gentleman from North Carolina and the rest of you an opportunity to make good his denunciation. I shall submit an amendment to refund to the American people the amount that we wrested from their pockets through that outrage, championed by the majority and twice opposed unanimously by the Republican side. [Applause on Republican side.]

When talking on this stamp subject a few months ago I took occasion to call attention to a Hoosier schoolmaster story about "lickin' and larnin'" out there in Indiana. I said that the people had been "lickin'" and they would be "larnin'." Well, it has come to pass. The people have "licked" and the people have "larned." It seems that the two facts of that actual physical trouble due to occur was that the "lickin'" occurred with the people first and the "larnin'" afterwards. Now, the "larnin'" has occurred here in Congress and the "lickin'" is to come hereafter. [Applause on the Republican side.]

Now, there is just one other proposition, the dumping clause, a measure crudely drawn, lame and halting. It is the broadest kind of an admission of dynamite protection.

I do not wonder now, after thinking it over, that in their travail of spirit, in their sorrow of soul, the majority of the Ways and Means Committee wanted to get back into the dark and away from their neighbors while they brought forth this remarkable production, which admits their fallacy and wrong for a period of two generations. I shall present an amendment to that. The bill provides for punishment, civil and criminal, if the foreigners sell their goods too cheaply in this country. My God! What do you think of the good old tariff-for-revenue-only fellow out on the plains who has been wishing and hoping all these years that we would have free trade, or tariff for revenue, so that he could buy all this stuff at the foreigners' price? Now, the minute they commence to haul the stuff over here and sell it cheaply the Democrats have put a protective obstacle in the way, and at the same time tell him, "Protection is right; we were wrong."

The CHAIRMAN. The time of the gentleman has expired.

Mr. SLOAN. Just one minute more.

Mr. FORDNEY. I yield one minute more to the gentleman.

Mr. SLOAN. I am getting this down to the irreducible minimum. But that clause and provision lacks this: There is no provision for punishing anybody who brings stuff into this country where the article is on the free list and causes unfair competition. That relates to nearly three-fourths of all the stuff imported. So, if you double the duty in that case it would be twice nothing and would make about nothing. I shall present an amendment providing that a penalty of 20 per cent ad valorem be placed on such unfair competition upon goods now on the free list. I do that because I think that particular percentage has a resonant and pleasant sound to those over on my right. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. KITCHIN. Mr. Chairman, I yield to the gentleman from Indiana [Mr. DIXON].

Mr. DIXON. Mr. Chairman, the bill now under consideration to increase the receipts of the Government is made necessary by the very largely increased appropriations for the Army, Navy, and fortifications for our country. The European war and the critical complications growing out of the Mexican situation have aroused the American people and Congress to the necessity of a more complete and thorough preparation for any emergency that might make necessary the use of the Army and Navy for the protection of our rights on land or sea. No one wants war, and our Army and Navy will never be used for aggression, but only to protect, defend, and maintain the rights and property of our country and our people.

In response to the demand for ample preparedness the Congress has and is giving full, complete, and satisfactory answer as the Army, Navy, fortification, and other bills plainly show.

To meet the money for this purpose additional revenue is needed and this bill is to meet that necessity. This measure embraces several sections, each connected directly with the revenues of the Government:

1. Income tax.
2. An estate tax.
3. A munitions manufactures tax.
4. Miscellaneous taxes.
5. Tax on dyestuffs.
6. Tariff commission.
7. Unfair competition.

We have sought to so levy the taxes for these additional expenses that its burdens may fall as lightly as possible upon the people. We have presented a fair and equitable measure. Our political adversaries would have no doubt adopted their usual plan of increasing tariff duties, but we believe that we have presented a much better plan and one that is more just, fair, and equitable. The tariff tax is levied entirely upon consumption, and not a penny on income or property. The laboring man must expend his wages for clothing and the necessaries of life, and under Republican tariff laws the rates were highest upon the articles of necessity. Everyone knows that the consumption of the wealthy does not bear the same proportion to the consumption of the poor that the income of the one does to the

wages of the other. The income tax is a measure of justice; it taxes wealth in proportion to its abundance rather than poverty according to its necessity. This system of taxation has been a sacred principle of our party for years. An adverse decision of the Supreme Court eliminated the income-tax provision from the Wilson bill in 1894. So insistent and continuous were the efforts of our party to arouse popular sentiment in support of our principles that as a result thereof a constitutional amendment was secured and the income-tax provision was incorporated into the Underwood bill of October 3, 1913. Its success and universal approval has justified the long continued effort of our party.

As we estimate that we will raise from customs duties this year about $225,000,000, we have readjusted the rates and reenacted the income tax in this measure and estimate the receipts therefrom during the coming year at $227,000,000, practically the same as from tariff duties. We have allowed most liberal deductions from the income for both single men and heads of families—in fact, more than was really necessary. From incomes we estimate an additional $107,000,000 this year. The bill makes clear and certain the exemptions of our domestic building and loan associations, the farmers' mutual fire insurance companies, mutual or cooperative telephone companies, or like organizations of a purely local character the income of which depends solely on dues and fees collected from members. The time limit for the payment of the income tax is changed from June 30 to June 15, the purpose being the collection of the entire tax within the fiscal year and to make the penalty for nonpayment attach within the same fiscal year. The bill provides for a normal tax of 2 per cent on incomes under $20,000 and additional rates as follows:

One per cent on incomes of $4,000 and over $20,000.
Two per cent on incomes of $60,000 and over $40,000.
Three per cent on incomes of $80,000 and over $60,000.
Four per cent on incomes of $100,000 and over $80,000.
Five per cent on incomes of $150,000 and over $100,000.
Six per cent on incomes of $200,000 and over $150,000.
Seven per cent on incomes of $250,000 and over $200,000.
Eight per cent on incomes of $300,000 and over $250,000.
Nine per cent on incomes of $500,000 and over $300,000.
Ten per cent on incomes in excess of $500,000.

This bill also provides for an estate tax. This is a new source of revenue for the Federal Government, as is also the tax on manufactures of munitions of war. The provision for an estate or inheritance tax was included in the Payne bill when first reported by the Ways and Means Committee on March 18, 1909. The report filed by that committee says:

The bill provides for a tax on transfers of property, both real and personal, by inheritance or succession and by will.

That provision provided for 5 per cent tax on transfers of certain kinds and on property by will or descent to direct heirs. There was an exemption of $10,000; the rates were 1 per cent for $10,000 to $100,000 and 2 per cent for $100,000 to $500,000; above $500,000 the rate was 3 per cent. There were several members of the Ways and Means Committee reporting that bill who are now Members of this House, and of course these men will not condemn this provision of our bill. In fact, it was an attempted effort of the Republican Party to collect a less amount from consumption or tariff duties by a transfer of part of the burdens of taxation from those less able to pay to those better able to pay. It was but an attempt, and it met with failure; but the party is entitled to some praise for an attempted step in the right direction, even though the step was never taken.

To-day there are 42 States imposing taxes upon inheritance, 30 of them provide for taxes upon both direct and collateral heirs; 12 limit the taxes to collateral heirs. This bill provides for a tax upon the transfer of the net estate rather than upon the shares passing to heirs and distributees, devisees, and legatees. Its administrative features are simple. I appreciate the argument that this tax might properly be left entirely to the States and have some sympathy with that proposition, but with its large exemption of $50,000 and its reasonable rates there will be little reason to complain of this law. The very small receipts from the inheritance tax in the 42 States, is either inefficiency in the collection or great success in the evasion. There will be neither in the enforcement of the Federal law; diverse citizenship, different situs of property, and that of decedent, and many reasons now effective can not prevail in case of a Federal tax. It is not improbable that at some time in the future all inheritance or estate taxes will be collected by the Government and distributed among the States in the proportion of collections from the States and as a result each State will receive a much larger amount, even if the Government retains a part in each case. The tax provided for in this bill is upon the net estate. In determining the net or taxable value of the estate the most liberal deductions are allowed for the gross value and in addition an exemption of $50,000. In other words, there will be no Federal taxation unless the estate, after payment of all expenses of administration and debts, exceed in value $50,000. The tax is payable one year after the death of the decedent and the law provides for a discount of 5 per cent per annum in case of payment before being due. The tax is graduated upon the basis of value.

One per cent of the amount of the net estate not in excess of $50,000.

Two per cent of the amount by which the net estate exceeds $50,000 and does not exceed $150,000.

Three per cent of the amount by which the net estate exceeds $150,000 and does not exceed $250,000.

Four per cent of the amount by which the net estate exceeds $250,000 and does not exceed $450,000.

Five per cent of the amount by which the net estate exceeds $450,000.

We have levied a special tax upon the manufactures of munitions of war, and in view of the present exceptional circumstances this will impose no unreasonable burden or hardship. Canada, Denmark, France, Germany, Great Britain, Italy, and Sweden have similar laws. The bill provides that if the net profit from the sale of munitions is less than 10 per cent there shall be no Federal taxation. In arriving at what is the amount of the net profit, the most liberal deductions are made from the gross receipts, not only cost of raw materials entering into the manufacture, running expenses, rental, repairs, maintenance, heat, power, insurance, management, salaries and wages, interest paid, taxes, losses sustained, but also depreciation of land and buildings. The tax is estimated to amount to $71,000,000 during the fiscal year ending June 30, 1917. The taxes are as follows:

Gunpowder or other explosives, excepting blasting powder and dynamite:
Five per cent of the amount of the gross receipts not in excess of $1,000,000; and 8 per cent of the amount of the gross receipts in excess of $1,000,000.
Cartridges, loaded or unloaded, and caps or primers;
Projectiles, shells or torpedoes of any kind, including shrapnel, loaded or unloaded, or fuses;
Firearms of any kind, including small arms, cannons, machine guns, rifles, and bayonets, or any parts of any of the articles above mentioned:
Two per cent of the amount of such receipts not in excess of $250,000;
Three per cent of the amount by which such receipts exceed $250,000 and do not exceed $500,000;
Four per cent of the amount by which such receipts exceed $500,000 and do not exceed $1,000,000; and
Five per cent of the amount by which such receipts exceed $1,000,000.
Copper ore, metallic copper, or copper alloys:
One per cent of the amount by which such receipts exceed $25,000 and do not exceed $1,000,000;
Two per cent of the amount by which such receipts exceed $1,000,000 and do not exceed $10,000,000; and
Three per cent of the amount by which such receipts exceed $10,000,000.

We have repealed all the stamp taxes provided in the emergency revenue law of October 22, 1914, but have retained the tax upon a few miscellaneous items. The tax on beer, at $1.50 per barrel, is retained and the wine provision reclassified and given new rates.

A few of the special taxes in the emergency revenue law are continued; the tax on bankers of $1 for each $1,000 of capital surplus and undivided profits; brokers, $20; pawnbrokers, $50; ship brokers, $20; customhouse brokers, $10; proprietors of circuses, $100; proprietors of other public exhibitions or shows, $10; and proprietors of bowling alleys and billiard rooms, $5 for each alley or table. The provision as to tax on theaters and museums is changed from a tax based upon seating capacity and substituted for it is the provision that the tax should be $10 upon such establishments doing business in places having a population not in excess of 1,000; $15 in places having population above 1,000 and not above 2,000; a tax of $20 in places having population in excess of 2,000 and not in excess of 3,000; and a tax of one-half of 1 per cent on gross receipts for admissions in places having a population above 3,000.

The tax as to manufactures of tobacco, cigars, and cigarettes has been changed and more equitably distributed.

In the matter of dyestuffs we furnish the means of relief from conditions produced by the European war and give security from the destruction of new industries by unfair competition from abroad after the war. We depend entirely upon importation for nearly 90 per cent of our dyestuffs, and the European war has not only greatly enhanced the price but made practically impossible the securing of many of the dyes necessary for our manufacturing industries. These industries have joined in a request for this legislation, seeking to assist in the establishment of a dyestuff supply in this country. We have placed the coal-tar crudes upon the free list; the intermediates, a rate of duty of 15 per cent and 2½ cents per pound; and 30 per cent and 5 cents a pound on the finished dyes. These

rates are 40 per cent and 53 per cent, respectively, based upon export value from Europe prior to the war. It is provided that these duties are temporary, and provision is made for their gradual reduction under certain conditions.

We have included a section for the creation of a nonpartisan tariff commission. There is upon the statute books to-day the Underwood law of October 3, 1913. It was framed in response to a great public demand and in accordance with the wishes of the American people; it has met the expectation of its framers; it has realized the hopes of the American people; it has stimulated American industry, strengthened their hold on the world's market, increased the output of American factories, increased the number and pay of American laborers, and brought happiness, prosperity, and contentment to the American people.

While our opponents can not deny the fact, they tell the people that present conditions are the result of the European war and are telling the people the horrible result that will follow the close of the European war. They tell us that the American markets will be flooded with the products of cheap foreign labor, that the people of Europe so crippled by the war will send us their goods and sell them without reference to cost. We do not agree with their prophecy. We can not understand how the industries of the belligerent countries can be so rapidly restored. Their workmen have gone to the front, many of them killed, more wounded, and how their factories can in a day be reestablished and at once begin an enormous output is beyond our understanding. But our opponents have so persistently reiterated it until they believe it and have caused many people to honestly fear the result. We have met this condition by creating the tariff commission. The President will appoint the members of the commission, not more than three of any political party, assured of a long term of service, with good salaries, and with plenty of money to make thorough and complete investigations. They are to investigate the administrative and fiscal effects of the custom law now in force or which may hereafter be enacted, the relations between the rates of duty on raw materials and finished or partly finished products, the effect of ad valorem and specific duties and of compound specific and ad valorem duties; all questions relative to the arrangement of schedules and classification of articles in the several schedules of the custom law, including their relation to the Federal revenues. It is given power to investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential transportation rates, the volume of importations compared with domestic production and consumption, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production. It can secure the attendance of witnesses in all parts of the country and can examine the books and papers of individuals and corporations.

It has full power to secure the facts. With the creation of the commission and with the power at its disposal to investigate and report about the conditions existing now and after the close of the war the commission can have full and complete data at hand so as to enable Congress to immediately make such changes and modifications in our tariff law, or any item thereof, as the changed conditions may demand. We have not only provided for the present but have safely guarded the future. Every item in the tariff law will be subjected to a scientific and business investigation that will make possible, and not only possible but certain with a Democratic Congress, the prompt correction of any duty that injuriously affects American business, American enterprise, or American labor. No legislative power is given the commission; this bill has been prepared upon the idea that new and unusual conditions may arise after the close of the European war affecting our industries and business and possibly requiring changes and modifications in our tariff laws. A judicious revision of the rates of any item should be based upon full and complete information and knowledge for the guidance of Congress when it comes to execute the power conferred upon it by the Constitution. The practical question is whether such a commission would be of valuable assistance to Congress in the perfection of the tariff rates. It is, of course, evident that Congress or a committee thereof could not have all the infinite and necessary information required to enable it to act absolutely intelligently upon every item without time for investigation. No one can with absolute certainty know just what effect a slight change or modification in some particular item may have and to know absolutely how it may affect any industry. The commission will collect, tabulate, and systematize a large amount of material that will be of invaluable service in the consideration of a proposed change.

No work of man is perfect, hence no tariff law is perfect; still, as nearly perfect as one can be made, a change in conditions may make necessary or advisable a slight change soon after its passage. We will never hesitate to make any change at any time when such change is for the benefit of the American people and in their interest. Our party is dedicated to their cause and responds when the occasion arises. [Applause on the Democratic side.]

We have as the last section a provision making it unlawful for a person, partnership, corporation, or association to import and systematically sell any article at a price substantially less than the actual market value at the time of exportation with the intent of injuring an American industry or of preventing the establishment of any industry or of monopolizing any part of trade or commerce in such imported articles in this country. Also of levying a special duty upon any article produced in a foreign country and imported here under the conditions that anyone here shall be restricted in any manner in his purchasing articles of another person.

This legislation is the necessary result of the vastly increased appropriations in pursuance of the program of ample and complete preparedness. The Underwood law was approved by the President October 3, 1913, and would have met all the usual and ordinary expenses of the Government but for the very large decrease in our importations caused by the European war, yet during the fiscal year ending June 30, 1914, produced $10,000,000 more than the Payne law the year before. It is true that the receipts for 1914 were aided by retention of the Payne rates on wool until December 1, 1913; on woolens to January 1, 1914; and on sugar to March 1, 1914. Comparing the receipts under the Payne law from January 1, 1913, to August 1, 1913, and the Underwood law during the same period in 1914, the same being to the beginning of the European war, and you will discover the Underwood law yielded $18,000,000 more than the Payne law for a like period. From January 1, 1914, to August 1, 1914, the beginning of the European war, the average customs receipts were $22,400,000 per month, and on this basis, had it not been for the falling off in customs receipts due to said war, the total receipts for the fiscal year would have been $269,000,000 instead of $210,000,000; the difference of $59,000,000 being caused by the European war. This decrease in revenue was provided for by the emergency revenue law of October 22, 1914, and would have been entirely unnecessary but for the European war. If the Payne law had been in operation at said time, importations would in like manner have been reduced and a deficit in money caused thereby, making the raising of additional revenue necessary to be provided by an emergency act of some kind.

They also charge that the Underwood law has caused deficits in the Treasury. As a matter of fact, if we exclude the Civil War period, the largest fiscal year deficits of ordinary receipts and disbursements in its history occurred while Republican tariff acts were upon the statute books. In 1894 under the McKinley Act the deficit was $69,000,000; in 1899, under the Dingley Act, the deficit was $89,000,000; in 1909, under the Dingley Act, the deficit was $58,000,000. The Payne law was in operation four years, and if the Republican administration had not issued two series of Panama Canal bonds that law would have brought a deficit to the Federal Treasury three out of the four years. The total deficit—that is, the difference between all receipts and disbursements from 1908 to 1913, under Republican administration and tariff acts, were more than $100,000,000, and without proceeds from canal bonds would have been more than $208,000,000, yet at the end of the fiscal year June 30, 1914, and before the outbreak of the European war, under the Democratic administration and Underwood law, there were both a surplus or ordinary receipts over all disbursements without the aid of a dollar of canal bonds, yet during that time we expended $35,000,000 upon the canal.

They tell us that the increased importations will destroy our home industries and the low rates of the Underwood law are alone responsible for said importations. The increased importations for the first year after the Underwood law was passed was less than 5 per cent, while the increased importations the first year after the Payne law was passed was over 18 per cent. The real manner in which to estimate the amount of importations, as related to our home industries, is by the per capita value of said importations. The per capita value in 1915, the last year we have the full data, was less than in 1910 or in 1912 under the operation of the Payne law.

To-day we have more prosperity than at any time in the history of the country, and our political opponents desire to give the credit to the shipment of munitions of war abroad. The total value of all articles that could have been converted into any possible use for the European war is less than 3 per cent of the total value of all our manufactured products; and if there had been no munitions of war sold, so small a proportion

of our total manufactured products, our prosperity could not have been affected thereby.

Mr. MEEKER. Will the gentleman yield for a question?

Mr. DIXON. Not at this time.

Mr. MEEKER. Just one question in that connection.

Mr. DIXON. All right.

Mr. MEEKER. Can you give us any idea of the percentage of products that have gone beside munitions, such as foodstuffs, and so forth?

Mr. DIXON. The Monthly Summary, as prepared by the Department of Commerce, sets it out fully, item by item.

Mr. KELLEY. Would not that affect the general prosperity of the country very much—the increased exportation of food supplies?

Mr. DIXON. All those things would naturally affect the prosperity of the country. My proposition is that the exportation of munitions of war alone is too small, in comparison with the total of our manufactured goods, as to amount to enough to affect the prosperity of the country.

To-day there are larger deposits in our national banks, our State banks, savings banks, loan and trust companies than ever before; there are more depositors in each of these institutions; our banks have the largest surplus funds and undivided profits than at any former time; we have more building and loan associations, with larger membership and larger total assets; our railroads in 1914 and 1915 carried more passengers and more freight and had more passenger and freight cars in active service; our postal receipts, in the sale of postal cards, postage stamps, and money orders, broke all former records; there were more boys in colleges and girls in colleges and seminaries, and this is accounted for by the fact that more parents were financially able to afford them college education; there were more employees in the woolen industry, in the cotton industry, and in the iron and steel industry, with larger wages than ever before; there were a larger number of wage earners in all the manufacturing establishments in the United States, with higher wages and with the largest production of goods; and you will find that in November there will be more Democratic ballots in the ballot box than ever before in the history of the country.

Mr. HAMILTON of Michigan. Mr. Chairman, about the time of the last national election Mr. Hennessey remarked to Mr. Dooley that the Democratic Party ought to profit by the mistakes of Republicans, to which Mr. Dooley replied with great dignity, "Hennessey, the Democratic Party can make its own mistakes."

Mr. Dooley was right. But the mistakes of the Democratic Party have not been so dangerous to the country as its principles—that is, if you can separate its mistakes from its principles.

It was a mistake, of course, for you to tell the people you would reduce the high cost of living. You knew you could not do it, and it was a mistake for you to promise to get along without injuring legitimate industry.

These mistakes and others only reacted upon yourselves, as a party, and affected your already somewhat precarious reputation for truth and veracity. [Laughter.] But when you undertook to run the Government with your principles, that was a serious matter—for the Government.

Party politics is a very human relation. It is never better than the people who compose it. Sometimes it is a good deal worse.

Take for illustration the Democratic Party as represented here on the floor of this House. Most of you are conscientious, patriotic gentlemen, who come from districts where they vote the Democratic ticket from force of habit, so that to be a Democrat is largely an automatic performance, and yet the sum total of these automatic results is an incoherent aggregation, except when controlled by Executive dictation.

There are a good many luminaries among you, of course, but each one of you wants to be a separate solar system all by himself, when in reality you are only sparks in the tail of the President's comet. I have no knowledge of the science of navigation, but as I understand it a comet is a mighty poor thing to steer by. [Laughter.]

AN AMBULATORY PLATFORM.

We have been in the habit of thinking of a political platform as a more or less definite statement of principles on paper, but the Democratic platform is now and for a long time has been a cordially cold human document in a frock coat, constantly subject to the vagaries of changing circumstances. [Laughter.]

And this brings me to the subject of a tariff commission. A year ago last January your ambulatory platform went out to Indianapolis and in the course of a speech there told his audience that there was a "joker" in the trade-commission law that answered the purpose of a tariff commission.

And he was somewhat supercilious and jocular about it. He said he was a school-teacher, and had no objection to instructing uninstructed Republicans, but he wanted it understood that he had not always taught in the primary grades.

A little later he wrote ex-Gov. Cox, of Ohio, that he was not in favor of an independent tariff commission anyway.

But finally he informed the gentleman from North Carolina that he had changed his mind on the subject of a tariff commission, because, he said, the circumstances of the world had changed. [Laughter.]

Then, to quiet the natural fears and apprehensions of the gentleman from North Carolina, he explained that he had "no thought whatever of a change of attitude toward the so-called protection question." "That," he said, "was neither here nor there."

Well, the "so-called protection question" is "here" now and we are going to have an election in November, and the "so-called protection question" will be "there," and then perhaps the President may not be "here." [Laughter on the Republican side.]

To paraphrase one of Mr. Raymond Hitchcock's curtain speeches, anyone can come out "there"; the thing is to get back "here." Many a man has come out "there" subdued, chastened, disciplined, and never lived to get back "here." [Laughter.]

It is really not of very great importance—getting back here—but a good many people lay a good deal of stress on it, possibly on account of the opportunities presented by the CONGRESSIONAL RECORD. [Laughter.]

CHANGING CIRCUMSTANCES AND CHANGING PRINCIPLES.

But, Mr. Chairman and gentlemen, consider the effect of all this upon the gentleman from North Carolina.

Consider being buffeted by "the changing circumstances of the world" by direction of some one else when you yourself do not consider that your principles ought to be constantly changing with changing circumstances. [Laughter.]

It was only a few months ago—before "the circumstances of the world began to change"—that the Hon. Thomas Riley, of Connecticut, then a Member of this House, broke into rapture in a pamphlet, widely circulated among the brethren, and dedicated to the gentleman from North Carolina, describing him as "a tall, erect, black-haired, black-eyed, handsome, dashing chap, born to lead."

Of course! Everybody indorses that. Everything that was said in that pamphlet was true, and more, too.

For illustration, it was true that the gentleman from North Carolina had sat up nights studying the doctrines of Democracy, which he conceived to have some stability at that time. [Laughter.]

It was true that he had attained rotundity of person in peaceful deglutition of Democratic doctrines, undisturbed by warlike alarms. [Laughter.]

And then, gentlemen, "the circumstances of the world" began to change.

The President, who had advised everybody not to become "nervous and excited," himself became "nervous and excited" and began to see "sparks falling all around" from New York to St. Louis and back again. [Laughter.]

Then he began to advocate a stronger Army and "a Navy incomparably the greatest in the world."

And the bigger the crowds, the bigger the Army and Navy. [Laughter.]

Then the whole Democratic Party got excited and began to shiver in Mr. Wilson's shoes. [Renewed laughter.]

Then "the circumstances of the world," continuing to change, the President revealed to the gentleman from North Carolina the necessity for a tariff commission in relation to which the "so-called protection question should be neither here nor there." [Laughter.]

And from that time on the joyous lilting spirit of the gentleman from North Carolina began to be subdued from that of an oratorical Pegasus, levitating in the radiant atmosphere, to that of a political dray horse pulling presidential loads, and doing it somewhat reluctantly. [Laughter.]

Gaze on the picture painted by Mr. Riley and then on this! The circumstances of the world have indeed changed.

"There comes a mist and a driving rain, and life is never the same again."

Times are changing, and we are changing with them. And it is no part of the purpose of the whirling Dervish of Democracy to let times change any faster than he can change. [Laughter.]

TARIFF COMMISSION HISTORY.

Let us analyze this proposition for a tariff commission in relation to which "the so-called protection question shall be neither here nor there."

This "so-called protection question" involves the levying of duties which shall equal the difference between the cost of production at home and abroad—that is, duties low enough to prevent domestic monopolies from overcharging domestic consumers and high enough to protect American labor from direct competition with cheap foreign labor. [Applause on the Republican side.]

In order to ascertain this difference with a reasonable degree of scientific accuracy, a great many people have for a long time believed that a tariff commission is necessary.

The Payne law of 1909 carried the beginning of a tariff commission, and in 1910 the Republican platforms of 28 States demanded a permanent independent tariff commission.

In January, 1911, the National Tariff Commission Association met in Washington and adopted a resolution demanding that the Sixty-first Congress, then in session, pass a tariff-commission bill.

Thereupon (1911) the Ways and Means Committee unanimously reported a tariff-commission bill, which passed the House, passed the Senate slightly amended, and came back to the House so late that its opponents were able to kill it.

Subsequently, May 9, 1912, Mr. CLARK of Missouri explained how two-thirds of the Democrats "lined up" against a tariff commission and, to use his expression, "rolled" him and Mr. UNDERWOOD "to a fare you well," which is pretty fair evidence that two-thirds of the Democrats were against a tariff commission then and are yet, for that matter.

In the Sixty-second Congress (1911–1913) this same defeated bill was offered as an amendment to the wool bill, then as an amendment to the so-called "excise bill," but this and various other tariff-commission bills failed in a Democratic House.

In January, 1913, the National Chamber of Commerce, with constituent organizations in nearly every State in the Union, began to advocate a tariff commission, and has continued to urge it ever since.

NEED OF PROTECTION PLAIN.

It is plain that the present tariff law is not yielding sufficient revenue to run the Government.

It is plain to Democrats that something must be done to placate public sentiment against the Underwood bill.

It is plain, too, that important changes in international trade are resulting and will continue to result from the European war.

It is plain, too, that the nations of Europe will revise their tariffs and inaugurate new schemes for commercial expansion.

It is plain, too, that we ought to protect ourselves against the tide of importations which the Secretary of Commerce says will threaten the "very existence" of our industries.

It is plain, too, that what we do ought to be based upon the known facts of international trade.

It is plain, too, that we ought to repeal the present tariff law and substitute a law that will yield sufficient revenue to run the Government and protect American labor and American industry.

But the President says he has "no thought whatever of any change of attitude toward the so-called protection question." That, he says, is "neither here nor there."

To what end, then, is he driving his reluctant party into passing a tariff-commission bill?

A tariff commission can not legislate; a tariff commission can not pass a tariff bill.

It can only gather facts for the use of a Ways and Means Committee in framing a tariff bill.

But to what end would a tariff commission gather facts?

A Democratic Ways and Means Committee would pay no attention to facts that did not coincide with their preconceived conclusions about the tariff.

The Democratic Party would cease to exist if it used facts gathered by a tariff commission for protection purposes.

No information, however conclusive, will ever induce the Democratic Party to protect American labor and American industry.

ANALYSIS.

Let us consider this tariff-commission bill.

A modern tariff bill contains 14 schedules and a free list.

In express terms or in general terms these schedules and this free list affect every commodity that can be grown, manufactured, or produced on American soil and every commodity that can be imported.

These sections and this free list have to do with all the products of American labor in their relation to foreign labor, all the products of American agriculture in their relation to the products of foreign agriculture, all the products of American factories in their relation to the products of foreign factories, all the products of American mines and forests in their relation to foreign mines and forests, and they also have to do with the raising of revenue to run the Government.

A tariff commission ought to be a practical and yet scientific organization, not organized to theorize but to furnish facts without regard to what effect they may have upon the fortunes of any political party.

This bill does not provide that agriculture or commerce or labor or manufactures shall be represented on the commission. Its personnel is left entirely to the President.

It defines its "duties"—that is, the things it must do—in section 502, and it defines its "powers"—that is, the things it may do if it wants to do them—in section 504.

Let us consider the duties of the commission defined in section 502.

First, it provides "that it shall be the duty" of the commission "to investigate the administration and fiscal effects of the customs laws of this country now in force."

Well, it needs no commission to tell us that.

Second, it provides "that it shall be the duty" of the commission to do the same thing as to laws "which may be hereafter enacted."

This might be useful, but the fiscal effect of a tariff law is one of the first things obvious to everybody.

Third, it provides "that it shall be the duty" of the commission "to investigate the relation between the rates of duty on raw materials and finished or partly finished products."

This calls for a professorial thesis on the relations of different kinds of duties.

Fourth, it provides for an investigation of "the effects of ad valorem and specific duties, and of compound, specific, and ad valorem duties."

Useful enough, but scarcely worth seventy-five or eighty thousand dollars a year.

Fifth, it provides for an investigation of "all questions relative to the arrangement of schedules and classification of articles in the several schedules."

This may be useful, but it scarcely requires six men, each at $10,000 a year, to do it.

Sixth, it provides for an investigation. "In general, to investigate the operation of the customs tariff laws, including their relation to Federal revenues."

"In general" you can ascertain about the working of a tariff law on any street corner, and its effect upon the Federal Treasury soon becomes a matter of common knowledge.

Section 504 gives the commission certain discretionary "power" to investigate "conditions, causes, and effects relating to competition of foreign industries with those of the United States, including cost of production and dumping."

If "cost of production" means cost of production at home and abroad, why not say so? If it means that the "power" shall be exercised, why not require it?

EXCLUSIVE INFORMATION.

Both these sections are vague, uncertain, and indefinite, and such information as the commission has is not to be given to the people; not to be given to the press. It is to be given only to the President, the Ways and Means Committee, and the Finance Committee.

Common, ordinary Members of the House and Senate can have none of it except by charitable dispensation in homeopathic allowances by the President and by these illustrious committees. [Laughter.]

Gentlemen of the Ways and Means Committee always speak of themselves now in terms of great respect, but if this provision by which they propose to seclude themselves in the upper regions of exclusive information becomes law, these gentlemen will become like the German professor, whom Coleridge met at Frankfort, who always took off his hat with profound respect when he ventured to speak of himself. [Laughter and applause on the Republican side.]

Compare the obscure, nebulous, and indefinite language of these sections with the plain, direct language of section 2 of the bill prepared by the Tariff Commission League, which embodies the principles indorsed by the National Chamber of Commerce:

SEC. 2. That it shall be the duty of said commission to investigate the cost of production at home and abroad upon all articles which are or might be, now or hereafter, the subject of tariff legislation, with special reference to the prices paid for domestic and for foreign labor, the hours of service and the standard of living; also the prices paid for raw materials, whether domestic or imported, entering into manufactured articles, for purposes of determining the difference between the cost of manufacturing such articles in the United States and articles of foreign manufacture of similar kind and quality; the importing

cash price plus expenses and the tariff thereon at the United States port of entry; and shall tabulate and set forth all detailed information obtainable with respect thereto, and particularly as to the amount of revenue that the several articles, respectively, have produced under various tariff acts of the United States, the amount of revenue at the time being produced thereon under any existing act, and, so far as the same can be determined or estimated, the effect upon the revenue of raising or lowering the tariff rate a stated amount; and all other information that may be useful to enable Congress to ascertain as nearly as possible whether or not a tariff duty is necessary or expedient; and if so, what the rate should be.

In reaching its conclusion the commission may take into account the difference in the cost and standard of living at home and abroad by the workers engaged in the industry.

It shall be the duty of the commission to make, or cause to be made, a study of the classification of the various items that appear in the existing tariff enactment and the classification of similar articles in any tariff schedule of the principal commercial countries of the world, for the purpose of ascertaining whether the several items are fairly and properly classified; and if not, to make such recommendations as will properly fix the status of such items in the tariff schedules.

If it is worth while to pass a tariff-commission bill at all, why not make it clear, specific, and direct?

TO WHAT PURPOSE?

But to what end do you propose a tariff commission?

Not to protect American labor and American industry. You do not dare do that.

You have no idea of changing your system. You are committed to a tariff for revenue only.

If what you have done is the slightest symptom of what you are likely to do, your treatment of the Taft Tariff Board convicts you of insincerity in relation to this board.

That board was bipartisan. There can be no such thing as a nonpartisan tariff board, if its members are worth having as American citizens, but there can be a board composed of men of such standing that their findings of fact will command the respect of the American people.

The Taft Board made a fair, unbiased report, but when that report was submitted to a Democratic Congress it refused to be guided by it in any way in framing tariff legislation.

It wanted only such facts as coincided with its party policy. Facts which did not agree with that policy were not facts. Nothing that indicated the need of protection interested it.

LEMONS.

Notwithstanding the disinclination of the Democratic Party to any standard by which its tariff conduct can be measured, consider the advantage it might have derived from a tariff commission in relation to lemons in the last tariff bill.

I do not say the tariff on lemons would have been different if you had had the advice of a tariff commission instead of the advice of lobbyists, but unbiased information might have saved you from the claim of paid lobbyists that they influenced your conclusions.

I touch upon this lemon item reluctantly and only to illustrate how the honest, but misguided, conduct of legislators may sometimes become entangled in the public mind with the devious dealings of unscrupulous mercenaries.

Dissension in the Fruit Importers' Union, an organization of importers of citrus fruits from Sicily, has lately revealed the fact that a fund of $140,000 was raised to facilitate a reduction of the duty on Sicilian lemons in the Underwood law.

It appears also that one William C. Beer, of New York, has commenced suit to recover a balance of $75,000 on a contract for $110,000 to engineer a campaign of education in relation to lemons in the Underwood bill.

In commenting upon his suit, Mr. Beer explained that as a result of his activities in this movement "the Italians were in full swing for Woodrow Wilson in the presidential campaign of 1912." He says, "We spent money like water and we helped to elect Woodrow Wilson. We had a right to expect some gratitude."

Of course, but, as Machiavelli observed some centuries ago, humanity is slow "to prove gratitude for service."

A COMMISSION INCONSISTENT WITH ALLEGED DEMOCRATIC PRINCIPLES.

This Congress is Democratic. Everybody realizes that. [Laughter.]

This administration is composed of men who by training and tradition are opposed to protection.

The President, his Cabinet, and the majority in Congress have declared their opposition to protection.

Your platform of 1912 declared that protection is unconstitutional. Pursuant to that platform you passed the Underwood law, which you now indorse in your platform of 1916.

You say the only legitimate purpose of a tariff is to raise revenue.

If that is true, what need have you of a tariff commission?

All you have to do is to send down to Mr. McAdoo for a few Treasury statistics about exports and imports, have an expert clerk detailed from the Department of Commerce to advise you as to the effect of lowering duties, sit gravely to hear testimony the effect of which you have discounted before you hear it, compromise your own conflicting interests, call a protective tariff a revenue tariff when your local interests require it, and then appear upon the floor of the House, with great gravity and an appearance of exhaustion, congratulate yourselves upon being members of so august a committee, tell the country how hard you have worked, and then, when hard times come on, solemnly swear they are only the natural reaction from good times under a protective tariff. [Laughter on the Republican side.]

You start with a predetermined hypothesis in favor of low duties or no duties, and it would work a revolution in your party and obliterate you as a party if you did anything else than insist on a tariff for revenue only.

All you can do is to ignore facts that do not support your views and adopt those that do.

American agriculture, American capital, and American labor never yet have had and never will have a fair hearing before any Democratic free-trade Congress.

REPUDIATED PLEDGES.

This whole tariff-commission proposition is only another piece of political hypocrisy intended to fool the people in the coming election.

You have held a convention and are about to enter upon another campaign.

The President has run up his political periscope, looked around the horizon at the "changing circumstances of the world," observed the "low visibility" of Democratic prospects, gone to the bottom for reflection, and come up again with this tariff-commission proposition, stolen from the Republican Party and intended only for effect in the coming campaign. [Laughter and applause on the Republican side.]

But the truth is beginning to dawn upon the people that the secret of the President's policy is that he has no policy, and this will confirm it. [Applause on the Republican side.]

You have held a convention and framed another platform; but whoever reads it will remember that you repudiated your last platform in at least nine essential particulars.

You have framed another platform, but you have not dared to tell the people again that protection is the cause of high prices.

You have framed another platform, but you have not dared to declare again that protection is unconstitutional, because you knew if you did you would be asked why you extended the duty on sugar.

You have not dared to tell the people again that you do not mean to "injure or destroy any legitimate industry." That would only arouse unpleasant memories. [Laughter.]

You have not dared to tell the people again that you are in favor of "simplicity and economy." The people know too well that you have increased appropriations and increased taxes. [Applause on the Republican side.]

They have not forgotten the declaration of the Democratic chairman of the Appropriations Committee that the Democratic Party had "unnecessarily piled up the public expenditures until it had become the laughing stock of the country."

You have not dared to promise again "the full protection of this Government" to the persons and property of American citizens "in foreign countries" and "on our borders."

This administration has filed a bill of particulars of its failure to keep this promise in its letter to Carranza. [Laughter.]

You have not dared to tell the people again that your "pledges are made to be kept in office as well as relied upon during the campaign."

That would cause a universal guffaw. [Laughter.]

You have not dared to say anything about one term. But the people will remember what you said in 1912 and take you at your word. [Laughter and applause on the Republican side.]

Ex-Gov. Glynn, in his speech at the St. Louis Convention, in a flight of oratorical imagination, prophesied that the principles declared at that convention would be remembered for a hundred years.

It may be, but when a party forgets, violates, and repudiates its promises in less than three years it is not likely to be remembered for anything except its colossal mendacity. [Applause on the Republican side.]

AN UNGRAMMATICAL TRUTH.

In the last Congress you Democrats seated a Democratic contestant, and with a view possibly of illustrating his capacity for service on the Democratic side of the House some of the brethren asked that he be permitted to speak in his own behalf.

He was not strong on grammar, but in the course of what he had to say he uttered a profound truth, which will recur to you gentlemen from time to time in the coming campaign.

It was this: "Misrepresentation don't never get nobody nothing nohow." [Laughter.]

"In every matter of important legislation, not only are the legislators deciding about the legislation, but the people are deciding about the legislators."

The people have decided about you.

One of the Roman emperors is said to have spent the revenues of the Empire upon astrologers to forecast the future. You can get that done now on any street corner in the United States—for nothing.

And the forecast is: Democratic defeat in November. [Prolonged applause on the Republican side.]

Mr. KITCHIN. Mr. Chairman, I yield 30 minutes to the gentleman from Missouri [Mr. DICKINSON].

Mr. DICKINSON. Mr. Chairman, the country is confronted with a condition that compels Congress to provide additional revenues, made necessary by war conditions that disturb the entire civilized world. Legislation for adequate preparedness has been demanded, and such legislation has been and is now being passed in response to that demand. The necessity for this legislation, contained in the pending measure, grows out of the extraordinary increases in the appropriations for the Army and Navy and fortifications of our country. This revenue bill, reported from the Ways and Means Committee, seeks to provide the money necessary to meet these additional appropriations.

The responsibility to meet this condition rests upon Congress—upon Democrats and Republicans alike. This proposed legislation can not justly be charged as partisan legislation. It meets the best judgment and patriotic thought of the people of this country. It represents the honest sentiment of the masses, whose agents you are, and its early passage and enactment into law will be heartily indorsed by those who are responsible for your being here. A vote in favor of this bill will meet with their approval. A vote against it should meet with their rebuke.

In addition to increasing the income tax, this measure further proposes two new sources of revenue, namely, a Federal inheritance or estate tax and a tax upon the manufacture of munitions of war. The necessary additional revenue is to be raised in the following manner:

(1) By increasing the present income-tax rates;

(2) By levying an estate tax;

(3) By levying a tax upon the manufacture of munitions of war; and

(4) By reenacting certain of the special taxes provided in the emergency revenue act of October 22, 1914, omitting objectionable stamp taxes.

It provides for an enlarged income-tax law. It doubles the present normal tax and levies an additional or surtax, commencing with 1 per cent on incomes of $20,000 and increasing up to 10 per cent on annual incomes of $500,000 and over. This bill proposes an increase in the normal tax on incomes and the tax on corporations from the present rate of 1 per cent to 2 per cent.

In lieu of the present law, which imposes additional tax rates upon net incomes of individuals, this proposed revenue bill imposes the following additional tax rates upon net incomes of individuals:

1 per cent additional on incomes over $20,000 and not exceeding	$40,000
2 per cent additional on incomes over $40,000 and not exceeding	60,000
3 per cent additional on incomes over $60,000 and not exceeding	80,000
4 per cent additional on incomes over $80,000 and not exceeding	100,000
5 per cent additional on incomes over $100,000 and not exceeding	150,000
6 per cent additional on incomes over $150,000 and not exceeding	200,000
7 per cent additional on incomes over $200,000 and not exceeding	250,000
8 per cent additional on incomes over $250,000 and not exceeding	300,000
9 per cent additional on incomes over $300,000 and not exceeding	500,000
10 per cent additional on incomes over $500,000.	

This bill leaves the income exemption at $3,000 for unmarried persons and $4,000 for married persons, or heads of families. During the fiscal year ending June 30, 1917, it is estimated that the income tax proposed by this measure will yield from the incomes received or accrued during the calendar year 1916, $227,000,000, or about $107,000,000 more than would be received under the rates provided in the present law.

This revenue bill further provides for a Federal estate tax upon inheritances in excess of $50,000. In determining the value of the net or taxable estate, deductions for all valid claims against the estate are allowed from the gross value of the estate and in addition an exemption of $50,000. The proposed measure levies the following taxes upon the transfer of such net or taxable estate of every decedent:

One per cent of the amount of the net estate not in excess of $50,000.
Two per cent of the amount by which the net estate exceeds $50,000 and does not exceed $150,000.
Three per cent of the amount by which the net estate exceeds $150,000 and does not exceed $250,000.
Four per cent of the amount by which the net estate exceeds $250,000 and does not exceed $450,000.
Five per cent of the amount by which the net estate exceeds $450,000.

The inheritance-tax laws of the various States never have been a source of large revenue. The total inheritance-tax receipts of the 42 States having inheritance taxes amounted in 1913 to only $26,470,964 and in 1915 to $28,217,735.55, as compared to Great Britain's receipts from her "death duties" or inheritance taxes, amounting to $132,000,000 in 1914.

The law specifies that the tax shall be due one year after the decedent's death, and allows a discount of 5 per cent per annum in case of payment before due. It is estimated that when the law is in complete and normal operation it will yield $54,000,000 annually. For the year ending June 30, 1917, the revenue from this source is estimated at $17,000,000.

This revenue bill further provides for a tax upon the manufacture of munitions of war, so that war profits on such manufactures shall help to bear these extraordinary burdens resulting from war conditions, the same conditions that require large expenditures for national preparedness for adequate defense. Those receiving special benefits from these disturbed conditions should help to pay for these increased expenditures. It is estimated that the munitions tax will yield during the fiscal year ending June 30, 1917, $71,000,000.

All of the stamp taxes provided in Schedules A and B of the emergency-revenue act of October 22, 1914, as extended by the joint resolution of December 17, 1915, are repealed immediately upon the passage of this act.

These stamp taxes the gentleman from Nebraska [Mr. SLOAN] denounces as "infamous stamp taxes." During the Spanish War a similar but much more drastic stamp tax was passed by a Republican Congress, which included stamp taxes on bank checks and other items, not included in this stamp-tax law, now repealed. The Spanish War tax measure was passed when trade and business conditions were far less disturbed than when this emergency-tax measure was passed because of the European war, which had paralyzed in a large measure the world's commerce and disturbed business everywhere and especially in this country during the early part of the war—cutting off customs revenues. I hope he will vote for this bill that repeals these stamp taxes so obnoxious to all of us.

This great revenue bill goes further. It provides for certain dyestuffs legislation, deemed appropriate because of abnormal and extraordinary conditions and to create a dyestuffs supply in this country, and thus make the United States independent in the manufacture of its own dyestuffs, so that it will not be at the mercy of foreign manufacturers of dyes during or after the European war closes. It is said that prior to the war Germany supplied the United States, Great Britain, France, and Russia with 80 per cent of the dyestuffs used by these countries. It is impossible now to secure dyestuffs, except in small amounts and at enormous prices, because of the war in Europe. This legislation seems important so as to make this country independent of the foreign supply by the manufacture of its own dyestuffs.

This bill also provides for a nonpartisan tariff commission, free from political control, so earnestly desired by the business world. A tariff commission will not entirely take the tariff out of politics. But it will change largely the method of making tariffs, and should largely take politics out of the tariff.

Who can justly charge that this measure is partisan in its character? No one does, except the bitter partisan, blinded by fierce prejudice.

Oh, some of you fear that the levying of taxes on large incomes and inheritances stands in the way of high protection. That fear, in my judgment, is in a measure well founded and is largely the cause of your active opposition to income and inheritance taxes. A high protective tariff system has been stricken down in this country, and I do not believe it will ever be restored to its former high estate. [Applause on the Democratic side.]

In June, 1909, in the Senate of the United States, Senator Aldrich, of Rhode Island, who was the patron saint of high protection, the comaker of the Payne-Aldrich tariff law, declared his opposition to income taxation as sure in the end to destroy the protective system, and at that time declared his

intention to vote for the corporation tax as a means to defeat the income tax; and he favored the corporation tax purely as a temporary measure to meet a then deficit in the revenues. Followers here of Senator Aldrich, while less frank, apparently are opposing this revenue measure for the same reason.

The Federal income-tax law is here to stay. By the mandate of the American people, even the Constitution of the United States was amended so that income taxation might become permanent law in this country. [Applause on the Democratic side.]

As between this law, that collects from those best able to pay, when every dollar goes into the Treasury, and the restoration of high protection, that fattens special interests, while the consumers pay the added burdens of tariff taxes, I have full confidence that the people will stand for an income tax, that they have forced Congress to enact. The income tax is far more equitable than a tax on consumption. The trend of thought in the civilized world has been in favor of income taxation. It is firmly established in all European countries. Criticism has been made that the minimum exemption is too high. If it had been fixed lower, I would have cheerfully voted for it. As it is written in the bill I shall heartily support it.

Income and inheritance taxes are not new in this country. The disturbed condition of the world has aroused great property interests for adequate preparedness against emergencies that may arise from foreign aggression, calling for large increases in Army, Navy, and fortifications, and particularly is this true along the seacoasts, where large cities and great wealth are located. Patriotic sentiment has been aroused. The youth of the land have been called on to respond, and not in vain. By the thousands they have rallied to their country's call, and it is a part of patriotism for the wealth of the country to be willing to pay for this service, while others go to defend their homes and property. [Applause on the Democratic side.]

Enormous profits come to those of large means, who fatten in time of war. The same conditions that bring additional expenses to the Government bring increased profits to them. Let large incomes, swollen fortunes, and war profits on the sales of munitions bear these additional burdens.

The taxes on consumption are already heavy enough. Let the burdens be shifted in a measure; equality of sacrifice, not merely equality of contribution. High protection, that shifts the burden onto the consumer, may suffer, as feared by special interests and by those here who advocate its restoration. High protection was doomed in this country. President William McKinley and James G. Blaine saw it and advocated tariff reform. The revolt of progressive Republicans helped to strike it down.

The fairness and justice of a graduated income tax are beyond question. As far back as 1864 the Hon. William P. Fessenden, a distinguished Republican, then Secretary of the Treasury, said in his report:

> The adoption of a scale increasing the rates of taxation as they rise in amount, though unequal in one sense, can not be considered oppressive or unjust, inasmuch as the ability to pay increases in much more than arithmetical proportion as the amount of income exceeds the limit of reasonable necessity.

Hon. John Sherman, a very high priest of Republicanism, in 1882 expressed himself on this subject as follows:

> The public mind is not yet prepared to apply the key to a genuine revenue reform. A few years of further experience will convince the whole body of our people that a system of national taxes which rests the whole burden of taxation on consumption and not one cent on property or incomes is intrinsically unjust. While the expenses of the National Government are largely caused by the protection of property, it is but right to require property to contribute to their payment. It will not do to say that each person consumes in proportion to his means. This is not true. Everyone must see that the consumption of the rich does not bear the same relation to the consumption of the poor as the income of the one does to the wages of the other. * * * As wealth accumulates, this injustice in the fundamental basis of our system will be felt and forced upon the attention of Congress.

On the income-tax bill, in 1870, Senator Oliver P. Morton, a great Republican leader, said:

> Mr. President, I was not surprised at the vote that we have taken this morning; that is, to strike out the general income tax. I have expected it for some time, but nevertheless I regret it deeply. Whether we consider it in regard to public sentiment, whether we consider it in regard to public justice, whether we consider it in regard to what is due the great mass of the people, and especially to the great mass of the poor people of this country, I regret it as a mistake, and a great mistake.
>
> Mr. DRAKE, of Missouri (a Republican Senator). A blunder.
>
> Mr. MORTON. Aye, it is a blunder; and that in politics is called a crime; but I will not so designate it this morning—that would not be respectful—but I do designate it as a blunder.

Many of the enormous fortunes of this country far exceed any service the recipients of these swollen fortunes have ever rendered society, and the time is ripe and opportune to levy graduated income and inheritance taxes for needed revenues.

Many of these enormous fortunes have been created through special privileges accorded by law or wrested from the people in defiance of all law. They cry aloud for larger armies and navies, for larger expenditures of public moneys. They have helped on the propaganda of preparedness and denounced Congress for its failure to adequately provide for the defense of the country. They seem to fear that tribute may be levied by foreign foes upon the wealth of the country, centered largely in our coast and other great cities. They urge the youth and manhood of the land to enlist, and while patriotism fills the breasts of those willing to risk their lives for their country, let wealth do its share in providing without complaint revenues necessary for its defense. While young men without wealth, the very flower of our country, bear the burden of battle and exposure to disease, let wealth, secure at home, pay a reasonable percentage for the support of the Government and for this preparedness demanded by wealth and the country. [Applause on the Democratic side.]

I heard in the early part of this debate from a neighbor of mine on the Kansas border, a very wail from the past, uttered so often in behalf of protection—that the foreigner pays the tax—an exploded theory. Every schoolboy, farmer, and laborer in the land knows that the tariff tax is passed on to the consumer and that the high wall of protection enables the inside protected interests to raise the prices of his products sold to consumers and they pocket these profits—not a cent of which goes into the Treasury. Every dollar of the income tax and inheritance taxes goes into the Treasury, except the small cost of collection.

Complaint is made of this bill that it has Democratic origin, and the distinguished gentleman from Michigan [Mr. FORDNEY] said he would not vote for a Democratic measure if it was covered with sugar a foot thick. All remedial legislation in recent years, tending to bring relief to the people, has had Democratic origin. Many Republicans here, by their votes on the final passage of these measures, written in the interest of the people, have evidenced their approval, even though from Democratic source. I have no such partisan prejudice. I voted for a tariff-commission measure of Republican origin during Mr. Taft's administration, more partisan in its construction than this tariff-commission measure, and I will cheerfully support it now; far preferring that the facts regarding needed tariff changes, as evidenced from time to time by changed conditions, shall be brought to Congress by a high-class tariff board than that special interests shall send through their paid agents and controlled clerks prepared statements and schedules, to be written for their own selfish interests into tariff laws.

Our friend from Michigan [Mr. FORDNEY] would not vote for a Democratic measure, however beneficial to the country. He looks to the source rather than to the merits of the measure. Let the issues be made before the country upon the merits of this bill, and all legislation proposed and enacted will be of Democratic origin for many years to come; and our friend from Michigan will simply criticize and vote against all remedial laws. Many Republicans for pure partisan reasons, forgetting country and blinded by partisan prejudice, may vote against this bill, but I hope that a large percentage of the Republicans, forgetting mere partisanship, will follow the lead of those distinguished Republican members of the Ways and Means Committee from Ohio and Iowa, who indorsed this revenue bill, and will by their votes put their seal of approval upon the greatest and most patriotic revenue bill ever presented to this country, and give it your support, even though of Democratic origin. The people, regardless of party, are for this revenue measure.

It is to be regretted that partisan prejudice should color the debate on this great revenue bill. The country is weary of bitter partisan politics, and the time is near when you can no longer defeat legislation in the interest of the people by appeals to party prejudice. There is no minority report here suggesting a substitute measure to provide revenues needed for preparedness legislation. The Republican members of the Ways and Means Committee would not attempt by a minority report to suggest other means of raising this money.

You want a great Army and a great Navy and coasts lined with fortifications, far beyond what is necessary, but you are unwilling for the large incomes of great wealth to bear this reasonable burden. You are willing for the youth of the land to go to the front in defense of home and country, but you would place the burden of taxation upon the consuming public. You proclaim your belief in the immortal doctrine, "Eternal vigilance is the price of liberty," but when necessary revenues

must be secured you cry aloud against an honest and just measure, the most patriotic revenue bill over presented to the American Congress.

Strike down this measure, and you have stricken down preparedness and blocked the way for adequate defense of the country. The Army and Navy and fortifications bills will have been passed in vain, and you will have stultified every profession you have made in behalf of preparedness. Defeat this measure, if you can, and Democratic success will be more than assured by aroused public sentiment that will place the fault where it belongs. [Applause on the Democratic side.]

Mr. FORDNEY. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. GILLETT].

Mr. GILLETT. Mr. Chairman, I had not intended to discuss this bill, and I feel now like apologizing for taking the time, because, under the Democratic policy of suppressing debate, they have been so niggardly that not even the members of the committee had an hour apiece, and I feel as if we outsiders ought not to intrude. But inasmuch as some Members on this side have expressed their intention to vote for the bill, I wish to state my reasons for not voting for it. It seems to me that no Republican can logically vote for it. [Applause on the Republican side.]

The chairman of the committee, with his contagious facetiousness, told us that this was a nonpartisan bill. If it is nonpartisan, it belies the way that it was begotten and conceived. Some months ago the President came before us and told us that such a bill should be prepared, and he suggested the lines which it should follow, but his suggestions were met with such public execration, and the ears of that side of the House were so closely to the ground that not a line of his suggestions appears in the bill. Indeed, apparently the whole bill is framed to touch just as few taxpayers as possible, coming as it does just before election. After the President made those suggestions, the bill was taken up by the majority of the Committee on Ways and Means. It was concocted in secrecy. No intimation of its provisions was given to the Republican members of that committee, and it was not made public until it was introduced into this House on the very last day possible in order to be taken up yesterday. Then the day before yesterday the minority members of the Ways and Means Committee were, I understand, called in, not for consultation or discussion or amendment, but, as the gentleman from Ohio [Mr. LONGWORTH] told us, to be shown the bill and informed of the fact that the Democrats were going to pass it and that the Republican Members could take it or leave it just as they pleased. It is a partisan measure, prepared and backed by the Democratic Party, and the question for the Republicans is not whether the bill will pass. It does not depend upon our vote to pass it.

The decree has gone forth that it is going to be passed by the votes of the majority, and the question for Republicans to decide, it seems to me, is how shall we vote simply for our record. It makes no difference so far as the passage of the bill is concerned. The Democrats have the votes to pass it. Our vote simply amounts to a vote of protest or indorsement; and which shall a Republican give—a vote of protest or a vote of indorsement? The gentleman from Ohio [Mr. LONGWORTH] yesterday himself said it was by no means such a bill as he would prepare. Why, then, should we indorse it if it is not such a bill as we would prepare? We are simply making a record for ourselves. The bill is going through by a partisan vote, and the Republican vote is merely to show whether we approve it, whether it is such a bill as we want. Of course, it is not the bill that any Republican wants.

It seems to me that the thoughtful Republicans throughout the country will be amazed and dazed if they see us, who have been preaching right along that the main purpose of a revenue bill should be to change the tariff, vote for a revenue bill constructed especially to avoid and postpone such a change. [Applause on the Republican side.]

A return to the protective tariff is the fundamental Republican principle in a revenue bill.

I can conceive circumstances under which our vote might be different. If the leader of the majority, for instance, had come to us and had said that large appropriations had been made for preparedness, that the band of pacifists on that side of the House, of which he was at one time the head, was unwilling to vote to raise the revenue for those appropriations, and asked our assistance, I would be in favor of granting it. We might make terms, concessions, compromises, but I would not be chary of our aid. But no such situation confronts us. Under those circumstances we would have some responsibility, while now the Democratic side is assuming all of the responsibility. They have the majority. The result of congressional action is always either to the credit or to the blame of the party that is in power. They have assumed responsibility, and our duty is simply to vote our opinions upon this bill. Is it a bill the Republicans want or is it not? We do not have to make a choice of evils and compromise our opinions, as the majority always has to, but if it is not the bill we want we show it by voting against it. For myself, there are one or two features in the bill that I strongly object to. Inheritances are a wise and legitimate field of taxation and revenue, but in my opinion such taxes ought to be left exclusively to the States. The income tax can not be left to the States, for one State might bid for the capitalists by making the tax low, so the income tax belongs to the Nation. The inheritance tax, however, is not subject to that abuse.

The States are year by year increasing the inheritance taxes, and, in my opinion, it ought to be left to them. There are other things in the bill to which I object, but my main and sufficient objection to it is that it is a revenue bill, and that instead of approving the principle of protection, which is what Republicans claim ought to form the basis of any revenue bill, it entirely ignores and escapes it. [Applause on the Republican side.] The fact that we voted for large appropriations does not in any way obligate us to vote for a revenue bill unless we approve its principle and its details, particularly as we were entirely ignored in the framing of it and told that our assistance was unnecessary. Are we bound to vote for any revenue bill which is brought forward?

There are attractive features in the bill, such as the tariff commission, but they contradict and condemn the past conduct and arguments of the Democratic Party. Very likely some of them would appear in any bill we would frame, because we have long openly favored them, but, coming from the Democratic Party, they evidence a mere deathbed repentance before the election, which will be the funeral. [Applause on the Republican side.]

So, Mr. Chairman, it seems to me that the fundamental purpose of a revenue bill, from a Republican viewpoint, is protection. Even the gentleman from Ohio [Mr. LONGWORTH] and the gentleman from Iowa [Mr. GREEN], who said they would support the bill, professed no enthusiasm for it. Their support reminded me of a passage somewhere in Macauley where he said, "We all like to see a bear dance, but it is not because we think the bear dances well, but because we wonder that it can dance at all." [Laughter.] The fundamental Republican policy of a revenue bill—a return to the protective tariff—is conspicuously and intentionally lacking in this bill; and so, although it has features which I approve, I will not by my vote pretend that it meets my view of what a revenue bill should be at this juncture. [Applause on the Republican side.]

Mr. FORDNEY. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. EMERSON].

Mr. EMERSON. Mr. Chairman, I was very much interested in the remarks of the gentleman who preceded the gentleman from Michigan [Mr. HAMILTON], wherein he said that we had more money in the banks, more prosperity, and more children in our schools under the Underwood tariff bill than we have ever before had. The Underwood tariff bill may be responsible for those elements of prosperity to which he refers, but I hardly think he ought to claim credit for having more children in school because of the Underwood tariff law.

Previous to my coming to Congress last December I had heard a great deal about the gentleman from Michigan [Mr. FORDNEY], the gentleman from Connecticut [Mr. HILL], and the gentleman from Illinois [Mr. MANN], and the gentleman from Pennsylvania [Mr. MOORE], and two years ago, upon the stump in Ohio, I had quoted those gentlemen upon the side of protection on numerous occasions. After coming here last December and listening to the distinguished gentleman from North Carolina [Mr. KITCHIN] on several occasions, I desire to state here and now that I nominate him the greatest debater in this Congress, and probably one of the greatest debaters in America, and when I go on the stump this fall in Ohio I shall no longer turn to Mr. HILL or Mr. MOORE or Mr. FORDNEY to defend my position upon the protective tariff, but I shall quote what the gentleman from North Carolina said yesterday upon the question of the protection of dyestuffs, which I hope he will put in the RECORD.

The Democratic Party has "sort of come" to this protection theory slowly, piecemeal by piecemeal, and if perchance there should be a Democratic Congress next year, which there will not be, but if there should be, the Democratic Party will simply be the protection party of this country, and then party allegiance and party affiliations will cease and the great millen-

nium will be here and we will all dwell in peace and brotherly love. [Applause on the Republican side.]

There is and has been since the organization of the Republican Party an essential difference between the Republican and Democratic Parties on the subject of the tariff, the Republican Party always standing for a high tariff and protection, and the Democratic Party standing for a low tariff or absolute free trade.

The controlling motives of the early advocates of the protective tariff were solely economic. Protection was deemed an economic necessity; it was regarded as essential to enable a young and undeveloped country to develop its resources and become independent of foreign countries. It has been urged that when a country systematically and persistently places a high duty upon the products of other countries with the avowed purpose of excluding them from its markets those countries will retaliate by excluding its products. The experience of the United States in the period of almost continuous protection, from 1860 to the present time, has not justified this assertion; on the contrary, it is in this period of highest protection the world has ever known that the exports of the United States have grown most rapidly.

Some might say this is due to the fact that other countries were compelled to buy our food and bread stuffs and raw cotton, but the facts are our exports of manufactured articles have greatly increased during this period of extreme protection.

When they deemed it for the national welfare to build up the tin-plate industry so as to manufacture tin plate at home instead of buying it abroad, they made the duty high enough to encourage American capital to embark in the business, uninfluenced by the fact that it carried injury to the tin-plate mills of other countries.

The charge that a protectionist has to most frequently meet is that he seeks to discourage international trade. This position does the protectionist a great injustice. The protectionists are fully as eager as their opponents to develop the foreign trade, but not at the expense of the home market.

The home market is by far the best market for the American manufacturer to sell in, and besides all goods sold in the home market are made at home by our laborers, and the benefit remains at home.

The first tariff experience of the United States was during the period after the close of the Revolutionary War. The States themselves often levied tariffs which operated against the other States. Some States had no tariff at all, which lead to goods being brought into one State from abroad and reshipped into other States to the great disadvantage of the State into which the goods were shipped.

This was found wholly unsatisfactory, and many of the States finally asked Congress to levy a general tariff to apply to the imports to all States alike.

The assertion is made that protection is robbery and that, while it might have been necessary in the early history of the country, its usefulness is now over. But the mathematics of facts show that protection and the period of greatest national income were coincident; that high tariffs and highest income and low tariffs and lowest income also went hand in hand. The greater the capacity of the laborer to earn money, the greater will be his purchasing power. The greater his purchasing power, the greater his consuming power.

It may seem strange, but the more the laborer earns the more he will spend, and the more the productive power of labor is increased the more prosperity will be diffused.

But it is claimed that unscrupulous men, availing themselves of the advantages accorded by the high tariff, form combinations to increase the price of a commodity. It has been shown that the same disregard for the public welfare exists in free-trade countries.

But the facts are that where such a condition exists other capital, realizing the great profits, immediately gets into the field, and the result is, as has been shown on numerous occasions, the price is brought down.

Many powerful combinations have been formed in England, which is a free-trade country. It has been said that the protectionist supports high tariff because it is for his interest to do so, but we must not forget that the importer supports and contributes to the cause of free trade. To him the wages of labor in his country are of no consequence. It makes no difference to the importer where the goods are obtained or in what country they are manufactured or what are the conditions of labor where they are manufactured as long as he can compete with the domestic manufacturer. If we buy our goods abroad, we deprive our laborer of an opportunity to earn a living, whereas if we buy at home, even if we pay more, we are giving employment to home labor and thus enabling our labor to buy the things we ourselves sell.

I am a believer in the policy of buying goods marked "Made in America." Before the Civil War the South was largely an agricultural country, and sold its cotton, tobacco, and so forth, in a market 3,000 miles away, and naturally bought in that market. But under protection even the South is becoming a manufacturing section in a way, and large quantities of its resources once exported are now consumed in this country and even some manufactured in the South.

Again, in most of the countries of Europe there is heredity pauperism. No such condition prevails in this country, where every boy is given an opportunity to work his way to the top.

Besides, supposing we pay more under protection for the goods we buy than we otherwise would, we have the money with which to buy.

A well-fed nation is a better nation than an underfed nation. It will do more work and superior work, the standard of self-respect is higher, and its moral tone will be raised. No nation can enjoy these blessings where the wage scale is low. A cheap man never made a high civilization or a strong nation or a liberty-loving nation.

Hunger is a great incentive to crime and sin. The test of civilization is the dearness of men. Cheap men do not create a great civilization or a strong nation. When the labor and citizen become dear, they should be protected against the inferior man of other countries.

If any person wants the advantages of this country, that person should have it only by rising to our plane of doing business. We should not be exposed to the disadvantage of being obliged to drop to the lower plane, as we would be obliged to do if our laborer had to compete with the laborer who lives on the lower plane. It is true that the foreigners who come to this country from countries that live on a lower plane in a short time establish themselves on the higher plane or return to the countries from which they came. There are numerous instances where the young immigrants or the children of immigrants have easily adapted themselves to our higher plane and became our leading and most capable citizens.

In the house of the well-paid and thrifty mechanic one finds solid furniture of good workmanship and pleasant design. He must have something that is not only more comfortable but which appeals to his sense of the beautiful.

This is the home in which the children of America should be raised. The free trader says that it costs more to live in America than in Europe. This is true, because the American laborer demands more and better food, larger and better homes and more of the comforts of life. The American workingman is the best fed, best clothed, and the best housed in the world. As a child he is not half starved or stunted in his growth. There are more proponents of a reasonable high tariff in this country to-day than four years ago. Many now realize that domestic industry was temporarily saved by the European war, and that sharp competition will begin again as soon as that titanic struggle is over. We need economic preparedness quite as much as we do military preparedness. I stand for both. This can only be done by placing a higher tariff on articles manufactured in this country that come in competition with articles manufactured in countries where labor receives lower wages than labor in this country.

Europe will need the money as never before and naturally will sell at less profit. But some say there will be no longer cheap labor in Europe after the war.

On the other hand, many men now engaged in the manufacture of war munitions will be out of employment after the war is over. Also in some parts of Europe women are taking the places of men. This is especially true in Germany, and many of these women, being widows, will be forced to work after the war has been settled and peace declared. Besides, the men that are now doing the fighting will return to the shop and the farm. I venture it will require something more than "whetting their wits in world competition" to keep American labor after this war in Europe is ended on the higher plane it has held. At the time the European war broke out—August 1, 1914—industrial and business conditions throughout the United States were very bad indeed. At least 3,000,000 men, American wage earners, were either wholly out of employment or working at reduced wages or fewer hours per day.

I desire to read some statistics from the report of the Department of Commerce and Labor. They give a very accurate idea of the increase in our export trade in American products caused directly by the European war. They tell the whole story of the cause of such prosperity that our Democratic friends boast so much about. But for this extraordinary increase in our exportation of American products, caused by the war, the industries and general business of the United States would be in a deplorable condition.

Here are the exact figures for you to compare:

Exports of American products.

Articles.	Seven months ending January, 1914.	Seven months ending January, 1916.
Cattle	$355,000	$2,000,000
Horses	1,653,000	51,183,000
Mules	389,000	14,116,000
Total exports of animals	3,000,000	67,693,000
Brass and manufactures	4,331,000	44,511,000
Corn	3,832,000	10,104,000
Breadstuffs	63,807,000	125,000,000
Cars, carriages, etc	69,000	4,654,000
Automobiles and parts	13,254,000	54,000,000
Cars for steam railways	6,269,000	13,000,000
Chemicals, drugs, etc	15,531,000	58,000,000
Manufactures of cotton	17,937,000	24,767,000
Wearing apparel	5,965,000	17,395,000
Cartridges, dynamite, gunpowder	3,367,000	180,782,000
Canned salmon	5,882,000	10,592,000
Glass and glassware	2,273,000	6,307,000
India-rubber manufactures	1,882,000	9,755,000
Iron and steel and manufactures of	4,349,000	16,482,000
Cutlery	724,000	1,908,000
Firearms	2,213,000	7,911,000
Locomotives	2,311,000	10,702,000
Metal-working machines and tools	8,209,000	25,196,000
Total exports of machinery	69,279,000	92,524,000
Steel rails	7,567,000	10,640,000
Tin plate	1,825,000	9,104,000
Wire	5,961,000	25,118,000
Leather and tanned skins	20,855,000	46,666,000
Boots and shoes	10,584,000	26,787,000
Harness and saddlery	12,263,000	38,933,000
Meat and dairy products	91,482,000	170,671,000
Silk, manufactures of	1,242,000	2,449,000
Vegetables	3,866,000	8,617,000
Manufactures of wool	2,741,000	29,066,000
Spelter, zinc, etc	261,000	25,579,000
Total	395,528,000	1,242,412,000
Increase, 1916 over 1914		846,884,000

The showing for the nine months ending March 31, 1916, is even more impressive:

Exports, nine months ending Mar. 31, 1916 (war period)	$2,995,875,232
Exports, nine months ending Mar. 31, 1914 (anti-war period)	1,883,221,915
Increase in war period	1,112,653,317

We strongly advocate a tariff law that would require the foreigner who seeks to take advantage of our superior market, when he brings merchandise in competition with what our people produce, to contribute to the maintenance of this Government by the payment into our Treasury of an amount sufficient to give the American producer a marked advantage. I do not mean by this that the foreigner pays the tax, only to the extent that he pays for the privilege of selling in competition with our producer, which privilege he would not otherwise pay for. Of course, if the foreigner did not pay this tariff, the Government would not get the tax, and the foreigner would sell in our market in direct competition with our producer, and by underselling him would naturally drive the American product from the market, and the American laborer would suffer as well as the American manufacturer.

My personal views are that we should pass such a tariff law as would place a high tariff upon all articles that we can produce in sufficient quantities in this country to supply the demands, but do not. I am not worried by such names as "robber tariff" or the "Chinese Wall" of protection. I would that this country could produce all that it needs to sustain itself and its people. I would like to see this country produce enough, so that if it was surrounded by hostile fleets upon the east, south, and west, and by hostile armies upon its borders we could still live independent of the whole world. This is military as well as economic preparedness. This can only be done by a protective tariff. Call it a wall if you will, but it is the only way this country can maintain its present high standing and be independent of the rest of the world. [Applause.]

Mr. FORDNEY. Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. MEEKER]. [Applause.]

Mr. MEEKER. Mr. Chairman, I shall ask to extend my remarks in the RECORD by inserting some letters and data from moving-picture men and also some statistics in regard to the shoe industry in St. Louis under the Underwood bill.

Mr. FORDNEY. The gentleman has that permission by order of the House.

Mr. MEEKER. I thank the gentleman. Mr. Chairman, the more one looks through this bill, if he has any sense of humor whatever, the more he is inclined to laugh. It is not exactly a hybrid, it is not exactly a composite. It is what we call, in the stock-breeding world, a "sport." That means it belongs nowhere and can not be classified. [Laughter.] I think the original intent on the part of the chairman of the committee was to cross the donkey with the elephant. But that did not work; so he decided to paint something that would look like a Democratic proposition with just enough of a Republican tint to attract the unwary. Down in Missouri we would call it a Democratic house with a Republican "lean-to." When you lead a Republican up to the structure you take him into the "lean-to" and show him around and say, "This is fine; you should be satisfied." And when a Democrat comes along you take him into the main part of the house and you say, "Is not this fine? How Democratic it all is." The further we go in the analysis of the bill the more we can discover the tricks in it. You propose a tariff commission with the proviso that anybody except a business man who has been or is a success in business can get on the commission. The business failure is eligible. A lawyer or a preacher or somebody like that could get on, but a good business man stays off. I believe that the preacher should write our theology; that the doctor should write the medical books and laws on sanitation, and I believe the business men of this country should have something to say about the business policies of this country. [Applause on the Republican side.] The laboring men come in here with their bills as do other organizations, but when a business man approaches the Democratic Party he gets it between the eyes.

So we find here the usual suspicion of the successful business of this country, and the active successful business man is not wanted on a board that will have to do with the industries of our Nation.

Now, to call this a tariff commission is to name it to catch the public eye. Then you rig up a concern that has nothing of the essence of a real commission in it. The purpose of this joker is to force the Republicans to vote for this bill; that is all there is to it.

The chairman of the committee does not believe in this commission plan. He would not even introduce it. They have said on the floor of this House and in the cloakrooms for the last three weeks that they intended to rig a bill which no Republican could vote against. Well, wait until Monday and see.

Now, here is the fundamental difference between the Democrat and the Republican on the matter of tariffs and markets. Whenever a Democrat discusses the issues of the Nation he always approaches the question from the standpoint of the purchaser. He is the bargain counter hunter, by nature I presume. He is the 10-cent store man, but you never saw a community built up on 10-cent stores. The Republican always approaches the question from the standpoint of the producer, and we will never find those two policies harmonizing. The man who believes that the day will ever come when the party who, to save a few cents on an article, is willing to destroy the wage scale of America will line up with the party that proposes to protect the producer and worker, that such may have the wherewithal to purchase, is doomed to disappointment.

I am growing tired of hearing some of the near Democrats in the Republican Party trying to persuade themselves that by some sort of a hocus-pocus we can make a protective tariff out of this bill and thereby benefit the country.

Now, let us turn to this bill for a moment. It is the actual result of the failure of your Underwood bill to bring in revenue. A very strange argument on the floor of this House is that if you increase your importations your home manufacturers will do more business at home. A man who talks like that thinks backward like a crab travels. That is, if the importer takes away your home market you are increasingly prosperous.

Now, the men on the Democratic side of this House know just as well as anybody that in the campaign of 1914 you men lost from a majority of about 150 down to about 23, because of the effects of the Underwood bill.

You can not blame it to the war or anything else. And you know further that with the decrease in bank deposits and with the decrease in business along all lines in 1914, we were headed toward the conditions of 1896 so fast that you could not see us for the dust when the war came along and saved you. Neither will you fool the people about this prosperity game during the next three months. They will remember it, if you do not, and you will remember it in November.

Your Underwood bill has not produced the revenue. We are not at war. The Mexican situation is set aside, for we are to vote $125,000,000 of bonds to pay that bill. We are at war with nobody else. You forget the fact that under the Republican administration we voted $500,000,000 of bonds for the Panama Canal, and that we have some of them left yet, and that we paid Panama bills from the Treasury direct. You do not dare match the economic policy of your party with the policy of

the Republican Party in this country, either in appropriations or in the raising of revenues.

This is a laughable bill. I can imagine the chairman of the committee, when looking around to find some one upon whom to light for funds, so that he might get away from the odious stamp tax, saying, "Let me see, where can I go and upon whom shall we lay this burden of direct taxes?" The first fellow he thought of was the banker. The banker looks like "easy meat" to a Democrat. He is already now paying his corporation tax and his personal income tax, but that was not enough. So the genial chairman of the committee said, "Let us touch him for a dollar a thousand special tax on his capital and surplus and undivided profits used in any of the activities, and so forth," as you find it in about the first seven or eight lines of that section.

Now, that is great statesmanship, is it not? When you have hit a man twice between the eyes, hit him again. What profound thought such a plan requires. When the chairman said on the floor yesterday that this was the very best thought of the committee, I said, "They do not think much." Then the chairman went over to the brokers, and he said, "We will take $30 apiece from you." He next went down to the place where the Democratic Party always gets to, the place where three balls hang out in front. He beheld the pawnbroker and proceeded to touch said pawnbroker for $50. So it turns out that Uncle Sam stands at every place where three balls hang out in front to collect $50 each from the men who take revenues from those who pawn their jewelry and wages and live on Democratic promises.

Next come the ship brokers. They got off easier; only $20 apiece for them. Then the custom brokers, $10 apiece. And then, lo and behold, he went to the picture show and to the theater and to the museum. Think of this Government going about in the small country towns asking the picture-show men for $10 apiece with which to help pay expenses. The movie men in towns and villages of between 1,000 and 2,000 population will pay $15 each and those in towns and cities of from 2,000 to 3,000 population $20 each; but the order changes when the genial chairman of the Ways and Means Committee looks upon the movie men in the towns and cities of 3,000 population and over. There is no tax for them such as their fellows just mentioned are to enjoy. The bill provides "that those located in a city, town, or village having a population in excess of 3,000 shall pay one-half of 1 per centum of their gross receipts from admission."

Let us consider for a moment what that tax will mean. Under the present law the maximum for the theater or movie is $100. Under this provision some of the theatrical and movie men will be forced to pay literally hundreds of dollars annually into the Treasury of the United States. This policy of levying special Government taxes upon those institutions which are already heavily taxed by the municipalities and States is as unjust and unfair as is the stamp tax which you propose to repeal. The picture-show business of this country is being called upon to bear a constantly increasing share of the burden of taxation in the communities and States. This, the popular theater of America to-day, is one of our greatest educational institutions, and should be fostered. It is the one place of amusement where the cost to its patrons is sufficiently low to permit the classes and the masses to attend. We have no moral right to so tax this place of recreation, amusement, and education that the proprietors will be forced to put up the price in order to operate it. To lay an undue burden of taxation upon the recreational institutions of the people is just as detrimental to the body social as it is to lay unnecessary and unjust taxes upon the other necessaries of life. Just here I will insert a few articles from the Moving Picture World to give you some idea as to what the movie men are being called upon to meet locally:

NEW NORFOLK ORDINANCE—NEW LICENSE TAX BECOMES EFFECTIVE MAY 17—CHARGES FOR PICTURE THEATERS OF 350 OR LESS ARE $100 A YEAR; FOR MORE THAN 350 SEATS, $150 A YEAR—PENALTIES AND ADDITIONS FOR DELAY IN MAKING PAYMENTS.

[By Clarence L. Linz, special correspondent, 635 Tenth Street NE., Washington, D. C.]

NORFOLK, VA.

The new license tax ordinance, adopted by the board of aldermen and the city council, and approved by the mayor on April 25, became effective the 1st of this month, and provides the taxes to be assessed during the ensuing year.

The new ordinance provides that no person shall engage in any business in the city of Norfolk for which a license is required by the laws of the Commonwealth or the ordinances of the city without first having applied for and obtained such license. The paragraphs pertaining to the theatrical business are as follows:

"121. Every proprietor or occupier of a public theater or other public rooms, fitted for public exhibitions, where no admission fee is charged, shall pay $500 per year or portion of a year for the privilege.

"122. Penny arcades or automatic theaters in which pictures are shown or music played, or both, by means of slot machines, $100. Not prorated.

MOVING-PICTURE LICENSE FEES.

"123. Every person furnishing entertainment by the use of moving pictures, where an admission fee is charged, shall pay a license tax of $100 for each place where the seating capacity thereof is 350 or less and $150 for each place where the seating capacity thereof is over 350.

"124. Every person furnishing entertainment by the use of moving pictures, where an admission fee is charged, and publicly advertises the said business by means of a phonograph, or other musical or noise-producing instrument, device, or method, whether inside or outside of the building—for each such place of entertainment, $300 per year.

"125. On other theatrical performances or any performances similar thereto, panorama, or any public performance or exhibition of any kind where an admission fee is charged, $10 for each performance or $20 for each week of said performance; but any theater which desires so to do may take an annual license, in which event the same shall be taxed as follows: All theaters charging not more than 30 cents per seat shall pay $200 per annum; any theater charging not more than 75 cents per seat shall pay $300; and any theater charging over 75 cents per seat shall pay $350 per annum. The above prices to include price of box seats, payable in advance. Not prorated.

"No license, however, shall be charged when the whole of the net proceeds are applied for religious or charitable purposes.

"126. Any person other than the manager, proprietor, or his agent, of a duly licensed place of amusement who sells tickets entitling the holder thereof to admission to a theater or other licensed place of public amusement shall pay a license tax of $50 per year or any part of a year."

MARYLAND LICENSES—STATE COMPTROLLER HUGH MCMULLEN HAS DRAFTED NEW SET OF REVENUE LAWS OF INTEREST TO THEATERS—ANNUAL LICENSE FEES INCREASED—RATES SET BY SEATING CAPACITY—PERFORMERS ALSO TAXED.

[By J. M. Shellman, special correspondent, 1892 Mount Royal Terminal Baltimore, Md.]

BALTIMORE, MD.

State Comptroller Hugh A. McMullen, of Maryland, has drafted a new set of revenue laws which will become effective June 1. By this new set of laws theaters of all descriptions, actors, vaudeville performers, circus riders, etc., will be subjected to the tax, as will many other lines of business. Approximately $800,000, it is estimated, each year will be added to the State treasury.

The provisions in the new laws are as follows:

"Moving-picture theaters (per annum fees), seating capacity less than 200, $15; seating capacity of more than 200 and less than 300, $30. This tax is on the ascending scale, the highest tax being $100 for theaters having a seating capacity of 1,000. In cases in which the exhibitions do not exceed three each week, the fee shall be one-half that for theaters giving a performance each week day. In cases in which the exhibitions are given in conjunction with the sale of patent medicines the license fee is $50 per week.

"Any person or company of stage players, ventriloquists, sleight-of-hand performers, rope dancers, tumblers, and wire dancers, $50 per annum, or $2 for each exhibition in each county.

"Circus riders or equestrian performers, $50 per annum in each county.

"Animal shows or natural or artificial curiosities, $20 per annum in each county.

"Each theater in Baltimore, $200 per annum, issued ratably, or $5 for each night of performance, for license to exhibit as ventriloquists, etc.; for circus or equestrian performers, $100 per annum; to exhibit animals, curiosities, etc., $50 per annum."

—

KANSAS CITY LICENSE FEES—FIFTEEN THEATER MANAGERS APPEAR BEFORE CITY FINANCE COMMITTEE AND ASK FOR REDUCTION IN THE COST OF YEARLY LICENSES—NOW HAVE TO PAY $100, BUT ASK THAT IT BE MADE $12.50, THE AVERAGE COST OF TRADE LICENSES.

[Special to Moving Picture World from Kansas City News Service.]

KANSAS CITY, MO.

One of the most important movements undertaken by the exhibitors of Kansas City was recently launched when the managers of 15 very prominent suburban theaters went before the finance committees of the upper and lower council in an effort to have the cost of their license fee reduced. The 1st of July is the date when all such will be renewed, and this action is taken so that when this date comes the moving picture theater owners will be able to realize on their efforts.

The fee is now $100 per year, one of the largest required for any business in Kansas City. The plea of the owners was that this be reduced to $12.50, the average amount required for any trade. In the lower house their request was granted, and the finance committee of that body agreed to support any ordinance decreasing the fee. The members of the upper house committee said the best they could do would be to cut the license in half, making it $50, and that their action would have to depend on the view taken by Mayor Edwards. If he was of the opinion that the city could not do without the revenue thus derived they could not favor it. However, it is believed that the efforts of the managers will be successful to the extent that the license will be reduced to $50, as suggested by the upper house. The matter is now in the hands of the mayor, after which it will be voted on in the houses, following the introduction of an ordinance.

John G. Hiatt, manager of the Gladstone Theater, acted as chairman of the committee which made the protest.

Now add to this this increased Government tax, and you will begin to realize the positive injustice to the movie proprietors and to the patrons of these places. This proposed increase has been sprung so suddenly that the parties affected will not have opportunity to enter their general protest. However, I insert at this point a letter from Mr. William P. Herbst, president of the Circle Amusement Co., of Washington, D. C., which clearly states the case:

CIRCLE AMUSEMENT CO. (INC.),
Washington, D. C., July 6, 1916.

Hon. JACOB E. MEEKER, M. C.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Permit me to present my views relative to the proposed tax on the gross receipts of theaters, etc., as included in the general revenue bill introduced by Hon. CLAUDE KITCHIN.

Moving pictures are distinctly a "poor people's" amusement, and an increased tax under the present high cost of doing business will

necessitate an increase in the price of admission to the shows patronized by that class of people who can ill afford to pay more. The sphere of the "movies" has been primarily to not only amuse but educate just these people whom the high cost of living prevents from paying fancy prices for this amusement and education. The 5-cent show admittedly has been an important factor in the uplift of the community through its power of education. Continued taxation will eventually put the popular "nickel" show beyond the reach of the people. When the admission is raised to 10, 15, and 25 cents, beyond the reach of these poor people, it is but natural that the communities that have felt the influence for good in the "movies" will simply revert to the old order of things, instead of having the united family enjoying an amusement within their means.

On the other hand, in behalf of the exhibitors, will say that I do not deem it compatible with the best interests of the country to hinder the growth of a business as vast as the moving-picture industry by heavy and, to say the least, unjust taxation. The present cost of doing business is very high. In fact were the proposed tax on gross receipts enforced, in the present condition of the country, many exhibitors would be forced to pay revenue when their receipts were actually below their expenses. It is not difficult to see the unfairness of this.

Many of the moving-picture houses throughout the country are controlled by small corporations, and as such they are already paying an income tax upon their gross profits. In addition to this they are burdened with the emergency internal-revenue tax, their local license fees, their real estate and equipment taxes. All throughout the country, city, and State taxes are already heavy, and additional burdens will work a hardship upon the "movie man" who, contrary to general belief, is making but a very small profit in comparison to the amount of investment.

I trust you will see the justice of these views and be governed accordingly.

Believe me, with expressions of esteem,

Sincerely, yours,

WILLIAM P. HERBST, *President.*

From the theater and the movie the chairman goes to the circus. To show what he proposes to do to them I insert here the circus section of the bill:

Seventh. The proprietor or proprietors of circuses shall pay $100. Every building, space, tent, or area where feats of horsemanship or acrobatic sports or theatrical performances not otherwise provided for in this section are exhibited shall be regarded as a circus: *Provided,* That no special tax paid in one State, Territory, or the District of Columbia shall exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be imposed for exhibitions within any one State, Territory, or District.

The only reason conceivable for Uncle Sam passing the hat at the circus is that this administration itself is a three-ring circus, with the gentleman at the White House the acrobat in chief, and circus legislation is therefore in order. [Applause on the Republican side.]

From there the chairman of the committee went to the other public exhibitions and shows and they looked good for $10 apiece. Then he hied himself away to the bowling alleys and billiard halls, where he levied $5 on each and every bowling alley and each and every billiard table. What statesmanship is this! What profound thought must have been required! Uncle Sam the itinerant tax gatherer from circuses, pawnbrokers, billiard halls and bankers! Can you tell me why, after the banker has paid his corporation tax and his income tax, that he should be singled out and made to pay a special tax of $1 for each thousand of capital and undivided profits, while his neighbor merchant and farmer friend of equal or possibly greater wealth is permitted to go scott free? Gentlemen, such procedure does not indicate statesmanship nor can this be called a big bill. It is a jitney. [Laughter.] This is jitney legislation, and nothing more. [Laughter.]

What is there in this bill to warrant any business man or manufacturer to invest a single dollar in new enterprises? Do you believe that when the business men of the country learn the provisions embodied in this bill that there will be a revival or an increase in business confidence? Do you men believe that by voting for the bill you will inspire confidence on the part of the business men of this country in the sound business judgment of the members of this Congress? Do you men on the Republican side believe that because you are put up against a buzz saw called "preparedness emergency" that you should give your indorsement to the Democratic free-trade method of raising revenue? Are you ready to vote for an increase of direct taxes upon men of cities throughout the Nation, while there is practically not one additional dollar to be raised at the customs houses; the places where Uncle Sam should gather his money and the place where he should get plenty now, and at the same time protect our home working men and manufacturers? Do you Republicans who are going to vote for this bill concede that you are willing to turn from the Government custom houses to the picture shows, the billiard and pool halls, theaters and circuses in order to get money to run our Government? I do not believe we should.

The antidumping clause in this bill is a confession of fear on the part of the Democrats that with the close of the war in Europe this Nation will be flooded with cheap goods. Do you propose to check that flood by enacting a cumbersome, unworkable scheme, rather than by placing a tariff on these articles sufficient to make them harmless as competitors in our own markets and to help maintain the operating expenses of our Government as well? [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MEEKER. Mr. Chairman, I wish to extend my remarks by inserting herewith the following monthly report of the International Shoe Co., of St. Louis, showing the business done in their three branches, from October 1, 1913, on, which is as follows:

October 1, 1913.

Fiscal year closes Dec. 1, 1915.
No report Dec. 1, 1915.

Mr. KITCHIN. Mr. Chairman, how much time has this side consumed, I will ask? And how much time has the other side consumed?

The CHAIRMAN. The gentleman from North Carolina [Mr. KITCHIN] has used 4 fours and 52 minutes. The gentleman from Michigan [Mr. FORDNEY] has used 5 hours and 43 minutes.

Mr. KITCHIN. I have to my credit now 51 minutes. I yield to the gentleman from Indiana [Mr. CLINE] 10 minutes. [Applause.]

The CHAIRMAN. The gentleman from Indiana [Mr. CLINE] is recognized for 10 minutes.

Mr. CLINE. Mr. Chairman, I favor a nonpartisan tariff commission for the same reasons that I favored a new currency system, viz, to steady business, give values once established some permanency under which business can increase in volume as to production and distribution with confidence, and without fear that new legislation will unsettle conditions. Our whole system of customs taxation is said to be based largely upon the cost of production. The Republican Party went so far in recognition of this theory that it wrote into its platform in 1908 that—

> the true principle of protection is best maintained by the imposition of such duties as will equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries.

It was a pleasing, deceptive, and misleading platform expression, and nothing more. Very many of our exports are produced much cheaper here than abroad, and that is the reason why we can and do sell them in competition with every country in all the markets of the world. The tariff in the magnitude of its importance should bear the same relationship to business that transportation does. Since the Interstate Commerce Commission was organized and the law enforced in general, shippers are not clandestinely seeking rebates and favorable classifications. When a tariff commission shall have been established and the scope of its business generally understood, no protectionist will be quietly maneuvering to get a special rate on his product written into law so that he can proceed unmolested to exploit the general public. What has given rise to this demand, so widespread, for a tariff commission? First, that the public shall have opportunity to know how far great combinations of wealth are authorized to go in asserting a privilege that they have grown to believe has merged into a "vested right," a right to tax one man to make another man's business profitable. I have seen two great tariff bills written into law. In each instance the hotel corridors in Washington were crowded for months with men seeking at the hands of Congress a protected rate for their especial products. No patriotic impulse prompted the action; the country's good and the solution of a great economic problem gave them no concern. All they were interested in was, To what extent will the Congress allow me to exploit the consumer in the sale of what I make by giving me a rate that I can eliminate all competition with and control the market? This condition will always exist so long as there are two great parties equally divided, numerically, and each committed to diametrically opposite views on the tariff. Let me state the position of the two parties, briefly, on the taxing power with reference to import duties:

The Republican Party believes it has the constitutional power to levy a high protective duty, one sufficiently high to eliminate all competition between domestic and foreign manufacturers. That the protective principle in fixing a rate of duty is the controlling purpose and the collection of means to defray the expenses of the Government is a mere incident in fixing a protective rate or duty.

The Democratic Party believes that the sole and only constitutional authority it has to collect customs duties is to collect them for revenue only; that the rate should be sufficiently high and so equitably distributed as to raise only the necessary funds to defray the expenses of the Government honestly and economically administered.

One principle upon which we are united, be we Democrats or Republicans, is that a large amount of the funds necessary to defray the expenses of the Government must be collected at the customhouse from duties on imports. That duty should be a fair and equitable rate, determined when all the elements that enter into rate fixing on a scientific basis shall have been fully considered. Hence the necessity for a permanent nonpartisan tariff commission that will sit in continuous session and will exhaustively take up and consider every item of the present law regardless of the present rate. The tariff should be equitably adjusted, having in view always a properly negotiated reciprocity with other countries. I realize, however, that the negotiation of reciprocal agreements can not be made by a commission; that such negotiations are within the powers of Congress alone; but Congress can act more intelligently after all of the related facts shall have been found by the commission. The commission should have all the constitutional power that Congress could invest it with, and it should provide in the organic act that all its findings should be made public for the information of all the people. The commission, of course, can have no legislative function, and the fact that no such function was contemplated should be made plain in the act creating the commission. The duty to fix the rate is a constitutional duty that Congress can not alienate. There is no intention on the part of Congress to divest itself of it. What this Congress will do will be to take the tariff out of politics and take the politics for many years injected into it by the Republican Party out

of the tariff by providing for the appointment of a nonpartisan tariff commission so far as legislation can accomplish that. A political tariff is so related to party success that the good or bad character of the tariff is discounted before it is enacted, because the people can not tell what will happen to business in the change of administrations. This creates doubt, tension, anxiety, and timidity, all of which is disastrous to business, and gives the commercial world an apprehension that business wants to rid itself of.

A tariff commission would be another antipanic barrier and constitute a valuable supplemental act to the present efficient Federal reserve banking act. Let no man be deceived by the slogan "take the tariff out of politics." Taxation is the greatest economic problem of this country. It will continue to be so, and no tariff commission can wholly change it. Many people conceive the idea that the tariff commission will bring all conflicting theorists to a common basis; that the rankest protectionist and the coldest free trader will bury their differences and agree. Nothing could be farther from the truth. That, however, is not an argument against a tariff commission. With its proper and constitutional limitations it will be a power to reduce the problem of taxation to generally accepted basis and settle it in a near approach to the absolute needs of the Government and trade conditions. Some of the wildest enthusiasts have demanded that it be given a field corresponding to that of the Interstate Commerce Commission. Any man at a glance will see the absurdity of that proposition. The Interstate Commerce Commission may well receive from Congress the power to tell the shipper what the rate shall be to ship his products from State to State or to the seaboard for export. But that is a very different proposition from investing a tariff commission with power, in direct contravention of the Constitution, to tell the importer what he shall pay at the customhouses to entitle him to market the goods made in a foreign country in American markets. The Interstate Commerce Commission was created under the commerce clause of the Constitution that empowers Congress to create a representative agency to fix rates, that does not forbid the alienation of that power for that purpose. The tariff commission is and can be but an advisory board to gather information to aid Congress in discharging a duty, to levy and collect taxes, made directly obligatory on Congress by the unequivocal and mandatory direction of the Constitution. Some uncertainty obtains as to the probable scope and jurisdiction of the proposed tariff commission as to what powers and duties are contemplated by the act creating it. Undoubtedly the commission's work will consist of an examination of the numerous schedules in the tariff law. Take any item whether there is any question as to the proper rate already fixed or not, the commission should secure definite and concise information regarding the article itself. The inquiry will relate to where it is produced, whether at home or abroad, under what conditions, whether we use it as a raw material or a manufactured product; if manufactured, whether we use it for domestic purposes or for export in whole or in part; if it is in line with our own productions, whether we export any portion of it. The commission should go extensively into the cost of production at home and abroad, how domestic uses affect prices, how export affects prices, cost of production in different countries and in different sections of the same country in the same lines of business. Prices at home and abroad, how they are affected by local conditions, influenced by wages and hours of work, the character and effectiveness of skilled labor employed, direct competition at home and abroad, freight rates and ocean traffic rates, rates of discount, and hundreds of other elements that enter into the complicated question in determining the rate of duty.

The appointment of a tariff commission will go further toward settling the economic question of taxation than any other act of Congress could. The voter will not be called upon to first determine whether he wants a high protective tariff or a tariff for revenue. He will be willing to place great confidence in the commission, and thereby eliminate much of his fear and anxiety as to what might happen. The two widely separated theories heretofore referred to will converge toward more common ground whether the needs of the Government and the proper relations of business to it will be the chief considerations.

The German tariff commission so frequently quoted with approval proceeds upon a wholly different theory than a tariff commission in this country would. Germany first declared for a policy—a high protective policy—and the German tariff commission was directed to study the tariff from that standpoint. The German tariff commission was not confronted with a dual theory of taxation as a tariff commission in this country will be. Its duty was to proceed wholly from a protective viewpoint. We will be inclined to fix a rate found from a clear presentation of all the facts solely for the collection of revenue with what protection incidentally follows because of the rate. The commission should have no authority to recommend rates. What Congress wants are the facts. Let those be found and reported, and Congress will do its constitutional duty in fixing the rates. I would take away from the commission the power to recommend rates, because I do not want that subtle influence that such a power would welcome. The commission should have the full confidence of the public without the least suspicion that the commission was overreached. I do not believe in absolute free trade; it is a theory without substance so far as the purposes of revenue are involved. Neither do I believe in the theory of a protective tariff. It is the most vicious doctrine as a whole that ever found its way into American politics. No man or set of men have a right to confer upon another man the power to exploit the citizenship of this country for the sole purpose of making business profitable. I believe in such a fair rate of taxation at the customhouse as will meet the expenses of the Government without favors or injustice to any man. I am supporting this proposition for a scientific nonpartisan tariff commission in the interest of the manufacturers, consumers, and the growth of business without fear or timidity that frequently happens coincident with administration changes, and happens, too, for no specific reason. I want to emancipate business from this condition so far as Federal legislation can do it. [Applause on the Democratic side.]

Mr. KITCHIN. Mr. Chairman, I yield 10 minutes to the gentleman from Mississippi [Mr. QUIN].

The CHAIRMAN. The gentleman from Mississippi is recognized for 10 minutes.

Mr. QUIN. Mr. Chairman, I am supporting this bill with the keenest of pleasure. On the 12th day of February, on the floor of this House, I told my reasons for supporting the preparedness program. In that speech I said that I favored raising the money to pay for the preparedness business off the wealth of the country, out of the incomes, inheritances, and munitions of war; and, thanks to the leader of the Democratic majority, that peerless Democrat, CLAUDE KITCHIN, of North Carolina, we have a bill before us to-day that places the burden of preparedness on the great millionaire class of our country. [Applause on the Democratic side.]

The gentleman from Michigan [Mr. FORDNEY], and the gentleman from Connecticut [Mr. HILL], and the gentleman from Pennsylvania [Mr. MOORE] spoke for the rich people, for the millionaires and the great big business interests of this country. I speak for the farmer, for the laboring man, for the poor people who make their living in the sweat of their faces. [Applause on the Democratic side.]

It is time, gentlemen, that somebody should talk for the farmers and laboring people who all these years have been paying the expenses of this Government. We are now grasping the opportunity to put directly on the wealthy people with great incomes $107,000,000 more of taxes than we have already put there. We put $19,000,000 on inheritances. We put $71,000,000 on these war traffickers, these fellows who have been harpooning everybody else and crying for preparedness. Only $2,000,000 of this money comes out of the people, and that we get out of the brokers and those men who have occupations in which money comes easily. Not one dollar of this money comes out of the men who work for their living.

The gentleman from Michigan [Mr. FORDNEY] wants a tariff wall so high that it would take a flying machine to get over it. He wants that same old protective law that permitted the great fortunes of this country to pile up, drawn out of the pockets of the people, to be continued again. He is grumbling against this bill. He says he would not support a Democratic bill even though it was 6 feet deep in sugar. [Laughter.] He says he is honest in his views, and I know he is. There are many other manufacturers and railroad and corporation lawyers who hold his views. That is the reason why the poor people of this country have had such a hard struggle, because men with the views that the gentleman from Michigan [Mr. FORDNEY] has expressed on this floor have been in power so long in this country. Thanks to the awakening of an outraged people, they marched up to the ballot box and drove them out, and since the Democratic Party has been in power more wholesome legislation, more real legislation, for the benefit of the American people, has been enacted than ever before since the Republican Party took charge of this Government in 1861. [Applause on the Democratic side.]

We have just now started on the road. When the ballots are counted again on the first Tuesday of November next, my friend from St. Louis [Mr. MEEKER], I want to say to you, you will see the greatest Democratic victory this country has ever had since the days of Thomas Jefferson. [Applause on the Democratic side.]

The people realize what this Congress has done. They realize what Woodrow Wilson, the President, stands for, even if the gentleman [Mr. LONGWORTH] does criticize him for changing

his mind. I admit that our good President changed his mind two or three months before Congress met last December on the preparedness question, and I admit that he changed his mind on the tariff commission, and also as to the way of raising this preparedness money. President Wilson cheerfully gave up his idea in part and came over to our way of thinking and fully indorses our plan of raising the money by taxing the rich.

I admire the man who changes his mind. It is these hard-hearted fellows who believe that a high tariff wall should be placed around the United States and the poor people taxed to death who never change their minds. [Applause on the Democratic side.]

My friend from Connecticut [Mr. HILL] says they have to eat horse meat in New York. Does he not know that many fashionable restaurants have on the bill of fare crawfish, snails, and lamb fries, and mountain oysters, and chitterlings? Does he not know that the rich and aristocratic people of France eat horse meat in preference to beef and lamb? In Republican times in the past, in some of the big cities throughout this country, little children have had to dig about in slop barrels at restaurants and hotels extricating pieces of bread and scraps of meat to make soup of in order to sustain their precious lives. [Applause on the Democratic side.] Can not you old stand-pat Republicans let your hard-frozen hearts thaw out and sympathize with the hardships and sufferings of the poor working people? [Applause on the Democratic side.]

Gentlemen, do not you feel ashamed of yourselves for abusing the Democratic administration, under which the legitimate industries of this country are flourishing to such an extent that the heavens are obscured by the smoke of factories in all the manufacturing centers, so that you can not see the open sky, either by day or by night, and innumerable happy men with buckets in their hands are marching to and from their homes to their daily work, with their buckets well filled? [Applause on the Democratic side.]

Gentlemen on the other side have said that the Underwood tariff bill has been a failure. Any man who can add up figures and read writing can go to the Treasury Department and see how, for the period of time since the Underwood bill has been in effect, before the European war started in August, 1914, we had $10,000,000 more revenue than you had under the Payne bill. Still you Republicans talk about that Underwood bill being a failure! You have been shooting off your bazoos and gasifying your protective tariff humbuggery on the American people long enough. We have called your hand. We have demonstrated that plenty of money can be raised to run this Government without robbing the people through a protective tariff. [Applause.]

Under this pending bill right now we are going to raise $275,000,000 a year and not touch a dollar of the money of the toiling masses of this great Republic. [Applause on the Democratic side.] We are going to take that speech delivered by my friend from Pennsylvania [Mr. MOORE] in which he called this bill a spider-web bill and show the working people of America that the Republican Party has been their oppressor, and we are going to catch the spiders of this country in this bill. We are going to catch such spiders as John D. Rockefeller and J. Pierpont Morgan and Andrew Carnegie and Charles M. Schwab and all the other millionaires of this country who have been grafting from the masses so long and make them pay for preparedness and otherwise support this Government. [Applause on the Democratic side.]

We are going to get it out of that class of idle rich who are riding around in $10,000 limousines, with poodle dogs on their laps. We are not going down into the railroad shops and factories and farms of this country to get this money to pay for the preparedness program that you Republicans helped to put on the people. We are going to get it out of those who are able to bear it. You, when you were in power, enacted laws that permitted this class of people to acquire these great fortunes that have piled up into the many millions of dollars until they are a menace to our institutions. Now we propose to do the honest thing, and to take a fair proportion of that income to defray the expenses of preparedness. Then, when men die and leave great fortunes of $500,000,000 or $1,000,000 or $500,000 as an inheritance, we propose to take a fair percentage of that to help pay for preparedness. We propose to take these war-munition fellows, who are making guns and ammunition to destroy human life, and take a fair percentage of their immense profits to pay for preparedness. [Applause.]

Will you Republicans vote for that? You want to go and take the biscuit and meat and bread out of the mouths of poor women and children. You want to tax the shirt off the poor man's back and the shoes off his good wife's feet. Through your pernicious and insidious protective tariff you want to rob the farmer and tax all of his farming implements and everything he buys. By the help of God we are not going to let you do that. [Applause on the Democratic side.] We are going to get this money out of the great rich classes of this country who under your lead for years have been reaching down into the pockets of the laboring classes and taking their hard earnings through a protective tariff and by charging exorbitant prices.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KITCHIN. I yield to the gentleman three minutes more.

Mr. QUIN. I thank the gentleman. I wish to say that the Republican Party, instead of being a party of progress, is the party of obstruction. Ever since the Democrats have been enacting wholesome legislation that will bring comfort and happiness to the firesides and hearthstones of the American Republic your leaders and your newspapers have been obstructing us all the time. Whenever we have proposed a piece of legislation and put it on the statute books that goes to the home of the humble American citizen and helps the poor man you have objected to it. Every time there was an appropriation bill brought up here 95 per cent of the gentlemen on that side of the aisle have voted to increase it, and I challenge any gentleman to deny it, for I can prove it by the RECORD. Still you criticize the Democrats for an extravagant administration. Extravagant in what? Extravagant in doing good for the American people [applause on the Democratic side]; extravagant in shutting off the privileged classes; extravagant in shutting out the entrenched privilege gang that has so long controlled the burglars who dominate the "grand old Republican Party." [Applause on the Democratic side.] We have shut the door in their faces and said, "No more shall you poke your heads inside of the people's Congress." The American people have their eyes on Washington City all the time. When they go to put their ballots in the box, regardless of what party they may belong to, they are going to vote for the man who stands true and loyal to the masses. Is there a Republican here who will vote against this tariff commission that you gentlemen have been howling for and pretended you wanted for the last four or five years? Is there a Republican here who will vote against the provision that goes down into the pockets of the great millionaire classes of this country and takes out a reasonable sum for defending the United States? Is there one of you who will vote against the provision that goes after the war-munition manufacturers and takes from them 2, 3, or 5 per cent of their profits? Gentlemen, in good conscience you can not vote against these things and then go home and face your people. You progressive Republicans, do not be fooled by my friend, Brother FORDNEY here and HAMP MOORE and these old standpat fellows who want the rich to grow richer and to continue creating commercial vampires to suck the life-blood out of the veins of the toiling masses and to take out of the pockets of the poor people even what little they have. Do not let them fool you. Come and vote for this good, meritorious, Democratic bill for the benefit of all the poeple. [Applause on the Democratic side.]

Mr. KITCHIN. I yield 10 minutes to the gentleman from Ohio [Mr. CROSSER].

Mr. CROSSER. Mr. Chairman, I have voted for all the measures which have come before Congress in the interest of labor hoping that some good might result, but I know that they will not bring substantial justice to the man who toils, although they will make conditions better.

The age-long struggle for industrial justice still goes on. The men who toil either with head or hands know that there is something wrong when as their share of the product of their labor they receive so small a part.

The object of all laws should be political equality and justice, but many laws are useless, and many others cause injustice and oppression. [Applause.]

It is common to hear men in a wailing voice and with manufactured tears telling how deeply they feel for those who toil. Perhaps some are sincere and I shall not at this time dispute their motives. But I do say that it is not enough, indeed it is a farce, to keep on telling in plaintive tones about the unfair distribution of wealth without offering a remedy for the trouble. Sensible and independent men will no longer be fooled with the worn-out, wailing speech; will no longer listen to the flattery of the office seeker; will not be misled by the political handshake and the hollow concern of the candidate about the voter's wife and children at election time.

Intelligent men who work for their living are tired of all that, and now want to know what is proposed to correct the wrong. The remedy must be one which goes to the root of the trouble. We have had much legislation which at best only soothes the

sore. Hundreds of bills are introduced each year, but none of them strikes at the cause of injustice. They do little to remove involuntary poverty.

If we will think about it for a moment, we must see that the reason why labor gets as pay so small a part of the value of what it produces is that a few monopolize the land and all its valuable minerals, ores, forests, and other valuable resources of nature which are necessary to the creation of wealth. [Applause.] The power which such monopoly gives to exploit those who must work may be made clear by the following illustration: Suppose that one man should own and control all of the land and the raw material in the land which is necessary for manufacturing and building, is it not perfectly plain that he could compel anyone wanting employment to accept enough only to keep him alive and able to work, because if he did not accept that, he could get employment nowhere else? You admit this, but conditions are only a little better when a few men own the *land* with its ores, minerals, and timber, because the man who must work for his living has still only a few employers among whom to seek work.

The man who owns land of any kind is not always the direct employer of labor, but he nevertheless is the man who takes as rent what should belong to labor. The man who operates a mill or factory generally must pay a very big rent to the owner of the land on which his factory is located, or if he owns the land also he receives his great income because he is landlord rather than because he is a manufacturer. Great areas of farm land are not cultivated because the speculator has monopolized it and demands so much rent for its use that anyone paying the rent has hardly enough left to enable him to live. The men who do the work necessary to bring from the earth the coal, the ore, the oil, and the timber receive far less for their work than they earn, because the lands producing these things are controlled by a few, and so miners can seek employment among only the few who own and control all the coal lands, and these few naturally do not compete with one another to increase wages. So it is with those who mine the ore, work in oil fields, and cut the forests. They, too, must seek employment among the few who control the lands bearing each of these things, and must accept practically what these few monopolists offer them. On the other hand, when we must buy coal, iron ore, oil, gasoline, and practically everything else we must pay more for them than they are really worth, because the oil lands are in the hands of a very few men, and if we do not buy at their price we must do without. [Applause on the Democratic side.] There is practically no competition. The greater part of the ore lands in the United States is owned by a few companies, and those who buy ore must pay what these companies ask. So it is with coal lands and the timberlands.

If the land of the United States had never been given away but had been leased at a rental equal to a reasonable rate of interest on the yearly value of the land of whatever kind, then men could not afford to monopolize it and hold it out of use, and thus limit the output of any of the things taken from the earth, and therefore also confine the demand for the labor of miners to such of the coal land as they might wish to operate, and do the same thing with the oil lands, ore lands, and timberlands. The rent or tax, whichever you like to call it, could easily be paid if the owners would make use of the land, but it would be a loss to a holder of land to pay this rent or tax if he did not use it. If the land which is held out of use by the monopolists were used, then there would be an increased demand for labor, and an increased demand for labor would cause increased wages, because men would not be compelled to work for those who would not pay fair wages when they could get employment easily elsewhere at reasonable wages.

A great wrong was done when the Government gave away to private persons the land which originally belonged to all the people, and it certainly should not give away more of the public lands. [Applause.] The land colonization bill which I have introduced would do much to abolish the injustice to which I have referred. This bill proposes that the Government shall allow those who wish to do so to use the valuable lands which the Government still owns by paying a tax or rent equal to a small percentage of the value of the land. In order, however, to prevent the land speculator and monopolist from getting great areas of the lands into his hands, as happens now, this bill provides that the Government shall keep the title forever, but those persons and the heirs and assigns of those whom the Government allows to use the land are to be allowed to hold it as long as they use it and pay the tax. The bill further provides that the Government may help those holding land to make improvements, the cost of which is to be paid back to the Government within 50 years.

Another important feature of the bill is that after locations suitable for community purposes have been decided upon the Government shall make complete plans for developing them, the plan in each case to provide for the clearing of the land, for the construction of roads, for means of drainage, for development and sale of timber and coal, and for other services to the community. This would make life on these new lands pleasant instead of having the dismal existence of those who go out alone to establish a home.

The important thing, however, is the fact that this plan would give those who wish to do so a chance to work for themselves and to get the full value of their labor. [Applause.] The land speculator could not trouble them, because they would not be allowed to sell the land.

The passage of this bill would be a blessing not only to those who settle on the land, but would benefit every man who labors, because as men would go to take up these lands, those looking for work in the older parts of the country would be fewer, and the fewer men looking for work the higher the wages would be for that work. Those in every kind of business would benefit, because, with employment plenty and wages good, there would be more customers and freer buying. This is the main object of the bill. When such a plan is in full force men will no longer need to beg others for leave to toil. [Applause.]

How much more sensible is this than all we do to compel some men to treat others decently. I voted cheerfully for the bill preventing child labor, but I would much rather have conditions such that fathers could earn enough so that they would not be compelled to send their children to work.

Mr. BAILEY. Good.

Mr. CROSSER. In the old countries they have old-age pension laws, but how much grander it would be if conditions were such that men could earn enough when young to take care of themselves in comfort during their old age.

Now, one would think that a plan of this kind would be supported by the people, and I know that the great majority of the people approve it, for I believe that the great majority of all parties are earnest, honest folks.

Men in every part of the country have written to me expressing their hearty approval of the bill. Workingmen in many States have sent petitions warmly indorsing it. Newspapers in all parts of the country have strongly indorsed it. Men like Benjamin C. Marsh, secretary of the New York Congestion Committee, and Frederick C. Howe, commissioner of immigration at Ellis Island, came at their own expense to Washington to speak in favor of the bill before the Committee on Labor. Secretary of Labor William B. Wilson, Assistant Secretary of Labor Louis F. Post, and Mr. Arthur E. Holder, legislative agent of the American Federation of Labor, all argued for the bill before the Committee on Labor.

Those who thrive on injustice do not denounce or attack the principle which I am advocating. They are far too wise to do that. They know that there is no use denouncing such just measures before the honest, upright, independent people whom I have the honor to represent. Those who benefit from special privilege are too smart to openly attack the idea which this bill proposes to put into effect. Long, long ago they learned that the so-called political boss is their best instrument to defeat measures or men who threaten to destroy the injustice upon which they fatten.

The interests help the boss to political power, and he in turn tries to prevent the election to office of men who fight against the giving of special privilege to a few. Neither do the political bosses come out openly and courageously to state their objections to the man whom they would destroy, but rather do they sneak into some dark corner and with their heads together and glancing out of the corners of their eyes to see if they are watched they scheme as to the best way to destroy him. Sometimes they resort to one trick and sometimes another.

As their own candidate for office they generally get some fellow who is "one of the boys" and a good handshaker; one who makes a business of asking about the voter's wife and children and who stands around and tells how as boys they all used to play together. Such men, of course, are what might be called "good fellows," but rarely have they any deep convictions or ideas. They can, however, be controlled and that is the thing necessary to the boss.

The bosses, or those who think they are bosses, resort to every mean trick to accomplish their ends. They play upon the prejudices of those whom they meet, now appealing to social prejudice, now to race prejudice, now to trade or business prejudice, or to any other prejudice resulting from sincere differences of opinion. They have fought bitterly every great advocate of justice. Gov. Pingree, of Michigan, was

abused like a pirate; "Golden Rule" Sam Jones, of Toledo, was ridiculed and reviled, and the valiant Tom Johnson, of Cleveland, was cursed, threatened, and misrepresented, and yet all of those men fought bravely for the cause of human justice, so that all might be happier.

Some men in this House have been threatened in the same way, and frequently by men who pretend to belong to their own party.

The people of this country must arouse themselves. Success or failure in the battle for political and industrial justice rests with them. They must realize that their own welfare and, what is much dearer to most of them, the welfare of their children, depends upon their earnest effort to discharge their political duties. If they care anything for their future and for their children they should not decide elections on the basis of good fellowship. They can not neglect to vote at elections, whether primary elections or elections between parties, and then complain if the right should lose. Men of all parties must realize their duty to try their best to know what is right, but they must also take the trouble to vote for what they think is right. If I were a Republican I would want to nominate men as candidates of the party who would be honest and courageous and who would fight for the best principles. As I am a Democrat I want to see the same thing true of my party. This is the surest way for any party to attain real success, and what is far more important than party success, it is the best way to improve the condition of the people. [Applause.]

Mr. KITCHIN. Mr. Chairman, I yield 10 minutes to the gentleman from Wisconsin [Mr. REILLY],

[Mr. REILLY addressed the committee. See Appendix.]

Mr. KITCHIN. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. OLNEY].

Mr. OLNEY. Mr. Chairman, on January 4 I introduced a tariff-commission bill and believe I was the first Democrat of House or Senate to introduce such a measure. While Congressman BARNHART, of Indiana, filed a similar measure on the same day, I think I dropped my bill in the basket at noon of the 4th day of January. I shall confine my remarks to-day to those features of the general-revenue bill which more particularly appeal to me for enactment, and they consist of the sections providing for a tariff commission and a tariff on dyestuffs.

I commend the ability and science of the Ways and Means Committee, which has worked out a system taxing munition factories, swollen fortunes, big and fair incomes, inheritances, luxuries, and so forth, believing that we are an efficient and competent people and that the brains and efficiency of the Nation should be liberally taxed to run the Government.

The House, irrespective of party, is, I suppose, in accord with the idea that the Government should launch another department, should take another partner, so to speak, in the character of a tariff board.

I hail the advent of a tariff commission as a guardian of American labor and capital.

The first tariff act was enacted July 4, 1789. Alexander Hamilton had much to do with framing legislation which seemed necessary to build up and protect infant American business.

The first essentially protective-tariff law was enacted on April 27, 1816, and was considered a southern measure, the South at that time favoring protection while the North opposed it.

Various tariff laws have been written into the statute books since that year, including the Morrill tariff, which was adopted in 1861, and was largely protective.

The customs revenue reached its highest point in 1872, and a surplus was finally created in the Treasury that threatened financial disaster to the country and encouraged extravagance in congressional appropriations.

In 1890 the McKinley bill was passed, which particularly increased the duty on wool and woolen goods.

In August, 1894, the Wilson bill became a law without the signature of President Cleveland. This bill, if on the statute books to-day, would be called highly protective. As a matter of fact, the average reduction of duty in comparison to the previous tariff law was less than 10 per cent, wool, hides, and iron being made free, if my memory serves me correctly.

The panic of 1893 was laid at the door of the Democracy and the Wilson bill, in spite of the fact that the law did not go into effect till nearly a year and a half after Cleveland's inauguration. The panic of 1893 was due, in my opinion, primarily to the inheritance by Cleveland of a bankrupt Treasury from the previous administration, the failure of and suspension of big business concerns in South America, and the generally panicky condition of affairs existing in free-trade England and Germany, with its high-protective tariff.

The Republican Party is to a considerable degree in favor of high-protective duties, while the Democratic Party is largely in favor of extensive reduction. But a powerful minority, I believe, hold opposite views to extreme opinions, and I cling, perhaps, to this minority.

I have always deplored the iniquitous and un-American system of high protection since it made possible the accumulation and hoarding up of tremendous fortunes at the expense of the people, and for which we are paying tribute to-day. On the other hand, I could never consistently favor extensive reduction of the tariff, which would jeopardize and destroy legitimate American business.

Three and a half years ago I appeared before the Ways and Means Committee advocating a gradual revision of the tariff—a procedure of five years, if necessary—and advising against an attempt to change in a single year a tariff principle which, no matter how wrong or unjust, had been a part and parcel of our industrial life for a hundred years and more.

I have high regard for OSCAR W. UNDERWOOD, the author of the 1913 law. He is as great now as he was then and as highly respected. While I consider the Underwood bill one of the best and most effective ever written into law, I also feel that no tariff was ever perfect.

I favor the creation of a tariff board, so that it may investigate tariff conditions and report to Congress from time to time changes made necessary by war and other conditions, and the remedy.

I regret that this bill does not confer upon the tariff commission the authority to report bills or to recommend needed changes in the tariff to Congress, and I intend to offer an amendment under the short debate conferring such power. Otherwise this part of the bill lacks teeth and will not satisfy the people—the laboring masses, who are entitled to share the profits of capital, and legitimate capital entitled to protection from foreign competition.

Please understand that I favor direct taxation as provided in this bill, and it is proper, just, and eminently satisfactory that the big capitalist who has fed upon and become wealthy through high protection and personal privilege should pay the bills. I heartily commend the increased income tax to be imposed upon the rich man, and I would even vote for a 20 per cent tax on an income of $500,000 and for the proportionate downward decrease.

I represent the largest boot-and-shoe district, according to area in square miles, in the world. Brockton, my largest city, in the last fiscal year produced boots and shoes to the value of $53,000,000.

The Payne-Aldrich bill made hides free and reduced the duty on boots and shoes from 25 per cent to 10 per cent on men's footwear and 15 per cent on women's shoes. The Underwood-Simmons law made boots and shoes free.

Mr. UNDERWOOD three years ago stated to protestants from the boot and shoe manufacturers, who presented a clear and fair argument in favor of the retention of the old duty, that he himself was in doubt concerning the wisdom of removing the duty, and should the time ever come when the shoe industry suffered as a consequence he would be the first to raise his voice in favor of restoring the duty.

As a wool merchant I am interested in the wool and woolen schedules of the Underwood bill. On account of the tremendous demand for sheep and lambs for food purposes in Europe, an absolute famine faces the world to-day in the production of wool. Sheep worth $1 a head in 1896 bring $8 to-day. I have induced the Department of Agriculture to bring these facts to the attention of the ranchmen farmers and textile men of the United States.

The great war doubtless has stimulated the trade in the boot and shoe factories and in the woolen and cotton mills.

After the war what?

There may be something wrong in the machinery of the tariff; a little more duty may be needed for woolen goods; our shoe factories may need a little protection.

It is for the reasons stated above that I welcome the creation of a tariff commission which shall jealously guard American industry and shall preserve to the American workingmen future happiness and prosperity.

In my district are thousands of boot and shoe operatives living in Brockton, Weymouth, Braintree, Randolph, Stoughton, Abington, Whitman, and Rockland. Many of the best and most loyal friends of mine in the world toil in the factories; and why should not I be keenly interested in the lives and welfare of these my friends?

Then, too, the mammoth Fore River Co. is in my district, and the existence of the tariff board may be needed some day in

the future to save the homes and continue the good wages of the skilled mechanics employed at this plant.

What a powerful and convincing speech of CLAUDE KITCHIN's on Thursday. All honor to him. His arguments on dyestuffs were illuminating, especially when he brought out the testimony of Dr. Becker, Mr. Schullkopf, and others that a tax of 2½ cents extra on certain articles in group 2 and 5 cents extra on certain dye materials of group 3 were sufficient. Mr. HILL asks for 3¾ cents and 7½ cents, respectively, and I reserve my right to vote on this subject according to my convictions.

Mr. FOCHT. Will the gentleman yield right there?

Mr. OLNEY. For a question.

Mr. FOCHT. Is it not a fact that after the tariff was removed from hides that the Government lost a revenue of between two and three and a half million dollars, and that even leather immediately went up 25 to 45 per cent, and with the tariff taken off shoes that shoes immediately advanced? Is not that a statistical fact?

Mr. OLNEY. The advance was on account of the scarcity of hides the world over, and I will say this for the benefit of the gentleman, that we did not import many shoes, and our export in shoes the year before the tariff went into effect amounted to $15,000,000 or $16,000,000 in comparison with the imports on shoes brought into this country where it was something like $173,000, and in a few months afterwards when the tariff was in operation there was a slight increase in the importation of shoes. I can not give the gentleman any more time.

Mr. FOCHT. All right.

Mr. OLNEY. With an allowance of 10 minutes I will not be able to say all that I desire.

As a wool man I visit a score of mills each year, and they all use dyes, and according to their testimony dyes show an advance of from 200 to 2,000 per cent.

Millions of dollars will be released by capital and thousands of skilled mechanics will be placed in employment if you grant sufficient duty on dyestuff material.

The leader of the majority tells us that he is supporting the tariff-commission idea with some reluctance and doubt as to its wisdom. Doubtless many of the southern Members coincide with his opinion. Do not you men of the South realize that your business and agricultural interests are as contiguous and intimate with the North as they possibly can be?

Every woolen mill I visit during the year uses your cotton. The great American Woolen Co. in its score of mills consumes thousands of bales of cotton yearly.

We want your iron, your cotton, your timber, and early fruits. You need our boots and shoes, our textile goods. We are necessary to each others existence and comfort. Therefore if in the future our shoe industry and our textile manufactures are in danger from foreign competition, will not a tariff commission with powers of investigation, report, and recommendation become a beneficial agent and a power for future remedial legislation?

To emphasize more fully my arguments in favor of granting a tariff board the power to recommend changes in a tariff found deficient let me quote from a letter dated Boston, April 12, from the New England Shoe and Leather Association, Thomas F. Anderson, secretary, which was mailed to all Senators and Congressmen:

> The directors recommend that the Rainey bill be amended by including the provisions of sections 5 and 6 of H. R. 6905, introduced by Mr. OLNEY, of Massachusetts, and which provided that the permanent tariff commission, if established, shall be empowered to present such tariff bills as it may agree upon to Congress for its action, and that the commission shall make such special reports to Congress as it may deem advisable. In other words, our directors favor giving the commission authority to make specific tariff recommendation.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KITCHIN. I yield the gentleman two minutes additional.

Mr. OLNEY. I hope to offer an amendment on Monday, extending the powers of the Tariff Board, and I hope that the Hon. CLAUDE KITCHIN will favor this substitute section.

I think the tariff commission should have an odd number of members, since in tariff investigations and recommendations the odd vote is often important and decisive.

Why eliminate from appointment on this commission Members of Congress and Senate and former Members. You can find the best timber in the country in the House and Senate; for instance, on the Republican side Mr. MOORE of Pennsylvania, a high protectionist, to be sure, but eminently fair; and on our side, as a good balance wheel, Mr. HELVERING, and over in the Senate Senator UNDERWOOD. As far as I am concerned, I wouldn't lift a finger for recognition. I desire to return to Congress, and have a fair chance, although my district is, at the present time, ostensibly Republican by 12,000.

A few years ago, when the primary law went into effect, the venerable Cardinal Gibbons was asked by a registrar of Baltimore of what political faith he was and, with a twinkle in his eye, answered, "I am a Republican-Democrat."

I will go farther and, enveloping all parties, style myself a social, progressive, temperate Republican-Democrat. When the proper time comes, say, in October, I hope to have the oratorical assistance of Democratic Members, but I shall not hesitate to invite into my district such stalwart Republicans as Hon. JAMES R. MANN, Hon. J. HAMPTON MOORE, and Hon. JOSEPH W. FORDNEY, in the interests of my reelection, and how can they refuse so polite an invitation? [Applause.]

Mr. KITCHIN. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. BAILEY.] [Applause.] Mr. Chairman, as I understand the time has been used equally by each side up to now. Up to now I understand that I have used the same number of hours and minutes that the gentleman from Michigan has used.

Mr. FORDNEY. Yes.

The CHAIRMAN. The Chair begs to state that the time is even now.

Mr. BAILEY. Mr. Chairman, in presenting the rule under which this two hundred million war-revenue measure is being considered the gentleman from Tennessee [Mr. GARRETT] explained that it was framed to meet an extraordinary situation. And that is true. But what I wish to say at the outset is that for this extraordinary situation no responsibility attaches to me. It has arisen in spite of all the efforts of those who think and feel as I do to stem the tide of militarism and to allay the hysteria for which we are now about to pay through the levying of heavy additional taxes.

It is not my business to reproach any Member of this House, but perhaps it will be permitted me to say that if other Members had striven as earnestly as I have done and as some of my colleagues have done to moderate the craze which has taken possession of the Nation the stupendous appropriations already made by this Congress might have been kept down, if not wholly avoided. But I am afraid that some who believe as earnestly as I do that there is no justification for the course which has been pursued have held their peace instead of exerting themselves as some of us have done to get the truth to the people, and thus to thwart the selfish and sordid aims of the militarists and the patriots for profit. [Applause.]

This bill in some respects is very distasteful to me, as it must be to very many Democrats. I am sorry that it includes certain provisions, especially sorry that it embraces a provision for a tariff commission, for a protective duty on dyestuffs, and for the shutting out of competition from abroad under a so-called "antidumping" clause. None of these provisions has any proper place in a Democratic measure. And if time permitted I think I could show conclusively that every one of these provisions is contrary to Democratic doctrine, a concession to Republicanism, and an affront to the fundamental principles of our party.

But, after all, these provisions are not vital. They are of secondary importance and sink into relative insignificance in comparison with the main purpose of this really great measure, which is designed to place the burden of this war scare on those chiefly responsible for promoting it, for let this be borne in mind: The demand for huge naval and military appropriations did not originate in the ranks of labor. It did not spring from the humble firesides of the land. It was not inspired by the farmers or the artisans or the plain men in overalls. It had its origin among the very elect. Trace it to its source and we find that it has proceeded from Wall Street and from those whose great interests center there. [Applause.] And so there is poetic justice in the proposition we now make in this bill. They who have done the dancing—the howling dervish dance of "preparedness"—must pay the piper. Those who have been financing the National Security League, the Navy League of the United States, the National Defense League, and all the other societies and organizations which have been fanning the war spirit into flame must now finance the great program which this Congress has authorized and the money for which has been appropriated. This is precisely what this bill means. It means that wealth must foot the bills which the "preparedness" hysteria has forced Congress to contract. [Applause.] It means that the great incomes of this country are not to be so great after Uncle Sam shall have taken his toll for this monstrous military and naval expansion that would never have been dreamed of but for the costly campaign that was waged for more than a year by the war traffickers through a newspaper press which has been practically closed to every argument in favor of reason and moderation. [Applause.]

No. The appropriations made by this Congress running up to amazing totals were not demanded by the great body of the

people. Not a farmers' organization in the land has gone on record in favor of the staggering program which is about to be written into law or has already been so written. Not an organization of labor in the United States has demanded these appropriations or the program that has called for them. The vast multitudes of those who toil and who carry the heat and burden of the day have given no expression which could be tortured into a call on Congress for the thing that has been done. But Congress has hearkened to the clamors of a strident minority which has been conjuring in the name of patriotism and which has exhausted the arts of the drummer in pushing the sale of its wares, for keep it in mind that "preparedness" calls for armor plate. It calls for powder. It calls for big guns and little. It calls for fat contracts for a vast variety of supplies. It calls for financial transactions which help the bankers. And it calls for a hundred things out of which profits may be made by those in the game. [Applause.]

But for the first time in the history of agitations of this sort the engineer is hoist of his own petard—the folks responsible for the "preparedness" craze are called upon to step up to the captain's desk and pay the score. It is something new under the sun. Never before in all the tide of time has it befallen that the great and the powerful who play upon the warlike spirit and conjure with patriotism in order to coin it into dollars or into advantages have been faced with the proposition that they and not the voiceless multitude should come across with the wherewithal. War and war crazes have always before been brought on by the great and the powerful, as this one has been. But they neither did the fighting nor paid the bills. Both the fighting and the paying fell to the lot of the poor and the lowly. For once the program has been changed.

A Democratic Congress is placing the burden where it belongs. We are not asking the poor man to shoulder it. We are not demanding that those least able to bear the load shall assume it. But we are saying to the men of great wealth, who in the main are the proponents of "preparedness," that they shall shell out. It is their party, and they must settle all scores. And surely they can not complain. They are getting just what they have been clamoring for, and it does not lie in their mouths to raise objections when they are invited to meet the necessary charges. [Applause.]

Allow me to say that the additional or supertax on large incomes is much more moderate than I had hoped it would be. The maximum of 10 per cent is altogether too low. It ought to be not less than 25 per cent; and I think 50 per cent would come nearer the mark. For I fancy that a 50 per cent supertax on a million-dollar income would dampen the patriotic ardor of even the most strenuous advocate of a huge military and naval establishment. We would have fewer security leagues and navy leagues and defense leagues if the millionaires who have been fostering them were compelled to part with a half or even a quarter of their annual gains for the purpose of meeting the cost of "preparedness." I can conceive of nothing more likely to calm the perturbed patriotic spirit of a Morgan or a Rockefeller or a du Pont than a 50 per cent tax on net incomes of a million or over as a contribution toward a huge standing Army and an "incomparable" Navy. [Applause.]

However, a fairly good start is made in this measure. It will be easy enough to keep on if we find that the additional tax carried in this bill is insufficient to quench the burning fires of patriotism in Wall Street. The country will rather enjoy sitting by and watching our multimillionaire defenders of the national honor do their plain duty. Always before the country has supplied the funds.

It will be a novelty to see those who sit in the seats of the mighty digging down into their strong boxes to meet an exigency of their own invention. And this spectacle we are now about to enjoy. It is one that we shall watch with a very curious interest and a spice of real satisfaction. Nor shall we weep should wealth set up a howl of anguish, as it is quite likely to do. Let it howl. To the ear of the common people its anguished and outraged cries will be as sweetest music. For wealth has never felt ruth or pity for the masses when the burden and the pain were upon them. Rather has it pursued its own way rejoicing. Rather has it looked with a cold and calculating eye on those who sweat and bled that it might have its holiday. If now we are to have something which approximates an evening-up process, there will be occasion for philosophic satisfaction.

Mr. Chairman, I do not feel like concluding without some reference to the Mexican situation and to the apparently hopeful aspect it has taken on within the past few days. I desire most earnestly here and now to offer my congratulations to President Wilson on the patience and forbearance he has shown in dealing with a case that might well have staggered a less resourceful and a less magnanimous man. In very special way I wish to congratulate him on the fine spirit of his recent addresses in Philadelphia and New York and to express the hope that the obvious way out of the delicate Mexican affair may be taken with the least possible delay.

In my belief our troops on Mexican soil are a continuing menace to good understanding, a certain invitation to a recurrence of incidents similar to that which took place at Carrizal. Their mission has been fulfilled. They have already dispersed the bandits after whom they were sent. It seems that if patrol duty alone is required, this can be better done at the border and within our own territory than a hundred miles or more below the international boundary. At all events troop movements should be northward rather than in any direction which may tend to excite the apprehensions and wound the sensibilities of the people of Mexico.

Nothing can be more certain, Mr. Chairman, than that the continued operation of American armed forces upon Mexican soil will eventuate in a breach or at least a heavy straining of our friendly relations with the distracted Republic which we should be helping toward the solution of its difficult and perplexing problems rather than adding to them. We can lose nothing in dignity or in honor by doing a just thing in the removal of a disturbing factor which is under our control.

I am emboldened thus to voice my sentiments by the President's own lofty words at Philadelphia, and by the purposes they imply. I believe with him that "America should be ready in every point of policy and of action to vindicate at whatever cost the principles of liberty, of justice, and of humanity to which we have been devoted from the first." And with him I realize that "it comes high" and that "it is not an easy thing to do." As he has so happily said, "it is easy to think first of the material interests of America, but it is not easy to think first of what America, if she loves justice, ought to do in the field of international affairs." With him again I believe "that at whatever cost America should be just to other peoples and treat other peoples as she demands that they should treat her." His are brave words voicing high thoughts. Can any one doubt their appeal to the heart of the great masses of our countrymen who have no sordid interest to subserve by the bringing on of war with our distracted and unhappy neighbor?

It seems to me, Mr. Chairman, that President Wilson must have the sympathy and the cordial and enthusiastic support of the great plain people in this magnanimous and entirely just position. I am certain that the vast majority of Americans do not want war with Mexico or with any one else. They have loved Woodrow Wilson because he has stood for peace, because he has stood between the country and those who for selfish and sordid reasons would have dragged it into the very vortex of that horrible maelstrom of blood in which Europe is being engulfed. They will love him with even a more consuming passion if he shall bring his great powers to bear in averting the breach with Mexico which has been so threatening ever since American troops began their operations on the soil of that unhappy and hapless land. [Applause.]

Mr. FORDNEY. Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. SWITZER].

Mr. SWITZER. Mr. Chairman, the pending bill provides machinery for the creation of a tariff commission. It is to my mind another admission that the Democratic Party has blundered fearfully in the fixing of the tariff rates as provided in the Underwood tariff law, having in view not the future welfare of American industries but having solely in view the idea of producing a competitive condition supposedly for the benefit of the consumer or, as more aptly put by President Wilson, "the whetting of American wits by contest with the wits of the rest of the world" [applause], and by this process of international grinding reduce the cost of living. With the cost of living soaring, harassed and annoyed by frequent consignments of internal-revenue taxes, with an income tax yearly increasing by leaps and bounds and new taxes galore, even many old-line Democrats have become so exasperated that they are not only whetting their wits but they are whetting their knives for the purpose of doing considerable fall pruning in the Democratic vineyard. [Applause on the Republican side.]

No wonder Democracy is wavering and fast receding from its boasted position with respect to the tariff. I have no doubt our Democratic friends are learning that the tariff rates fixed in the haphazard manner as carried in the Underwood bill are imposing upon the business men of this country, the manufacturers and producers, the burden of paying a protective duty on much of the raw material which they consume while their finished product is carried on the free list and has no protec-

tion whatever. [Applause on the Republican side.] I have no doubt that they are daily hearing from these unfortunate whipsawed industries. [Applause on the Republican side.] In this bill there is a sop to Republican protectionists in the way of a duty on dyestuffs. The report of the majority of the Ways and Means Committee on this bill says that duties are levied on imported dyestuffs solely for the purpose of protection. There is no estimate of what revenue it will produce, and I do not understand that they expect to derive any material revenue from imposing those duties and it is solely for the purpose of protection.

Now, my Democratic friends, if it is constitutional in this particular industry to resort to a tax and levy a tax on imported dyestuffs to nurture and encourage this industry, why is it not constitutional and a wise policy to levy duties all along the line in order to nurture and build up and maintain and protect American industry? [Applause on the Republican side.]

Taxes galore! This bill is a good deal like Joseph's coat of many colors. For variety of methods of taxation I suppose it stands without an equal in the history of revenue legislation. They propose a tax on the incomes of those living and attempt to sequester the estate after they are dead. All manner of taxes—a protective-tariff tax, free-trade taxes, income taxes, corporation tax, munition taxes, estates taxes; there are special taxes, and, finally, fearing that something might escape, we have miscellaneous taxes. Nothing escapes them, and I presume they are providing a tariff commission for the purpose of devising new methods of taxation, for detecting new sources of taxation in the future. [Applause on the Republican side.] They attempt to conceal their real reason for legislating into existence a tariff commission by raising the cry that they want to take the tariff out of politics, when, in fact, all they desire to do is to divert the minds of the people from their recent miserable failure at tariff legislation. They say that in order to take the tariff out of politics you must authorize President Wilson to appoint a tariff commission. Just what a free trader wants with a tariff commission is a little difficult for me to understand. I would think that Satan would have just about as much use for the Apostle's Creed as a Democrat would have use for a tariff commission. [Applause on the Republican side.]

One of the gentlemen who preceded me said that they expected to take the tariff out of politics merely by creating this tariff commission, when all that it has to do is to investigate and make a report. I do not understand how that will take the tariff out of politics.

The gentleman who preceded me, the gentleman from Wisconsin [Mr. REILLY], I believe, said something about their proposing to write a nonpartisan tariff bill. That is a new one on me. A nonpartisan tariff bill? I will wait and hear the definition and explanation before attempting any criticisms or observations concerning that bill, but I am anxious to see the first draft of it.

Mr. YOUNG of North Dakota. Did the gentleman say "bill" or "pill"? [Laughter.]

Mr. SWITZER. I said "bill," but possibly it will be a pill. In my judgment the tariff will not be taken out of politics until one of the two great parties will recede or capitulate on the past position it has taken on this great question.

Mr. BENNET. Will the gentleman yield?

Mr. SWITZER. I will.

Mr. BENNET. Does not the gentleman think that the Democratic Party has both receded and capitulated?

Mr. SLOAN. To go further, is it not a surrender?

Mr. SWITZER. I was just going to remark that I was glad to note that through the recent national platform utterances of the Democratic Party and by a Democratic majority of the Ways and Means Committee recommending this legislation, they are fast receding from the position they have heretofore taken on this question, and it is likely that in the not far distant future they will entirely surrender, and then with a Republican tariff commission and a Republican protective tariff, we will not only have Republican prosperity, but peace and happiness throughout the Nation. [Applause on the Republican side.]

The Democratic national platform of 1912 declared "it to be a fundamental principle of the Democratic Party that the Federal Government under the Constitution has no right or power to impose or collect tariff duties except for the purpose of revenue," to administer the Government economically. But it seems the present day leaders of that great party have many misgivings as to the soundness of this time-honored principle of Democratic faith, or, at least, they do not believe it is very popular at this time among the American people.

They have stated in their platform this year that they reaffirm the doctrine of the tariff for revenue for the operation of the Government economically administered, but there is an absence of any declaration reaffirming directly or indirectly that great fundamental principle of the party so proudly proclaimed in the Baltimore platform in 1912, and which was a mere reiteration of a similar declaration in the Democratic national platform of 1892. The minds of the President and the Democratic leaders of the country seem to have become much troubled because of their past denunciations of Republican protective tariff policies, and there is not an utterance, there is not an expression, in their recent platform adopted at St. Louis; there is not a declaration that produces even an echo of that old-time ringing pronouncement of the unconstitutionality of all protective-tariff duties. [Applause on the Republican side.] On the other hand, they say that "we recognize that tariff rates are necessarily subject to change to meet changing conditions of the world's production and trade," and this is followed by a declaration for a tariff commission "to make impartial and thorough study of every economic fact that may throw light either upon our past or upon our future fiscal policy with regard to the imposition of taxes on imports or with regard to the changed and changing conditions under which our trade is carried on."

Mr. HASTINGS. Will the gentleman yield?

Mr. SWITZER. I will.

Mr. HASTINGS. I am very much interested in this very delightful argument the gentleman is making. I want to ask him if he still holds to the theory that the foreigner pays the tariff tax?

Mr. SWITZER. I do not recollect ever having unqualifiedly advocated that theory, but undoubtedly in many instances under a Republican tariff law the foreigner does pay the tax. [Applause on the Republican side.]

Mr. CULLOP. Mr. Chairman, will the gentleman permit a question there?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Indiana?

Mr. SWITZER. Yes.

Mr. CULLOP. Does the foreigner pay the tariff tax when the goods are entered in the customhouse here?

Mr. SWITZER. Well, it depends on who owns the goods when they are entered at the customhouse.

Mr. CULLOP. If the foreigner pays the tax, is it not collected back off the purchaser here?

Mr. SWITZER. In some instances it is, and in many instances it is not.

Mr. CULLOP. Then, the gentleman believes the foreigner gives that to you. The gentleman believes the foreigners are very generous over there.

Mr. SWITZER. I do not say and I do not imagine that they are so generous as the gentleman suggests, but under a Republican tariff law, in order to get trade, they sometimes do pay the tariff taxes themselves, and in such cases it may not be added to the price that is charged in this country; not always, of course, but sometimes.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Illinois?

Mr. SWITZER. Yes.

Mr. DENISON. Can the gentleman state who will get the amount of tariff that this antidumping clause will compel the foreigner to pay on the goods that are brought in here? Who will get that tariff—the Government or the foreign shipper?

Mr. SWITZER. I do not know that I can answer the gentleman's question, because I do not understand the consistency of this bill. But the Democratic idea was to lower the duty so as to increase importations into this country, in order to reduce the price to the consumer here. That was their doctrine, but after a few years of that method of doing business they bring in here what they call an antidumping provision. Whether it will work or not I am unable to say, but I doubt it; but the Government gets the special duty imposed by the unfair-competition provision of the pending bill.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. FORDNEY. Mr. Chairman, I yield to the gentleman two minutes for the purpose of asking him a question.

Mr. SWITZER. Very well.

Mr. FORDNEY. The gentleman from Oklahoma [Mr. HASTINGS] asked the question a moment ago whether the importer paid the tax. I want to ask a question in return. Prior to the adoption of the Underwood tariff law there was a duty of 11 cents a pound on wool. When the Underwood law took effect the duty was removed. The price of wool did not go down upon the enactment of the Underwood bill. Now, who paid the tax before the Underwood bill became a law—the foreigner or the American purchaser?

Mr. SWITZER. I think the gentleman's question answers the other question. The same thing happened when the tariff was taken off hides and leather. Instead of the price going down, as was promised, the price went up. I do not want to be understood as saying that the foreigner always pays the tax, but if the tariff bill is properly framed along the lines of Republican protection, I say that in most instances the foreigner will pay the protective tax in order to enter this market with his commodity.

Mr. HASTINGS. Mr. Chairman, will the gentleman yield there?

Mr. SWITZER. Yes.

Mr. HASTINGS. Can you name a single one where the consumer does not pay the tariff tax?

Mr. SWITZER. I do not yield, Mr. Chairman. If the gentleman does not believe in protection, why does he support a bill brought in by his party, placing a duty on imported dyestuffs, for the purpose of building up the dye industry here? [Applause on the Republican side.]

The ultimate object, the purpose for making the investigation and impartial study declared for in the recent Democratic tariff plank is not very clear, for while the plank subsequently expresses sympathy with the principle and purpose of the remedial legislation proposed respecting the change to be made from time to time in tariff duties, it does not specifically state whether such legislation is to be protective, competitive, or of a free-trade character. The proposed principle is so illy defined, and the purpose sought so beclouded with uncertainty that no one knows just what it means. It is capable of almost any construction, and I have no doubt but that it was intended to be capable of any construction that the Democratic administration or a Democratic caucus might see fit to decree.

The final analysis of the foregoing declaration leads one to conclude that the broad investigation and intense study to be provided for in the legislation recommended is solely for the purpose of giving the present administration an opportunity to express its "sympathy" for the numerous industries left defenseless and helpless by the Underwood tariff law, but I wish to call the attention of the people to the fact that a mere expression of sympathy on the part of our Democratic friends has never heretofore rendered them any material assistance.

During the consideration of the Underwood tariff bill in the last Congress large numbers of Democratic Representatives expressed their deep sympathy for the woolgrowers of the country and stated that a duty ought to be put on raw wool, but when it came to the supreme test they voted to put raw wool on the free list.

The agonizing sympathy of the Democratic majority in the Sixty-second Congress for the sugar consumers of the country was most pathetic to behold, and I can still hear the sorrowful wail going up from the other side of this Chamber as Democrat after Democrat rose and told of the annual $115,000,000 extorted from the people by reason of the Republican duty on imported sugar and that the humanity of a Democratic Congress and a Democratic administration never would tolerate such an outrageous burden to continue on the American people. But upon the final perfection of the Underwood tariff law we find sugar not only left on the dutiable list, but under a protective duty. I submit that the unprotected industries of the country are not at this time seeking legislative expressions of sympathy, but what they want is legislative protection against their foreign rivals. They want immediate and effective action.

Having practically failed to redeem a single preelection promise and having failed to redeem any important platform pledge, our Democratic friends realize that their platform promises of 1912 are regarded by the people as a huge national joke, so much so that a prominent Democratic Member of the House upon the floor of this Chamber in the last Congress in utter disgust exclaimed "that the Democratic Party had become the laughing stock of the country," and, being deeply impressed with the necessity of passing some legislative act to lead the people to believe that they intend to fulfill at least some of their recent platform pledges, we find incorporated in the pending revenue bill an antidumping provision.

Such legislation is necessarily protective in its character, and its sole purpose is to directly protect the American producer against his foreign competitor regardless of the question of raising revenue, and the Democratic members of the Ways and Means Committee, by recommending the passage of this legislation, construe their new-born tariff plank as a declaration, among other things, for tariff legislation solely for the purpose of protection. For no Democrat has so far had the audacity to suggest the enactment of dumping legislation for the purpose of raising revenue.

If the protective principle is wrong, then all forms of protection and all methods adopted by Congress to partially restrict the importation of foreign-made goods into this country for the purpose of securing to the American producer a market free from ruinous foreign competition are wrong.

And when our Democratic friends pass or attempt to enact legislation solely for the purpose of preventing foreign-made goods from being thrown upon our markets in large quantities, which have been purchased at a price lower than the usual selling price or cost of production in the country from which they are exported, plus freight, duty, and the necessary expenses of importation, all for the purpose of breaking down and destroying some American industry, then they most assuredly admit or concede that the protective principle is not only constitutional but that it is also a wise economic policy.

But the passing of an antidumping law will not alone initiate and build up new industries. Such legislation is a necessary adjunct to an adequate protective-tariff act, but standing alone it will be of scarcely no value in developing new methods for the utilization of our great national resources. But it is a necessary supplement to a protective-tariff law to further secure, to further safeguard, the protection afforded thereunder to American producers by undertaking to prohibit unfair business practices on the part of their foreign competitors. It is the protective reserve force that will be invoked by the American producer when his foreign competitor resorts to unfair business methods and cut-throat competition.

When the Underwood tariff bill was under consideration in the Sixty-second Congress I sought to have its antidumping provision, which affected only articles upon the dutiable list, so broadened as to apply to articles upon the free list produced in this country. This proposition was voted down by the Democratic majority. When the bill got over to the Senate the Democratic members of the Senate Finance Committee cut out the antidumping provision because it smacked too much of Republican protection, but they stated that if the law carried an antidumping provision, in their opinion it ought to apply to all articles, both dutiable and free.

The present bill seeks to curb the dumping evil by making it a criminal offense, punishable by fine and imprisonment, and they thus avoid the objections raised by the Senate committee to the former plan.

But while they seek to save the face of the Senate Finance Committee by changing from a dumping duty to a criminal offense to curb unfair competition, in the very next section of the unfair-competition chapter of the pending bill, for the purpose of punishing monopolies in restraint of trade, they resort to a special import duty equal to double the amount of the duty otherwise imposed by law. It seems to me that this provision has the same vice as the dumping provision of the Underwood tariff bill condemned by the Senate Finance Committee, in that it affects only articles upon the dutiable list of our tariff law. If the monopolist dealt in an article carried upon the dutiable list, he is punished by the imposition of a special double duty, but if the article he deals in is upon the free list, he is subject to no punishment or inconvenience whatever. I am anxious to see the comments of the Senate Finance Committee upon this new proposition.

The CHAIRMAN. The time of the gentleman from Ohio has expired. If no gentleman desires further time, the Clerk will read the bill for amendment.

Mr. KITCHIN. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. CULLOP].

The CHAIRMAN. The gentleman from Indiana [Mr. CULLOP] is recognized for 10 minutes.

[Mr. CULLOP addressed the committee. See Appendix.]

Mr. KITCHIN. I yield five minutes to the gentleman from New York [Mr. LONDON.].

[Mr. LONDON addressed the committee. See Appendix.]

Mr. FORDNEY. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Chairman, the gentleman from Indiana [Mr. CULLOP] refused to yield to me, and I am rather glad he did, because I wanted to ask him a fairly mean question. I wanted to ask him if he was as sure of what he was then stating as he was sure in 1911 that a tariff commission was wrong. As I do not like to ask mean questions, I am rather glad that he did not yield. He asked the gentleman from Ohio [Mr. SWITZER] a question, and that was, whether the foreigner paid the tax. I propose in my five minutes to give three instances where the tariff was raised in the Payne bill, where an American industry was established, and where the price to the consumer was not raised, and that ought to answer the question. The first was in the case of pumice. The tariff in the Payne bill upon pumice was very much increased, something like 80 per cent. Pumice is used as a cleanser. There

were fields of pumice in Kansas and Nebraska, but before the Payne bill they could not be operated, because the Italian wage is about 35 cents a day and the wage in Nebraska and Kansas is something like $2 a day. We almost doubled that tariff in the Payne bill. What was the result? They commenced to mine pumice in Kansas and Nebraska, and the price of the product, the cleanser, has not been raised to the consumer. That is one case. The second was in the case of post cards. My colleague [Mr. LONDON], who just spoke, and myself know that New York City is the center of a great lithographic industry. The union laborers from New York came down and asked Congress, when drafting the Payne bill, to increase the tariff upon lithographed post cards, because they said the then tariff did not equal the difference in cost of production at home and abroad. We did raise the tariff in the interest of the lithographers in New York City and elsewhere, with the result that on Beekman Street and other streets in New York City establishments were opened for the manufacture of post cards, and the first result that I saw of that was that the price of picture post cards here in the city of Washington, instead of going up to the consumer, went down under the American competition.

The third instance was the question of cheap lace—a kind of lace that is used upon the garments of the poor people. The tariff on those laces, known as Lever and Gothrough laces, was increased to 70 per cent in the Payne bill. Prior to the Payne bill there was practically no industry of that kind in this country. In the Payne bill, under the provision, that industry was created, and created so quickly that by 1913 we were able to prove to the gentleman from North Carolina [Mr. KITCHIN] and others on the Ways and Means Committee that we had an industry of that kind in this country, and prove it so effectively that the Underwood bill continued the tariff, not at the full Payne rate but at the rate of 60 per cent, so as not to kill that industry, that came into being by reason of the increase under the Payne bill. There were 31 factories established. There are three of those factories in the district of my friend from the twenty-fourth New York [Mr. OGLESBY], all due to the operation of the Payne bill, and the price to the consumer is less to-day than it was then. [Applause on the Republican side.]

Mr. KITCHIN. Mr. Chairman, I yield two minutes to the gentleman from Indiana [Mr. CULLOP]. [Applause.]

Mr. CULLOP. Mr. Chairman, we have made a new convert. The gentleman from New York now is preaching the doctrine that every Republican in the land will repudiate, that the levying of high-tariff rates reduces the price of the article. Such a doctrine is hostile to the theory upon which protection is demanded and given.

Now, I would like to ask him how high must a tariff be in order to get the article for nothing, if the doctrine he now asserts be true? In order to defend the doctrine of protection he now asserts, instead of it increasing prices it lowers them. Now, Mr. Chairman, this abrupt change of theory on the part of the gentleman from New York shows the fallacy of his party's doctrine on this question, and when pressed it is indefensible, and he is compelled to shift his position in order to sustain his theory. It will not stand the test nor bear the light of analysis. Instead of declaring the necessity of levying a high duty to raise the price, he here boldly proclaims it should be made high in order to reduce the price, to cheapen the product to consumers. Let it be noted now that he is the only advocate of high protection on this floor who has offered such an argument, and in making it he directly opposes every person who has attempted to advance a reason for retaining the system. The gentleman stands alone in his defense. If it is not levied to increase the price, then what good reason could any person give for levying it? Does any man suppose the protected industries would stand for it if it lowered the price? [Applause on the Democratic side.] Does the gentleman from New York believe that the owners of great industries which have thrived for years because a high tariff has raised the price of their products and enabled them to extort unearned profits from the people will indorse his new doctrine and applaud his theory? If he does, he is woefully mistaken, and he will find it will arouse their hostility, and they will repudiate his theory and denounce the doctrine he has advanced. Imagine, if you can, the great tariff barons visiting Congress urging it to raise the tariff in order that they could lower the price of their products to the consumer. When that happens, the millennium will be here in full blast. Ah, the manufacturer can lower the price without raising the tariff, but he can not, as a usual thing, raise the price without having the tariff raised. He needs no tariff to lower the price, but does need it to raise the price above competitive prices, as a usual thing. It requires it to enable him to plunder the people. [Applause.]

Now, the gentleman from New York gives an illustration of how a protective tariff enabled some little factory to be started in Kansas and employ a small number of laborers, because by protection it could keep out of this country the foreign-made product, or prevent it from selling as cheaply as it could otherwise do, and then declares with much exultation that it is an instance where the tariff has enabled labor to be employed. Does not the gentleman think it was a very expensive experiment to the people of this country? In order to do this, 100,000,000 people were taxed and the price increased on all the products used by the entire population of the country, solely for the purpose of employing a handful of men in this industry. It might have been a good thing for the men who owned the industry and the men employed, but, oh, great heavens, think how hard it was on the millions of people who had to pay the increased price when they purchased the product! [Applause on the Democratic side.]

Does the gentleman longer justify such a system of taxation, which wrings from the pockets of the helpless consumers their money for which they have toiled, to put in the pockets of a favorite few profits they have never earned and could not collect if it were not for the indefensible system. Oh, no; the gentleman from New York used to contend for that, but judging from the speech he has just made, he has had a change of heart, and now he repudiates the old doctrine, advances a new one, and wants a high tariff now, for the purpose of reducing the price, in order to have the protected industries sell cheaper to the consumers. A new doctrine, indeed, but one that he will find nobody will believe. [Applause on Democratic side.]

Mr. FORDNEY. Mr. Chairman, I yield three minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Chairman, the doctrine I enunciated will not be repudiated by a single Republican who believes in the doctrine of protection [applause on the Republican side], because it has been our contention, and it has been proved, that by the establishment of any industry in this country under a protective tariff ultimately the price went down. I can give a concrete instance. Take men's gloves. The tariff on men's gloves in the McKinley bill was increased 100 per cent. Men's gloves are cheaper to the consumer to-day than they were at the time the McKinley law was passed, and the difference is that they are being manufactured in this country, instead of being manufactured abroad.

Mr. CULLOP. Is there any duty on them to-day—160 per cent?

Mr. BENNET. It started with the McKinley bill, and there are some things that even the Democrats did not dare do. They did not dare kill as conspicuous an example of how an industry can be built up under a protective tariff as is the glove industry. Take the old familiar question of steel rails. Prior to any duty on steel rails the price of steel rails in this country—manufactured, all of them, in Great Britain—was over $100 a ton, and the last time I looked at it they were around $28 a ton, because with the tariff in this country we established the industry, and with the competition that came between our industry and the industries abroad and with the appliances, with the American inventive genius applied to the American industry, we were able to put the price down, and that is a proved contention of Republicans year in and year out from time immemorial that if you give us a chance to build up American industries in time we will reduce the price. I give you credit by saying that that is exactly what you are trying to do in the dyestuff situation in this bill—you are trying to build up an American industry.

And if your bill works out right in detail, as to which I express no opinion, the ultimate result will be, when you have established the dyestuff industry under the provisions of your bill, in time the price will go down, and we will all owe a debt of gratitude to the gentleman from North Carolina [Mr. KITCHIN], the leading protectionist to-day. [Applause on the Republican side.]

Mr. KITCHIN. Is it satisfactory to the gentleman from Michigan [Mr. FORDNEY] that the committee do now rise?

Mr. FORDNEY. Yes.

Mr. KITCHIN. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. The gentleman from North Carolina moves that the committee do now rise.

Mr. KITCHIN. Mr. Chairman, I withdraw that motion for a moment. I wish to yield to the gentleman from Missouri [Mr. RUSSELL].

Mr. RUSSELL of Missouri. Mr. Chairman, the bill now under consideration is an emergency revenue bill, and I shall give it my support with the understanding and belief that it is to be a temporary measure and not a permanent law. It is necessary to-

day because of the unusually large appropriations that have been or that will be made by this session of Congress. I shall not undertake at this time to discuss the necessity nor the wisdom of these large appropriations. The most of them I know to be absolutely necessary in properly carrying on the functions of the Government. Others, no doubt, will promote the progress of the country and will be of great benefit to the American people. Some of these appropriations may be unnecessary and unwise.

But these questions are not relevant to this discussion and should not enter into our deliberations to-day. The appropriations have been or in a few days will be made, the money will be expended during the present fiscal year, and the only question before us now is how we will get the money. Like individuals the Government can not spend the money without in some way collecting the money to spend, and the only way known for the Government to get it is by taxation in some form. It may be by direct taxes, by indirect taxes, or by a bond issue that simply postpones the evil day of payment to a later time. Permanent improvements, such as the construction of the Panama Canal, that will abide for years to come for the benefit of future generations, all agree can consistently be paid for by a bond issue; but I think the most of us agree that it would be cowardly for the representatives of the present generation to borrow money upon the credit of posterity with which to pay the current expenses of our country to-day, and leave to those who shall come after us the burden of paying debts, when the things for which they would pay shall have been exhausted and disappeared before their time.

This is not a political measure but a business proposition, and I now modestly, without specific knowledge, predict that a majority of the Republican Members of this House will vote for its passage. Permit me to add that the Republican Members on the other side of the House, who do not vote for it will in my opinion place themselves in an inconsistent attitude before the country. It is true that in theory the party in power is usually held responsible for all appropriations made, and all legislation enacted by Congress, but in fact, the Republican Members of this House are as responsible to their constituents and the country, as are the Democratic Members for the large appropriations of this session. As a rule the great majority of Republicans, not only voted for all appropriations made, but for many proposed increases that were not made. I practiced law for 30 years and I always found that the most convincing proof against a litigant was his own admissions, especially when against his interests. One of the ablest and fairest speeches made on the Republican side of the House during this discussion was made by the gentleman from Ohio [Mr. LONGWORTH], who is a member of the Ways and Means Committee that prepared and reported this bill to the House. In the course of his speech he said:

> In the interest of fairness, however, it ought to be said that the wanton and reckless extravagance of the party in power is only partly responsible for the vastly increased expenditures which we have assumed and for which this bill is intended partly to provide. The larger portion of these expenditures represents the effort on the part of Congress to place this country in a condition of somewhere nearly adequate military and naval preparedness, and in that the Republican Party has not only assisted but has successfully insisted that the Democratic program be extended and elaborated.
>
> Being thus responsible for expenditures even larger than the Democratic Party either contemplated or desired, we of the Republican Party ought to be prepared to pay the price.

This distinguished Republican Representative not only assumes for his party its share of the responsibility for the large appropriations that make this emergency bill necessary, but he admits that his party was successful in making the appropriations for military equipment and national defense larger than they otherwise would have been, and like the fair and consistent man that he is, he says he will vote for this bill.

In view of this frank and true statement by the able and distinguished Republican Member of this House, let no other Republican of less information or less frankness undertake to criticize the Democratic membership of this Congress, either for the large appropriations made or for the passage of this measure, which provides the way to pay the obligations for which Members of all political parties voted and for which we are jointly responsible.

This bill provides four methods of taxation, which I will very briefly mention in their proper order.

First. The present income-tax law, for which nearly all Republicans and Democrats here originally voted. This law I am sure is to-day approved by a great majority of this House and a great majority of the American people. It produced in the last fiscal year, $124,000,000 collected from those of large incomes, thereby relieving the citizens of the country of small incomes from this large part of the revenue necessary to carry on the business of the Government. This law it is now proposed to amend by increasing the tax from 1 to 2 per cent upon incomes less than $20,000, with a graduated tax increasing as the amount of income increases up to incomes of more than $500,000, which are to be taxed 12 per cent per annum.

The same exemptions provided for in the present law are to be continued in this proposed law—that is, heads of families who have no more than $4,000 net income will be exempt from taxation, and those without families will have $3,000 exempt, so that those of small incomes will be relieved from any burden whatever under this law.

Second. The inheritance tax upon all estates of deceased parties where the amount of the estates after all debts are paid are more than $50,000. No estate of less than that amount, after all debts are paid, will be subject to any tax under this proposed law. It provides for a graduated tax of 1 per cent on the second $50,000 of an estate of $100,000, with gradual increases as the estates increase up to estates of $500,000.

Third. The manufacture of munitions of war tax. This is not only a very just and a very reasonable tax, but will meet with practically the universal approval of the people of the country. It is claimed that many of the munition plants are making a million dollars per day, and are deriving the greatest benefits from the expenditures of the millions of dollars that have been and that will be expended for so-called preparedness. It is estimated that there will be collected about $71,000,000 per year under this provision, thereby relieving the people of less profitable vocations from this large part of the necessary revenue to pay the expenses of the Government.

Fourth. It is proposed by this bill to repeal the special-tax law passed about two years ago and to reenact the same, continuing certain taxes imposed by that act, but I am glad to find that this bill will not reenact that part of the former bill providing for stamp taxes. I have personally never favored the provision requiring stamps upon telegraph and telephone messages, deeds, notes, or other documents that has proved to be such an inconvenience to the people, and I now want to congratulate the members of the Ways and Means Committee for repealing that part of the former act and leaving out of this bill that feature of the old law.

Mr. Chairman, I of course regret the necessity of this bill, but we all know that nearly all civilized countries are to-day at war and all the world seems to be war mad. There are many of our ablest and most thoughtful citizens who have believed there was grave danger of our own country being drawn into the bloody European conflict or of becoming involved in war with some other nation. I believe that our great President, Woodrow Wilson, who has thus far preserved both the peace and the honor of our country without war, will, with the cooperation of the peace-loving people of America, continue to do so, but our own apprehensions of a possible war aided by an urgent and a persistent pressure from many of our constituents, led this Congress to appropriate millions of dollars to prepare for our national defense, and of course the bills we have made must be paid. In my opinion, the plan agreed upon by the Ways and Means Committee, as expressed by this bill, will place the burden of the increased taxation made necessary by the present emergency upon the wealth of the country that is best able to bear it. Such of our American citizens as have been so fortunate as to accumulate and now possess the wealth that will make them subject to the provisions of this bill will in times like these no doubt be patriotic enough to bear, without complaint, this additional burden that will be temporarily placed upon them in obedience to the demands of the country for adequate preparedness for our national defense. [Applause.]

Mr. FORDNEY. Mr. Chairman, I yield to the gentleman from North Dakota [Mr. YOUNG].

Mr. YOUNG of North Dakota. Mr. Chairman, I thank the gentleman for his courtesy in extending time to me. I made some remarks upon the subject of the raising of revenue two or three months ago, and made some suggestions to the members of the Ways and Means Committee which I am sorry to see they have not acted upon. I ventured to suggest a method of raising revenue which would not only produce a large amount of money but at the same time help to correct a great abuse in the marketing of grain. My proposal was to tax all sales of grain for future delivery where deliveries were not in fact made. Such a tax would produce revenue and at the same time discourage gambling. Many letters of approval have come to me, and among them one from Benjamin Drake, Minneapolis attorney for the Equity Cooperative Exchange. Mr. Drake has given this subject much consideration, and delivered a strong and most convincing address last December before a great convention of farmers at St. Paul, held under the auspices of the Equity Cooperative Exchange. It was the largest gathering of farmers ever gotten together at St. Paul, made up of thoughtful, intelligent farmers interested in the cooperative handling of grain,

from North Dakota, Montana, South Dakota, Minnesota, and Wisconsin. The press dispatches said that the address was listened to with great interest, and the farmers present, who had suffered so much from the market fluctuations caused by gambling in options, frequently interrupted the speaker with applause. In the absence of objection, I shall have printed in the RECORD Mr. Drake's address. Mr. Drake said:

FUTURE TRADING ON GRAIN EXCHANGES.

Mr. Chairman and gentlemen of the convention, the attention of the American public has been repeatedly called of late to the evils of market manipulation. The New York Stock Exchange has been the principal object of attack. As yet there has been comparatively little public discussion of short selling and market manipulation as applied to grain and produce exchanges. This last phase of the question is the most important, because it affects the greatest number of people and because in this case the subject of price manipulation is invariably a necessity of life. Price manipulation as applied to industrial and other stocks affects only a few persons of means; but manipulation of the prices received for farm products directly affects all growers and consumers of these products—in a word, affects all persons. The whole problem has assumed such proportions that its solution is a public necessity. The solution should come as the result of careful study. It must be based on facts, not ineffective or hysterical appeal. It must come, moreover, from the common people, the source from which every reform of merit springs. The grain gamblers themselves will never suggest or institute a real reform; it is with this idea in mind—the idea of presenting for the consideration of thinking men some facts and arguments connected with the evils of gambling in grain—that I desire to speak to-day.

For many years the public has heard but one side of this controversy—the arguments of the speculators themselves who wish to perpetuate the system. The grain exchanges of the United States all are private industries. They are carried on for the pecuniary profit of their members. Whenever speculative features of grain exchanges have been assailed the members of these grain exchanges, ably aided by the banks, newspapers, servile politicians, and big business generally, has sprung to the defense.

We are told that future transactions as carried on in grain exchanges relieve the producer of the necessity of carrying his grain at the risk of fluctuation until such time as the consumer can actually use it. We are told much of the practice of hedging a purchase against a sale, and vice versa. It is claimed that this practice amounts to insurance against speculation. We are told that on the whole unlicensed speculation as carried on to-day increases the price which the producer would otherwise receive for his grain. And we are told, lastly, that the whole subject is too vast and intricate to be understood or even discussed intelligently by anyone except the few favored individuals who are actually engaged in the grain trade and incidentally profiting by the system.

Yet notwithstanding this persistent and long-continued effort to convince us that short selling in grain and other farm products is essentially right and proper, public opinion is apparently steadily setting against the practice. The practices of the New York Stock Exchange have few defenders. The present Democratic platform declares without qualification against gambling in food products. A bill recently passed Congress directed against short selling in cotton exchanges. A bill introduced at the 1913 session of the Minnesota Legislature, calling for the total prohibition of future trading, failed to pass the lower house by only a single vote. The powerful Rules Committee of Congress, after a solid week of hearings, where both the producer and grain exchanges were represented, has demanded a general investigation of future trading, and frames the following indictment against the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Duluth Board of Trade:

"That it is the common practice of these controlling members, by concerted action in these three great markets, offering or withdrawing enormous quantities of wheat of the public warehouses and terminal elevators, and by concerted bidding and betting in the pit on futures, to depress or raise the price of wheat to suit the purpose of their gambling operations; that the prices are by such combination and manipulation depressed, while the farmers are compelled to market the heavy portion of each crop and raised and manipulated so as to tempt speculative investors after the bulk of each crop is in the control of the combination; that for each bushel of real wheat actually sold and handled in each of those terminal markets at least 100 bushels are bought and sold in so-called future trading; that the multiplied expense of all such future trading, as well as most of the profits thereof must come out of the real wheat actually marketed; that the only part of the gains of gambling in wheat not borne by the farmer or buyer of bread is borne by men tempted to speculate in the pit; that the number of embezzlements, bankruptcies, and wrecks caused by gambling in wheat futures is appalling; that the members of the Chicago Board of Trade, the Minneapolis Chamber of Commerce, and the Duluth Board of Trade, through whom such gambling operations are made, cover and hide the record of the losses sustained by speculators and refuse to exhibit their books to the State officials whose duty it is to protect the public; that the Chamber of Commerce of Minneapolis and the Board of Trade of Chicago, by virtue of a large membership of wealthy men closely allied with banking institutions, transportation companies, and with certain daily newspapers of their communities, exercise and control an unwholesome influence in local government and public opinion."

This is only a part of the whole indictment; but it is enough to show that the American public has set itself seriously to the task of deciding whether to permit or prohibit short selling in the product of the farm.

The terms "future trading" and "short selling," broadly speaking, mean the same thing. Each term may in turn cover two general practices which should be specified in order to secure accuracy of thought and designation.

The so-called practice of hedging is one variety of future trading. It is the kind of future trading which is constantly harped upon and unduly emphasized by the defenders of short selling in order to distract attention from the other kinds of future trading which can not be defended at all. Hedging is best understood by the familiar illustration of a man hedging a bet. Having a bet on one side, he also bets on the other side, and thus guards himself against loss, whatever the result. Keeping in mind the general idea of hedging a bet, two illustrations will suffice to show examples of a hedge as used to-day in the grain exchanges. A Minneapolis miller has an order for 10,000 barrels of flour to be delivered next May at a certain price. That price is based upon the present price of wheat. The miller does not know what the price will be next May. He does not wish to invest capital in wheat and store it until May. Neither does he wish to assume the risk of wheat going up or down between the present time and the date of delivery. If he had many such contracts, a rise of 25 cents per bushel might mean great loss and even financial ruin. Therefore at the time of accepting the order for 10,000 barrels of flour he goes into the market and buys 50,000 bushels of wheat for delivery in May. In this way he has hedged his sale of flour, whether the market goes up or down. The payment of the small margin required protects him against loss from fluctuation in price.

Another typical instance of hedging is to sell actual grain for future delivery by a local country elevator. The elevator may be full of grain, but owing to railroad congestion or other cause, it may be impossible to get the grain to the terminal inside of 30 days. During this time wheat may fall 20 cents per bushel. The directors of the local elevator do not wish to bear this risk. They therefore direct their manager to wire some commission house at the terminal to sell 25,000 bushels of wheat for future delivery. When this is done, the elevator has only to make delivery within the time specified and it is protected against loss from a falling market. In other words, the elevator has hedged its own purchase of grain in the same way in which the miller has hedged his sale of flour.

Some persons see grave objections in the practice of hedging. It is pointed out with truth that practically no other commodities except grain and grain products can be protected by the hedging practices. The manufacturers of all other products are obliged to bear the risk of price fluctuation. Why, then, should the handlers of grain and grain products enjoy the singular insurance against risk in market fluctuation? The answer is that in theory at least it enables all parties to do business upon a closer margin. The miller, it is claimed, can make a closer price on his flour. The local elevator can pay a better price for the grain, because the profit of each can not be wiped out by price fluctuation.

Moreover, it is also true that hedging differs from all other forms of future trading in this respect; it is based upon a commodity either actually in existence or contracted for in a bona fide sense. In my own opinion, as terminal marketing is now conducted, hedging is a practical necessity. It is a necessity, because unlicensed speculation as now carried on causes sharp and constant fluctuation in market price. In other words, it is short selling itself which causes the market variations which make hedging a present necessity.

Senator CUMMINS, in his argument on the cotton futures bill, quoted in the CONGRESSIONAL RECORD for September 3, 1913, sums up this argument admirably when he says:

"It is said—and this is one of the arguments most frequently used—that short sales ought to be permitted, because they tend to steady the market and tend to prevent extreme fluctuations in the price of commodities. I have read a great deal of argument submitted to sustain this contention. I can not at this time enter upon an analysis of the subject as I would like to do. I can only record my own opinion that instead of steadying the market short sales disturb the market. Instead of preventing extreme fluctuations they excite extreme fluctuations. Those who defend the practice always forget that when short sales are used to steady prices—and I admit there are times when they are so employed—they are employed to steady prices which the practice itself has disturbed."

But whatever may be the merits or demerits of hedging, as used under the present system, it is certain that the practice can not be preserved unless it can be separated from the other forms of future trading. If it can not be separated from the other vicious forms of future trading which lend themselves to price manipulation and exploitation of the producer, then hedging must inevitably go. The public, when it learns facts, the stupendous volume and controlling influence of sheer gambling transactions, will eradicate the whole system of future trading unless hedging can be separated from the riot of gambling transactions which to-day raises and lowers the price of grain at will of the gamblers.

The volume of hedging, as compared with the total volume of future transactions of the grain exchanges of Chicago and Minneapolis, is comparatively insignificant. If all the grain entering the Minneapolis terminal in an entire year were hedged once, it would amount to less than 300,000,000 bushels. If it were hedged three times, it would still amount to less than a billion bushels. As a matter of fact the evidence at hand indicates that the total future transactions on the floor of the chamber of commerce aggregate not less than 10,000,000,000 bushels. The future transactions, which are not the result of hedging and which probably aggregate more than 9,000,000,000 bushels a year in Minneapolis alone, are purely speculative or gambling transactions. These are the transactions which make possible price manipulation, and which the public to-day seems determined to wipe out.

This second variety of future trading is more easily described than defined. It differs from hedging, because there is no actual interest to protect or hedge. Ordinarily there is neither actual delivery of the grain, nor any intention to deliver. The speculator or gambler buys or sells grain for future delivery on the chance of a favorable change in the market before the time specified for the delivery. Settlement of these transactions is commonly, almost invariably, effected by payment of the difference in price, called margins, instead of actual transfer of the grain. The speculator, therefore, merely makes a bet on what the future price of grain is going to be. He has no actual interest to protect, unlike the man who hedges.

To what extent is this purely speculative variety of future trading carried on? And what is its effect, if any, upon the price of cash wheat?

Let us answer these questions one at a time. One of the dramatic features of the recent grain-exchange hearing before the Rules Committee of Congress was the testimony of Samuel Hallet Greeley. For 28 years Mr. Greeley had been a member of the Chicago Board of Trade. He had sold his membership only 10 days before the hearing in order to be able to testify without fear of punishment. Mr. Greeley said that at the lowest estimate the future transactions of the Chicago Board of Trade amounted to 300 times the entire volume of wheat handled in a year. In other words, for every bushel of real wheat handled 300 bushels of phantom grain were bought and sold. On a single day, Mr. Greeley says, he has seen 25 Chicago firms buy and sell 5,000,000 bushels of grain apiece for future delivery. He styled himself an "insignificant" trader, but said that on many a day he had bought or sold a million bushels of grain and thought nothing of it. When it is remembered that recent average yearly receipts of wheat at Chicago do not exceed 50,000,000 bushels at the most, the sale of over 17,000,000,000 bushels for future delivery becomes simply appalling.

Mr. Greeley says that individual firms of Chicago lease private wires to the Pacific coast at an annual rental of more than $100,000 per year, so stupendous and so profitable is this system of organized gambling and

exploitation. He tells us that at times single firms of Chicago work as many as 20 clerks and bookkeepers night and day, simply to jot down and enter in their books of account the enormous volume of these future trades.

The only trouble with Mr. Greeley appears to be that he is altogether too conservative in his figures and statements. He has understated the facts. Willet M. Hayes, formerly Assistant Secretary of Agriculture, says that the future trading of the Chicago Board of Trade amounts to at least 90,000,000,000 bushels annually, which makes Mr. Greeley's figures of seventeen billions pale to insignificance. In January, 1913, the Assistant Secretary of Agriculture published an article in the American Academy of Political and Social Science, entitled "Functions and needs of our great markets." He says upon page 253:

"There is evidence that the really large speculative dealing is in wheat on the Chicago market. Estimates made some years ago indicate that 90,000,000,000 bushels of grain sales were made annually in Chicago."

Again he says, upon page 250:

"It is perfectly clear, however, that in the large the outside speculators and the producers and consumers among them lose money to a class of men who do not really pretend either to produce, to transport, or to manufacture; and they also pay the expenses of running an expensive speculative machine.

"A very rough estimate places the money received from the people by exchanges and their bucket-shop appendages in America alone at upward of $200,000,000 annually. On the face of it, this seems a high price to pay for fluidity and acceleration to the market and for the opportunity of hedging."

Mr. Hayes further states in this article that the speculative public loses annually at least $30,000,000 "through dealing with speculators with business connections with your (cotton) exchanges, or who assume to have such connection." According to Mr. Hayes's estimate, the annual losses of the public through the speculative features of grain and cotton exchanges would build a Panama Canal every second year. It would build 40,000 miles of macadamized roads over gumbo prairies every year. It would cover the entire proposed increase of governmental expenditures for preparedness for the coming year. And these figures do not take into consideration at all the losses which producers themselves sustain through manipulation and depression of prices of the commodities which they grow.

Nor is it necessary to rely entirely upon the testimony of Mr. Greeley nor the investigations of Mr. Hayes in order to determine the volume of gambling transactions upon the Chicago Board of Trade. Sworn testimony and admissions of the members themselves are available to establish these facts. Some years ago the Chicago Board of Trade prosecuted Christie Odell and others as bucket shoppers. The substance of some of the testimony in those cases as taken from the appeal record is as follows:

Charles A. Weare, of the Weare Commission Co., testified that his firm did a business of 600,000 bushels a day and that not more than 1 per cent resulted in actual deliveries. C. D. French, broker, testified that he had done a business of 100,000,000 bushels annually for 15 years and that only two or three times in all his experience had he had any property delivered to him. He fixed the total of the deliveries at about 200,000 bushels, or one two-hundredth of 1 per cent of his business.

Ex-Gov. James E. Boyd, of Nebraska, testified that he had been a commission merchant and dealer on the Chicago Board of Trade, and that actual deliveries were not one-half of 1 per cent of his business. Austin W. Wright, one of the heaviest speculators on the floor of the Chicago Board of Trade, testified that he had been a speculator for over 30 years and a member of the board of trade for 20 years and that in all that time he had never but three or four times paid for any grain. Since 1892 he was postive that he had not received or delivered any of the actual commodity. The following question and answer was put to Mr. Wright:

"Q. What is the difference, if there is any, between speculation on the board of trade and speculation off the board?—A. There is no difference. Locality can not affect the character of the transaction."

Walter Comstock was another interesting witness in the lawsuit. He was a member of Schwartz, Dupee & Co., the largest or second largest speculative house in the United States at the time when he testified that in the previous year his firm had dealt in from 2,000,000 to 3,000,000 bushels a day, and that in the previous December there were delivered to his firm only about 100,000 bushels of all kinds of grain. His testimony showed that not more than one-fifth of 1 per cent of the enormous business of his firm resulted in actual deliveries. The remaining 99⅘ per cent represented deals settled through the clearing house of the board of trade.

Judge Thompson heard the O'Dell case, and in his decision declared:

"The evidence convincingly shows that the larger part of the transactions in grain and other produce on the complainant's exchange are merely gambling transactions conducted by some of its members in violation of the law of the State of Illinois against bucket shops." * * *

The bucket shops are the offspring of the Chicago Board of Trade and kindred organizations, to which they still look for sustenance and life, and they can only be effectually suppressed by striking at the root of the evil. When this species of gambling on the commercial and stock exchanges of the country ceases the bucket shops will disappear, and not before."

It is unnecessary to comment upon this evidence. The promoters of the Louisiana lottery paid the State of Louisiana $40,000 for the privilege of running a gambling institution. The Chicago Board of Trade pays nothing; but the profits of its members from this source alone, computing them at the regular rates established by its own rules, would be not less than $75,000,000 per year.

At Minneapolis the evidence is not so clear as to the actual volume of future transactions. It is no doubt less than that of the Chicago market. At the grain investigation of 1913, conducted by the Minnesota Legislature, the members of the chamber of commerce refused to show their books disclosing the volume and details of their future trading. However, the volume of this future trading appears indirectly. It was shown at this investigation that within the chamber of commerce is the corporation known as the clearing-house association. This association had only 37 Members out of a total of more than 300. Its sole business was to clear the future trades of its own members. For this service it received one-half cent per $1,000 of future transactions clear. This was the sole source of revenue. Out of this revenue the association had paid its yearly expenses of $24,000, declared dividends, and accumulated a large surplus. The revenue to the clearing-house association for clearing $1,000,000 in future trades would be only $5. Computing simply the amount of future transactions necessary to maintain the yearly expenses of the clearing house and ignoring wholly the dividends paid, the surplus accumulated and the admitted fact that the clearing house acted for only a part of the entire membership, it appears that the future transactions passing through the clearing house amount each year to approximately $5,000,000,000. From all the facts and evidence it is quite clear that the entire volume of future transactions must equal at least 10,000,000,000 bushels per year. This estimate is apparently borne out by the testimony of F. G. Holbrook, a Minneapolis pit trader. He testified that on an average his future transactions amounted to 67,000 bushels per day, and that he seldom, if ever, delivered any real wheat to a purchaser. It is evident that approximately 90 per cent of the commission revenues of the members of the Chicago Board of Trade, taken as a whole, and three-fourths of the commission revenues of the members of the chamber of commerce are at present derived from future trading. In the case of Chicago the revenues derived from future trading must amount to approximately $75,000,000 a year, and in the case of Minneapolis between five and eight million dollars per year. The revenue derived from handling consigned grain, figuring a single commission, has never exceeded $1,000,000 in Minneapolis, or $2,000,000 at Chicago, in a single year. Gambling, therefore, is not merely an incident or adjunct. It is the main business of the modern grain exchange.

Time does not permit me to give the facts in detail, but the evidence taken at the Minnesota investigation shows conclusively that there never has been a year when the revenue of the commission houses of the Minneapolis chamber, taken as a whole and computing a single commission upon consigned grain entering the terminal, would be more than one-half of their admitted expenses. The major portion of these expenses and practically all revenues must be derived from future trading.

Judging from the facts obtainable, the bulk of these future transactions come from men not engaged in the grain business at all. Carefully contrived market news is ticked off the ticker every minute. Sure tips are freely circulated. The imagination of the sucker is aroused, his activity stimulated, and he takes a flier in wheat. He may be a lawyer, doctor, farmer, a minister of the gospel—all are welcome; the money of each is accepted. Bankruptcy and financial ruin may follow, often does follow, but in any case, win or lose, the board of trade member makes his commission. Some members of the Minneapolis chamber maintain uptown offices for the accommodation of the indiscriminate betting public. Some maintain private wires at vast expense. It is a vast and highly developed system—a democratic system, where the money of the poor pensioner or defaulting bank clerk is just as welcome as that of the millionaire theoretically fitted to bear the risk of fluctuation.

What effect do these stupendous gambling transactions have on the price of cash wheat? The answer is that within limits of many cents per bushel they absolutely determine and fix the price which the producer receives for his grain. Gambling can not, of course, completely do away with the law of supply and demand. But within limits these future dealings give speculators in wheat pit the power to raise or lower the price of cash grain at will.

Under the present system the price of cash grain is determined by the price of future grain. It is determined by what is called the "dominant" future, meaning the nearest date in the future fixed by speculators as the delivery date. These dates are May, September, December, and July. Just now the dominant future happens to be May, and the price of cash wheat is fixed by the May future. Theoretically, the price of cash wheat is the price of the dominant future less the cost of storage of the actual grain to the date of supposed delivery. Sometimes, under abnormal conditions, the rule does not work out exactly. But for practical purposes the price of cash wheat is fixed by the price of the dominant future. If the future goes up, the price of cash grain follows. If the future goes down, so does the price of cash grain. This is admitted by the members of the grain exchange themselves.

At the recent hearing before the Rules Committee at Washington, John Stream, a member of the Chicago elevator monopoly, which handles 90 per cent of the actual grain entering the Chicago market, testified as follows: "We would take the closing market of the future and calculate what was a fair price for cash grain." At the Minnesota investigation B. S. Ireys, of Minneapolis, pit trader, testified, "The price of cash grain is made by the price of future. If the buyers' orders were more numerous and vigorous the price would immediately respond and go up." The testimony of W. A. Gregory, E. L. Welch, and F. A. Hallet was to the same effect. Welch admitted that large dealers in the great markets, by acting in concert, had the power to temporarily affect the price of cash grain in any direction which might suit their purposes. He admitted further that if the market were affected for only a few minutes trades of stupendous magnitude could be closed. F. A. Hallet, now president of the Minneapolis chamber, testified, "at times I have seen the market advance half a cent on an order of 50,000 bushels; then I have seen it depressed in the same way." F. B. Wells, president of the Minneapolis chamber in 1913, testified in substance that speculators working collusively and in secret could raise or lower the price of cash grain at will. The only qualification which he imposed upon this admission was that speculators could not hold the price permanently at a given figure, although they have the power to alter it at will.

The facts quoted above are not surmises. They are the admissions of grain-exchange members themselves. Under the present system as now carried on by the privately owned grain exchanges the price of farm products is made the football of speculators. The agency is simple and effective. The price of the future determines the price of cash grain. The price of the future in turn is fixed by the relative strength of a flood of fictitious sales and purchases thrown on the market by speculators who know just what they want. If the speculators for their own purposes wish to lower the price of grain they throw on the market a flood of selling orders, and the price is beaten down. If they wish to raise the price they throw on the market a flood of buying orders, and the price is boosted up. The speculators pull the lever, and results follow. On a sensitive market in the Minneapolis Chamber of Commerce, an offer of 50,000 bushels will sometimes depress the price of cash grain half a cent per bushel. What influence, then, does 9,000,000,000 bushels of option trades and phantom grain at Minneapolis and 90,000,000,000 at Chicago, judiciously dumped on the market in the course of a year—what influence does this unthinkable volume of future trading have upon the price of your grain, Mr. Farmer? Is it any wonder that you have sold your grain practically every year for the past 20 years for a figure less than the actual cost of production?

A remedy for this condition, as I see it, does not lie so much in legislation as it does in organization and cooperative effort among producers. It is true that you can tax future trading out of existence; it is true that you can deny speculators the use of the telegraph and the mails and thereby eliminate the element of speculation; it is true that strict laws against gambling rigidly enforced would also curb the

operations of these speculators; but to my mind the true remedy is the one which you have already embarked upon. You have already established an open market at St. Paul. No speculation, no rigging of the market, no manipulation of prices is possible in your market place. Already your terminal market agency is handling as much wheat as the entire Chicago Board of Trade. It has demonstrated its efficiency and success. In a few years, at the present rate of increase in its business, it will no longer be possible for private grain exchanges to carry on the system of gambling and exploitation on its present scale. Your agency will market the bulk of the crop, and every bushel which your agency markets withdraws so much from the operations of the speculators in the so-called regular exchanges. Inside of the next five years at the present rate of increase in your business, and assuming reasonable efficiency in its future conduct, all of the legitimate dealers in grain will be doing business with your agency and similar agencies organized in the different parts of the country for the same purpose. Then the speculators of the regular exchanges will have lost the power to manipulate prices; they will have lost the enormous profits which now accrue to them; they will have no more influence upon the price of grain or process of distribution than a collection of thimble riggers at a country fair. And when this day arrives the American farmer will have at last come into his own.

Mr. KITCHIN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. FOSTER, Chairman of the Committee of the Whole House on the state of the Union, reported that the committee had had under consideration the bill (H. R. 16763) to increase the revenue, and for other purposes, and had come to no resolution thereon.

BRIDGE ACROSS BAYOU BARTHOLOMEW.

Mr. GOODWIN of Arkansas. Mr. Speaker, I desire to ask unanimous consent for the present consideration of the resolution which I send to the Clerk's desk.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House concurrent resolution 46.

Resolved by the House of Representatives (the Senate concurring), That the President be requested to return to the House of Representatives the enrolled bill, H. R. 12197, entitled "An act authorizing Ashley County, Ark., to construct a bridge across the Bayou Bartholomew."

Mr. GOODWIN of Arkansas. Mr. Speaker, about two weeks ago the bill H. R. 12197 passed the House, authorizing the construction of a bridge across Bayou Bartholomew, in Ashley County, Ark., and some two or three days ago this bill passed the Senate and is now in the hands of the President. Owing to a misdescription as to the location of the bridge, I have asked that the bill be returned, in order that it may be properly drawn in order to conform to the proper description.

The SPEAKER. Is there objection to the present consideration of the resolution? [After a pause.] The Chair hears none.

The question is on agreeing to the resolution.

The resolution was agreed to.

GENERAL DEBATE TO-MORROW.

Mr. FORDNEY. Mr. Speaker, I ask the gentleman from North Carolina to ask unanimous consent that the plan or rule agreed upon be so modified as to permit general debate to run until 1.30 o'clock p. m. to-morrow, one half the time to be controlled by the gentleman from North Carolina and the other half by myself.

Mr. KITCHIN. And then the bill be read in accordance with the rule?

Mr. FORDNEY. Be read in accordance with the rule.

The SPEAKER. The gentleman from North Carolina asks unanimous consent, at the suggestion of the gentleman from Michigan, that general debate be extended two hours and a half, one-half to be controlled by the gentleman from North Carolina [Mr. KITCHIN] and one-half by himself. Is there objection? [After a pause.] The Chair hears none.

EXTENSION OF REMARKS.

Mr. TAVENNER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of legislation enacted by the Sixty-fourth Congress.

The SPEAKER. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD on the subject of legislation enacted in the Sixty-fourth Congress. Is there objection? [After a pause.] The Chair hears none.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BURGESS, indefinitely, on account of illness in his family.

To Mr. EAGAN, for five days, on account of illness in his family.

To Mr. STEELE of Iowa, for 10 days, on account of important business.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 57 minutes p. m.) the House adjourned until to-morrow, Saturday, July 8, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report of reexamination of Fishing Creek, N. C. (H. Doc. No. 1277), was taken from the Speaker's table, referred to the Committee on River and Harbors, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. RAKER, from the Committee on the Public Lands, to which was referred the bill (S. 5466) to open abandoned military reservations in the State of Nevada to homestead entry and desert-land entry, and to amend an act entitled "An act to open abandoned military reservations in the State of Nevada to homestead entry," approved October 1, 1890, reported the same with amendment, accompanied by a report (No. 925), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 8849) to reimburse George H. Morrow, reported the same without amendment, accompanied by a report (No. 926), which said bill and report were referred to the Private Calendar.

Mr. PRICE, from the Committee on Claims, to which was referred the bill (H. R. 10173) for the relief of Anna C. Parrett, reported the same with amendment, accompanied by a report (No. 927), which said bill and report were referred to the Private Calendar.

Mr. FOSTER, from the Committee on Claims, to which was referred the bill (H. R. 14826) for the relief of F. M. Barfield, reported the same without amendment, accompanied by a report (No. 928), which said bill and report were referred to the Private Calendar.

Mr. MILLER of Delaware, from the Committee on Claims, to which was referred the bill (H. R. 8625) to reimburse the officers and enlisted men of the Revenue-Cutter Service and Public Health Service for losses sustained in the wreck of the revenue cutter *Tahoma*, reported the same without amendment, acompanied by a report (No. 929), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. R. 16090) for the relief of the officers and crew of the lighthouse tender *Armeria*, reported the same without amendment, accompanied by a report (No. 930), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (H. R. 16519) for the relief of Joseph F. Mitchell, reported the same with amendment, accompanied by a report (No. 931), which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. KEATING: A bill (H. R. 16850) to forbid the use of the mails for letters, postal cards, circulars, newspapers, or pamphlets offering for sale, soliciting the purchase of, or advertising intoxicating liquors; to the Committee on the Post Office and Post Roads.

By Mr. HULBERT: A bill (H. R. 16851) for the appointment of a commission to supervise the food supplied to the military forces of the United States; to the Committee on Military Affairs.

By Mr. DILLON: A bill (H. R. 16852) laying an embargo upon print, book, bond, and linen paper, pulp and pulp products; to the Committee on Interstate and Foreign Commerce.

By Mr. McARTHUR: A bill (H. R. 16853) to provide for the erection of a public building in the city of St. Johns, Oreg.; to the Committee on Public Buildings and Grounds.

By Mr. CRISP: Resolution (H. Res. 293) for the consideration of H. R. 9216; to the Committee on Rules.

By Mr. ALEXANDER: Resolution (H. Res. 294) providing for printing as a public document of "Ocean Shipping: The Basic Principles of Maritime Transportation, with Particular Reference to the Foreign Trade of the United States"; to the Committee on Printing.

By Mr. McARTHUR: Resolution (H. Res. 295) authorizing the printing of Farmers' Bulletin No. 68, "The milch goat"; to the Committee on Printing.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. BARKLEY: A bill (H. R. 16854) granting a pension to Samuel Walker; to the Committee on Pensions.

By Mr. BELL: A bill (H. R. 16855) for the relief of Riverside Military Academy; to the Committee on Claims.

By Mr. BURKE: A bill (H. R. 16856) granting a pension to Elmer R. Harrington; to the Committee on Pensions.

By Mr. COADY: A bill (H. R. 16857) granting an increase of pension to Louis Irons; to the Commitee on Invalid Pensions.

By Mr. DICKINSON: A bill (H. R. 16858) granting an increase of pension to Christopher C. Russell; to the Committee on Invalid Pensions.

By Mr. DOOLING: A bill (H. R. 16859) granting a pension to Patrick J. Blake; to the Committee on Pensions.

By Mr. FULLER: A bill (H. R. 16860) granting a pension to Joseph Ford; to the Committee on Invalid Pensions.

By Mr. HOLLINGSWORTH: A bill (H. R. 16861) granting an increase of pension to Isaac O. Weaver; to the Committee on Invalid Pensions.

By Mr. NEELY: A bill (H. R. 16862) granting an increase of pension to Andrew J. Gaskins; to the Committee on Invalid Pensions.

By Mr. TAVENNER: A bill (H. R. 16863) granting an increase of pension to Helen L. Huff; to the Committee on Invalid Pensions.

By Mr. VAN DYKE: A bill (H. R. 16864) for the relief of Ivan Yermakof, Alexiej Kutyaj, Nikolaj Karpunin, Ivan Primak, Nick Wlad, Gavrylo Shumof, Efim Davidof, Pavel Baraniuk, Pavel Balonin, Fred Wolon, Sam March, Ivan Melnyk, Emilian Krakowiacki, Mrs. Michael Wituk, widow, and two minor children, heirs of Michael Wituk, deceased; to the Committee on Claims.

By Mr. WILLIAMS of Ohio: A bill (H. R. 16865) granting a pension to John G. Schrock; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. CARLIN (by request): Petition of sundry citizens of Washington, D. C., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. DALE of New York: Petition of members of the Snowflake Relief Society, favoring woman-suffrage amendment; to the Committee on the Judiciary.

Also, petition of the National Association of Vicksburg Veterans, relative to appropriation for reunion and peace jubilee at Vicksburg; to the Committee on Appropriations.

By Mr. DILLON: Memorial of Crystal Lake Farmers' Local Union, No. 50, F. E. and C. U. of A., relative to amendment to rural-credits bill; to the Committee on Banking and Currency.

By Mr. HOLLINGSWORTH: Papers to accompany House bill 16861, for the relief of Isaac O. Weaver; to the Committee on Invalid Pensions.

By Mr. MATTHEWS: Papers to accompany House bill 16809, for the relief of Jacob Presler; to the Committee on Invalid Pensions.

By Mr. KELLEY: Petition of E. P. Thurgood and 30 others of the State of Michigan, against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. KENNEDY of Rhode Island: Petition of Rhode Island Bankers' Association, relative to House bill 12998, amending Federal reserve act; to the Committee on Banking and Currency.

By Mr. TIMBERLAKE: Petition of sundry citizens of Boulder, Colo., relative to bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

SENATE.

SATURDAY, *July 8, 1916.*

(Legislative day of Friday, July 7, 1916.)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

AGRICULTURAL DEPARTMENT APPROPRIATIONS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. SMOOT. Mr. President, there are but four Senators in the Chamber. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gronna	Nelson	Smoot
Bankhead	Hardwick	Norris	Sterling
Beckham	Husting	Overman	Swanson
Brady	James	Poindexter	Taggart
Bryan	Johnson, Me.	Pomerene	Thomas
Catron	Johnson, S. Dak.	Ransdell	Tillman
Chamberlain	Jones	Saulsbury	Vardaman
Clapp	Kenyon	Shafroth	Warren
Clark, Wyo.	La Follette	Sheppard	Williams
Curtis	Lane	Sherman	Works
Fletcher	McCumber	Smith, Ariz.	
Gallinger	McLean	Smith, Ga.	
Gore	Martine, N. J.	Smith, S. C.	

Mr. MARTINE of New Jersey. I again announce the necessary absence of the Senator from Montana [Mr. MYERS], who is detained through illness.

The VICE PRESIDENT. Forty-nine Senators have answered to the roll call. There is a quorum present. The bill is as in Committee of the Whole and open to amendment.

Mr. McCUMBER. Mr. President, I offer a substitute for part B, comprising sections 1 to 12, inclusive, and ask that it may be read.

The VICE PRESIDENT. The Secretary will read it.

The Secretary read as follows:

PART B.

That this part, to be known as the United States grain standards act, be, and is hereby, enacted to read and be effective hereafter as follows:

"That this act shall be known by the short title of the 'United States grain grades act.'

"SEC. 2. That the Secretary of Agriculture is hereby authorized to investigate the handling, grading, and transportation of grain and to fix and establish as soon as may be after the enactment hereof standards of quality and condition for corn (maize), wheat, rye, oats, barley, flaxseed, and such other grains as in his judgment the usages of the trade may warrant and permit; and the Secretary of Agriculture shall have power to alter or modify such standards wherever the necessities of the trade may require. In promulgating the standards, or any alteration or modification of such standards, the Secretary shall specify the date or dates when the same shall become effective, and shall give public notice, not less than 60 days in advance of such date or dates, by such means as he deems proper.

"SEC. 3. That the standards so fixed and established shall be known as the official grain standards of the United States.

"SEC. 4. That whenever standards shall have been fixed and established under this act for any grain, thereafter all such grain entering into interstate or foreign commerce and bought or sold by grade shall conform in quality and character to the standard so fixed and established for such grade: *Provided*, That no person shall in any certificate, or in any contract or agreement of sale or agreement to sell by grade, either oral or written, involving, or in any invoice or bill of lading or other shipping document relating to, the shipment or delivery for shipment in interstate or foreign commerce of any grain for which standards shall have been fixed and established under this act, describe or in any way refer to any of such grain as being of any grade other than a grade fixed therefor in the official grain standards of the United States.

"SEC. 5. That no person shall represent that any grain shipped or delivered for shipment in interstate or foreign commerce is of a grade fixed in the official grain standards other than as shown by a certificate therefor issued in complince with this act; and the Secretary of Agriculture is authorized to cause examinations to be made of any grain for which standards shall have been fixed and established under this act and which has been certified to conform to any grade fixed therefor in such official grain standards, or which has been shipped or delivered for shipment in interstate or foreign commerce. Whenever, after opportunity for hearing is given to the owner or shipper of the grain involved, and to the inspector thereof if the same has been inspected, it is determined by the Secretary that any quantity of grain has been incorrectly certified to conform to a specified grade, or has been sold or offered for sale under any name, description, or designation which is false or misleading, he may publish his findings.

"SEC. 6. That whenever standards shall have been fixed and established under this act for any grain and any quantity of such grain which has been sold, offered for sale, shipped, or delivered for shipment in interstate or foreign commerce shall have been inspected and a dispute arises as to whether the grade as determined by such inspection of any such grain in fact conforms to the standard of the specified grade, any interested party may call for reinspection or appeal the question in accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations to the Secretary of Agriculture, and the Secretary of Agriculture is authorized to cause such investigation to be made and such tests to be applied as he may deem necessary and to determine the true grade.

The findings of the Secretary of Agriculture as to grade, made after the parties in interest have had opportunity to be heard, shall be accepted in the courts of the United States in all suits between such parties, or their privies, as prima facie evidence of the true grade of the grain determined by him at the time and place specified in the findings.

"SEC. 7. That the Secretary of Agriculture shall, from time to time, make such rules and regulations as he may deem necessary for the efficient execution of the provisions of this act.

"SEC. 8. That any person who shall violate any of the provisions of sections 4 or 7 of this act, or any inspector who shall knowingly or carelessly inspect or grade improperly any grain which has been shipped or delivered for shipment in interstate or foreign commerce, or shall knowingly or carelessly give any false certificate of inspection or grade, or shall accept money or other consideration, directly or indirectly, for any neglect or improper performance of duty, and any person who shall improperly influence or attempt to improperly influence any such inspector in the performance of his duty, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $1,000, or be imprisoned not more than one year.

"SEC. 9. That every person who forcibly assaults, resists, impedes, or interferes with any officer or employee of the United States Department of Agriculture in the execution of any duties authorized to be performed by this act or the rules and regulations made hereunder shall, upon conviction thereof, be fined not more than $1,000, or be imprisoned not more than one year, or both.

"SEC. 10. That the word 'person' whenever used in this act shall be construed to import the plural or singular, as the case demands, and shall include individuals, corporations, companies, societies, and associations. When construing and enforcing the provisions of this act, the act, omission, or failure of any official, agent, or other person acting for or employed by any corporation, company, society, or association within the scope of his employment or office shall, in every case, also be deemed the act, omission, or failure of such corporation, company, society, or association, as well as that of the person.

"SEC. 11. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $125,000, which shall be available until expended, for the expenses of carrying into effect the provisions of this act, including rent and the employment of such persons as the Secretary of Agriculture may deem necessary in the city of Washington and elsewhere."

Mr. McCUMBER. Mr. President, I stated yesterday that I would try to draft a substitute for the provision of part B of the pending bill. I have done that in the proposed substitute which I have just had read at the desk.

I desire to explain to the Senator in charge of the bill [Mr. GORE] that there is not such a change in the proposition offered by him as might be indicated from the reading of my amendment. I have copied verbatim most of the sections which are contained in the bill with the amendments, but in order to make a substitute for the whole matter it was necessary to cover everything under part B of the bill.

I do not wish to be understood as saying that this substitute satisfies me. I have desired to have both Federal standardization and Federal inspection of all grain entering into interstate commerce which is sold by grades; but the sentiment of Congress at the present time would not allow us to go so far. Therefore the committee, in order to secure some relief, have very wisely presented a measure which is intended for Federal standardization only. That being the case, what is necessary in a law to effectuate this purpose? Four things, Mr. President, are necessary, and four things only, and those should be expressed in the most simple way possible.

First, a provision requiring the Secretary of Agriculture to fix standards for all grain entering into interstate or foreign commerce; second, a prohibition against the use of any other system of the grading of grain entering into such commerce; third, a provision for reinspection and for appeals from the boards of trade or others making the present inspection; and fourth, adequate penalties in order to make the law effective.

Mr. NORRIS. Mr. President, will the Senator from North Dakota kindly repeat the second requirement he gave? I did not catch it exactly.

Mr. McCUMBER. There must be a prohibition against the use of any other system of standards in grading.

Mr. President, I fear that the bill as presented fails to recognize either the immensity or the complexity of the grain trade business. It also fails to recognize the course of trade in many of our States; and I wish briefly to call attention to that course of trade, for the methods in the Northwest are similar to the methods all over the country.

In States like North Dakota, South Dakota, Minnesota, Wisconsin, Iowa, and Montana we have what are known as the line elevator companies. They own the large elevators at the great terminals. They have also lines of elevators, which may run into the hundreds, along every important railway line. They appoint their agents. Their agents make the purchases and ship to the terminals. In shipping to the terminals they do not ship the grain as of any particular grade. Although they purchase it at grades from the farmer, they do not ship it out from the State as of any particular grade, for under the Minnesota law it must be graded at the terminals. Therefore there is no necessity of those agents being inspectors, although they have sufficient knowledge of the grain trade to know at what grades to buy the grain.

Then, again, we have independent elevators. The independent elevators all buy from the farmer in exactly the same way. They buy by grades Nos. 1, 2, 3, 4, or rejected. They of course keep the grades which they buy in separate bins. They then ship out a carload from the bin without designating it as of any grade whatever; but the moment they ship it out, Senators will understand, it enters into interstate commerce, and they intend, of course, that it shall be graded at the terminal and sold for whatever may be the proper grade. Then, in addition to that there is the farmer himself, who, instead of selling to the elevators—either the independent or the line elevators—will ship his own grain from some station in carload lots. He also ships it without reference to any particular grade, depending entirely upon the grade which he will receive at the great terminal.

Senators can easily see from this explanation that if you had a law which provided that all grain entering into interstate commerce must be graded before it enters into that commerce you would compel the appointment of an inspector at every one of the elevators, and the appointment of as many inspectors as there would be elevators in the United States.

Not only that, but you would compel the department to appoint as inspectors the agents of the parties who are purchasing, and the inspector would thereby be the Government inspector and also the agent of the purchasing company. In addition to that, you would compel the farmer who desires to ship a load of grain as No. 2 Northern, or whatever he thought his grade was, first to secure a certificate of inspection from an inspector at that point. He would have to go to his competitor, and his competitor naturally would like to ship the grain himself and to have the profit of handling it. He would not therefore be inclined at least to settle questions of uncertainty against himself and in favor of the farmer.

That is sufficient, Mr. President, to indicate that we ought not to have any law upon the statute books which would compel the farmer shipping independently to secure his grade from his competitor or any law upon the statute books which would compel the Secretary of Agriculture to issue certificates of authority to inspect to the agents of the purchaser.

Mr. NORRIS. Mr. President, right on that line, I want to ask the Senator another question. I have not seen his amendment, of course, and only have knowledge of it as it has been read, but the grain-grading section of the bill pending before the Senate was amended the other day on motion of the Senator's colleague [Mr. GRONNA], by including in it a provision, which, I understand, was copied from the Senator's bill pending a year ago, which, in effect, provided that no one should be appointed as an inspector who was engaged in buying grain either directly or as an employee of any firm or corporation.

Mr. McCUMBER. That was very applicable to the bill which I then had before the Senate, which was a bill providing for inspection and grading, but only at the great terminals and by Government experts, and by Government officials only. The Senator can see that it would not be applicable to any bill providing that all grain entering into interstate commerce must be inspected and graded before it enters into that commerce, because if that were done it would compel the appointment of thousands and thousands and tens of thousands of inspectors, and the inspectors at all of the elevators would have to be either independent inspectors or else employees of elevator companies.

Mr. NORRIS. Does the Senator think that an amendment similar to that would not be applicable to the substitute which he has proposed?

Mr. McCUMBER. No; it would not be applicable at all to the substitute, because, Mr. President, we must either take possession of the entire inspection field or we must abandon it altogether.

Mr. NORRIS. Well, does the Senator contemplate, if his substitute were adopted and enacted into law, that the elevator men throughout the country would be appointed as inspectors by the Federal Government?

Mr. McCUMBER. No. My amendment does not provide for any inspectors whatever at the terminals or anywhere else. I avoid the inspection feature entirely. If we are going to keep out of that field, then let us allow the present system of inspection to go on, the inspection to be made by inspectors at the great terminals, with a right of appeal from the final inspection at such terminals; and have no inspectors appointed by the Government or anyone else at the place of initiation of the interstate traffic.

Mr. NORRIS. The only Federal appointees contemplated, then, by the substitute would be those to whom appeals could be taken?

Mr. McCUMBER. That is all; and they would be right in the department here. I can not see any possible way of our invading or dividing up the field of inspection between the United States and the boards of trade and chambers of commerce and warehouse commissions.

Mr. NORRIS. What would be the modus operandi in case an appeal were taken by some one shipping grain? How long does the Senator think it would take for a final decision to be reached; and in the meantime what would become of the grain over which the controversy had arisen?

Mr. McCUMBER. We spoke of that yesterday. I will take, for instance, the Minnesota method. There is, first, an inspection, and immediately after the inspection is made either the person purchasing the grain or the one selling it may call for a reinspection. That reinspection is held immediately before the grain is unloaded. Then, if there is a further appeal it is taken to a board, and if there is still another appeal it is taken to the chief inspector.

This bill provides for a further appeal under such rules and regulations as may be provided by the Secretary of Agriculture. Of course he would require, under the rules, that samples of the grain should be taken by both parties and furnished to him, and he would pass upon these samples and require a settlement in accordance with whatever grade was finally determined upon. I have not changed that from the provision as it has been reported and is being supported by the committee. I have left that just as it is.

Mr. NORRIS. What is the Senator's judgment about the length of time that would take?

Mr. McCUMBER. It would not make so much difference how long it would take, inasmuch as it will not interfere with the final disposition of the grain and its unloading and shipping, but merely require a final settlement under such conditions and regulations as the Secretary of Agriculture may provide by rule.

Mr. NORRIS. It seems to me that a difficulty might arise, for instance, in the case of the exportation of a carload of grain, the grain in the meantime being across the ocean. There might be a contest which would not be settled until after the grain had departed from our shores, and the buyer might be located in Liverpool, for instance.

Mr. McCUMBER. Let me explain what the course of the trade is in that respect.

Mr. NORRIS. That is what I want the Senator to do.

Mr. McCUMBER. Under all our export shipping rules the foreign purchaser is bound to accept the American grade.

Mr. NORRIS. But the American grade would not have been determined until some time after the grain, the grade of which is in dispute, has been delivered.

Mr. McCUMBER. It would have been determined by that time. I have not finished my sentence. The foreign buyer must accept the American grade. I leave that to the final decision of the Secretary of Agriculture, and the provision now in the law will require a final settlement in accordance with the final decision of the Secretary of Agriculture. So if there is a question about a grade when the grain leaves a United States port the foreign purchaser is entitled to whatever advantage he may receive from the final decision of the Secretary of Agriculture.

Mr. NORRIS. Now, let me ask the Senator another question, not exactly on that point. The Senator spoke awhile ago of the farmer himself shipping his grain in carload lots. In order for the farmer in that case to take advantage of the rights which the law bestows upon him, would it not be necessary for him to follow the grain in person or have some one represent him at the place where it is inspected, in case he wanted, for instance, to ask for a reinspection, which would have to be made at once before the grain is unloaded?

Mr. McCUMBER. Under the course of trade—and this is always the rule—no farmer ships his grain to the terminal direct; he ships it to some commission man, to some one who has charge of it there, and then the party having it in charge is the farmer's agent and makes every provision for reinspection and for appeal. I have not attempted to interfere with the course of business, because, as I have said, we can not enter that field in competition or in conflict with the present system. We must either get into it wholly and completely or we must keep out of it wholly and completely, reserving only the right of appeal to the Secretary of Agriculture, so that at all times the standardization fixed by the Secretary may be promulgated and brought to every home market.

Mr. NORRIS. As I understand, in substance the Senator's substitute provides first for Federal standardization?

Mr. McCUMBER. Yes.

Mr. NORRIS. And then for an appeal from whatever State authority exists to the Federal authority in the person of the Secretary of Agriculture?

Mr. McCUMBER. Yes; from the final decision of the State authority, whether it be a board of trade or warehouse commission or chamber of commerce.

Mr. NORRIS. Does the substitute also provide that all the State authorities must handle grain under the standardization of the Federal Government?

Mr. McCUMBER. Yes. The second proposition that I made was a prohibition against the use of any other standards. I want to make it just as simple as possible, and so as not to interfere with the general course of trade; and yet I want to make it so workable that there will be no complaint found against it by the farmers, or the independent elevators, or any other persons dealing throughout the country.

Mr. LA FOLLETTE. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Wisconsin?

Mr. McCUMBER. I yield to the Senator.

Mr. LA FOLLETTE. I wanted to inquire as to this appeal from the inspection made at the terminals. In the case of a farmer shipping a carload of grain to a commission merchant, he must depend, must he not, upon the commission merchant to take care of his interests in the matter of the inspection?

Mr. McCUMBER. Yes. The commission merchant always wires him, as soon as it is inspected, what grade is given it and what dockage is taken.

Mr. LA FOLLETTE. Yes; and if he is instructed by the farmer to take an appeal, the appeal would be made by the commission merchant for the farmer?

Mr. McCUMBER. Yes. His first step would be to ask for a reinspection.

Mr. LA FOLLETTE. Yes, I understand; but I am passing over those intermediate steps, because this commission merchant, as I understand, acts all the way through for the farmer from whom he has received the grain on consignment.

Mr. McCUMBER. That is the course of trade.

Mr. LA FOLLETTE. Yes. So that if the farmer's interest is protected, whatever protection it secures it must secure entirely through these commission merchants to whom the grain is shipped?

Mr. McCUMBER. Yes.

Mr. LA FOLLETTE. Now, has there not been a very general complaint that these commission merchants have such connections with the parties to whom the grain is sold that they can not serve the interests of the farmer?

Mr. McCUMBER. I have not heard of that, because the interest of the commission merchant at all times is to secure the very best grade he possibly can, so as to secure business. He wants to get all the business he possibly can from the farmer; and I have never heard any complaint about the integrity or the desire of the commission merchant to secure the very best result that he can secure in the matter of grades.

Mr. NELSON. Mr. President——

Mr. McCUMBER. The complaint generally is against those who purchase, and that the inspectors and those to whom the appeal is taken are more or less under the domination of the interest that buys their grain and mixes it. That is the main complaint I have heard.

Mr. NELSON. Mr. President——

Mr. McCUMBER. The Senator from Minnesota, who desires to interrupt, can possibly better explain that.

Mr. NELSON. I want to say, in reference to that matter, that in the State of Minnesota we require all commission merchants in agricultural products of any kind to take out a State license and give a bond. They are bonded and under State licenses, and if they violate their duties they can be removed; and the bonds that they are required to give, while they run to the State, inure to the benefit of any party that is injured.

Mr. LA FOLLETTE. My recollection is not altogether distinct upon it. I think I have some data from which I can refresh it; but it is my impression that there has been not a little complaint of the commission merchants acting for the farmer, and if that be so, the case of the farmer upon appeal would suffer very materially.

Mr. McCUMBER. That would certainly be the case.

Mr. LA FOLLETTE. And this proposed amendment would not remedy that in any respect.

Mr. McCUMBER. No; the only way I can see to remedy that would be by national inspection.

Mr. LA FOLLETTE. Yes.

Mr. McCUMBER. And that is one of the reasons why I favor national inspection; but it is not the purpose of the committee, or probably of the Senate, to allow us to go that far.

Mr. LA FOLLETTE. While I am on my feet I will ask the Senator from North Dakota why it is that we can not secure for the grain growers the protection that would come to them

from a Federal inspection law? What are the influences here in Congress that prevent that legislation from being enacted?

Mr. McCUMBER. The Senator has been here nearly as long as I have, when we have been fighting this matter over and over again, and I think he understands the influence on one side and the lack of organized effort on the other side which has been responsible, in my opinion, for the failure of the farmer to receive that which I think he ought to have received. Lord knows, I have worked strenuously and hard enough to secure the limit!

Mr. LA FOLLETTE. Let me be certain that I have the information that the Senator assumes I have from my service here. Is it the opposition of the boards of trade of the various grain centers that prevents legislation here in the United States Senate?

Mr. McCUMBER. Certainly. It has been their opposition, and the organization which they have had, and which has been pressed with vigor at all times against the enactment of this or any kindred law that has prevented legislation so far.

Mr. LA FOLLETTE. I just wanted that to appear in the RECORD.

Mr. SHAFROTH. Mr. President, if the Senator will yield, is it not also due to the fact—I should like to have the attention of the Senator from Wisconsin just a minute—that the officers of those States that have State inspection are very much opposed to Federal inspection, which would deprive them to a certain extent of their rights, and of what they believe to be their proper duties, under the State law? Does not the opposition come very largely from all of the State officers in these States that have adopted State inspection?

Mr. McCUMBER. It is rather difficult to answer that question in that way—to say that it is due to the opposition of the States. The influence which is brought to bear directly against the bill comes from the boards of trade and exchanges, and so forth; and I have found no influences that carried any weight on the part of farmers' organizations in favor of it in those States, and even in other States where there is no great grain market. I have stated many times that if the agricultural sections of the country, the grain-raising sections of the country, were organized as well as the great exchanges of the country, and would attempt to make their feelings and desires felt as strongly as those great exchanges, this bill, or something similar, would have been a law very many years ago.

Mr. LA FOLLETTE. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota further yield to the Senator from Wisconsin?

Mr. McCUMBER. I do.

Mr. LA FOLLETTE. Is it not a fact that the testimony taken by the committees of Congress will show that the farmers' organizations in the grain-growing States have given, in volume, more testimony in support of this legislation than the boards of trade have given in opposition to it?

Mr. McCUMBER. No; I can hardly say that that is correct. Through the efforts of those who are interested in such a bill we have secured from farmers' organizations, from farmers, from foreign purchasers, and elsewhere through the United States a volume of testimony very much greater than the volume of testimony against the proposition, and to my mind very much more conclusive.

Mr. LA FOLLETTE. Then, Mr. President, if I understand the Senator, there has been presented to Congress a much greater mass of testimony in favor of Federal inspection, with the end and aim of securing square, honest dealing between the seller and purchaser, than there has been presented by these boards of trade in opposition to it.

Mr. McCUMBER. Both in volume and in substance.

Mr. LA FOLLETTE. Now, that being true, what is the strength of this organization in opposition to this legislation that is not shown in the record in testimony against the legislation? What character of appeal is it that is strong enough, and yet so insidious, as not to be shown in the testimony here in opposition to this legislation?

Mr. McCUMBER. Inasmuch as I can only see one side to it, of course I can not answer for the other side. I see no reason on earth why we should not have Federal standardization and Federal inspection. I have never read a single argument that I thought was a valid argument against it. I think we have met every objection that they could possibly urge against it. Honest standardization and honest grading by disinterested parties can not by any possibility injure anyone who wishes to do an honest business. Now, that is all there is to it.

Mr. LA FOLLETTE. I quite agree with the Senator. I think his statement as to the testimony in this matter is fully borne out by the record, and I did not expect the Senator to answer my question; that is, I did not expect him to state the case of the boards of trade, the character of this influence which is so potential in legislation as to defeat it without doing it through testimony; but I did not know but that some other Senator might be able to answer and volunteer that information.

Mr. McCUMBER. In the immense amount of labor that is imposed upon every Senator, when he receives from his State an immense amount of literature against any proposed legislation, pointing out its defects, or supposed defects, and so forth, and he hears nothing from the other side from his own State, it is quite natural that his mind should be along the line of the testimony that has been presented, where he has not had time to go into the question thoroughly himself. That is all I can say in reference to those who take a view contrary to my own.

Now, Mr. President, we ought to and must abandon the field of inspection in this bill, or else we must take complete control of that field. We can not, as I have said, divide it up with other organizations, and we can not have our own inspectors working side by side with theirs. It is an impossibility to have inspectors at every elevator in the United States. When we secure a system of Federal inspection, all we shall ever need is just the inspection that we are getting to-day at our great terminals. There are enough inspectors in the United States; and all that we want is to have inspectors that are freed from the influence of either the selling or the buying interest, and whose inspection, backed by the name of the United States in its certificate, will give to the grain that is sold under that inspection a confidence that will assure better prices in all of the world's markets.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Iowa?

Mr. McCUMBER. I yield to the Senator.

Mr. CUMMINS. What the Senator has just said prompts me to ask this question, and it relates somewhat to the discussion which he has just been having with respect to his own bill: What proportion of the grain from North Dakota is shipped outside the State by the producer of the grain?

Mr. McCUMBER. By the producer? Oh, I would not say that 5 per cent of it was. Probably my colleague could give the Senator better information on that point than I could, because he does farming; but I would say that not to exceed 5 per cent of the grain is shipped out by the farmer himself in carload lots. I should be glad to have the better judgment of my colleague on that subject.

Mr. GRONNA. Mr. President, I do not know that I am competent to give the exact percentage, but I think it is much larger than 5 per cent. Since the farmers became dissatisfied with the grades and with the prices which they received from their grain, they ship a considerable amount, loading it into the cars themselves. They do not even run it through the elevator, but they have either what we call a loading platform or a little elevator which they use on the farm, and which they take to town and use to load their own cars. In that way it may be that the grain is being shipped by the farmers.

Mr. McCUMBER. Last year we raised, I think, 115,000,000 bushels of wheat in the State, did we not?

Mr. GRONNA. We raised over 150,000,000 bushels.

Mr. McCUMBER. I do not think the farmers shipped over 5 per cent of that; but I may be in error.

Mr. CUMMINS. I asked the question because in my own State, if you will exclude the grain bought by the farmers' organizations, the farmers' elevators, I think it would be very much less than 5 per cent.

Mr. McCUMBER. Of course I meant to exclude that.

Mr. CUMMINS. How will terminal inspection alone help the farmer in view of the fact that his grain has been bought and paid for at a certain rate before it leaves the State? His price is neither increased nor diminished by the inspection at the terminal.

Mr. McCUMBER. It is very simple to explain that. Every elevator undoubtedly desires to give the farmer the best grade that he dare give it where there is competition, and there is scarcely a town, village, or station where there is not competition; but he must depend entirely upon the grade that he gets at the terminal and must buy with caution, the caution always being exercised against the farmer. He knows from experience that he has sent what he would regard as good No. 2 grain, and possibly he did not get at the terminal better than No. 3. He as a rule, buying every day, is just as competent to pass judgment upon the grade of that grain as any man at the terminal, and he has plenty of time to make a thorough test. If he feels certain that he can have a grade that is dependable, he always gives the farmer the full benefit of that grade. Not only that, but he is held to a strict accountability, if he is an employee of the line elevator, for a failure either in weight or in grade. If his grades or his weights do not hold up to his

shipment, he must lose it out of his own salary, and he is extremely careful, of course, that he shall not lose. However, if he gets a little the best of it I have never heard of any division, or anything of that character.

So the benefit that the farmer would get would be in the confidence that the elevator man would have in the grade that he would secure at the terminal. Feeling certain that he is right in a grade, and that he will get that grade, he is going to give the farmer the benefit of his judgment.

Mr. CUMMINS. But, Mr. President, that simply means that there ought to be honest inspection.

Mr. McCUMBER. Yes; and disinterested inspection, which is more liable to be honest.

Mr. CUMMINS. It must be disinterested in order to be honest.

Our situation is very possibly a little different. We have not so many of the line elevators. We have a great many independent elevators that are not the farmers' organizations, but they operate independently. They have no employers. They buy as low as they can and sell as high as they can.

I have looked in vain for any great advantage to the farmer unless the grain is graded when he sells it and unless he gets the pay for the grade that is honestly attached to the grain.

I shall have occasion further to speak about the service provided in the bill—I think it is intolerable—but I shall not do it at this moment.

Mr. McCUMBER. Every farmer knows every day in the year just what is the cash price of wheat in Chicago and Minneapolis of a certain grade. He knows when he hauls his grain to the elevator just what it costs to take that bushel of wheat from that elevator to Chicago. He knows what is a reasonable fee to be charged by the elevator for handling that grain. That being the case, there is not the great opportunity for the elevator man to buy as low as he can and to sell as high as he can. In fact, the elevator man, in order to keep even, must be selling continually to arrive at the prices at which he buys, unless he wishes to speculate. Otherwise, he is liable to lose and lose heavily if grain should fall while his elevator is filled.

Mr. GRONNA. He sells every day.

Mr. McCUMBER. Yes; he sells every day, and intends to sell a sufficient amount to cover what he buys in every day so that he can keep even with the market. He might hold the grain and make something if he wanted to speculate—if wheat should rise; but if it went down, he would lose heavily. So the universal custom is to arrive and sell ahead so as to keep even.

As I have said before, the benefit that the farmer will get will be the general benefit of confidence in grades. Let me explain that. If at a terminal the terminal elevator man should take some good No. 1 and some No. 2 and mix them together, he would sell it as a whole for No. 1. He might put in so much of the No. 2 that in reality it is not and ought not to be graded No. 1, but if he has sufficient influence over the inspecting department they will give him the benefit of that doubt. The miller purchasing that grain for consumption examines it and finds that it is not good No. 1, but it is certified as that and it is not worth what he paid within 3 cents a bushel. The next time he purchases that kind of grain he will purchase it for 3 cents less, and that depresses the price clear back to the farmer.

Mr. CURTIS. Mr. President——

Mr. McCUMBER. I say if that is done. I am not speaking as making an accusation against anyone; but the very fact that the final purchaser has confidence that he will receive what he contracts for gives a better price.

Now, take our shipments abroad. That which you grade as No. 2 red or No. 2 northern when it arrives in Liverpool is found to be No. 4 or even No. 3. A Canadian No. 2 that is shipped at the same time is found to be good No. 2. They will give 5 cents less a bushel for it; and they will offer 5 cents less a bushel, we will say, for the next consignment from America than if it came from Canada, all due to the confidence they have in the Canadian grades. That difference of 5 cents in Liverpool will affect the wheat all over the United States where it must be exported to Liverpool.

I yield to the Senator from Kansas.

Mr. CURTIS. In view of the statement made by the Senator, would it not be better to inspect the mixed grain before it is permitted to be shipped?

Mr. McCUMBER. Certainly; that is assumed to be the case where we do the inspection under the bill. I provide for Federal inspection. Wherever it is mixed it has to be regraded again. The difficulty is as to this mixture. You may have a grade of splendid No. 1 away above what is necessary. You may have another grade of No. 2 that will nearly reach No. 1. Now, you may mix those and make a good, honest grade of No. 1.

Mr. CURTIS. But I understand the Senator's amendment only provides for grading. I could not hear it read, however.

Mr. McCUMBER. It only provides for standardization.

Mr. CURTIS. By the Department of Agriculture.

Mr. NELSON. Will the Senator yield to me?

Mr. CURTIS. Right there, just another moment. Is it not true that the Department of Agriculture has formulated tentative grades for commercial corn?

Mr. McCUMBER. I do not know much about that. I do not know what the Senator means by tentative grades.

Mr. CURTIS. I understand that the Department of Agriculture has fixed grades for corn and that the same were promulgated some two years ago, and they have been satisfactory so far as I understand it to the grain-grading commission of Kansas. The Kansas Grain Commission has adopted the grade fixed by the Government and they would like to see Federal grades established on other grains.

Mr. McCUMBER. I understand that to be the case.

Mr. NELSON. Will the Senator yield to me?

Mr. McCUMBER. With pleasure.

Mr. NELSON. I wish to say, in reference to the suggestion made by the Senator from Iowa [Mr. CUMMINS] a moment ago, that when the farmer brings his wheat to the country elevator he has to take the price that is given him, and directly he does not get the benefit of the terminal inspection. As a matter of fact, the terminal inspection is really for the advantage and benefit of the middleman, rather than the original seller. We have overcome that difficulty in Minnesota. We can not have an inspector at every railroad station, but if when the farmer sells a load of wheat he thinks the elevator man has not given him the proper grade, he has a right under our law to take a sample of that grade out of his load of wheat and send it down to Minneapolis or Duluth, to whatever point the grain is billed, and have it submitted to inspection there, and if the local elevator man has not given him the right grade he will get the benefit of that inspection. But that is under our law. That could not take place under this legislation in any shape or manner.

Mr. CURTIS. That is provided for in your State law?

Mr. NELSON. In our State law. We have what we call a country elevator law to regulate country elevators, and no law has given our farmers greater satisfaction than that part of it. The moment a farmer sells his grain at the local elevator the man who buys it gives him a storage ticket. If the farmer thinks he is not justly dealt with, he takes a sample of that grain and puts it in a sealed sack. He and the elevator man agree about the sample put in the sealed sack, and it is immediately sent to the terminal to be inspected there, and whatever grade the terminal allows him, that farmer is entitled to.

Mr. McCUMBER. I wish to say to the Senator, in answer to his statement, that that is not provided for here. Of course it does not interfere with that one way or the other.

Mr. NELSON. Oh, no.

Mr. McCUMBER. It does not attempt to repeal either any of the good features or any of the bad features in either State or board of trade methods.

Mr. NELSON. If the Senator will allow me, as I understand the purport of the Senator's amendment—I have only heard it read casually and looked over it hastily—it proceeds on the theory that the Federal Government will establish a standard, and then it leaves the application of the enforcement of that standard to the local authorities, State inspectors, or board of trade inspectors, with the right of appeal ultimately to the Department of Agriculture. Is not that the purport and object of the Senator's amendment?

Mr. McCUMBER. That is correct, Mr. President.

Mr. NELSON. In other words, it allows the Federal Government to make the general standard for all the kinds of grain, but when it comes to applying it the application is made by the State authorities or by the local authorities—by the State authorities where they have a State system and by the board of trade system where they have nothing but that; but in any case, if the State authorities fail to make a proper application of the Federal grades, if they fail to rule or pass on it properly, an appeal lies to the Department of Agriculture. Is not that the object of the Senator's amendment?

Mr. McCUMBER. The substitute which I offer is not intended to go any further than the present bill proposes to go. The only purpose in introducing it as a substitute is to rid the bill of certain features that I not only consider unworkable but which I think also are very dangerous for the grain trade.

Mr. CURTIS. The bill provides for Federal inspection, and that is left out of the Senator's amendment.

Mr. McCUMBER. It does not provide for Federal inspection. It provides that the Secretary of Agriculture must give the certificate and make officers of the persons who do the inspecting.

Mr. CURTIS. We are to give them a license?

Mr. McCUMBER. We are to give them a license; but, nevertheless, they are the appointees by the State, and so on. All it does to change the law at all is to give those persons already employed by the boards of trade and chambers of commerce and warehouse commissions a Federal license, but they do not change their duties in any way except, of course, that they must in all cases grade according to the Federal standards, and that they would have to do even if no United States commission was issued to them.

The objection to the Government's issuing a license is that the Government thereby gives a license to the employees who do the purchasing and who have a direct interest in the result of the inspection. I want to avoid that. There is nothing to be gained by that; it puts us in a position that I desire to avoid.

Mr. NORRIS. Right on that point, if the Senator will permit me, is not the objection the Senator makes avoided by the amendment agreed to the other day by which it is provided that the Secretary of Agriculture shall not issue a license to anyone interested in the trade?

Mr. McCUMBER. If you follow that out and take the bill as it now stands, you would eliminate all elevators in all the outside States shipping to the terminal. They could not ship unless they would grade, and they can not employ a special inspector, and the Government will not create an inspector for every elevator.

Mr. NORRIS. I do not think it is contemplated by the original part B of the bill that the elevator man is to be an inspector.

Mr. McCUMBER. If he wants to ship out No. 2 from an elevator in North Dakota to Minneapolis, how can he ship it out under the bill unless he has somebody in his employ who is a Government inspector?

Mr. NORRIS. I understand he would ship it out just the same as under the Senator's amendment.

Mr. McCUMBER. But the bill prohibits the sale of grain in interstate commerce by grades unless it has first been inspected by a Government inspector.

Mr. NORRIS. I take it the sale would not take place until the grain had arrived at the terminal.

Mr. McCUMBER. But suppose I am operating an elevator in Iowa or North Dakota, and I wish to ship to Chicago or Minneapolis. I have bought the grain as No. 2 northern, and I ship it as No. 2 northern to either of these terminals. I must have a certificate to grade that or else I merely ship it without any grade.

Mr. NORRIS. That is what I think the Senator would have to do. He would not buy it as No. 2 and ship it as No. 2, but before it is sold it must be inspected and graded, and it is to be sold under that inspection and under that grade.

Mr. McCUMBER. Why not allow them also to ship it out as a grade if they desire? There is no injury done by it.

Mr. NORRIS. No; except that there is not anybody who has the necessary authority to give the grade. There is not any inspector.

Mr. McCUMBER. But I do not want to deny them that privilege, if they desire it.

Mr. CUMMINS. Mr. President——

Mr. NORRIS. I yield to the Senator from Iowa.

Mr. CUMMINS. I think the Senator from North Dakota knows my view, for I have stated it more than once. To attempt to ship grain in that way—and I speak especially of corn, because that is the principal product shipped out of Iowa, so far as cereals are concerned—would simply revolutionize the business. The business could not be carried on unless the grain were sold by grade. A farmer brings a wagonload of corn to a town in my State where there is a corn buyer. The farmer knows the price of No. 2 corn in Chicago and he wants that price, and the buyer is willing to give him the price properly graduated No. 2 corn bears in Chicago, and he must sell it by grade. It would simply destroy the whole fabric of business, at least in my State. I think the Senator from North Dakota is wrong in saying that the bill does not provide a Federal inspection. I think the Senator does not give due attention to the real relation which is created between these inspectors and the General Government. My opposition to the bill is that it creates a Federal inspection, but that it is so crude and so imperfect that to attempt to substitute it for the State inspection, or even for the board of trade inspections, would do vastly more harm than good.

When the Secretary of Agriculture licenses an inspector that inspector becomes, in a sense at least, a Federal inspector, even though he be paid no salary, even though he must secure his compensation from some source other than the National Treasury.

I hope the Senator from North Dakota will not withdraw from this bill some of the real objections to it by introducing a belief that the Government is not here entering upon the field of inspection and is not trying in a very inadequate way to grade the grains that are shipped in interstate commerce. I think it is a great deal worse than the Senator from North Dakota has described it.

Mr. McCUMBER. Mr. President, let us see, now, whether it is Government inspection or whether it is State inspection. The Senator from Iowa and I, of course, understand clearly what it means. The Senator may call it Government inspection and I may call it State inspection; but all the Government does is to give the license. The State or the board of trade or the chamber of commerce or the railway commission representing the State appoints the inspector and they pay the inspector. Under the operation of this provision they must appoint inspectors, and they do appoint and they do pay the inspectors. There is not a dollar paid by the United States to the inspector. He gets his pay—so much a car or so much a day—for inspecting, and is appointed by the railroad and warehouse commission or by the exchange or the board of trade. Under this bill those employers would give the names of their employees as persons having had experience; and as they are the only inspectors we have in the country, naturally the appointments would first have to go to them; and the Government would issue its certificate of authority. The Senator from Iowa may call that Government inspection or he may call it State inspection through officials appointed by the Government, but the same result flows from the act.

Mr. CUMMINS. Mr. President, the Senator from North Dakota has not fully described what may be done. I will assume, for illustration, a town of 300 inhabitants. It has no board of trade; it has no chamber of commerce; the State in which it is situated has no grain-inspection law. John Smith, of that town, makes application for a license under this bill. He is not required to be authenticated by any State authority or by any board of trade or by any other organization. If he furnishes to the Agricultural Department sufficient evidence of his competency, he may be licensed as an inspector of grain at that point. The passing of any grain out of that point which has not been inspected by him constitutes a violation of the law if sold by grades.

Mr. McCUMBER. I assume, Mr. President, that whenever this gentleman, John Smith, would apply for a certificate as inspector the Agricultural Department would naturally ask him where he is going to do his inspection and by whom he is going to be paid for it. Inasmuch as there is no provision made for the payment of inspectors at any of these places, and inasmuch as the purpose of the bill, as already indicated, is not to have any inspectors except at the terminals, not to have general inspectors throughout the United States—if they did that, if they had such a system, as I have heretofore said, they would have to have an inspector at every place in the United States where grain is bought and sold. While the bill itself might possibly be subject to that construction, when you take into consideration that there is no appropriation for such purpose and no provision for fees to be paid to these parties, I can not believe that that would be the construction given by the department. At any rate, it simply goes to show that the bill has not been carefully drafted along that line, and I agree with the Senator from Iowa that we should either get entirely into the field of inspection or keep entirely out of it. We can not have a partnership in the matter.

Mr. President, I intended to call the attention of the Senator having charge of the bill to the only changes which are proposed in the substitute, but as the Senator from Oklahoma [Mr. GORE] seems to be absent from the Chamber, I will ask the Senator from Colorado [Mr. SHAFROTH] if he will kindly give his attention to the matter, as I desire to present it at this time.

Mr. SHAFROTH. It will give me pleasure to do so.

Mr. McCUMBER. I am now taking the old print of the bill, on page 101. Part B, sections 1, 2, and 3 are exactly the same, without any change whatever, as indicated in the bill. Section 4 deals with inspectors, and so forth. Now, I propose to cut out all of section 4, on page 102, down to the word "thereof," on line 20, page 103, and to insert an entirely different proposition, which is this:

That whenever standards shall have been fixed and established under this act for any grain thereafter all such grain entering into interstate or foreign commerce and bought or sold by grade shall conform in quality and character to the standard so fixed and established for such grade.

So far in the bill I have provided for the title of the act and for the fixing of national standards. Section 4 provides that

when these standards shall have been fixed thereafter no other standard of buying and selling grain shall be used. It may be sold by sample or it may be sold as "no grade," but if it is to enter into interstate commerce the Federal standards must be used. Then from the word "thereof," on line 20, my substitute proceeds:

Provided, That no person shall in any certificate or in any contract of sale or agreement to sell by grade, either oral or written, involving, or in any invoice or bill of lading or other shipping document relating to, the shipment or delivery for shipment in interstate or foreign commerce of any grain for which standards shall have been fixed and established under this act described or in any way refer to any of such grain as being of any grade other than a grade fixed therefor in the official grain standards of the United States.

That is in furtherance of the preceding part of the section, which provides that only after having fixed Federal standards, those standards shall be the standards adopted in interstate grain trade. Then section 5 is left exactly as it appears on page 104.

Mr. GRONNA. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to his colleague?

Mr. McCUMBER. Certainly.

Mr. GRONNA. Before my colleague leaves section 4, I should like to secure some information as to the effect of that section. Suppose an elevator man buys grain and grades it as No. 1 northern; he has established the grade; then that grain enters into interstate commerce, and when it is inspected at the terminal it is graded as No. 2. What effect in such a case would the penalty clause which is attached to the Senator's amendment have?

Mr. McCUMBER. It would have no effect, unless the grade had been carelessly or intentionally or dishonestly made. If a grade has been made in accordance with the very best judgment of the one making it, then, because some one else makes a different grade, either lower or greater, we ought not to inflict a penalty upon him any more than we should inflict a penalty upon an inspector whose inspection does not correspond upon appeal with the decision of the appeal board. It may be a very close question between one grade and another, and if he acts honestly and fairly, if he uses his best judgment and does not act carelessly, there is no penalty.

Mr. STERLING. There would be a right of appeal, though, would there not?

Mr. McCUMBER. Of course, there is always the right of appeal.

Mr. GRONNA. Mr. President, if the Senator will allow me further, I hardly think that that feature is covered in the Senator's amendment.

Mr. McCUMBER. No; that is covered further along.

Mr. GRONNA. The Senator will remember that the chairman of the committee offered an amendment striking out the word "carelessly," so that it is not in the bill itself.

Mr. McCUMBER. Well, it is in my substitute, as the Senator will notice, further along.

Mr. GRONNA. It can readily be seen that a grain dealer might be penalized under the provision of the amendment substituted by my colleague if he should err in his judgment, because section 7 is very rigid in its provisions, penalizing every act which is a violation of section 4, and unless the grain conforms to the standard fixed by the Federal Government it will be a violation of the law.

Mr. McCUMBER. I want to call my colleague's attention to section 8 of my substitute. It reads:

That any person who shall violate any of the provisions of sections 4 or 7 of this act or any inspector who shall knowingly or carelessly inspect or grade improperly any grain which has been shipped or delivered for shipment in interstate or foreign commerce, or shall knowingly or carelessly give any false certificate of inspection or grade, or shall accept money or other consideration, directly or indirectly, for any neglect or improper performance of duty, and any person who shall improperly influence or attempt to improperly influence any such inspector in the performance of his duty shall be guilty of a misdemeanor—

And so forth.

I think that that will cover everything. I agree with my colleague that carelessness ought not to be included. No one ought to be allowed to excuse himself upon the ground that he was careless.

Mr. GRONNA. Mr. President, I also believe that my colleague should provide in his amendment that grain should be permitted to be shipped and sold by sample or by type.

Mr. McCUMBER. There is nothing in the amendment to prevent that.

Mr. GRONNA. I think there is something to prevent it, for it is provided in section 4 that grain which enters into interstate commerce, after it has once been graded, must conform to the Federal standardization. I think that under that provision it would have to be shipped out on a grade. The Canadian law, by separate section—section 116, I think—provides that the buyer or seller shall at all times be permitted to sell or buy grain by sample or by type.

Mr. McCUMBER. Well, I do not think anything on earth could prevent that being done. I read the following:

That, whenever standards shall have been fixed and established under this act for any grain, thereafter all such grain entering into interstate or foreign commerce and bought or sold by grade—

Not when it is bought and sold otherwise.

Mr. GRONNA. But every bushel that goes into the elevator has been bought by grade.

Mr. McCUMBER. Very well; but I do not think that possibly could prevent my looking at a car of grain which is graded No. 1 or No. 2 and saying, "I will buy this and pay 5 cents a bushel more for it as it is," or "I will give you so much for it." I do not think we could prevent that by any kind of a bill; and this bill does not prevent it. The only purpose of the section is that when grain is sold by grade it must conform to that grade.

Mr. GRONNA. It might not prohibit the buyer if the two contracting parties agreed, but supposing that the buyer should refuse to purchase it by sample; suppose that the grade was lower than it ought to be, would not the seller be held to the contract that it should be sold by grade?

Mr. McCUMBER. If it is sold by grade and it conforms to that grade, of course he would have to pay according to that grade, if that was his contract. Either of the parties to a contract can change it by agreement if they see fit to do so, and either party may release the other; but there will be no danger along that line.

Section 5 of the substitute which I offer is exactly the same as section 5 of the bill, on page 104.

Section 6 is modified from the beginning down to the word "receipts," in line 18, exactly in accordance with the amendment which was made yesterday. I call the attention of the Senator in charge of the bill to that, and I will read that provision, so that there may be no misunderstanding:

SEC. 6. That whenever standards shall have been fixed and established under this act for any grain and any quantity of such grain which has been sold, offered for sale, shipped, or delivered for shipment in interstate or foreign commerce shall have been inspected and a dispute arises as to whether the grade as determined by such inspection of any such grain in fact conforms to the standard of the specified grade, any interested party may—

We introduced the words yesterday "call for reinspection"—

or appeal the question—

And here yesterday was inserted the following:

in accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations, to the Secretary of Agriculture; and the Secretary of Agriculture is authorized to cause such investigation to be made and such tests to be applied as he may deem necessary and to determine the true grade.

The remainder of the section of my substitute is the same as the remainder of section 6 as now found in the bill.

Section 7 has been entirely stricken out. That section relates to the matter of issuing licenses to any person upon presentation to the Secretary of Agriculture of satisfactory evidence, and so forth. As I have indicated, my idea in striking that out is that the Government should only enter the field of inspection to supervise through the process of appeal and other instrumentalities under the Agricultural Department, unless it takes cognizance of the entire field of inspection and appoints its own inspectors; that the Government ought not to give the license to the inspectors who are appointed and employed by the boards of trade, the chambers of commerce, or the State railroad and warehouse commissions; that the Government ought not to give the license to persons who are buying or selling in their own behalf; that the Government can not by any possibility, without an enormous expense, furnish inspectors at the original place of shipment, and even if it does it will be compelled to make the elevator man, who often is alone in his elevator, the inspector, and he becomes the official inspector with a certificate from the Government to buy and to sell the thing which he inspects and by the grade which he gives it. There is such an inconsistency between them and the idea that we wanted to get rid of and divorce the inspection department from the purchasing interest that it seems to me improper that we should issue Government licenses at all.

I hope that very soon after this law shall be in operation we will find that we can appoint all the inspectors at the great terminals and have the inspectors paid, as they are now, from 15 to 35 cents a carload for inspecting at these terminals and be Government employees entirely.

Mr. STERLING. Mr. President, I should like to ask the Senator a question relative to the reinspection and appeal, as

provided for in section 6. The provision relates to reinspection or appeal, and gives the right of reinspection and appeal——

Mr. McCUMBER. Is the Senator reading from section 6 now?

Mr. STERLING. Yes; section 6. It gives to the party dissatisfied the right to call for a reinspection or to appeal the question in accordance with the laws, rules, or regulations in force or provided at the place of inspection, with a further right of appeal from any final decision rendered under such laws, rules, or regulations, to the Secretary of Agriculture. Now, the Senator may be right in assuming that at any place of inspection there are to be found the laws, rules, or regulations regulating reinspection or appeal. This question occurs to me, however: Might there not be a place where the grain has been inspected but where there are no rules or regulations relating to reinspection or appeal? And if there be, what would be the result in such a case?

Mr. McCUMBER. I can not imagine that there would be an instance of that kind. The inspection and where the appeals are to be taken, of course, would be at the great terminals. Now, no matter whether we inspect in North Dakota or in Iowa or in any other place in Minnesota or not, the final inspection will be done at Duluth or Superior, or at Minneapolis or St. Paul. There is where your inspection will be done. Now, machinery is offered at all of those places for appeals; and under the laws of Minnesota, or elsewhere, as I understand, an appeal could be taken if you sold a carload for milling purposes by grade down at Austin, in the southern part of the State, where they have none. Then it would be by sample, but it would be under the rules and regulations of the State in reference to appeals.

Again, let me call the attention of the chairman to the fact that section 8 is transferred into my substitute as section 7.

The only change that has been made in section 9 is that I have stricken out the words "licensed under this act," because in the substitute I do not provide for any licensing whatever, for the reasons that I have already indicated.

Then sections 10, 11, and 12 are exactly the same as in the bill.

I do not know of anything further that I can say in reference to the substitute. I have tried to keep within this rule in drafting the substitute: First, to make as few amendments as possible to the proposition which is contained in the bill reported from the committee. Second, simply to provide for standardization of grain sold by grade in interstate commerce. Third, a prohibition against the use of any other grade or standard. That does not mean as against any other method of selling, because they can sell by sample or in any other way if they see fit; but if you are to use standards, you must use the United States standards. Fourth, to provide for a reinspection and appeal to the Secretary of Agriculture, thus keeping the Government control over the actions of the States and the boards of trade through this method of appeal, which will also operate to bring to the attention of these inspecting departments just what the Agricultural Department will require in measuring up to its standard of certification. Fifth, a provision for penalties which would make the law effective.

I do not believe we ought to go any further than that unless we go entirely into the field of Government inspection.

I think, Mr. President, that we will have a more workable law, and one very much superior to that which has been reported, by the adoption of my substitute.

Mr. GORE. Mr. President, I wish to say one or two words in regard to the proposed substitute.

First, I wish to say that I realize that the Senator from North Dakota [Mr. McCUMBER] has been one of the pioneers in carrying forward the agitation for legislation providing for the standardization of grain. It is true that there has been a difference of opinion. There have been three phases of opinion upon this subject. One section of the opinion opposes any legislation whatever, opposes either Federal inspection or Federal supervision, and insists upon a continuance of the local or State systems of standardization and grading. In the Senate there have been two sections of opinion—one led by the Senator from North Dakota, in favor of direct Federal inspection. I believe I have voted uniformly with the Senator for the measures proposed by him to accomplish that end. It has been impossible, so far, to achieve that result. The difference between Federal inspection and Federal supervision is not one of principle; it is a difference of policy. It has seemed best, at least for the present, to concentrate our efforts on the legislation seeking to bring forward at this time and to consummate at this time Federal supervision. I think it would be impossible at this time to secure Federal inspection.

There are two or three points in the proposed substitute and amendments on the part of the Senator which seem to me seriously objectionable. Section 4, as proposed by him, is ironclad in the requirement that all grain shall be graded in accordance with the Government standards and shall be sold and shipped in accordance with those standards. There is no flexibility whatever—no elasticity. I have little doubt that it would result in great congestion, or at least in great embarrassment, and would in some measure defeat the purposes which we have in view.

The act to which this is proposed as an amendment allows greater freedom. It does not insist that all grain shall be graded in accordance with official standards before being shipped or sold in interstate commerce. I think for the present that is preferable. Perhaps sooner or later we may be able to institute a system of universal Federal inspection under which the policy proposed by the Senator's substitute could be carried out.

Another provision—I believe an amendment which was adopted yesterday in my absence—I think is subject to still further criticism. That is the provision that appeals shall be, in the first instance, prosecuted by the existing State authorities. There are two objections to that. One objection is fundamental. The proposition to commit the enforcement of a Federal statute to State authorities, over which the Federal Government has no control, I think is unwise. In fact, I think it impracticable. I do not believe it would work. Any Government establishing a system of this sort ought to have some sort of control over at least the administrative officers who are to carry it into effect. I believe it is a little unusual for one government or jurisdiction to pass a statute and to devolve the execution of that statute entirely upon other authorities or instrumentalities, and surrender all control whatever over the administration of its own enactment.

I think that objection is fundamental. There would be a hiatus in the enforcement of the law under this amendment. In the first instance, the inspection would be, or might be, by a licensed Federal inspector. Then an appeal would be taken to a State authority. A further appeal is provided from the State authority to the Federal authority. Now, I question the wisdom of that sort of administration.

In the second place, it would be possible for the existing exchanges to make final appeal to the Federal authorities an impossibility. The fee for the appeal in the first instance could be made so high that no appeal could be taken to the State authorities; and since an appeal to the State authorities is a necessary preliminary to an appeal to the Federal authorities, all appeals might be foreclosed. I believe that the present fee in cases of appeal in the Baltimore Exchange, for instance, is $3 per car. That might be raised to such an amount as to make it impossible to prosecute an appeal to the local authorities, which would, of course, make impossible a further appeal to the Federal authorities.

I will say that if the substitute is voted down, I should not have serious objection to an amendment of this character, which could possibly be further considered in conference and hammered out into something practicable:

The Secretary of Agriculture may, under rules and regulations to be prescribed by him, permit an appeal to the authorities empowered under the State law to hear and determine such appeals, with the right of a further and final appeal to the Secretary of Agriculture.

That would protect the enforcement of this law against the objections which I have just cited. The Secretary could prescribe the rules and regulations under which appeals should be prosecuted, in the first instance, to the State authorities; and if the State authorities did not conform to those rules and regulations, the Secretary could withdraw entirely this right of appeal. I think that would make it a practical measure.

Mr. McCUMBER. Mr. President, may I interrupt the Senator with just one suggestion?

Mr. GORE. Yes, sir.

Mr. McCUMBER. In nearly every one of the cases, or at least in perhaps 50 or 60 per cent of them, the mere reinspection settles the difference. Now, the Senator would not want every case of reinspection to come up for the decision of the Secretary of Agriculture?

Mr. GORE. Oh, not at all; if the party was content.

Mr. McCUMBER. That would be the most of it; and that must be done—because there is no provision in the bill here for reinspection—under the provisions of the laws of the States or the boards of trade.

Mr. GORE. I think, under one of the amendments suggested by the Senator yesterday, that proposition is taken care of, with respect to reinspection.

Mr. McCUMBER. It is, yes; but that is embodied in my substitute.

Mr. GORE. Therefore, Mr. President, I express the hope that the substitute will be voted down. In that event, I should not seriously object to the amendment which I have suggested.

I believe I will ask the Senate at this time, however, to permit me to move that when the Senate recesses to-day it recess until 11 o'clock on Monday.

The VICE PRESIDENT. The question is on the motion of the Senator from Oklahoma.

The motion was agreed to.

Mr. SHAFROTH. Mr. President, I want to say just a few words with relation to the substitute which has been offered by the Senator from North Dakota. It is a substitute that takes away from the grain-grades bill as incorporated in the Agricultural bill the idea of supervision upon the part of the Federal Government. This subject has been discussed by the farmers' organizations, by the boards of trade, and by the millers' associations to a very large extent, with perhaps more particularity than by the Members of this body; and on that account it seems to me that we ought to pay some attention to what they say and what they want.

This section with relation to grain grading is divisible, of course, into three parts: First, the standardization, which everybody concedes is the proper thing to do by the Federal Government; second, the supervision, by which perhaps inspectors of the Federal Government would be in the 35 leading markets of the United States, and would not be in other portions of the United States; third, the inspection by the Federal Government, which would include a vast number of employees upon the part of the Government.

Mr. McCUMBER. Mr. President, may I ask the Senator a question right here?

Mr. SHAFROTH. Yes, sir.

Mr. McCUMBER. I will ask the Senator if he does not think that the bill as proposed—and I will admit that my substitute is open to the same objection—is rather weak upon the matter of supervision? The only supervision that I can make out of the bill—and that would be true also of the amendment—is the supervision that would come through the appeals.

Mr. SHAFROTH. There is something more than that, because under the bill as contained in the Agricultural appropriation bill the inspectors who are now inspecting the grain must operate under a Federal license; and while, of course, they have the influence of the State organization behind them, yet they have certain responsibilities to the Federal Government, and it seems to me it would bring them in closer touch, and make for more uniform grading.

I did not, however, intend to go into the general discussion of the question, because I have on another occasion discussed it at considerable length. I want to call the attention of the Senate to the fact that while we have given this matter some consideration, these farmers' organizations, these millers' organizations, these elevator organizations, and these State organizations have given infinitely more time and attention to the provisions of the measure which is embodied in the Agricultural bill.

I want to read just a few of these indorsements, to show that the general farmers in their organizations, comprehending thousands and thousands of people, and the millers in their organizations, and even boards of trade, have approved this identical bill, because what is contained in the Agricultural bill is simply what was called the Moss bill in the Sixty-third Congress, and what was called the Rubey bill in the Sixty-fourth Congress. They have had these measures before these various organizations, and they have discussed them, and the result has been that they have formed an idea as to what they want in the matter. Perhaps their idea was influenced to some extent by the fact that a year ago, upon the question as to whether we should have Federal inspection and do away with State inspection, it was defeated in this body; and, thinking that perhaps that could not be obtained, they have indorsed the Moss bill and the Rubey bill, which is identically the same bill contained in the pending Agricultural appropriation bill.

I want to call attention to just a few of these resolutions which indicate that they are familiar with and have discussed this very question, and, with the idea of their own self-interest, are better capable of determining what is to the best interest of the entire United States.

The membership of the Western Grain Dealers' Association includes the regular grain dealers of the States of Iowa, Nebraska, and South Dakota.

At the annual convention of the Western Grain Dealers' Association, held at Cedar Rapids, Iowa, April 14–15, 1916, the following resolution was adopted:

Whereas there is pending before Congress the Rubey bill, which bill is substantially the same as that known to the trade as the Moss bill, or grain-grades act; and

Whereas this association has heretofore gone on record as favoring the Moss bill, which is designed to bring about supervision of grain inspection by the Federal Government:

Resolved, That we reaffirm our position with reference to this bill, which has been favorably reported by the House Committee on Agriculture and is now on the calendar awaiting action.

There is a specific indorsement of the membership in those three great wheat-raising and grain-raising States, and it was after a most thorough examination had been made by them and a thorough discussion that the resolution was adopted.

Now, there are various other indorsements. For instance, here is one adopted at Peoria, Ill., October 11, 1915. At the nineteenth annual meeting of the Grain Dealers' National Association, held at Peoria, Ill., October 11, 1915, the following resolution was adopted:

Whereas the bill introduced in Congress by Representative Moss and known as the grain-grades act failed of enactment: Therefore be it

Resolved, That we indorse Representative Moss in his declared intention to reintroduce this measure, without material change, immediately after the Sixty-fourth Congress convenes; that we reaffim in all respects the indorsements given this measure by this association at its Kansas City convention and that every honorable effort be put forth by the members of this association to secure its enactment into law.

Here is one which was addressed to Representative RUBEY from the Boston Chamber of Commerce:

BOSTON CHAMBER OF COMMERCE,
March 25, 1916.

Hon. THOMAS L. RUBEY,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN RUBEY: I have already notified you by day letter of the vote of the grain board indorsing the Rubey grain-grades act. The board of directors of the chamber, at their metting on March 23, unanimously adopted the report of the grain board and voted to inform the New England Senators and Congressmen of the action taken.

It goes into details concerning it, which are too long to read.

Now, take the Kansas City Board of Trade. This is addressed to the author of the bill, Mr. RUBEY, January 14, 1916:

[Telegram.]

KANSAS CITY BOARD OF TRADE,
Kansas City, Mo., January 14, 1916.

Hon. THOMAS L. RUBEY,
Washington, D. C.:

The Kansas City Board of Trade strongly indorse the Moss grain bill, and respectfully but earnestly solicit your best efforts toward its adoption this session.

B. C. MOORE, *President.*
E. D. BIGELOW, *Secretary.*

Again, the Kansas City Millers' Association indorses the measure in these words:

[Telegram.]

THE KANSAS CITY MILLERS' CLUB,
Kansas City, Mo., January 14, 1916.

Hon. THOMAS L. RUBEY,
House of Representatives, Washington, D. C.:

We respectfully urge you to do all that is possible to secure enactment of the Moss grain-grades bill during the present session of Congress. The proper Federal supervision of grain inspection is of the utmost importance to the milling industry and the grain trade of the United States, and further to defer enactment of this important legislation will merely delay much-needed relief.

THE KANSAS CITY MILLERS' CLUB,
R. E. STERLING, *Secretary.*

Mr. President, I have a number of other indorsements here. Here is one from the Missouri Grain Dealers' Association, which heartily indorses this bill. Here is another from the Missouri Grain Dealers' Association of a later date, and as it is shorter I will read it. It is as follows:

[Telegram.]

MISSOURI GRAIN DEALERS' ASSOCIATION,
St. Louis, Mo., January 27, 1916.

Hon. THOS. L. RUBEY,
Representative in Congress, Washington, D. C.:

The Missouri Grain Dealers' Association, assembled in annual convention at St. Louis, Mo., January 27, unanimously indorsed the Gore bill, now pending in the Senate, and the Moss bill, now pending in the House, relating to uniform grading of grain, and desire to thank you for your sincere and constant efforts put forth in behalf of the grain trade.

MISSOURI GRAIN DEALERS' ASSOCIATION,
By J. A. GUNNELL, *Secretary.*

Then here is one from the New York State Millers' Association. As it is short I will read it:

[Telegram.]

NEW YORK STATE MILLERS' ASSOCIATION,
Buffalo, N. Y., January 27, 1916.

THOS. L. RUBEY, *M. C.*,
Washington:

The millers of New York State, as assembled at their annual dinner last night at Buffalo, again express their strong hope that they might have immediate relief from possible grain-inspection abuses as would be provided by bill H. R. 4646. They hope that your committee may have already reported the bill favorably, or, if not, may do so as soon as may be possible, and that this may be followed by prompt favorable action of the House and Senate. If we can be of any service, please command us.

NEW YORK STATE MILLERS' ASSOCIATION,
By W. V. HAMILTON, *President.*

Then here is another one from the Providence Chamber of Commerce.

Here is one from the St. Louis Merchants' Exchange, and here is one from Texas Grain Dealers' Association. The executive committee of the Texas Grain Dealers' Association, in session April 22, 1916, passed a resolution instructing the secretary to take up with the Senators and Congressmen from Texas the matter of urging the passage of the Rubey bill or the grain-grades act at this session of Congress.

The fact that all these associations have looked into these bills closely and have indorsed this bill by specific name indicates that, so far as they are concerned, they have compromised their differences as to grain inspection by the Federal Government so as to simply establish grades by the Federal Government in the bill which is now reported by the Committee on Agriculture and Forestry, namely, that you should have grain standards established by the National Government, and that there should be that amount of supervision which is provided in the bill, and which unquestionably it seems to me will aid the promulgation and carrying out of provisions as to the sale of grain by grade standards.

Mr. ASHURST. Mr. President, I observe that an amendment has been attached to the pending bill. I shall not take time to read it, but it provides specifically for permitting the importation of cattle affected with splenetic or Spanish fever.

The amendment proceeds along the line that whereas in 1911 in the Agricultural appropriation act an amendment was attached providing that a class of cattle could be imported into Texas, therefore, in view of this apparent special right or privilege having been granted to Texas, it ought to be granted to other States.

Surely the Senate can not now open the door and permit the importation of cattle, to use the language of the amendment, afflicted with splenetic or Spanish fever. To my mind the logical way to eliminate the special privilege, if there be one, would be to repeal that provision of the Agricultural appropriation act of 1911 which granted to Texas the right to have such cattle imported into the State.

Mr. SMITH of South Carolina. Mr. President, I think the Senator from Arizona is laboring under a misapprehension as to the character of this disease. As I stated the other day when this matter was under discussion, there is a zone running from the Gulf around the south Atlantic where the disease does not manifest itself, and the cattle in that section are immune because of the presence of the tick. But if you take any cattle from a diseased zone and ship them into the interior of my State, where they come in contact with the immune cattle, the immune cattle may develop the disease.

Mr. ASHURST. Mr. President, I thank the Senator from South Carolina for his statement; it is very clear. But the language of the amendment is that the act of Congress of August 30, 1890, shall be amended so as to permit the admission of tick-infested cattle.

I reserve any right that may be necessary. I now tender the following amendment to the bill.

Mr. GORE. Mr. President——

The PRESIDING OFFICER (Mr. CUMMINS in the chair). Does the Senator from Arizona yield to the Senator from Oklahoma?

Mr. ASHURST. I do.

Mr. GORE. Perhaps the Senator from Arizona was not present when the junior Senator from Alabama [Mr. UNDERWOOD] gave the required notice that he would move to suspend the rule and offer the amendment to which the Senator refers. It is true the amendment is now in the bill, but in the Senate it will be subject to a point of order, and doubtless a point of order will be made. In order to escape that contingency, due notice has been given by the Senator from Alabama that he would move to suspend the rule in order to offer the amendment. Of course, the matter will then be thrown open for general discussion.

Mr. ASHURST. For fear that the rule might be suspended and the amendment adopted, which would permit, if I view it correctly, the importation of these tick-infested cattle, as a proposed solution I now give notice of an amendment proposing to amend the Agricultural appropriation act for the fiscal year ending June 30, 1912, which was approved March 4, 1911, by striking out the language on page 6, as follows:

The act of August 30, 1890, is hereby amended so as to authorize the Secretary of Agriculture, within his discretion, and under such joint regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico into that part of Texas below the southern cattle quarantine line.

Mr. SMITH of South Carolina. I would just like to state, if the Senator will allow me——

The PRESIDING OFFICER. Just a moment. The Senator from Arizona gives notice of a motion to suspend the rules to make in order the amendment which he has suggested. The notice will be entered.

Mr. SHEPPARD. Let me state to the Senator from Arizona that it will be necessary to reduce it to writing.

Mr. ASHURST. I shall do so.

Mr. SHEPPARD. I suggest that the Senator amend his notice by stating "I hereby give notice in writing," and so forth.

Mr. ASHURST. I will accept that suggestion. I offer it as a compromise between the law and the amendment which has been adopted. I think we ought to repeal that part of the law which permits tick-infested cattle to be shipped from Mexico to States on the border. We have spent thousands, yea, millions of dollars to prevent the spread of splenetic or Spanish fever among the cattle there.

Mr. SMITH of South Carolina. Mr. President, I would like to call attention to the fact that even this amendment provides that they shall only be brought in below the quarantine line. Under the tick-eradication act in a State where the quarantine has been allowed you can not ship cattle out of one tonwship into another township in the State where one is immune and the other is not—where the tick has been eradicated and where it has not. This only provides that the cattle may be imported into this country in those zones where like conditions exist in the countries from which the cattle were shipped, and under the law you can not ship them across that zone.

The PRESIDING OFFICER. The Chair suggests that the amendment is not before the Senate. The Senator from Arizona has given notice of a motion to suspend the rule.

Mr. NELSON obtained the floor.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Will the Senator from Minnesota yield to the Senator from West Virginia?

Mr. CHILTON. Will the Senator yield to me to make a motion that at quarter to 2 we shall stand in recess?

Mr. NELSON. I yield for that purpose.

Mr. CHILTON. I move that at a quarter to 2 the Senate shall stand in recess until 11 o'clock Monday, as fixed by the previous order of the Senate.

The motion was agreed to.

Mr. McCUMBER. Will the Senator from Minnesota yield to me to ask that my amendment in the form of a substitute may be printed and lie on the table?

The PRESIDING OFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, the Senator from Colorado [Mr. SHAFROTH] a few moments ago read a number of extracts from chambers of commerce, boards of trade, and associations in favor of this legislation, and apparently he wished to convey the idea that they were unanimously in favor of this legislation.

One of the leading commercial organizations in this country is the Commercial Exchange of Philadelphia. They are utterly opposed to this legislation, and I beg leave to call attention to it in connection with what the Senator from Colorado said. I will first read the letter from the president of the commercial exchange, inclosing the statement of the exchange. It is dated May 12, 1916:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, May 12, 1916.

Hon. KNUTE NELSON,
United States Senate, Washington, D. C.

DEAR SIR: On behalf of the export grain trade of the United States the Commercial Exchange of Philadelphia respectfully asks you to vote against and do all you can to oppose the passage of the amendment to the Agricultural appropriation bill, known as the "grain-grades act."

We ask this because the provisions of this act are calculated to injure the export grain trade, and injury to that trade will necessarily result in serious hardship to the agricultural and farming interests of the country. The farmers of this country as a rule are not advocating the passage of this bill, and they know nothing whatever of its text. A few western grain men not familiar with the requirements of the export grain trade have fathered this bill, and by the cooperation of their affiliated associations have made it appear to have a strong indorsement. Could the farmers know how much it will injure them, they would flood Congress with telegrams and letters of protest.

Your attention is invited to the inclosed communications, which recite in detail our reasons for opposing the measure.

Yours, very truly,

L. G. GRAFF, *President.*

Here is the communication to which the president of the exchange referred. It is very interesting and important and has a strong bearing on this case:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
May 12, 1916.

To the MEMBERS OF THE UNITED STATES SENATE,
Washington, D. C.:

In re "grain-grades act."

[The Commercial Exchange of Philadelphia was founded in 1854, and is composed of merchants engaged in the grain, flour, feed, and provisions business, both domestic and export; also the principal banks, railroads, and steamship lines of Philadelphia. It has one of the best-equipped grain-inspection departments in the United States. Through

this exchange was received approximately 71,000,000 bushels of grain, including flour, of which 50,000,000 bushels was exported from this port in 1915.]

The export trade of this country is the best friend of the farmer of the United States, and should it be injured, harassed, or taken away we hesitate to forecast the dire consequences to the producer of the crops. The enormous crops raised in this country leave a large available surplus annually for export, which, if not disposed of, would mean ruinously low prices to our farmers, and we can not expect to secure and hold this foreign trade if our laws regarding the grading of grain are such as to hamper and destroy fair competition with other exporting countries.

The proposed grain-grades act, should it become a law, would be especially detrimental to the export trade and the farmer, inasmuch as its provisions would prevent from competing upon equal terms with our competitors, such as the Dominion of Canada, Argentina, and other exporting countries, these competitors not being amenable to our laws. As a concrete example of this, permit us to say that the United States Department of Agriculture has adopted a standard for grading corn, requiring No. 2 corn to contain not more than 15½ per cent moisture, No. 3 corn not more than 17½ per cent moisture, and No. 4 corn not more than 19½ per cent moisture, etc. In the western markets the settling price between No. 2 and No. 3 corn is 2 cents a bushel, and between No. 2 and No. 4 corn as much as 6 cents a bushel. At the present time all of the No. 3 corn can be used for export without docking the farmer or country shipper, but the Department of Agriculture, should the grain-grades act become a law, would prohibit us from doing so, and would therefore legislate in favor of the foreign buyer, as well as our competitor, and against the producer in this country. Very little corn, as you may know, has as little moisture as 15½ per cent in its natural state or condition, and it is safe to say 2,500,000,000 bushels of the crop will contain a moisture about 15½ per cent. As all corn containing one-quarter or even an eighth higher percentage of moisture would necessarily, under the department's proposed moisture test, be forced to take the grade of No. 3 corn, the Agricultural Department would thereby reduce the value of this year's crop to the farmers of the country 2 cents a bushel, which, as above stated, is the settling price between the grades of No. 2 and No. 3 corn, or $50,000,000; this is, of course, assuming it would all grade No. 3 corn, but we know a great deal of it would be below No. 3, and as No. 4 is docked 4 to 6 cents a bushel, it would be a safe estimate to say the loss to the farmer by reason of the proposed grades would be 3 cents a bushel, or $75,000,000.

Furthermore, our Philadelphia merchants, together with the efficient grain-inspection department of this exchange, by reason of their knowledge and experience in blending wheats, are producing an article which the millers of England, France, and Holland have shown a desire to purchase in preference to those of western markets. It is only within the past two years that the great State of Montana has produced wheat in large enough quantities to become a factor in the export trade. During that time the production of wheat in that State has grown from an unknown quantity to that of 33,000,000 bushels, a matter of great importance to the State, the railroads, the steamship lines, and the export merchants of the entire country. Under our present export grading system we are permitted to bring that wheat from Montana to Philadelphia, and by blending it with wheat from other sections of the United States are enabled to give to our foreign merchant millers a desired milling article, of which we have shipped millions of bushels within the past year. Under the terms of the grain-grades act this will be impossible.

Another important factor that should be considered in connection with the proposed grain-grades act is that grain graded at western primary points frequently deteriorates in quality while in transit between the western shipping point and the eastern terminus. If the western exporter has sold such grain to the foreign buyer on western certificates of inspection, the question arises as to the attitude of the Government in case the grain arrives at the seaboard out of condition. Will it stop the shipment and compel the exporter to put the grain in good condition, or will the shipment be permitted to continue on its way across the ocean regardless of its condition? It would seem there is a responsibility on the part of the Government in such exigencies after the proposed grain-grades act should be enacted into law. If the Department of Agriculture, under the grain-grades act, permits deteriorated grain, as above referred to, to be shipped on the western certificate of inspection, this would be a serious discrimination against the seaboard exporter. Then, again, if this act becomes a law the exporters will of necessity be forced to establish their own brands, which would require every receiver, shipper, and exporter to have their grain stored in separate bins, so as to preserve the identity of the grain. This would necessitate largely increased storage facilities, for which the storage capacity of our elevators would prove to be decidedly inadequate, resulting in still further congesting the railroads and interfering with general business.

Finally, owing to the—

And I call attention to this—

Finally, owing to the numerous varieties of grain grown in the United States, contingencies frequently arise requiring a change in the grades to meet the existing conditions and the requirements of the foreign buyer; this is especially applicable to wheat, and most generally after harvesting a new crop. In accordance with our present rules we can adopt and make effective such changes in grades as may be necessary and advise the foreign buyer of the same within a period of two weeks. Should the proposed grain-grades act become a law, it will require 60 days to make effective any changes in the grades, and usually there are unforeseen delays in all such governmental matters. This would be exceedingly detrimental to the export business, as well as to the farmer of the United States, and be especially beneficial to our competitor who is not amenable to our laws.

In view of the foregoing facts the Commercial Exchange of Philadelphia is unalterably opposed to the enactment of the grain-grades act, and solicits your earnest cooperation in bringing about the defeat of the bill.

Respectfully, yours, L. G. GRAFF, *President.*

Attest:

A. B. CLEMMER, *Secretary.*

Here is another and a shorter communication from the same body:

THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
Philadelphia, May 12, 1916.

To the MEMBERS of the UNITED STATES SENATE,
Washington, D. C.:

In re "grain-grades act."

The committee on grain of the Commercial Exchange of Philadelphia enters this protest against the bill known as the United States grain-grades act.

We hold that the act in question not only places entirely too much power in the hands of one official of the Government, the Secretary of Agriculture, but that it will also work against the interests of the farmer as well as of the merchant engaged in the export of grain, two industries which are of vital importance to the welfare of the United States.

Any attempt on the part of the Government to force commerce to flow through certain prescribed channels and to submit to standards imposed in an arbitrary way will be injurious to trade. Under the present system there is a wholesome rivalry between different ports on the Atlantic seaboard to secure for each one its share of the export traffic, and self-interest alone will dictate to the exporter the establishment of such grades as will promote business in the foreign markets and at the same time enable him to secure the proper kind of grain from the farmer in the interior. The mixture of certain grades of grain is not only a benefit in some cases to the foreign buyer as well as to the domestic buyer but is also a distinct benefit to the farmer and to the producer, because under such a system the different grades are not sacrificed in price but are so blended as to make, in the case of wheat, for instance, a good milling grade entirely satisfactory to the European buyer, without forcing the farmer or the producer to accept what might be called a slaughter price.

We hold that the export trade of the United States would be so hampered under the proposed legislation that serious injury would be done to it; and the present system, which has been in operation for years and is now giving general satisfaction both to the consumer and to the buyer, should not be disturbed. Competition between different ports will naturally tend to benefit the farmer, for each port wishes its own grades to be popular with the buyer either at home or abroad, and any dishonest or unjust inspection will soon work its own cure.

We hold that the proposed legislation is largely in the direction of paternalism; that is to say, it places one of the great industries of the country under the paternal care of the Government at Washington, a process which we can not too strongly deprecate. The growth of the country in the last hundred years has been largely the result of private enterprise unfettered by oppressive legislation or by standards imposed by Government officials who know little or nothing of what they attempt to control. In the interest of the domestic and foreign commerce of the United States, as carried on in grain of all kinds, we protest against this legislation and ask you to vote against the grain-grades act.

Respectfully, yours,

GRAIN COMMITTEE OF THE COMMERCIAL EXCHANGE OF PHILADELPHIA,
GEORGE M. WARNER, *Chairman.*

Mr. BORAH. Mr. President, is there an amendment pending or is an amendment now in order?

The PRESIDING OFFICER. The question now before the Senate is the amendment offered by the Senator from North Dakota [Mr. MCCUMBER].

Mr. BORAH. I understood that the Senator from North Dakota was going to ask that his amendment go over.

Mr. NELSON. He did ask to have it printed and lie over. It ought to be printed before we take a vote on it.

Mr. BORAH. If that order is made and the amendment is going over, I wish to offer an amendment. I ask the attention of the Senator from Oklahoma to it.

The PRESIDING OFFICER. The Chair does not understand that the amendment offered by the Senator from North Dakota has been withdrawn. It is the pending question.

Mr. NELSON. The amendment has been offered but the voting on it I take it will not take place to-day. Within a quarter of an hour we must take a recess and it would be idle to seek to reach a vote upon it to-day. Besides it is quite an extensive amendment and it ought to be printed in order that we may give it due consideration.

To section 4 of the amendment I heard the Senator from Oklahoma make an objection that seemed to me to be well grounded, and I want to have an opportunity to study it further.

Mr. BORAH. Mr. President, do I understand that the amendment proposed by the Senator from North Dakota [Mr. MCCUMBER] has gone over?

The PRESIDING OFFICER. The Chair does not know of any way in which the amendment offered by the Senator from North Dakota can be disposed of without either a vote on it or a withdrawal so as to admit the presentation of another amendment.

Mr. GRONNA. Mr. President, my colleague is not in the Chamber at present, but I know it is his wish that his amendment shall go over until Monday. I therefore ask unanimous consent to withdraw the amendment for the present.

The PRESIDING OFFICER. Without objection, that course will be pursued.

Mr. GORE. Mr. President, I think in view of the suggestion made by the Senator from Minnesota [Mr. NELSON], it might now be well for the Senator from North Dakota [Mr. GRONNA] to give notice that the amendment heretofore offered by his colleague will again be offered, and ask that it be printed and lie on the table.

The PRESIDING OFFICER. The senior Senator from North Dakota [Mr. MCCUMBER] has already asked that the amendment be printed. Does the Chair understand the junior Senator from North Dakota to ask that the amendment lie on the table?

Mr. GRONNA. I ask permission that the amendment be printed and lie on the table.

The PRESIDING OFFICER. That order will be made.

Mr. BORAH. Mr. President, I offer an amendment on page 71, after the word "plant," in line 19, to insert:

To make preliminary survey and examination of what is known as the Black Canyon irrigation project, in Canyon County, Idaho, the sum of $10,000, or so much thereof as may be necessary.

Mr. President, I wish to say just a word in explanation of the amendment. It will take only a moment. What is known as the Black Canyon irrigation project was once part of a Government irrigation project, but it was afterwards, for reasons which it is not necessary for me now to detain the Senate in stating, eliminated from the project as a whole, and has since that time been outside of any Government irrigation project. It had, however, been settled upon by a large number of settlers who have been upon the tract of land for from five to eight years. From time to time there has been an effort to ascertain whether or not it would be a practicable proposition for the Government to put water upon this project.

If it be not practicable, of course these settlers must give up their homesteads and their homes in a large measure, if not wholly, and depart. Therefore the Secretary of the Interior has indorsed the proposition of a small appropriation to make a preliminary survey and examination in order to determine whether it is such a feasible plan as the Government, under any circumstances, would take hold of. I have a letter from the Secretary of the Interior approving of the item and of the survey and examination. I do not care to discuss the matter further, unless there is some serious objection to it.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 71, line 19, after the word "plan," it is proposed to insert:

To make preliminary survey and examination of what is known as the Black Canyon irrigation project, in Canyon County, Idaho, the sum of $10,000, or so much thereof as may be necessary.

Mr. GORE. Mr. President, I wish to say that I am almost persuaded by the statement of the Senator from Idaho, indeed I am persuaded, that this survey ought to be made. I think there is no doubt of that in the interest of the settlers and in fulfillment of an obligation which perhaps the Government owes the settlers. I feel certain, however, that if this amendment should be adopted, requiring the Department of Agriculture to make this survey in connection with an irrigation plant, it would undoubtedly become invested with the character of a precedent, and efforts would be made hereafter to follow this precedent. It is extremely difficult to discriminate between Senators or between projects and proposals standing upon the same footing and having apparently the same merit. I feel obliged, therefore, reluctantly to make this point of order against this amendment.

Mr. BORAH. What is the point of order?

Mr. GORE. I think the item is not estimated for.

Mr. BORAH. I think I have an estimate for it. I have undertaken to get an estimate for it, Mr. President. I asked the Secretary of the Interior to give me an estimate, and he has given it to me under date of July 6, 1916.

Mr. GORE. Mr. President, I will say that, as I understand, an estimate in order to be entitled to qualify under the rules of the Senate, must be transmitted by the Secretary of the Treasury to the Speaker of the House, I believe.

Mr. BORAH. I do not find any rule requiring that.

Mr. GORE. At any rate, I think it has to be certified by the Secretary of the Treasury.

Mr. BORAH. Under what rule is that required?

Mr. GORE. I believe that is in the statutes requiring the Book of Estimates to be prepared and submitted to Congress.

Mr. BORAH. I know that there have been numerous instances here—I recall one in particular—in which that has been regarded as an estimate, which was a recommendation from the department in the nature of a letter. I have that kind of a recommendation from the Secretary of the Interior.

I know the attitude of the Senator from Oklahoma, and I have no doubt that he is friendly to this matter. I shall regret if he feels the necessity of making a point of order against the amendment, although I feel that we have complied with the spirit of the rule.

I want to say to the Senator from Oklahoma, however, that I certainly would not for a moment embarrass him with this amendment if it were not for the peculiar situation which surrounds this particular transaction and this particular project, which is similar to no other that I know of anywhere in the West. It must be understood that the settlers went upon this land at a time when it was a part of a Government project, and now they have been set off by themselves, eliminated, and left, as it were, marooned. It is an act of humanity to tell them either that they can or can not entertain hope for the future in regard to their homes. They have been there for some six or seven or eight years—some of them as long as eight years and others for five and six years—and from time to time investigation into the matter has been delayed. It is a small amount, and will settle the future of the people who are residing upon 150,000 or 200,000 acres of land.

The PRESIDING OFFICER. The Chair understands, addressing himself now to the Senator from Oklahoma, that he makes the point of order that this proposed appropriation has not been estimated for?

Mr. GORE. Yes, sir; that is the ground upon which I base the point of order. I will say, Mr. President, that after the further statement of the Senator from Idaho, if he will devolve this duty upon the Secretary of the Interior, I believe that I shall withdraw the point of order.

Mr. BORAH. How is that?

Mr. GORE. If the Senator will direct the Secretary of the Interior to make this survey—I do not think it ought to be devolved upon the Secretary of Agriculture——

Mr. BORAH. It is the intent that it shall be done by the Secretary of the Interior.

Mr. GORE. Then I misunderstood it. Mr. President, I will not insist upon the point of order.

The PRESIDING OFFICER. The point of order is withdrawn. The question is on the amendment submitted by the Senator from Idaho [Mr. BORAH].

The amendment was agreed to.

Mr. BORAH. I ask unanimous consent to have printed in the RECORD a letter from the Secretary of the Interior, Mr. Lane, in regard to the matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter referred to is as follows:

THE SECRETARY OF THE INTERIOR,
Washington, July 6, 1916.

Hon. WILLIAM E. BORAH,
United States Senate.

MY DEAR SENATOR: I have your letter of June 28, relative to an investigation and survey of what is known as the Black Canyon irrigation project. While it is very difficult to estimate in advance the cost of such work, I am of the opinion that the sum which you have in mind, $10,000, will be sufficient for the purpose, and that the contemplated survey is justifiable.

Cordially, yours,

FRANKLIN K. LANE,
Secretary.

Mr. CATRON. I offer an amendment to the pending bill, which I ask to have printed in the RECORD and also printed for the use of the Senate.

The PRESIDING OFFICER. Such will be the action, in the absence of objection.

The amendment is as follows:

On page 78, line 17, insert the following:

"That portion of the act of March 4, 1911, entitled 'An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1912,' which reads as follows: 'The act of August 30, 1890, is hereby amended so as to authorize the Secretary of Agriculture, within his discretion and under such Government regulations as may be prescribed by the Secretary of Agriculture and the Secretary of the Treasury, to permit the admission of tick-infested cattle from Mexico into that part of Texas below the southern cattle quarantine line,' be, and the same is hereby, repealed."

Mr. ASHURST. Mr. President, I have received so many requests for information concerning the legislation proposing Federal aid in the construction of roads that I take this opportunity briefly to set out just in what way the goods-roads legislation relates to the State of Arizona.

The good-roads bill appropriates $5,000,000 for the fiscal year beginning July 1, 1916; $10,000,000 for the fiscal year beginning July 1, 1917; $15,000,000 for the fiscal year beginning July 1, 1918; $20,000,000 for 1919; and $25,000,000 for 1920, which sums of money are to be expended by the Secretary of Agriculture in cooperation with the State highway departments in constructing rural roads over which the United States mails are or hereafter may be transported. The State, in order to obtain the benefits of this law, must, by act of its legislature, assent to the terms of the act of Congress, and then it is further required that a State highway department be established, with which the United States Government may deal, and the State contributes at least an equal amount, which contribution may be in money, material, or labor, toward the construction of any proposed road.

The money appropriated by the good-roads act will be apportioned among the States according to, and will be determined by, three factors, to wit: One-third in the ratio which the area of the State bears to the total area of all the States, one-third according to population, and one-third according to the mileage of rural delivery and star routes as compared with the total mileage of all such routes.

Arizona has an area of 113,810 square miles, or 3.83 per cent of the total area of the United States. She has 0.224 per cent

of the population of the United States and 0.251 per cent of the post-route mileage of the United States. By consolidating these three factors it is disclosed that Arizona is entitled to 1.435 per cent of the appropriation made under this act, which means that if Arizona sees fit to take advantage of the benefits offered by the Federal law the following sums of money will be available for road construction in Arizona within the next five years:

For the fiscal year beginning July 1, 1916	$71,750
For the fiscal year beginning July 1, 1917	143,500
For the fiscal year beginning July 1, 1918	215,250
For the fiscal year beginning July 1, 1919	287,000
For the fiscal year beginning July 1, 1920	358,750
Total	1,076,250

In addition thereto it should be explained that this good-roads bill also appropriates $1,000,000 each year for the next 10 years, to be expended under the supervision of the Secretary of Agriculture upon request of the county or State authorities, in the construction and maintenance of roads within, or partly within, national forests. There were in Arizona on January 1, 1916, 12,499,485 acres in national forests, or about 10 per cent of the total area of our national forests in continental United States. Assuming Arizona to have one-tenth of the national forest area, Arizona would therefore receive the additional amount of $100,000 per year for the next 10 years for the construction of roads within her national forests. This will make a total of $2,076,250 available for Arizona within the next 10 years through this good-roads legislation. In this connection it must not be forgotten that this sum of $2,076,250 will be in addition to the sum of $112,697.51 which is now annually paid to the State of Arizona by the Federal Government on account of receipts from the national forests. I submit herewith a table showing how this sum of $112,697.51 is derived and to what fund it is to be credited:

Receipts from grazing and other sources, State of Arizona, fiscal year 1915; also, amounts paid to State for school fund under the enabling act, and for roads and schools, 25 per cent of receipts.

Forest.	Grazing.	Timber and other sources.	Total.	Paid to State.	
				School fund, enabling act.	Roads and school, 25 per cent.
Apache	$15,738.55	$3,789.16	$19,527.71	$2,109.07	$4,354.66
Chiricahua [1]	4,049.33	786.96	4,836.29	522.34	1,078.49
Coconino	25,867.55	64,633.18	90,500.73	9,774.44	20,181.57
Coronado	10,630.27	2,354.67	12,984.94	1,402.43	2,895.63
Crook	9,160.94	2,251.40	11,412.34	1,232.58	2,544.94
Dixie [1]	2,375.31	529.88	2,905.19	313.77	647.85
Kaibab	4,099.43	864.28	4,963.71	536.10	1,106.90
Manzano [1]	330.85	575.54	906.39	97.89	202.12
Prescott	24,318.31	5,214.29	29,532.60	3,189.64	6,585.74
Sitgreaves	10,623.94	1,467.67	12,091.61	1,305.94	2,696.42
Tonto	28,142.44	1,908.12	30,050.56	3,245.58	6,701.25
Tusayan	17,462.97	31,023.00	48,485.97	5,236.68	10,812.32
Total	152,799.89	115,398.15	268,198.04	28,966.46	59,807.89

[1] Forests partly in another State; receipts prorated according to area.

In addition to the above, 10 per cent of receipts, $23,923.16, was set aside as Arizona's share of the appropriation for construction of roads and trails within the State.

RÉSUMÉ.

The Department of Agriculture received from all sources from national forests in Arizona in 1915 $268,198.04.

Paid to Arizona for roads and schools, 25 per cent thereof (after deductions for school lands)	$59,807.89
Paid to Arizona 10 per cent of receipts for construction of roads and trails	23,923.16
Paid to Arizona on account of school lands within the national forests	*28,966.46
Total paid to Arizona, 1915, on account of national forests	112,697.51

I wish to explain, with reference to the $28,966.46* paid to Arizona on account of school lands within national forests, that within 20 days after entering the Senate I discovered that the phrase "of all the national forests within said State the area," referring to Arizona, was unfortunately omitted from section 24 of the enabling act, although the phrase appeared in section 6 of said act, wherein it referred to New Mexico. Believing it was the intention of Congress to apply the same rule to both Arizona and New Mexico with regard to the proportionate amount to be paid to each State to the credit of the common-school fund by reason of school lands in national forests, I obtained departmental construction of said section 24, which resulted in securing $28,966.46 additional for the Arizona common-school fund in 1915, and also resulted in securing an amount approximating this sum for the years 1912, 1913, and 1914, and by reason of the departmental construction which I obtained this sum will in future years progressively increase. The omission of these important words above mentioned from the statehood bill was not an omission by any mistake of the printer, but they do not appear in the enrolled bill, for I have closely examined the enrolled bill on file in the State Department.

Nearly 75 years have elapsed since the Federal Government discontinued making appropriations for road construction, and in this progressive age it is very timely that the Federal Government should resume its function of constructing roads. Of the 48 States of the Union 43 have continued in some measure the practice of State participation in public-road improvement and management, and in 31 States appropriations are made to aid in construction of public roads. There are, of course, some critics of Federal aid, and they advance the objection that Federal aid is beyond the power of Congress and therefore unconstitutional. But even if sufficient authority for Federal aid could not be obtained under the "general welfare" clause, the provision of Article I, section 8, of the Constitution, granting to Congress the power to establish post offices and post roads, is specific and unquestionable:

Many, if not most, of the men who participated in laying the foundations of the Federal Government, as well as those who in subsequent years guided its destiny, left expressions as to their views on this question, and of the men who believed the Constitution authorized Congress to construct roads were Jefferson, Madison, Hamilton, Henry Clay, Daniel Webster, John C. Calhoun, and Andrew Jackson.

I have no doubt that this good-roads bill will prove to be one of the most beneficial of the many excellent reforms proposed by this Congress.

RURAL CREDITS.

In addition to receiving many requests for an explanation as to the provisions of the good-roads bill, I have also received a large number of requests for information as to the provisions of the rural-credits bill, and all inquiries have been especially directed toward the amortization plan of repayment of loan.

ADVANTAGES OF AMORTIZATION PAYMENTS.

The term "amortization" means a method of paying a debt by creating a sinking fund which will extinguish both principal and interest at the close of an agreed period. Under this plan the annual payments are all of the same amount and the last payment discharges the debt in full. We have familiar examples of this principle in the endowment life insurance policy or a certificate in a building and loan association.

It is founded on the fact that the regular payment is larger than the interest charges on the principal borrowed, so that every payment discharges a part of the debt. To one who is not familiar with the advantages of this plan it is surprising how rapidly small savings grow when faithfully extended over a long period of years. For example, if a man were to borrow $1,000 at 5 per cent interest, the annual interest charge will be $50. If the borrower pays only $50 per year, he can never discharge his obligation; he will always owe the full sum of $1,000. But under the amortization plan as proposed in the rural-credits law, if he will pay $60 per year, which is only $10 more than the annual interest charge, he will pay his debt in full at the close of 36 years. If a farmer in any State in the Union to-day were offered money on an unrecallable contract for 36 years at a rate of interest as low as 3½ per cent, he would readily accept the terms. This is the simple-interest rate which any borrower will actually receive under this bill if he is enabled to borrow money at 5 per cent on the amortization plan and will agree to make an annual payment of $60 per year for 36 years. A simple computation will prove that this result is correct. Thirty-six payments of $60 each is a gross

sum of $2,160. This sum pays both interest and principal. Subtracting the principal, it leaves $1,160 which has been paid for interest in 36 years. This is an average of $32.22 per year, or an average rate of 3.22 per cent, which is slightly less than a rate of 3¼ per cent. Of course, this remarkable result is really accomplished by the constant reduction which is made in the principal and by constantly decreasing the annual interest charge. The rate given—that of 3.22 per cent—represents, however, the average rate of interest paid during the entire period if computation be made on the original principal of $1,000, which is the ordinary method of borrowing money.

To illustrate: Under the present system of borrowing money, if Mr. X borrows $1,000 for 20 years at 6 per cent interest, he would pay $1,200 interest, and the original amount borrowed would be unpaid. If he borrowed $1,000 at the rate of 10 per cent interest, he would in 20 years pay $2,000 interest and owe the original $1,000 borrowed at the end of 20 years. Under the amortization plan as defined in this bill, if he borrowed $1,000 for 20 years at 6 per cent interest, his payments would be as follows:

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount on principal unpaid.
1	$87.19	$60.00	$27.19	$972.81
2	87.19	58.36	28.83	943.98
3	87.19	56.63	30.56	913.42
4	87.19	54.80	32.39	881.03
5	87.19	52.86	34.33	846.70
6	87.19	50.80	36.39	810.31
7	87.19	48.61	38.58	771.73
8	87.19	46.30	40.89	730.84
9	87.19	43.85	43.34	687.50
10	87.19	41.25	45.94	641.56
11	87.19	38.49	48.70	592.86
12	87.19	35.57	51.62	541.24
13	87.19	32.47	54.72	486.52
14	87.19	29.19	58.00	428.52
15	87.19	25.71	61.48	367.04
16	87.19	22.02	65.17	301.87
17	87.19	18.11	69.08	232.79
18	87.19	13.96	73.23	159.56
19	87.19	9.57	77.62	81.94
20	86.85	4.91	81.94	.....
Total	1,743.46	743.46	1,000.00	.....

By paying $87.19 per year for 20 years he will have paid both principal and interest.

In order to show the maximum costs under this bill, if the borrower desires to take advantage of the 36-year loan, I incorporate what is known as an amortization table showing the process by which the loan and interest are paid. The table is for a loan of $1,000 for 36 years at 6 per cent interest, and the annual payment is $68.39:

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount of principal still unpaid.
1	$68.39	$60.00	$8.39	$991.61
2	68.39	59.40	8.90	982.71
3	68.39	58.96	9.43	973.28
4	68.39	58.40	9.99	963.39
5	68.39	57.80	10.59	952.80
6	68.39	57.16	11.23	941.57
7	68.39	56.40	11.90	929.68
8	68.39	55.79	12.60	917.08
9	68.39	55.02	13.37	903.71
10	68.39	54.28	14.11	889.60
11	68.39	53.37	15.02	874.58
12	68.39	52.47	15.92	858.66
13	68.39	51.52	16.87	841.79
14	68.39	50.50	17.89	823.89
15	68.39	49.43	18.96	804.93
16	68.39	48.29	20.10	784.83
17	68.39	47.08	21.31	763.52
18	68.39	45.81	22.58	740.94
19	68.39	44.45	23.94	717.00
20	68.39	43.02	25.37	691.63
21	68.39	41.49	26.90	664.73
22	68.39	39.88	28.51	636.22
23	68.39	38.17	30.22	606.00
24	68.39	36.36	32.03	573.97
25	68.39	34.43	33.96	540.01
26	68.39	32.40	35.99	504.02
27	68.39	30.24	38.15	465.87
28	68.39	27.94	40.45	425.42
29	68.39	25.52	42.87	382.55
30	68.39	22.95	45.44	337.01
31	68.39	20.22	48.17	288.84
32	68.39	17.33	51.06	237.78
33	68.39	15.26	53.13	184.65
34	68.39	11.07	57.32	127.33
35	68.39	7.63	60.76	66.57
36	70.56	3.99	66.57	.....
Total	2,464.21	1,464.21	1,000.00	.....

REPAYMENT OF LOAN.

The amortization plan provided by this bill will be clearly understood by the following table, showing a loan of $1,000 for 20 years at 5 per cent interest, if the borrower desired a loan for that period:

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on principal.	Amount of principal still unpaid.
1	$80.24	$50.00	$30.24	$969.76
2	80.24	48.48	31.75	938.00
3	80.24	46.90	33.34	904.67
4	80.24	45.23	35.01	869.66
5	80.24	43.48	36.76	832.90
6	80.24	41.64	38.59	794.31
7	80.24	39.71	40.52	753.79
8	80.24	37.68	42.55	711.23
9	80.24	35.56	44.68	666.56
10	80.24	33.32	46.91	619.64
11	80.24	30.98	49.26	570.39

Total	1,604.80	604.80	1,000.00	.....

Mr. GORE. I ask to have printed in the RECORD two letters from the Secretary of Agriculture in regard to the foot-and-mouth-disease situation and methods pursued for its eradication.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letters referred to are as follows:

MARCH 29, 1916.

Hon. A. F. LEVER,
House of Representatives.

DEAR MR. LEVER: In compliance with your request for the important facts in connection with Mrs. Scott Durand's herd which was slaughtered by the Illinois State authorities on account of foot-and-mouth disease, I beg to submit the following information:

September 7, 1915.—Foot-and-mouth disease was discovered in Mrs. Durand's pure-bred Guernsey herd and diagnosed by Dr. Lewis E. Eppel, a veterinary inspector of the Bureau of Animal Industry.

September 8, 1915.—Dr. J. S. Jenison, our veterinary inspector in charge of foot-and-mouth eradication work in Illinois, accompanied Dr. Eppel to the Durand farm, and after a reexamination of the animals confirmed the diagnosis. Dr. Jenison made satisfactory arrangements with Mrs. Durand before leaving the premises that day for the appraisal and disposition of her herd, and she immediately ordered her hired men to proceed to dig a trench, which was nearly finished by noon the following day. During the conversation September 8 Mrs. Durand stated to Dr. Jenison she was satisfied that her hogs and cattle were affected with foot-and-mouth disease, and she realized the herd should be sacrificed in the interests of the live-stock industry of the country, and she was willing it should be done. Dr. Jenison asked her if she desired to name an appraiser to act with a representative of the State and a representative of the Bureau of Animal Industry in appraising the herd. Her reply was in effect that she knew a breeder of Guernsey cattle in the State of Wisconsin whom she would like to have represent her, but she did not think it fair to ask him for he might endanger his own herd by going among her diseased animals, but she would probably call him up that evening and talk the matter over with him. She further stated she was satisfied to have Dr. O. F. Butterfield, the local deputy State veterinarian, represent her interests for she knew him to be competent and honest, as he had been doing her veterinary work for some time. She also said she believed the Bureau of Animal Industry would select an equally competent appraiser, and there should be no difficulty, as the State law is specific in regard to values that may be allowed under such circumstances for animals of the class she owned when registration certificates could be furnished. In a phone conversation that evening, Dr. Jenison informed Dr. Dyson, the State veterinarian at Springfield, of what arrangements had been made with Mrs. Durand. Dr. Dyson objected to Dr. Butterfield acting as the only representative of the State Board of Live-Stock Commissioners on the board of appraisers in this instance because he doubted if Dr. Butterfield was sufficiently familiar with values of pure-bred animals to be considered competent, and he might not be regarded by critics of the State board entirely disinterested, as he did Mrs. Durand's veterinary work. Dr. Dyson also stated he desired to have a live-stock breeder represent the State board in appraising this valuable herd, whose judgment and reputation as an expert could not be questioned. Dr. Dyson concluded the conversation by informing Dr. Jenison that Mr. Morgan, an Illinois breeder of the same kind of cattle that Mrs. Durand owned, would meet the other appraisers at Lake Bluff at 8 o'clock the following morning.

September 9, 1915, Mrs. Durand's herd was appraised. The appraisers were Mr. Morgan, the special representative of the Illinois Board of Live Stock Commissioners; Dr. W. C. Herrold, representing the Bureau of Animal Industry; and Dr. O. F. Butterfield, the local deputy State veterinarian. The herd to be appraised consisted of 61 cattle, including young stock, and 13 hogs. The herd was appraised at $13,089. Dr. Herrold and Dr. Butterfield were satisfied to be guided by Mr. Morgan's judgment in placing values on the various animals comprising this herd, and there is no reason to doubt that the valuation was not a fair and equitable appraisal. Then the appraisers informed Mrs. Durand of the valuation placed on her herd; she objected strenuously, and insisted that she be allowed the maximum provided by the Illinois State law for pure-bred stock with registration certificates. The appraisers could not see their way clear to accede to Mrs. Durand's

wishes. She refused to accept their appraisal and they left her. Under the Illinois State law, in instances where certificates of registration can be produced, as much as $300 may be paid for individual bovine animals, but the valuation of the herd must not exceed an average of $250 per head. On the evening of September 9, 1915, the appraisers reported to the Chicago office that Mrs. Durand refused to accept what they considered a fair and reasonable price for her herd. The State authorities seemed disposed to stand by the appraisers and not raise the valuation of the herd. Shortly after this it was reported that Mrs. Durand would refuse to permit her herd to be slaughtered unless she received $35,000 for it, and that the United States Government must pay her that price. As the representatives of the Bureau of Animal Industry did not have the authority to slaughter and bury her herd until after it had been purchased by the State and Government, they relinquished further responsibility in the matter, and urged the State veterinarian and members of the State board of live-stock commissioners to immediately dispose of these diseased and exposed animals under the provisions of the State law, as they were considered a menace to the live-stock industry of the country. Dr. Jenison states that on September 8 Mrs. Durand seemed willing to accept the maximum of $250 for each of 56 cattle and $50 for each of 5 head of young stock, which would amount to $14,250. The hogs were appraised at $114, and figuring on this basis the total valuation of her hogs and cattle would amount to $14,364. Deducting from the above amount the value of 5 cows, at $250 per head, and 1 calf, at $50, which died, the total value of the animals slaughtered by the Illinois State authorities November 9, 1915, amounted to $13,064, which amount does not vary materially from the value placed on this herd September 9 by Mr. Morgan and the other appraisers.

September 9, 1915, Mrs. Durand filed a bill in the circuit court of Lake County and secured an injunction from Master in Chancery Heydecker in vacation. The Attorney General promptly moved for a dissolution of this injunction before Judge Donnelly at Woodstock.

September 18, 1915, Judge Donnelly stated at the hearing he would enter an order dissolving the injunction, but would continue the injunction in force pending the appeal.

October 27, 1915, the injunction was dissolved by a higher court.

October 28, 1915, at a conference in Chicago between the attorney general of the State of Illinois, the State veterinarian, members of the Illinois State Board of Live Stock Commissioners and Mrs. Durand's attorneys, at which Dr. U. G. Houck, a representative of the Bureau of Animal Industry, was present, it was proposed by Mrs. Durand's attorneys that a committee of experts be appointed by the State to determine wheher the animals in question had not fully recovered and were no longer dangerous disseminators of the infection of foot-and-mouth disease. The State authorities agreed to this proposition, but were unable to get the desired experts to serve on the committee. In reply to a request from the Illinois State board to act on this committee, Dr. Mohler, Assistant Chief of Bureau of Animal Industry, replied to Dr. Dyson by wire October 29, 1915, as follows:

"No one possesses sufficient knowledge to determine presence or absence of disseminators of foot-and-mouth disease by making physical examination of suspected animals. Therefore respectfully decline to serve on committee requested to do the impossible."

Dr. C. J. Marshall, State veterinarian of Pennsylvania, replied to a similar request from Dr. Dyson, as follows:

"Can not accept. Destruction only course. Physical examination would not change this opinion."

It is known that Dr. James Law, of Cornell University, also refused to serve on this committee.

October 28, 1915, Mrs. Durand's attorneys proceeded to file another bill in the circuit court of Lake County and secured an injunction from Judge Claire Edwards at Waukeegan, Lake County, Ill.

November 9, 1915, the herd was slaughtered by the Illinois State authorities under the provisions of the Illinois State law. The representatives of the Bureau of Animal Industry had nothing to do with the slaughtering of Mrs. Durand's herd, except that Dr. Adolph Casper, our veterinary inspector in charge of the foot-and-mouth disease eradication work in that district, was requested by members of the Illinois State Board of Live Stock Commissioners to accompany the State authorities to Mrs. Durand's premises on the day the herd was slaughtered, so that a representative of the Bureau of Animal Industry would be present to get Mrs. Durand's signature to the necessary papers if she finally decided to accept the appraisal. Dr. Casper was informed by the State officials that Mrs. Durand would be given an opportunity to accept the appraisal and sign the usual documents before the herd was slaughtered. After Mrs. Durand refused to accept these terms, Dr. Casper retired to the public road and did not participate in the slaughtering of the herd. At the last session of the Illinois State Legislature a bill was passed appropriating funds to remunerate Mrs. Durand for the value of her herd, but the bill was vetoed by the governor, as she would not agree to withdraw her suit against the State authorities.

As soon as Mrs. Durand refused to allow her animals to be slaughtered the Bureau of Animal Industry withdrew, and the State assumed entire control of the quarantine and final disposition of the herd. Consequently the expenses to this bureau in connection with this herd was small, as our inspectors' visits to her farm were made in connection with their regular work in that district.

Much has been said about disagreeable incidents that occurred in connection with this herd. No reports have been received involving the inspectors of the Bureau of Animal Industry. Dr. Houck, of this office, who was detailed to foot-and-mouth disease eradication work in Illinois from August 13 to December 15, 1915, reports that he heard of no disagreeable incidents so far as our inspectors are concerned. On September 21, 1915, 12 days after the first injunction was granted, he accompanied Dr. Stoeckinger, a deputy State veterinarian, to Mrs. Durand's farm at the request of the State veterinarian to confer with Dr. Stoeckinger in regard to what quarantine measures should be instituted to protect the surrounding herds from infection. Recommendations were forwarded to the State authorities. Mrs. Durand objected to the recommendations, and they were never carried into effect by the State. Dr. Houck again visited Mrs. Durand's premises September 22, 1915, accompanied by Dr. Adolph Casper and Dr. J. S. Jenison, both representatives of the Bureau of Animal Industry, to ascertain if she would then sell her herd for the maximum valuation allowed by the State law. She stated she was willing to accept these terms, but desired to confer with her husband, who was in Chicago, before signing any papers. During the night she changed her mind and again refused to allow the herd to be slaughtered. There were no unpleasant remarks or incidents in connection with either of these visits, and the business with Mrs. Durand was transacted with mutual cordiality. Dr. Houck states, however, on several occasions he heard State inspectors allude to unpleasant remarks that were made and disagreeable incidents that occurred in connection with their affairs in enforcing the quarantine and in the final disposition of the herd.

You will probably be interested to know that during their visit on September 22, 1915, Mrs. Durand allowed Drs. Houck, Jenison, and Casper to examine her herd. She accompanied them to the barn and seemed much interested in the lesions pointed out to her. This examination revealed that over 50 per cent of her animals showed lesions commonly found in animals affected with foot-and-mouth disease. Mrs. Durand lost five cows and one calf due to complications resulting from foot-and-mouth disease before the herd was finally slaughtered by the State authorities.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

DEPARTMENT OF AGRICULTURE,
Washington, July 6, 1916.

HON. THOMAS P. GORE,
Chairman Committee on Agriculture and Forestry,
United States Senate.

DEAR SENATOR GORE: My attention has been called to a statement concerning the foot-and-mouth disease outbreaks of 1914 and 1915 which, at Senator SHERMAN'S request, was printed in the CONGRESSIONAL RECORD of July 1, 1916, page 11891. This statement appears similar in every respect to the one left at my office last March by Mrs. Scott Durand, of Lake Bluff, Ill. It contains so many erroneous and misleading assertions that I am taking the liberty of writing you this letter in order that you may have the facts before you.

I will take up the erroneous statements in their order and indicate wherein they are incorrect:

Paragraph 3: "Dr. Dumphy notified Federal Inspector E. P. Shaffter at Detroit."

Dr. Shaffter was not notified as stated in paragraph 3. When Dr. Dumphy, State veterinarian of Michigan, called the Detroit office from Niles, Mich., on September 2, 1914. Dr. Shaffter was absent from his station on annual leave. Dr. Fess was the acting inspector in charge and responded to Dr. Dumphy's call. The details in connection with Dr. Fess's visit to Niles, Mich., on September 3, 1914, in response to Dr. Dumphy's call are fully explained in his statement to you, dated May 3, 1916.

Paragraph 4: "Dr. Fuss, assistant inspector, was sent to Niles September 1. He and Dr. Dumphy took samples of diseased tissue and contents of vesicles and sent them to the Bureau of Animal Industry at Washington. Eight days later experts reported to the Detroit inspector that it was a noncontagious diseases, 'mycotic stomatitis.' (Read bulletin by Dr. J. A. Moore, director New York State College of Veterinary Science.) The cases at Niles ran through the entire herd. Also read pamphlet issued by Bureau of Animal Industry, November 28, 1908, 'Differential diagnosis,' and still Dr Ward, of the Pathology Division, said cases at Niles, Mich., were 'mycotic stomatitis.'"

As Dr. Fess was acting inspector in charge when Dr. Dumphy called the Detroit office on September 2, 1914, he responded to Dr Dumphy's request, but was not sent to Niles, as stated.

The samples collected by Drs. Fess and Dumphy did not include contents of vesicles, as no vesicles were found by either Dr Fess or Dr. Dumphy. In referring to the lesions observed in the animals inspected on September 3 at Niles by Drs. Fess, Dumphy, Graham, and Clemo, Dr. Fess says in his statement to you:

"The vesicle is the characteristic lesion of foot-and-mouth disease. Diligent search failed to reveal a vesicle or anything that resembled a vesicle. I was careful to inquire of the owners and of the veterinarians who accompanied me if any of them had at any time observed vesicles, and they informed me that they had not. * * * As a further precaution, however, before leaving Mr. Unruh's premises, I collected a sample of the best available tissues, consisting of saliva, scabs, pus, necrotic tissue, and scrapings from the sore feet and mouths of the affected animals and forwarded it with my report to the pathological laboratory at Washington. These materials presented the characteristic appearance of the materials usually taken for diagnostic purposes from animals affected with necro-bacillosis or stomatitis showing secondary infection."

Dr. Graham testified before the Committee on Agriculture and Forestry of the United States Senate at Niles Mich., as follows:

"He (referring to Dr. Fess) did not have a chance to get the blisters as Dr. Hallman did, but he got as much of the secretion and the dead tissue as he could. He did not have a chance to get the contents of the vesicles as Dr. Hallman did."

The cases at Niles had not run through the entire herd up to September 3, 1914, the date they were examined by Drs. Fess, Dunphy, Graham, and Clemo. None of these veterinarians was able on this date, or on any previous date, to diagnose foot-and-mouth disease in these infected herds. In referring to this matter, Dr. Fess says in his statements to you:

"At Unruh's I found about 20 cattle, about two-thirds of which showed lesions in either the feet or mouth or both. I was informed that the disease first appeared in these animals about two weeks previous to my examination. Foot-and-mouth disease is very contagious and usually passes through a herd rapidly. The disease had been in this herd for two weeks, and apparently only two-thirds of the animals showed lesions, and none of them showed either acute or characteristic lesions. I examined these cattle very carefully, having in mind the possibility of the trouble being foot-and-mouth disease, but found no lesions that were characteristic of foot-and-mouth disease. * * * After thoroughly disinfecting my rubber garments, Drs. Dunphy, Graham, Clemo, and myself proceeded to Mr. Hoadley's farm, about 1½ miles beyond Unruh's on the same road, where we found 6 cattle, 20 hogs, and a small band of sheep. We proceeded to examine these animals. Only one of the hogs showed lesions. We caught the animal, and a careful examination showed that the lameness was no doubt due to a traumatism. Examination of the cattle revealed healing lesions in the feet of nearly all the animals but no lesions or scars of the mucous membrane of the mouth. The sheep showed no lesions, and there was no history of their having been ill."

Paragraph 5: "September 19, with disease increasing and no action or quarantine or interest displayed by the Bureau of Animal Industry, after one month, Dr. Hallman, Michigan College of Agriculture, went to Niles, obtained specimens, and he and State Veterinarian Dunphy inoculated a calf at East Lansing. They had results in four days and concluded the disease was infectious, which 'mycotic stomatitis' is not."

In the beginning of the outbreak of 1914 the disease did not show its usual tendency to spread rapidly. On September 3, when Drs. Fess, Dunphy, Graham, and Clemo made their inspections of herds in the vicinity of Niles, Mich., there were only two infected herds, and up to October 7, the date Dr. E. P. Schaffter and Dr. Dunphy visited Niles, the disease had spread to only six additional herds.

It is true that Dr. Hallman and Dr. Dunphy collected specimens at Niles, Mich. These specimens were taken to Lansing, and on September 26 Dr. Hallman inoculated a calf with the material. By October 1 the calf showed fever and drooling, followed by erosions in the mouth, but the case was not diagnosed as foot-and-mouth disease because of the absence of foot lesions. Neither these visits nor the results of this inoculation were known to the bureau at Washington until October 10, when a letter was received from the inspector in charge at Detroit, stating he had visited Niles and found the disease had spread during the interval from September 3 to October 5 from the two original herds to six additional herds in the neighborhood.

This inspector had never had experience with foot-and-mouth disease, and in his letter no diagnosis was made of the disease, but the history of the various herds was so completely described that no affection other than foot-and-mouth disease could suggest itself, and Dr. Adolph Eichhorn was sent on the next train to investigate the report:

Paragraph 6: "Again Federal inspectors were notified at Detroit, but not until October 5 did Federal Inspector E. P. Schaffter go to Niles, Mich. When he arrived there, six weeks later than he should, he became convinced it was foot-and-mouth disease. He got samples, sent them to Washington, and asked for experts to come on from Washington, but put on no quarantine. Cattle were shipped to Chicago stockyards, farmers were coming and going on infected farms. Dr. Adolph Eichhorn, who had had considerable experience in Europe, was sent to Michigan, almost two months after cases were first reported to the Bureau of Animal Industry. Why was not Eichhorn sent there August 26? Dr. Adolph Eichhorn was sent to Niles, Mich., October 6, but although he reported by wire at once that the disease was probably foot-and-mouth disease, not until October 13, a week later, did Dr. A. D. Melvin, Chief of the Bureau of Animal Industry, call Dr. U. G. Houck and tell him to go to Niles, Mich., as they likely had foot-and-mouth disease there. He, with Drs. J. R. Mohler, H. E. Smith, and B. A. Gallagher, went to infected section and pronounced the disease after two months' delay foot-and-mouth disease."

Dr. E. P. Schaffter was not convinced that the disease at Niles was foot-and-mouth disease and, as previously stated, he made no diagnosis. He did not put on any quarantine because he had no authority under the law to do so even if he had recognized the disease as foot-and-mouth disease. Only the Secretary of Agriculture has authority to establish a Federal quarantine. The State authorities might have issued quarantine orders if they were satisfied the disease was of a contagious nature.

Dr. Eichhorn was not sent to Niles August 26, because up to October 10 the bureau had no information that indicated there was any contagious disease in Michigan.

Dr. Eichhorn was not sent to Niles October 6, as stated. The letter from Dr. Schaffter which aroused suspicion first that there was a contagious disease in the vicinity of Niles was not received until October 10. On receipt of this letter, Dr. Eichhorn proceeded on the next train to Niles. Inoculations were made on the evening of October 10 with the scrapings, etc., that accompanied Dr. Schaffter's letter. Dr. Eichhorn on arriving at Niles immediately made inoculation tests on calves. It was expected that if the disease was foot-and-mouth disease the inoculations would develop in a day or two, but although there was no development up to the afternoon of October 14 Drs. Mohler, Houck, Smith, Gallagher, and others proceeded to Niles in order to be on hand ready to begin operations should the inoculations show that the disease was foot-and-mouth disease. When they reached Niles it was found the disease had developed that day in the calf inoculated by Dr. Eichhorn. The disease did not develop in the calves inoculated from the material sent to Washington by Dr. Schaffter until October 17.

Paragraph 7: "In the meantime, shipments of hogs from the Michigan district had infected the Union Stockyards at Chicago. That square mile of pens became rotten with the disease. The disease has since been proven to have been in the stockyards prior to October 15."

There was no positive evidence that diseased hogs had been shipped to the Chicago stockyards from the infected district of Niles, Mich., prior to the time the disease was diagnosed in that vicinity. There was some suspicion, however, and suspected shipments were reported in order that appropriate precautionary measures might be taken against such possible sources of infection.

It is not true that the disease was proven to have been in the Chicago stockyards prior to October 15, 1914. It is not known that there was any infection in these yards prior to October 19, 1914.

Paragraph 8: "Serum was made from infected hogs for weeks. Several hundred of the most valuable dairy animals in the world were permitted to be shipped into the annual dairy show October 20, and yet it was known to exist among serum hogs of the Chicago Serum Co. at Union Stockyards November 20, when about 120 of these hogs were destroyed on account of this disease, Veterinary Inspector Bennett permitting cattle to come and go and dairy show cattle arriving. October 27 Federal Inspector Bennett absolutely denied there was a single case of foot-and-mouth disease at the stockyards to the dairy-show officials, but the following day advised the manager of the dairy show to spread in aisles and approaches shavings saturated with disinfectants."

It is not true that serum was made from infected hogs for weeks, that foot-and-mouth disease was known to exist among serum hogs of the Chicago Serum Co. at Union Stockyards November 20, and that 120 hogs belonging to this firm were destroyed November 20 on account of this disease. A written statement was made to you on April 22, 1916, concerning the infected serum manufactured by the Chicago Serum Co. This statement gives in detail the facts concerning the infected batch of serum.

Dr. S. E. Bennett had good reason on October 27, 1914, to deny that there was a single case of foot-and-mouth disease at the Union Stockyards, as the disease did not appear in the national dairy-show herd until Sunday, November 1, 1914, and it did not appear in the stockyards proper until November 3, 1914, when it appeared in the stocker and feeder division, and the infection seems to have been confined to that division of the stockyards.

Dr. Bennett and Dr. Tiedebohl advised the dairy-show management to see that sawdust saturated with a strong disinfectant be spread in the passageways of the dairy-show buildings, for the reason it was known that foot-and-mouth disease existed in southern Michigan and northern Indiana, which was only a short distance from Chicago, and it was desired to protect the dairy-show animals in every possible way against infection. It was believed the passageways might have been exposed by visitors from Michigan and Indiana before the cattle arrived, and it was to be expected that other visitors from the infected areas would come to the show and go among the animals.

Paragraph 10: "October 31, disease found in dairy-show herd. Shipments of feeders continued for four days after from the stockyards to various counties in Illinois and adjoining States, so that by November 6 reports poured in showing 19 counties in Illinois infected."

In reply to the above statement the following telegram from Mr. Arthur G. Leonard, president of the Union Stockyards & Transfer Co., to the Committee on Agriculture of the United States House of Representatives is quoted:

"No cattle, sheep, swine, or other ruminants were shipped other than for immediate slaughter out of the Union Stockyards of Chicago, Ill., for interstate or foreign commerce on October 31, November 1, or November 2, 1914."

Since the stocker and feeder division was closed and locked on the evening of October 28 any animals shipped from the Union Stockyards into Illinois or adjacent States during the next four days for feeder purposes must have been collected from culls in the fat-stock division.

Paragraph 11: "November 1, although disease was known to be in the cattle of Darlington & Co. and Ronan & Kelly, the yards were still open to visitors who visited pens and tramped about without restriction over all the premises. It was doubtless due to visitors the week previous that that brought the disease from the yards to the dairy show cattle at the coliseum."

The statements contained in this paragraph are erroneous. The disease did not appear in the Darlington & Co.'s cattle or any other animals at the stockyards until November 3, 1914. Immediately when it became known on October 28 that the disease had appeared at Blissfield, Mich., in some steers that had left the stocker and feeder division of the yards October 19, this division of the yards was closed by request of Dr. Bennett. He states in his official report that, "The stocker and feeder division of the Union Stockyards was closed and locked and no cattle were permitted to be taken into or out of this section."

It is not known from what source the dairy show herd became infected. The infection may have been carried from the Union Stockyards proper to the dairy show herd, but there is a possibility that it was carried there by some of the visitors from the infected district of Michigan and Indiana, as there was no attempt made by the manager of the dairy show to prevent visitors from the infected district from entering the show and handling the animals.

Paragraph 20: "The serum which caused this latter outbreak, which has cost the lives of thousands of head of live stock and hundreds of thousands of dollars, besides bringing upon the owners of the cattle untold suffering and deprivation, was due to eleven hundred dollars' worth of hog serum produced by the Chicago Serum Co. at the stockyards some time prior to October 20, 1914, and through the Department of Agriculture was permitted to be kept and after a questionable test in July, 1915, was sent out on sale."

Exception is taken to the statement that "after a questionable test in July" the serum was sent out for sale. On page 50 of the statement to you dated April 22, 1916, there appears a detailed account of the test of this serum which shows that the test was not a question able one:

Paragraph 21: "The first animal of the Crab Tree herd was taken August 16, 1915, at once isolated and State veterinarian sent for. State veterinarian was at Half Day, Ill., 15 miles away, combating a fierce raging of the disease from the first case on August 7, at Wheeling, a few miles distant. He did not know what disease the animal had, he said, although for 10 days working in infected herds. The following day brought Federal Inspector Lavery, and although the animal was by himself, one man to attend him, the cattle barns thoroughly disinfected, the Federal inspector pronounced this case (the worst case in the Crab Tree herd) 'weed poisoning,' and said no precaution from infecting the herd need be taken. In 10 days animal was as well as ever and pegged in alfalfa field."

It is impossible to answer the statements attributed to Dr. Lavery as he died a few weeks after making the first inspection of the Crab Tree herd in the latter part of August.

Paragraph 22: "September 7, Federal Inspector L. S. Eppia, in making the rounds found the young stock barn with aged bulls completely recovered from the foot-and-mouth disease; all lesions healed, so light was the attack that not one animal showed any sign of disease or sickness, some young calves not even having it."

Paragraph 23: "The milking herd of 36 head had one-third recovered, one-third just starting. By September 19 not one trace of foot-and-mouth disease could be found in herd. September 17 a thorough examination by State and Federal inspectors found but one lesion, and by September 19 that had healed."

Paragraph 24: "September 24, Dr. Joseph Hughes was permitted to inspect herd, and Dr. Hughes, who had so successfully carried the dairy-show cattle through the disease, could not tell that there had ever been any foot-and-mouth disease, as no evidence showed."

The statements in paragraph 22 are not in accord with the reports of the inspectors who made subsequent inspections of this herd. On September 21 Dr. Houck, of the Bureau of Animal Industry, and Dr. Stoeckenger, assistant State veterinarian, inspected the Crab Tree Farm herd, and on September 22 Dr. Houck, Dr. Jenison, and Dr. Casper inspected the herd again. These inspectors found over 50 per cent of the animals showing lesions of the feet, as the result of foot-and-mouth disease, and there were some scars found in the mouths and on the teats of the animals. Most of the young stock showed foot lesions, which were pointed out to the owner. Some of the cows had such sore feet they were unable to stand, and the owner was informed then that three or four of them would probably die. The owner was urged by Dr. Houck to remove the seriously affected animals from the stanchions and give them proper medical treatment. After Dr. Hughes took charge of the herd 5 cows and 1 calf died or were killed as the result of the disease. While these inspectors were on the premises they observed the herdsmen milking, and noted that the milk records on the wall did not seem to correspond with the amount of milk that was being taken from some of the animals. It was believed that the herdsmen were padding these records to mislead the owner in regard to the condition of the animals.

Paragraph 28: "Twenty-six armed men came upon the premises, although enjoined by circuit-court injunction, imprisoned the men and Mrs. Durand, shot the animals in the stanchions—140 years of pure-bred breeding of the finest dairy strains the country ever possessed."

This herd was slaughtered by the State officials, with the assistance of the sheriff and a couple of deputies. There was no such number as 26 armed men engaged in the slaughter of the herd. Two assistant State veterinarians shot the animals, without removing them from the stanchions. Soon after the animals were killed about 20 men arrived, armed with picks and shovels, to finish digging the trench and bury the animals.

As soon as the animals were slaughtered the inspectors in charge of the burial commenced to remove the dead animals from the barn to the side of the trench so they could be promptly buried when the trench

was finished. Guards were stationed along the infected trail of these animals night and day, and no strange persons or animals were allowed to approach until after the trail had been disinfected. It was probably through the exercise of such precautions that the disease was not spread from these dead animals.

Further details concerning the outbreak of foot-and-mouth disease in the Crab Tree Farm herd and the final disposition of this diseased herd were given in a statement dated March 29, 1916, to Hon. A. F. LEVER, chairman of the House Committee on Agriculture, a copy of which is inclosed herewith.

Very truly yours, D. F. HOUSTON, *Secretary.*

Mr. SHEPPARD. Mr. President, I offer an amendment to the pending bill.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 80, after line 4, it is proposed to insert a new paragraph, as follows:

The President is hereby authorized to extend invitations to other nations to appoint delegates or representatives to the International Irrigation Congress, to be held at El Paso, Tex., during the fiscal year ending June 30, 1917: *Provided*, That no appropriation shall be granted or used for the expenses of delegates.

Mr. GORE. Mr. President, I will ask the Senator if the amendment follows the precedent heretofore established?

Mr. SHEPPARD. It is in the usual language, and there is a similar provision in the bill as to another congress.

Mr. GORE. I have no objection to it, so far as I can speak for the committee.

Mr. SHAFROTH. Mr. President, I think in the sundry civil appropriation bill that very language is used, unless it was stricken out. I am certain that it was in the bill at the time the committee passed upon it, and I am pretty sure that it is there now.

Mr. SHEPPARD. The authorities of the International Irrigation Congress have asked me to present this amendment at this time. I wish to say that if the Senator will permit it to go in the bill now I shall withdraw it if I find it is already taken care of in the bill to which he has referred.

Mr. SHAFROTH. Very well.

Mr. GALLINGER. Mr. President, the Senator's amendment reads "that no appropriation shall be granted or used." Would not the word "asked" be better than "granted"?

Mr. SHEPPARD. I accept the amendment very readily.

Mr. GALLINGER. I suggest that modification.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Texas as modified.

The amendment as modified was agreed to.

Mr. SHEPPARD. I offer another amendment.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 58, after line 14, it is proposed to insert a new paragraph as follows:

That whenever any person, association, organization, or corporation, or State or any political subdivision thereof, shall, by lawful grant or devise, gratuitously donate to the United States of America any lands in any State, Territory, or district of the United States suitable for, and to be used as, a preserve or refuge for wild game animals or wild birds, and the Secretary of Agriculture ascertains that the title thereto is good and that the lands may be advantageously devoted to the purposes of such donation, the President, upon the recommendation of the Secretary of Agriculture, is hereby authorized to accept said donation for and on behalf of the United States, and shall, by public proclamation, give notice of such acceptance, of the location and boundaries of said lands, and of the reservation thereof for the uses and purposes aforesaid.

SEC. —. That any lands acquired and reserved as and for the purposes aforesaid shall be administered by the Secretary of Agriculture in accordance with the rules and regulations made and promulgated by him under this act.

SEC. —. That the Secretary of Agriculture is authorized and directed, from time to time, to make and promulgate such rules and regulations as may be necessary to carry out the provisions of this act.

SEC. —. That whoever, except in accordance with the rules and regulations of the Secretary of Agriculture made and promulgated pursuant to this act, shall hunt, trap, capture, willfully disturb, or kill any wild game animal or wild bird, or take the eggs of any such bird on any lands included in any preserve or refuge established by proclamation of the President under this act, or shall go upon any such lands for any purpose whatever, shall be punished as is provided for in section 84 of the act of March 4, 1909 (35 Stat. L., p. 1088), entitled "An act to codify, revise, and amend the penal laws of the United States."

RIVER AND HARBOR APPROPRIATIONS—CONFERENCE REPORT (S. DOC. NO. 488).

Mr. CLARKE of Arkansas. On July 3, 1916, I submitted a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, and asked that it be printed and lie on the table.

I desire to withdraw that report, and in lieu thereof to submit the following report and ask that it lie on the table and be printed in the RECORD, and that it also be printed in its proper form for the use of the Senate. The report which I now submit does not represent any change in the substance at all.

The VICE PRESIDENT. Without objection, it is so ordered.

The conference report is as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 3, 12, 16, 25, 28, 33, 42, 43, 44, 55, 66, and 85.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 4, 5, 6, 9, 10, 14, 15, 18, 19, 20, 21, 23, 24, 34, 35, 36, 37, 38, 39, 46, 50, 51, 52, 53, 54, 56, 57, 59, 60, 62, 64, 65, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 78, 81, 82, 83, 86, 88, and 89, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment as follows: Strike out item and insert:

"Harbor of refuge at Duck Island, Connecticut: For restoring depth behind Duck Island Breakwater, $71,000."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows: In the proposed amendment before the word "Commerce" insert the words "War and the Secretary of"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"Government iron pier in Delaware Bay near Lewes, Del.: For maintenance in accordance with the report printed in House Document No. 1059, Sixty-fourth Congress, first session, $10,000: *Provided*, That hereafter said pier shall be open to public use under regulations to be prescribed by the Secretary of War: *Provided further*, That the provision of the act of March 3, 1891, authorizing the transfer of said pier to the Treasury Department is hereby repealed."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment as follows: In the proposed amendment strike out the figures "$78,000" and insert the figures "$60,000"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment as follows: In the amended paragraph strike out the word "For" in line 1, page 17, and insert in lieu thereof the words "Continuing improvement and for"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment as follows: In the amended paragraph strike out the word "Texas," in line 11, page 22, after the words "Washita River," and insert the word "Oklahoma"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment as follows: In the proposed amendment strike out the figures "$30,700" and insert the figures "$30,500," and strike out the word "fourteen" after the word "and" and insert the word "thirteen"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 26, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"Harbors and connecting waters of the Great Lakes, with a view to determining what additional improvements would be necessary in order to permit those waterways to accommodate vessels able to pass through the Welland Canal when enlarged by the Dominion of Canada, including report as to the character and drafts of vessels which may be expected to use the canal when so enlarged.

Transfer item so modified to the survey section of bill (sec. 2).

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following: "*Provided*, That the pierhead for marking the east end of the east breakwater extension provided for in the existing project shall be located at the east extremity of the breakwater as now built, said pierhead to be constructed with funds heretofore appropriated for the construction of said breakwater"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment as follows: Strike out all of the proposed amendment and the figures "$17,000" in the preceding item and insert in lieu thereof, after the word "maintenance," the following: "$20,400: *Provided*, That of this amount $3,400 may be expended for dredging above Ogden Street Bridge"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment as follows: In the proposed amendment strike out the figures "$10,000" and insert the figures "$4,000"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment as follows: Strike out all of proposed amendment and the figures "$25,000" in the item immediately preceding and insert in lieu thereof after the words "St. Clair" and the comma the figures and language following: "$108,325: *Provided*, That of this amount the sum of $83,325 may be expended for the purpose of securing a channel in St. Clair River along the water front of Port Huron, Mich., in accordance with the report printed in House Document No. 782, Sixty-fourth Congress, first session"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 32, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"Duluth-Superior Harbor, Minn. and Wis.: Continuing improvement by enlarging the Superior Harbor Basin in accordance with report printed in House Document No. 651, Sixty-fourth Congress, first session, $180,000: *Provided*, That the Secretary of War may enter into a contract or contracts for such materials or work as may be necessary to complete said project, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate $180,000, exclusive of the amounts herein and heretofore appropriated."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 40, and agree to the same with an amendment as follows: In the proposed amendment strike out the words "and Round Lake" where they last occur, near the close of the paragraph; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 41, and agree to the same with an amendment as follows: In the proposed amendment strike out the words "shall be immediately" and insert in lieu thereof "may, in the discretion of the Secretary of War, be"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment as follows: In the proposed amendment strike out the figures "$100,000" and insert in lieu thereof "$75,000"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 47, and agree to the same with an amendment as follows: In the proposed amendment strike out the figures "$28,000" and insert the figures "$14,000"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 48, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"Los Angeles Harbor, Cal.: Continuing improvements by the construction of a diverting dam for the protection of Los Angeles and Long Beach Harbors in accordance with the report printed in House Document No. 462, Sixty-fourth Congress, first session, and subject to the conditions set forth in said document, $500,000."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 49, and agree to the same with an amendment as follows: In the item proposed insert, after the word "Provided," the words "this appropriation is made on the condition precedent that"; strike out the word "donates" and insert the words "shall donate"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 58, and agree to the same with an amendment as follows: In the proposed amendment strike out the word "survey"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 61, and agree to the same with an amendment as follows: In the proposed amendment strike out the colon and the words "For survey" after the word "Georgia" and insert a comma; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 63, and agree to the same with an amendment as follows: In the proposed amendment strike out the words "Ship Channel from" and insert in lieu thereof the word "From"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 77, and agree to the same with an amendment to read as follows: In the proposed amendment, after the word "Thereof," insert the following: "As a part of the examination which the Secretary of War is hereby required to make, he is directed to report whether access to the river at St. Paul Harbor, by persons and shippers desiring to use the same for the purposes of transportation or travel thereon, is so completely dominated by private control as to materially impede or burden traffic originating or terminating there; and, if he shall so find, he is further directed to report what steps are necessary to free said landing place from such improper control or obstruction, and also if, in his opinion, it is advisable for the United States to acquire the fee simple to the said landing place and the approach thereto, by condemnation or otherwise"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 79, and agree to the same with an amendment as follows: In the proposed amendment strike out the words "beginning in or near lot 1 of section 24, township 144 north, range 25 west of fifth principal meridian, thence southerly and terminating in or near section 22, township 55 north, range 27 west of the fourth principal meridian"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"State of Kansas, floods in: Investigate the flood periods of the Kansas River and its tributaries, the Cottonwood and Neosho Rivers, in the State of Kansas by an examination of the territory and from data already gathered by governmental, State, private efforts, and by the Board of Engineers of the War Department, and to devise some general plan which will best guard against the recurrence of floods and diminish their damaging effects upon the lower valleys of the Kansas, Arkansas, Missouri, and the Mississippi Rivers."

And the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 84, and agree to the same with an amendment as follows: In the proposed amendment strike out the words "That a survey of the" and the words "is hereby ordered to be made"; and the Senate agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 87, and agree to the same with an amendment as follows: In lieu of the language proposed insert the following:

"Weymouth Fore River, Mass.: Completing improvement, including the removal of the small shoal south of the west end of Peddocks Island, in accordance with the report printed in Senate Committee Document No. 13, Sixty-third Congress, third session, and subject to the conditions set forth in said document, $200,000."

Transfer the item thus amended to page 2 of the bill, following line 21, for "Weymouth Fore River, Mass."

And the Senate agree to the same.

JAMES P. CLARKE,
JOS. E. RANSDELL,
KNUTE NELSON,
Managers on the part of the Senate.

S. M. SPARKMAN,
W. E. HUMPHREY,
Managers on the part of the House.

STATEMENT.

The managers on the part of the Senate at the conference of the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, submit the following written statement explaining the effect of the action agreed on:

The rivers and harbors bill as it passed the House carried cash appropriations in the sum of $37,898,410, and continuing-contract authorizations amounting to $1,710,000, a total for the House bill in cash and authorizations of $39,608,410. The amount added by amendment in the Senate was $4,840,475, of which $3,825,525 was in cash appropriations and $1,014,950 in

continuing-contract authorizations, making the total of the bill as it passed the Senate $41,723,935 in cash and $2,724,950 in continuing-contract authorization, a total of $44,448,885 for the bill. As a result of the conference the amounts involved in the Senate amendments have been reduced from $4,840,475 to $3,277,675, a net reduction of $1,562,800, making the total of the bill as it now stands $42,886,085.

The following statement shows the action taken by the conference on each of the Senate amendments:

No. of amendment.	Page of bill.	Item.	Amount, cash and authorizations.	Action taken.
1	3	New London, Conn	$170,000	House recedes.
2	3	Duck Island, Conn	71,000	Modified, and House recedes.
3	3	Narrows of Lake Champlain; cash, $300,000; authorization, $437,000.	737,000	Senate recedes.
4	5	Black Rock Harbor, N. Y		House recedes.
5	9	Crum River, Pa		Do.
6	9	....do		Do.
7	9	....do		Modified, and House recedes.

All of which is respectfully submitted.

JAMES P. CLARKE,
JOS. E. RANSDELL,
KNUTE NELSON,
Managers on the part of the Senate.

MESAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a concurrent resolution requesting the President to return to the House the enrolled bill (H. R. 12197) entitled "An act authorizing Ashley County, Ark., to construct a bridge across Bayou Bartholomew," in which it requested the concurrence of the Senate.

The message also announced that the Speaker of the House had signed the following enrolled bills:

H. R. 3673. An act to establish a term of the United States circuit court of appeals at Asheville, N. C.;

H. R. 8351. An act to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto; and

H. R. 11878. An act to amend section 99 of the act to codify, revise, and amend the laws relating to the judiciary.

PETITIONS AND MEMORIALS.

Mr. LANE presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. PHELAN presented the memorial of J. F. Turner and sundry other citizens of Soquel, Cal., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

PUBLIC BUILDING AT YORK, PA.

Mr. SWANSON, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 486) authorizing the Secretary of the Treasury to sell the old post-office building

and site thereof at York, Pa., reported it without amendment and submitted a report (No. 650) thereon.

ELLEN M. WILLEY.

M. BRANDEGEE. A few days ago I inroduced for the Senator from Pennsylvania [Mr. PENROSE] the bill (S. 6578) for the relief of Ellen M. Willey, and it was inadvertently referred to the Committee on Pensions. I ask unanimous consent that the Committee on Pensions be discharged from the further consideration of the bill and that it be referred to the Committee on Naval Affairs.

The VICE PRESIDENT. Without objection, it is so ordered.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SWANSON:

A bill (S. 6586) for the relief of John A. Muse; to the Committee on Claims.

A bill (S. 6587) granting a pension to Murray Pierce;

A bill (S. 6588) granting a pension to Commodore C. Graham;

A bill (S. 6589) granting an increase of pensions to Irma B. Edwards; and

A bill (S. 6590) granting an increase of pension to Elise Habercom; to the Committee on Pensions.

By Mr. NORRIS:

A bill (S. 6591) granting an increase of pension to John Lamberson; to the Committee on Pensions.

By Mr. SHAFROTH:

A bill (S. 6592) to adopt the weights and measures of the metric system as the standard weights and measures in the United States; to the Committee on Standards, Weights, and Measures.

By Mr. TAGGART:

A bill (S. 6593) granting an increase of pension to James F. Nosler (with accompanying papers); to the Committee on Pensions.

By Mr. GORE:

A bill (S. 6594) vesting the Superintendent for the Five Civilized Tribes in Oklahoma with the authority over the lands and individual moneys of the Five Civilized Tribes which is now vested by law in the Secretary of the Interior and the Commissioner of Indian Affairs; to the Committee on Indian Affairs.

A bill (S. 6595) to reimburse William Blair for losses and damages sustained by him by the negligent dipping of his cattle by the Bureau of Animal Industry, Department of Agriculture; to the Committee on Claims.

By Mr. THOMPSON:

A bill (S. 6596) to amend section 5146 of the Revised Statutes of the United States; to the Committee on Banking and Currency.

AMENDMENT TO AGRICULTURAL APPROPRIATION BILL.

Mr. SHEPPARD submitted an amendment proposing to authorize the President on recommendation of the Secretary of Agriculture to accept lands donated to the United States as refuges for wild game animals and wild birds, etc., intended to be proposed by him to the Agricultural appropriation bill (H. R. 12717), which was ordered to lie on the table and be printed.

IMPORTS OF MERCHANDISE AND AGRICULTURAL PRODUCTS.

Mr. GALLINGER. Mr. President, I ask unanimous consent to have printed in the RECORD, without reading, a table showing the imports of merchandise and agricultural products in March, 1916, and in March, 1915, as compared with March, 1913, and also a table showing the imports of merchandise and agricultural products in April, 1916 and 1915, as compared with April, 1913.

The PRESIDING OFFICER. Without objection, it is so ordered.

The tables referred to are as follows:

Imports of merchandise and agricultural products in March, 1916 and 1915, under the Underwood law, and March, 1913, under the Payne law, using for comparison products having the most extreme foreign competition.

Products.	1916 (values).	1915 (values).	Difference.	1913, Payne law.
			Increase.	
Automobiles and parts	$121,023	$101,407	$19,616	$119,950

Tin plate	7,535	8,575	1,040	23,298
Wood pulp	1,092,922	1,519,121	426,199	1,268,567
Wool manufactures	1,419,913	2,020,791	600,878	1,127,488
Total, 18 products	6,071,401	9,471,006	3,399,605	6,966,851
Increase list	54,131,300	39,399,127	14,732,173	28,666,618
Total, 38 products	60,202,701	48,870,133	11,332,568	35,633,469

Imports of merchandise and agricultural products in March, etc.—Contd.

The comparison for March, 1916, 1915, 1913, shows that there was an increase in the imports of 20 products in March, 1916, compared with an increase of 3 products in March, 1915.

Automobiles and parts, breadstuffs, cotton cloth, films and plates, fish, fruit and nuts, handkerchiefs (linen), hides and skins, lace and lace articles, leather and tanned skins, nets and nettings, paper and manufactures, perfumery, seeds, silk manufactures, vegetables, watches, wool, and yarns increase from $39,399,127 in March, 1915, to $54,131,300 in March, 1916, compared with $28,666,618 in March, 1913, under the Payne law.

Aluminum scrap, aluminum manufactures, blocks, cutlery, eggs, embroideries, enameled ware, plate glass, other glassware, leather gloves, knit goods (less stockings), meat and dairy products, oilcloth and linoleum, artificial silk, cotton stockings, tin plate, wood pulp, and wool manufactures show a slight decrease in imports of $3,399,605 from $9,471,006 in March, 1915, to $6,071,401 in March, 1916, compared with $6,966,851 in March, 1913, under the Payne law.

Total imports of the 38 products in March, 1916, were $60,202,701; in March, 1915, $48,870,133; in March, 1913, $35,633,469; which shows that imports of the 38 products in March, 1916, increased almost 100 per cent over the imports of the same products in March, 1913, under the Payne law.

The total imports of all merchandise in March, 1916, were $213,589,785; in March, 1915, $157,982,016; showing an increase of $55,607,769, while the ad valorem rate of duty, based on imports for consumption, falls from 12.66 per cent in 1915 to 9.97 per cent in March, 1916, compared with 15.84 per cent for the nine months ending March, 1914.

It is sometimes argued that much of our present prosperity is due to the decrease in imports since the beginning of the foreign war, but official customs figures show a very heavy increase in imports of leading competitive products, and, furthermore, imports of these products have been much heavier under the Underwood law than they were under the Payne law, consequently American producers of these products are justified in demanding additional protection now as well as after the close of the foreign war.

Imports of stockings are at present, and have been for some time, very small, but stocking manufacturers know that this is caused entirely by the foreign war, and also, that if the foreign war had not occurred and imports had increased as rapidly as they did from March, 1914, up to the beginning of the war, they would find it very difficult to run mills on anything near full time, and no stocking manufacturer in America can compete with the price at which stockings of foreign make have entered this market since the Underwood law became operative, and while not being positive, think this same condition no doubt applies to many other products having strong foreign competition, and it can be stated that quite recently knit goods have entered the United States in considerable quantities from Japan, causing knit-goods manufacturers to believe that the long-threatened invasion of cheap knit goods from Japan has finally become a reality.

Imports of merchandise and agricultural products in April, 1916 and 1915, under the Underwood law, and April, 1913, under the Payne law, using for comparison products having the most severe foreign competition.

Products.	1916 (values).	1915 (values).	Difference.	1913, Payne law.
			Increase.	
Aluminum scrap	$206,548	$50,139	$156,409	$566,857
Automobiles and parts	145,728	123,649	22,079	131,065
Watches and parts	302,587	224,202	78,385	225,165

Imports of merchandise and agricultural products in April, etc.—Contd.

Products.	1916 (values).	1915 (values)	Difference.	1913, Payne law.
			Increase.

Stockings (cotton)	6,232	70,999	64,767	239,674
Knit goods (cotton)	33,131	144,335	111,204	41,690
Eggs	5,856	28,113	22,257	.....
Handkerchiefs (linen)	86,731	123,176	36,445	76,532
Fish	843,307	906,386	63,079	746,895
Plate glass	528	538	10	33,865
Other glass	177,911	226,037	48,126	544,336
Cutlery	27,857	83,431	55,574	136,157
Meat and dairy products	1,975,979	2,594,047	618,068	1,179,020
Oil cloth and linoleum	25,139	82,761	57,622	138,871
Films and plates	106,682	150,122	43,440	184,132
Silk, artificial	166,051	207,782	41,731	204,374
Vegetables	778,991	937,375	158,384	738,414
Wool manufactures	1,100,829	1,367,136	266,307	991,382
Total 18 products	7,545,820	9,428,051	1,882,231	7,706,067
From increase list	48,432,488	37,126,200	11,306,288	27,174,627
Total 38 products	55,978,308	46,554,251	9,424,057	34,880,694

Very little can be added to the story told by the above figures, which show a rapid increase in imports. Twenty products increase heavily as against five products in April, 1915, and the decrease in imports of 18 products is very small, but the totals, covering the entire 38 products, have increased nearly 100 per cent over imports under the Payne law in April, 1913, or April, 1915, and is a very decided warning to manufacturers as to what they can expect after the close of the foreign war.

CITIZENS' ASSOCIATION OF THE DISTRICT OF COLUMBIA (S. DOC. NO. 489).

Mr. GALLINGER. Mr. President, I ask to have printed as a public document a communication from William McK. Clayton, chairman of the Public Utilities Committee of the Federation of Citizens' Associations of Washington, D. C. It is very brief and relates to the so-called Borland amendment in the District of Columbia appropriation bill, which is now being considered.

The VICE PRESIDENT. Without objection, it is so ordered.

BAYOU BARTHOLOMEW BRIDGE.

The VICE PRESIDENT laid before the Senate the following concurrent resolution (No. 46) of the House of Representatives, which was read:

Resolved by the House of Representatives (the Senate concurring), That the President be requested to return to the House of Representatives the enrolled bill (H. R. 12197) entitled "An Act authorizing Ashley County, Ark., to construct a bridge across Bayou Bartholomew."

Mr. SHEPPARD. I move that the Senate concur in the resolution.

The resolution was concurred in.

RECESS.

The PRESIDING OFFICER. The hour of 1 o'clock and 45 minutes having arrived, under the order previously adopted the Senate stands in recess until 11 o'clock Monday morning.

Thereupon (at 1 o'clock and 45 minutes p. m., Saturday, July 8, 1916) the Senate took a recess until Monday, July 10, 1916, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *July 8, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou Source of life and thought and action, teach us how to think clearly, act nobly, seeking honesty for the sake of honesty, truth for the sake of truth, purity for the sake of purity, holiness for the sake of holiness, that we may reflect in our life the image of our Maker; and we shall ask no higher reward than the words "Well done, good and faithful servant," now or then, in time or eternity. Hear us, in the name of Him who taught us the way and the truth and the life. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed without amendment bills of the following titles:

H. R. 16287. An act granting the consent of Congress to the county of Sumter or to the county of Dooly, both of the State of Georgia acting jointly or separately and their successors and assigns to construct a bridge across the Flint River; and

H. R. 16641. An act granting the consent of Congress to Julian B. McCurry, A. G. McCurry, P. W. Walton, and J. J. Fretwell to construct a bridge across the Savannah River.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested.

S. 6375. An act to authorize the changing of the name of the steamship *Aroline*; and

S. 5441. An act for the relief of the heirs of Albert Sidney Johnston.

The message also announced that the Senate had passed without amendment the following resolution:

House concurrent resolution 46.

Resolved by the House of Representatives (the Senate concurring), That the President be requested to return to the House of Representatives the enrolled bill (H. R. 12197) entitled "An act authorizing Ashley County, Ark., to construct a bridge across Bayou Bartholomew.

CHANGE OF REFERENCE.

Mr. PADGETT rose.

The SPEAKER. For what purpose does the gentleman from Tennessee rise?

Mr. PADGETT. I rise to ask that the bill H. R. 16147, introduced by Mr. MUDD, of Maryland, and referred to the Committee on Naval Affairs, be referred to the Committee on Claims, inasmuch as it is a bill for a claim. I ask that the Committee on Naval Affairs be discharged from further consideration of the bill and that the bill be rereferred.

The SPEAKER. What is it about?

Mr. PADGETT. It is a bill for the relief of mechanics employed at the proving ground at Indianhead, Md., during the fiscal years 1914 and 1915.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 16147) for the relief of mechanics employed at the proving ground at Indianhead, Md., during the fiscal years 1914 and 1915.

The SPEAKER. The gentleman from Tennessee, chairman of the Committee on Naval Affairs, asks that his committee be discharged from the further consideration of the bill and that the bill be referred to the Committee on Claims. Without objection, it will be so ordered.

There was no objection.

UNUSED HOSPITALS AT ELLIS ISLAND, N. Y.

Mr. SIEGEL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the following resolution, which I send to the Clerk's desk.

Mr. KITCHIN. Reserving the right to object, Mr. Speaker, I would greatly prefer, and I suppose the gentleman from Michigan [Mr. FORDNEY] would, too, that the gentleman wait for unanimous consent until this afternoon before we adjourn.

Mr. SIEGEL. It will take only a moment. The resolution provides that the unused hospitals at Ellis Island be used in connection with the treatment of infantile paralysis cases. The matter can be disposed of in a few moments.

Mr. KITCHIN. General debate closes at 1.30 o'clock. To consider the resolution now would cut out some of the time for general debate. I suggest that the gentleman take it up before adjournment this afternoon. It will amount to the same thing.

Mr. SIEGEL. Very well.

REVENUE.

The SPEAKER. Automatically the House resolves into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 16763, the revenue bill. The general debate on it is to run for two and one-half hours, one half of the time to be controlled by the gentleman from North Carolina [Mr. KITCHIN] and the other half by the gentleman from Michigan [Mr. FORDNEY]. The gentleman from Illinois [Mr. FOSTER] will take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further considera-

tion of the bill H. R. 16763, the revenue bill, with Mr. FOSTER in the chair.

The CHAIRMAN. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. FORDNEY. Mr. Chairman, I yield 20 minutes to the gentleman from Wyoming [Mr. MONDELL].

The CHAIRMAN. The gentleman from Wyoming [Mr. MONDELL] is recognized for 20 minutes.

Mr. MONDELL. Mr. Chairman, the only virtues, real or apparent, that this bill possesses are such as it secures through the adoption or the recognition of Republican policies. While these features are, in the opinion of the leader of the majority, the gentleman from North Carolina [Mr. KITCHIN], of sufficient importance to lead him to suggest that, from the standpoint of certain Democrats at least, the bill was something of a dose. I agree with that view of it, though from my viewpoint it is a Democratic dose, and I have no appetite for such, even though sugar-coated by Republicanism.

There is much food for reflection in the fact that in these days Democratic argument is much interlarded with the claim that what they have done or are proposing is in harmony with Republican pledges and policies. Even as the gentleman from Missouri [Mr. BORLAND] recently bottomed his party's claim for support on the alleged resemblance which their recent legislative program bears to our platform pronouncements of 1912, so the gentleman from North Carolina keyed his adroit argument in favor of this bill to the cooing note that what they propose is largely along the lines of Republican policy. The balance, he assured us, was what we would do under like circumstances.

Even if it were true, which it is not, that the provisions in the bill proposing to build up a dyestuff industry under protection, providing for a tariff commission, the so-called antidumping provision were all in form that would entitle them, standing alone, to Republican support, Democratic conversion to our principles and policies, even to that extent, would not justify any Republican in approving the bill. [Applause.] Republicans can not consistently approve it, for in what it contains and what it omits it challenges sharply the Republican contention that Federal taxation should be largely indirect and placed upon the shoulders of those abroad who seek our markets rather than upon those at home who support our institutions. [Applause on the Republican side.]

We welcome this tardy Democratic recognition of the virtue of Republican policies, but we decline to desert the altars of the true faith to participate in the acts and incantations of those who, though unable to longer entirely resist the penetrating power of truths they have long spurned and denied, still in the main adhere to their idols of free trade and their fetishes of burdensome direct taxation.

Even as the ancient Israelites in the very shadow of the mountain of the law set up an altar to the worship of the golden calf, so Democrats in this day of their proclaimed enlightenment as to the wisdom of Republican principles of protection still set up their altars to and worship their discredited idols of free trade and of direct and burdensome taxation upon the people and their industries.

Let us analyze for a moment the provisions of the measure, admittedly Republican in policy and claiming to be Republican in form, on the strength of which the Democratic Delilah, the gentleman from North Carolina [Mr. KITCHIN], would persuade or betray the Republican Samson into the camp of the Democratic Philistines. [Laughter.]

Taking them in their order, what are they? First, a duty on dyestuffs. So far as it goes, it is frankly, confessedly protective, defendable only from the standpoint of the Republican policy of protection. It is what in other days our Democratic friends would have called the unconstitutional and indefensible coddling of an infant industry. The robbery by taxation of the many for the benefit of the few. It is true that those best acquainted with the subject believe its provisions scarcely adequate to accomplish the purpose sought, but I hail it as a sign of belated sanity, of at least partial conversion on the part of the Democracy to the logic of the doctrine of protection. But I shall not as a Republican vote for this bill, which in its omission of other needed protection thunders loud against the very policy thus gingerly applied to one single item in order to vote inadequate protection to this one industry. [Applause on the Republican side.]

Extensive, widely distributed, vastly important industries upon which the Nation's labor and enterprise depend stand in jeopardy, exposed to destructive and devastating competition the moment peace is declared in Europe. In view of that situation am I justified in virtually surrendering my demand, that all these, and the labor they sustain, shall be safeguarded, by voting for a bill which in its provisions for this new and minor industry alone emphasizes the indifference of its supporters to the welfare of the country and its industries as a whole. [Applause on the Republican side.]

Then there is the provision for a tariff commission, heretofore opposed, reviled and condemned by Democrats of high and low degree. With what amazing suddenness, at the suggestion of the President, is it tolerated, approved, embraced, raised to the dignity of honorable mention in a party platform. No wonder the gentleman from North Carolina, who is a reasonably consistent Democrat, is a trifle bewildered and not wholly convinced. What is the occasion of this sudden conversion compared with which that of Saul of Tarsus on the road to Damascus was a slow and plodding process. [Laughter on the Republican side.] Is the Democracy fully converted to the theory of a protective tariff? If not, why a tariff commission?

It remains as true to-day as when stated on this floor by the gentleman from Alabama [Mr. UNDERWOOD], then the leader of the Democratic Party in the House, that a free trader or a believer in tariff for revenue only has no sort of use for a tariff commission. The facts he seeks relative to industries, so far as he seeks any at all, relate not to comparative costs of production but to availability for revenue-producing purposes. They can all be found in records of consumption and importation. The facts that a fair, impartial, unbiased, unprejudiced, uninfluenced tariff commission would seek to secure, analyze, and publish would be as valueless as a guide or rule of action to a free trader or tariff-for-revenue Democrat in framing a revenue bill as would a copy of Hoyle to him who sought to solve the problems of the fourth dimension. [Laughter on the Republican side.]

Why, then, do our Democratic friends seek a tariff commission? With a view of getting facts as to comparative wage scales and production costs here and abroad? Do men seek those things that from their viewpoint are inconsequential unless they seek them with the hope and the expectation that if they serve no purpose from the viewpoint of their philosophy they may be so marshaled and presented as to tend to confound the arguments of those who seek such facts as a basis of action?

I shall not say that the President suggested, and his party approved, the policy of a tariff commission with the idea of securing only such facts as might be pleasing from their viewpoint, or of coloring or arranging or adjusting facts for the purpose of disproving the claim of wide differences in cost of production at home and abroad; I will not say that, even though it may run through my mind [laughter]; but I do say, in all sincerity and with regret, that I should not expect appointments to this tariff commission, if the provision be enacted into law, such as would inspire me with any considerable confidence in the result of its labors.

Then there is the antidumping clause—the unfair-competition provision, as they call it. Of all the admissions, direct and indirect, that have been wrung from an unwilling Democracy of the truth of the Republican contentions, none is so extraordinary as this—that many of our industries, under our high wage scale and standard of living, would not be able, unaided and unprotected, to withstand the fierce competition of underpaid labor abroad seeking a market for its products at the close of the European war. They now make no denial of the importance—aye, the necessity—of some action to prevent the overwhelming invasion of our markets when at the close of the war impoverished Europe, its people inured to privation and hardship, shall struggle desperately for a market for their products.

Democratic leaders having admitted this danger, having testified to its imminence, the natural and logical move would have been to have prepared against this threatened invasion, as has been done in this bill in the matter of dyestuffs, by placing protective duties sufficiently high to enable the American producer to live, and yet not so high as to prevent reasonable importations. This bill to raise revenue, and claimed by its proponents to be intended in this paragraph to be protective against dumping competition, would have been just the place to provide for the raising of increased revenue through the protection of the American producer.

But instead, we have section 601. This so-called unfair competition section, if intended in good faith, as we should assume it was, reflects little credit on those who drafted or those who will support it. [Applause on the Republican side.] If I were inclined to attribute questionable and improper intent and motive in its drafting, I should say that it is an indefensible joker, fraud, and fake, without even the left-handed virtue of adroit construction, for its iniquity is impudently gauzy and

transparent. No effort is made to prevent dumping of foreign goods in our market at prices below cost of production, unless such dumping be the result of a far-reaching conspiracy.

The major portion of the industries of the country might be ruined, or temporarily paralyzed without any thought on the part of those disposing of dumped foreign goods here to conspire, to destroy or injure an industry. If such a conspiracy were to actually exist, it would in the majority of cases be utterly impossible to prove it. Whatever the intent of the draftsman of this legislation was, as a means of preventing the selling here of foreign-made goods at a price not warranted by their average cost of production, this provision would be utterly valueless and ineffective. But the danger that confronts us is not, by any means, confined to so-called dumping of products. Conditions in Europe at the end of the war are likely to produce lower wage rates and production costs than ever before and the sale in our markets in the ordinary way of articles so produced presents a menace which the provision in question does not even pretend or seek to remedy.

The gentleman from North Carolina [Mr. KITCHIN] wants to know if we do not want to vote to repeal the stamp taxes. Of course, we do. Those of us who were here at the time that iniquity was committed and voted and talked against it are already on record. [Applause on the Republican side.] We did not vote to lay the stamp taxes on the American people. The responsibility for them is not ours. We will vote to keep the section repealing them in the bill, of course, but we are in nowise bound, obligated, or disposed, to lay other and heavy burdens on the American people simply because by so doing we incidentally vote for the repeal of the stamp tax. The Democratic Party in a belated spasm of virtue now admits that all we have said about the villiany of the stamp taxes is true. We welcome this eleventh-hour conversion, but it is not a convincing argument on behalf of further tax burdens that you are proposing to relieve the people of some you never should have placed upon them.

In his most engaging manner the gentleman from North Carolina [Mr. KITCHIN] insisted that Republicans having voted for large and unusual expenditures for all or part of the so-called preparedness programs, were in honor bound to vote for the bill through which it was proposed to pay at least a part of the bills. That argument is about the most unsubstantial of any of the transparent bids that have been made for Republican support of this measure. If it were good now, it would be good whenever revenue legislation is pending, for under all administrations the major portion of the appropriations made, if not actively approved, are at least acquiesced in by substantial majorities made up of men of all parties. The fact that the necessity of appropriations may be acquiesced in by a part, even a major part, of the minority, and receive their support, never has and never can be be properly and legitimately considered as binding the minority to the majority's plan of revenue legislation.

My recollection is that during the years of Republican control in the House the Democratic minority voted with practical unanimity, and frequently with enthusiasm, for the expenditures which they afterwards criticized as criminally extravagant. I never heard that fact urged as a legitimate reason for Democratic support of Republican revenue legislation. In the Fifty-fifth Congress, in which the Democrats were largely responsible for bringing on the War with Spain, after war was declared and the boys were rallying to the colors and we needed money to arm and feed them, our Democratic friends, with less than half a dozen exceptions, if my memory serves me right, voted against the revenue measure brought in by the Republican majority to raise the funds necessary to prosecute the war.

The present honored Speaker of this House; the gentleman from Alabama [Mr. UNDERWOOD]; the gentleman from Virginia [Mr. HAY], now chairman of the Military Committee; the gentleman from Virginia [Mr. JONES], chairman of the Committee on Foreign Relations; the gentleman from Texas [Mr. HENRY], chairman of the Committee on Rules; and other distinguished Democrats occupying seats on this floor, were among those who voted against a Republican bill to raise war revenue at that time, when war was actually in progress.

In view of these facts it strikes me as being about the limit of brazen assurance for the gentleman on the other side to urge Republican support of their revenue bill on the ground that they have voted for, or have not been able to prevent, great expenditures. So far as I am personally concerned, I feel no responsibility for the fact that the total of appropriations is as great as it is. It is true, I have under protest as to some of their items voted for all of the so-called preparedness bills to date, but if I could have had my way their total would have been considerably reduced, and I shall not support the increases which have been made in another body to some of these bills. But whether I voted for them or not, I should feel justified in reserving my right to vote against a revenue plan I did not approve. Because one sees fit to join the dance, it does not follow that one is bound to be bullied in the matter of the way to raise the coin with which we shall pay the fiddler.

Passing to those provisions of the bill which the gentleman from North Carolina, Mr. Kitchen, was pleased to call nonpartisan, I entirely agree with him that a Republican Congress would undoubtedly pay a part, at least, of increased expenditures out of revenue derived from income taxes, but as the Democratic Party was not justified in levying stamp taxes, obnoxious and burdensome, in time of peace, so it is not now justified in levying what is equivalent to a war income tax. This is particularly true when it is not expected to pay actual war expenses, if war should come, out of revenues so raised, but to pay them out of money secured from the sale of bonds.

The States have heretofore looked upon inheritance taxes as one of their legitimate fields for securing revenue. Forty-two of the States now secure revenue from such sources. The Federal Government is not justified in invading this field of State taxation except as a war measure. We are not at war. If we get into war, we are told the administration expects to sell bonds to finance it.

As one of those who has not been in sympathy with the extreme clamor for so-called preparedness and inclined to the opinion that those making money out of war munitions were, to a certain extent, responsible for the height of the preparedness furor, I might be expected to be enthusiastic about the proposition to tax war munitions manufacturers. I am in favor of it within reason and justice, but a provision which proposes a tax of from 5 to 8 per cent, without regard to the amount of profit, if any, above 10 per cent, on the total receipts of a year's business, half of which has been transacted, and in most cases all contracted, before the tax was proposed, comes perilously near being taking property without due process of law. I have no love for the war munitions business. In my philosophy it is a sad and sorry and an unenviable way to make money, but even a war munition manufacturer is entitled to some consideration and some notice of the burdens that are to be placed on his business.

I am not informed as to what, if any, motion to recommit will be made by the minority. So far as I am personally concerned, I do not consider the presentation of an alternative plan of raising revenue necessary to justify my opposition to and my vote against this bill. The fact that in the face of the admitted danger and menace to our industries, which the close of the European war will present, no attempt was made to secure revenue by such increases of rates as would at least reasonably protect our industries, is in itself sufficient to justify my vote against the measure whatever it may contain, which, standing alone, I might support. [Applause on the Republican side.]

What would we do under these circumstances has been asked. Had the Republican Party been in control, the circumstances would in all probability have been entirely different. We should not have had exactly this situation to meet. We should have made a start toward real preparedness last year, and there would have been therefore less excuse and less demand for extraordinary appropriations this year. We would not have had on hand the expensive and deplorable Mexican situation, for a Republican administration would not have created the muddle that makes heavy expenditures on the border necessary.

We would have had a large real surplus in the Treasury, not a largely fictitious one as at present, made up of disbursing officers' balances already pledged, and all the uncurrent and battered coin and small change in the Federal till. If under our control more funds were necessary, we would raise them largely from the foreigner seeking our market. While replenishing the Treasury, we would build up our industries and profitably employ the Nation's workers.

Why should we now draft the details of a Republican bill, when we know and you know that no bill prepared on this side, no matter how wise and fair, reasonable, just, helpful, would get a single vote on the Democratic side or have the slightest chance of passage? It would be a case of virtue's labor lost. It might well be likened to casting jewels before swine.

But do not be downcast or discouraged gentlemen on the other side. You will not have long to wait to see the details of a Republican revenue measure. The remnant of you gentlemen on the Democratic side who are here after the 4th of next March will become familiar with just what we propose to do. The measure then presented will have for its purpose the rais-

ing of necessary revenue for the support of the Government with the minimum of annoyance and burden upon the citizen. Its provisions will be fair and just to all. Incomes will pay their fair share, but we shall not penalize thrift or industry. Those who seek our great market shall make their goodly contribution to the National Treasury. Our labor will be protected in its wage, our home industries within reason in their market. In the meantime, the responsibility is yours, not ours. If you insist on your plan of revenue, you can not reasonably expect our support of it, even though some of its provisions pay the Republican Party the sincere flattery of adopting some of its policies. We still have in mind the ancient warning, long since crystallized into a proverb, "Beware of the Greeks bearing gifts." [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. Will the gentleman from Michigan give me five minutes more?

Mr. FORDNEY. I have more requests for time than I have time left; otherwise I would be glad to.

I yield 10 minutes to the gentleman from New York [Mr. ROWE].

Mr. ROWE. Mr. Chairman, on June 30 the report on the income tax showed that $124,867,430 had been collected in this country during the fiscal year. Now, before I begin to talk I wish to say that I have always felt that an income tax might be a correct tax, and I was one of the men that helped to support it in the State of New York. But, like every other tax, an income tax, when properly administered, can be a just tax, and can be a most unjust tax if administered wrongly.

Now, after hearing the address of the chairman of the Ways and Means Committee, I thought I would like to find out a few more facts which he was not able to give in the 2 hours and 30 minutes of his address, and I went to the Treasury Department, that I might get started right. I found out that out of the $125,000,000 the State of New York paid $45,000,000, or 36 per cent of all the money collected under the income-tax law.

I found another very interesting thing, that the part of the year ending June 30, 1915—I desired to bring the facts down to 1916 but could not get the figures—the surcharge tax that New York paid was 48 per cent of all the surcharge tax of the United States. [Applause on the Republican side.]

Is it any wonder that the chairman of the Ways and Means Committee never mentioned New York in his two hours and a half address? Four States—Massachusetts, New York, Pennsylvania, and Illinois—pay almost two-thirds of this entire tax. I thought I would like to know just in what way this affected other States. Can it be possible that the State of New York has 36 per cent of the wealth of this Nation? Let me give you a list: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, North Carolina, South Carolina, Tennessee, Texas, and Virginia—11 States—put together have a billion more capital than the State of New York, and they are very powerful in this Congress, having the chairmanship of almost every committee. But, gentlemen, how much of this tax do they pay? They pay the sum of $6,494,995, and New York State pays more than $45,000,000.

Now, I thought it must be that New York State was getting the benefit of these appropriations that we make in this House, and so I turned to the river and harbor bill, and I found that New York State got an appropriation of $2,917,500 all told; that the 11 States I have mentioned got the very nice little sum of $9,168,698—almost four times as much, although they pay one-third as much into the Treasury of the United States. [Applause on the Republican side.]

I found some other things that might be interesting, not connected with these States but other States. I found that the very wealthy State, the State which claims it has more automobiles per resident than any other State in the Union, the State that has more money in the savings and other banks per capita—the State of Iowa—paid into the Treasury, notwithstanding the enormous amount of money they have, but $277,000 as individual taxes and $517,000 in corporation taxes.

I would like to know why it is that no New Yorker, no Tammany man, no Democrat in this House, has come forward and stated these facts. They are taken entirely from the Treasury Department reports, and are public to every Member of this House. We have on that committee members of Tammany Hall; and why have they not brought out these figures and saved their own State? I do not believe, gentlemen, that this is good politics for any party. I do not believe that any party in this Nation has the right to loot the State of New York. [Laughter and applause on the Republican side.]

Nor do I believe that the money that we raise in this House by our votes should be put out in any one section of this Nation. It belongs to us all, and the money should be spent over this vast land to develop our country for the present and for the future. [Applause on the Republican side.]

Mr. Chairman, I yield back the balance of my time.

Mr. FORDNEY. Mr. Chairman, I yield to the gentleman from Indiana [Mr. WOOD].

Mr. WOOD of Indiana. Mr. Chairman, if there is any one thing which the Democratic Party, with its record of inconsistency, has consistently opposed it is the protective-tariff idea. For more than half a century and until its last national convention this party each four years in its platform has declared that a protective tariff is robbery and that it is unconstitutional. And some of the apostles of Democracy have gone so far as to advocate the entire abolition of customhouse duties.

At the St. Louis convention, held a few days ago, the Democratic Party, true to its antecedents, reaffirmed its belief in the doctrine of free trade, or a tariff for revenue only, by heartily indorsing the Underwood tariff law. The Underwood tariff law since its enactment has been held up before us by its champions as a model piece of legislation, as a realization of the dream of free traders. So far as its practical working is concerned, it is entitled to all that has been claimed for it. From the time it went into effect until the outbreak of the present European war it was outstripping all of its predecessors in closing the mills and factories of the country, rendering idle millions of workingmen, and depleting the Public Treasury. So well was it doing its work that the railroads of the country, instead of building more miles of main track, were building more miles of sidetrack on which to store their idle cars and engines. Not only was it breaking down and ruining the manufacturing industries of the country but it was also giving the American farmer a beautiful exhibition of what it was going to do to him in the months and years that were immediately to follow. This is best illustrated by what was said in commendation of the practical working of the Underwood tariff bill by Secretary of Commerce Redfield in a speech delivered before the chamber of commerce in the city of Hamilton, Ohio, on February 25, 1914. In that speech he said:

> For example, take the last three months of 1912 and the last three months of 1913. In the former we imported 112,000 cattle; in the latter, 341,000.
>
> In the former we brought in 253,000 bushels of corn; in the latter, 4,450,000 bushels.
>
> In the former, 13,600 bushels of oats; in the latter, 13,230,000 bushels.
>
> In the same period of 1912, 865,000 pounds of fresh meat; in 1913, 33,500,000 pounds.
>
> In 1912, 41,000 bushels of potatoes; in 1913, 2,800,000 bushels.

From the above statement, given us by the business expert of this administration, it is plain to be seen what would have happened to the American farmer had it not been for the intervention of the European war. And in spite of the fact that Germany and Austria are shut out of our markets by the battleships of the allies, and France and Belgium and even Great Britain are in a large measure shut out of our markets by reason of their reduced productive capacity, the imports into this country are increasing by leaps and bounds.

In March we had imports of $214,000,000. This is $31,500,000 more than the imports of March, 1914, before the war and immediately after Mr. Wilson's administration and his Congress had thrown open our tariff floodgates. It is nearly $55,000,000 more than in March of 1913, when Mr. Wilson first went into the White House. It is $74,000,000 more than in March, 1911. It is $81,000,000 more than in March, 1909. It is $125,000,000 more than in March, 1908.

This war in Europe can not last forever. It will end one of these days, and when it does end and the millions who are now engaged in the shedding of blood shall become engaged in rebuilding their devastated countries and shall find employment at low wage in the factories that are now idle, and when those factories for the purpose of reestablishing their now destroyed foreign trade will sell their wares at such reduced price that American competition will be impossible, then will we see our imports grow, great as they now are, manyfold. With all those nations selling us, as they can sell us and will sell us after the war, there is scarcely any conceivable limit which one can put upon our imports then, so far as foreign sellers are concerned. Against this evil day, if this Congress is wise, it will erect a protective-tariff barrier to shield our country and its producers against this flood of imports. [Applause on the Republican side.] If this is not done our markets will be wrecked, our industries crippled almost to destruction, our wage earners will find little to do, and soup houses will again have to be provided to feed their hungry mouths.

Before this European war commenced there were more than 4,000,000 wage earners idle in the United States, and this army was increasing day by day. For the most part, they have found temporary employment, made possible by reason of the

great demand on this country for munitions of war and the incidents thereto. When this war is over there will no longer be a demand for this employment and they will be compelled to find employment elsewhere or else become idle again. With the opening of the factories abroad and with the output of those factories coming without limit and without hindrance into our country, the prospect of the American workman is not encouraging, to say the least. Every dollar's worth of goods sold in this country which is the product of a foreign laboring man takes 90 cents away from the American laboring man, for 90 per cent of all the manufactured goods in the world is the proportion contributed by labor. [Applause on the Republican side.]

I am told that when the Underwood bill passed this House its author was frank enough to say upon the floor of this House that its passage would mean the ruin of the sugar industry in this country. But, notwithstanding this fact, and desiring above all things else to remain true to the traditions of the Democratic Party, he voted to bring this ruin upon one of the great and growing industries of our country. That his prophetic vision was correct has been amply demonstrated. A few weeks ago, when the Flood Control Committee of this House visited the State of Texas to inspect the flood conditions arising from the overflow of the Brazos and Colorado Rivers, we spent a week in the Delta country of this great State, which was rapidly becoming one of the largest sugar and rice producing sections of the country. Thousands and thousands of acres had been broken from virgin soil and planted to cane. Thousands and thousands and thousands of acres had been prepared for the cultivation of rice, and it takes lots of money and lots of labor to prepare a rice field. Thousands and thousands of dollars had been expended in the building of canals and irrigating ditches and for pumps and other machinery to provide the water with which to flood these rice fields. And through the alluring prospects afforded and with the reasonable belief that such an industry would not be ruined by the legislative branch of our Government, millions of dollars in capital were invested in the building of sugar mills and rice mills throughout this section.

But what happened to it all? The Democratic Party, that has ever adhered and still adheres to the policy of free trade, with full knowledge of the possibility of these great industries, and with a full knowledge of what would happen to them if they were not given the protection that would warrant their continuance, enacted a law placing their products upon the free list. The result is that these thousands and thousands and thousands of acres that had been planted in sugar cane and in rice have been permitted to go back to grass, and these mills that had been built for the making of sugar and the hulling and polishing of rice are idle. We found and heard of but one mill in all that country that is making any pretense of running at all. That mill is located at Sugar Land, in Texas. The general manager of that mill informed us that had it not been for the Underwood tariff law, plenty of cane would have been raised in the immediate vicinity to have kept it running day and night. That now this mill could grind all of the cane raised in that whole section of Texas, which is available by reasons of railroad transportation, in less than 30 days. This mill is running in spite of the efforts of the Democratic Party to destroy it. It gets its raw sugar from Cuba, however, and the management is living in hopes that the striking example of the ruinous effects of free trade in the manufacture of sugar which is afforded in that section will be sufficient to cause this Congress, or the Republican Congress that is to follow it, to enact into law a protective tariff upon sugar that will insure it from future blight like that now affecting it.

What has been said with reference to the cane-sugar industry of the South may also be said with reference to the beet-sugar industry of the West. Prior to the Underwood tariff bill there were 15 States engaged in the raising of sugar beets. The acreage was constantly increasing, and a goodly return was being brought to the raiser of the beets and to the manufacturer of the sugar therefrom. Six hundred and twenty-four thousand acres in these 15 States were devoted to this crop last year, but this was a mere drop in the bucket in comparison to the possibilities of sugar-beet raising in this country. We are told by those who have made the investigation that there are 274,000,000 acres in the United States adapted to the growth of sugar beets. It has been demonstrated that this plant is the best possible plant for enriching the soil and bringing its productivity up to the fullest measure. All of these facts were known at the time the Underwood bill was enacted into law. But notwithstanding all this the Democratic Party elected to sacrifice this business, and all that it means for the present and the future, to the Democratic fetish of free trade.

We were in hopes that when the present tariff bill failed to produce revenue enough to run this Government under ordinary circumstances and it became necessary to repeal the clause of the Underwood bill putting sugar absolutely upon the free list the Democratic Party had awakened to the fact that they had made a woeful mistake in providing that sugar should be put upon the free list, and that in acknowledgment of their mistake they meant to correct it by keeping permanently a protective-tariff duty upon sugar. But the leaders of the Democratic Party say that this is not to be done; that the duty of 1 cent now upon sugar is only temporary, and is only left there for the purpose of helping to meet the present emergency, and that as soon as this emergency is past they will carry out their original intention of putting sugar absolutely upon the free list. Those who are engaged in the sugar industry at present and who had hopes of becoming engaged in it in the future should take notice of this fact and govern themselves accordingly. For it has been demonstrated beyond a question of a doubt that in order to raise sugar cane and sugar beets in this country at a profit a protective tariff must be maintained thereon, and that the measure of such protection should be the difference between the cost of raising and manufacturing sugar in this country and the sugar-producing countries abroad.

Experience, the wisest teacher men ever had, seems impotent when it comes to teaching Democrats the utter fallacy of the theory of free trade when applied to our industries and in demonstrating to them the practicability of a protective tariff.

A quarter of a century ago, when all of the tin and the tin manufactures used in this country were made abroad, protective-tariff leaders advocated that tin could be successfully made in this country. This advocacy was derided by the Democratic leaders in Congress and out of it. But, notwithstanding their derision, a protective tariff was placed upon tin and the manufactures from tin, and we all know what the result has been. When the first tin-plate factory was located in Indiana, Democratic speakers and Democratic newspapers all over the country denounced it as a fraud. They even went so far as to say that the output of that factory was not manufactured there at all; that the whole scheme was gotten up as a Republican trick and that its utter failure would soon be announced; that tin could not be profitably made in this country. Instead of this dire disaster coming to pass, however, this industry, from that small beginning, has grown until it is one of the greatest industries in the United States, giving employment to thousands upon thousands of men at splendid wage and affording profitable investment to millions upon millions of capital.

It was also suggested that pearl buttons could be successfully made from fresh-water pearl shells. This, too, was derided by the Democrats, who made all sorts of fun of the project, and many facetious and humorous speeches were indulged in by the Democrats of this House upon this proposition. Nevertheless, a protective tariff was put upon this industry, and what is the result?

In 1914 there was manufactured in this country 26,181,405 gross of pearl buttons, with a value of $7,369,208, representing 43.2 per cent of the total quantity and 45.4 per cent of the total value of all the buttons manufactured in the United States. Of this amount 21,664,436 gross, valued at $4,879,844, were made from fresh-water pearls, and 4,516,969 gross, valued at $2,489,364, from mother-of-pearl, or ocean pearl. This pearl-button industry, under the fostering care of a protective tariff, has grown in the last 25 years from nothing until to-day it is looked upon as one of the great industries of the Nation. Button factories have been built in almost every State in the Union. The mussel shells in every fresh-water creek and stream have become an asset of great value, and the gathering of these shells and the manufacture of them into buttons affords lucrative employment to thousands of people. All of which would never have been had the Democratic Party had its way.

The present war in Europe has demonstrated the absolute necessity for the aniline dyes, that we use in many kinds of manufactures, to be manufactured here, that hereafter we may not find ourselves in the predicament in which we are now placed on account of a shortage of aniline dyes. The present duty on aniline dyes is 30 per cent ad valorem; an amount entirely insufficient to encourage the investment of American capital in this much-needed industry. In 1913 we imported aniline dyes amounting to 44,000,000 pounds, valued at $13,200,000. The duty paid on this importation amounted to $3,960,000. Those who have investigated the subject and who have examined into the cost of the manufacture of these dyes, and the difference in the cost of manufacturing them here and in Eu-

rope, tell us that, in addition to the 30 per cent ad valorem duty now on them, there should be a specific duty of 7½ cents per pound, and that unless such an approximate increase in duty is made, American capital can not be encouraged to invest for the manufacture of the same. The bill that we have before us proposes to reenact the present duty of 30 per cent ad valorem, but only adds a specific duty of 2½ cents per pound. If the gentlemen who claim to know the facts are correct, this added duty will have but little or no effect in encouraging investment in the manufacture of dyes. If a specific duty of 7½ cents per pound is added to the ad valorem duty, taking the importation of 1913 as a basis, it would make an added duty only of $1,584,000. If a duty of 2½ cents only is added, the amount derived from this source will be but a little more than one-fourth of $1,584,000.

The estimated total yearly value of the woolen, silk, cotton, leather, and hosiery industry in this country amounts to $1,860,000,000. Of this amount it is estimated that 85 per cent, or $1,554,180,000 worth of these articles are dyed to a more or less extent. Objection has been urged to putting 7½ cents per pound specific rate on aniline dyes, in addition to the 30 per cent ad valorem duty, for the reason that it would afford too great a profit to the maufacturer. Let us admit for the sake of the argument that this entire amount of $1,584,000 went into the profits of the manufacturer. How much of it would the individual user of dyed goods pay? It would not make more than one-thirtieth of a cent per yard upon all the yards of goods manufactured in these great industries using the same, which have a combined yearly value of $1,860,000,000. Thus showing that the increase in cost to the individual user is so insignificant that it amounts to nothing and would not be felt by anyone. If this added increase of 7½ cents represents the difference between the cost of the manufacture of these dyes in this country and abroad, why is it not the part of wisdom to grant the increase? And when these factories are once established and have reached a point beyond the experimental stage it will be easy enough to ascertain the facts, and if it is found that too large a profit is being made by the manufacturer, it will be very easy to reduce the tariff on this commodity. Without this encouragement I do not believe that much capital will be found to invest itself in this kind of industry. On the other hand, we are assured that with the proper amount of protection there is abundant capital ready and willing to immediately start building large dye establishments sufficient to supply the wants of all the industries using aniline dyes.

We have been saying much and doing much with reference to preparedness against war. There is nothing more important along this line than that we have in our own country dye factories that will manufacture not only the dyes to supply our manufacturing industries, but which will in time of war manufacture the materials for high explosives which will be so imperatively needed in large quantities for the defense of the Nation.

If the American people had held steadily to the protective policy of the Republican Party we would not now be depending upon foreign nations to furnish us with dyestuffs, but, on the other hand, we would have had ample industries of our own manufacturing this great necessity. A number of coal-tar dye industries did spring up in this country under the tariff of 1882, and they were increasing in number and importance until the duty was reduced by a Democratic Congress, which caused their abandonment.

There may be other wars and there is many an emergency that may arise besides war which might prevent our getting dyes sufficient for our use from abroad; and if we profit by the experience which this war has afforded and is affording us, we will not take a chance on being placed again in the precarious condition that we now find ourselves on account of an insufficient amount of dyes to provide for our wants.

It was the dream of William McKinley, the great apostle of protection to American labor and American industries, that the time would come when our national policy would be that of protection to American labor and American industry, and that when that time did come the question of protection would no longer be a political issue, bandied about by the political parties of the country. If there ever was a time more fitting than another for the establishment of this national policy, it is now. Now, when we are made to realize as never before the absolute necessity of a protective tariff, not only for the maintenance of our domestic industries and the labor of our country, but, which is also so essential, for the proper protection of our country itself against the other nations of the earth.

But it seems that the time is not yet ripe for this to be; that those who have so long advocated the free-trade theory are not sufficiently aroused to the importance of the necessity of such a national policy. That they are not in accord with this principle has been evidenced on this floor almost every day since this session of Congress began, and it was likewise forcibly evidenced in the national convention at St. Louis a few days ago, when in the face of all this public necessity the Democratic Party reaffirmed its devotion to and belief in the Underwood tariff bill, which was acclaimed to the world as a tariff for revenue only, or a free-trade law. And we are told that when any revision of that law is made it shall be made in keeping with its free-trade tendencies if there is a Democratic majority in Congress at the time. Yet, in view of all this evidence of their adherence to the theory of free trade, the majority has presented in the pending bill a provision for the establishment of a tariff commission. How many Democrats are there in this House who honestly and earnestly believe in a tariff commission? The leader of the majority, Mr. KITCHIN, in his speech on day before yesterday, was frank enough to admit that until within a very few weeks the idea of a tariff commission was repugnant to the believers in true Democratic principles. What has transpired to change their ideas in this respect? What marvel has come to pass to cause the leopard to so suddenly change its spots?

Is it not the mandate coming from the gentleman on the hill that they are bowing down to rather than obeying the dictates of their own conscience? Is it not a mere expedient to which they are resorting as a subterfuge to carry them over the breakers that they see immediately ahead? That this latter is the real reason that has prompted this sudden change I think is quite well evidenced by what the President himself has to say upon this subject of a tariff commission. In his letter of January 26 last to the leader of the majority side of this House, Mr. KITCHIN, the President, amongst other things, said:

> Our conversation yesterday made me realize that in my letter of the 24th I had not set forth as I should have set them forth my reasons for changing my mind on the question of creating a tariff board, for I must frankly admit that I have changed my mind since I last spoke on that subject—

A most remarkable performance on the part of the President—

> I have changed my mind because all the circumstances of the world have changed, and it seems to me that in view of the extraordinary and far-reaching changes which the European war has brought about it is absolutely necessary that we should have a competent instrument of inquiry along the whole line of the many questions which affect our foreign commerce.
>
> I have had in this change of mind no thought whatever of a change of attitude toward the so-called protective question. That is neither here nor there. A commission such as I have suggested would have nothing to do with theories of policy. They would deal only with facts, and the facts which they would seek ought to be the actual facts of industry and of the conditions of economic exchange prevailing in the world, so that legislation of every kind that touch these matters might be guided by the circumstances disclosed in its inquiries.

From the above quotation we have it from the President himself that while he has changed his mind on almost everything else he has not changed it upon the question of protection; and if he has not changed his mind—and we have not heard from him to the contrary to-day—he is a free trader still. He always has been a free trader, and he is one of the gentlemen who have heretofore subscribed to the proposition that a protective tariff is unconstitutional.

I dare say that the gentleman from Pennsylvania [Mr. BAILEY] expressed the real belief of the majority of the Democratic Members of this House when he said in his open letter of February 14, addressed to the majority leader, Mr. KITCHIN, that—

> As I view it, the measure—

Referring to the creation of a tariff commission—

> is distinctly misleading in character as a whole and in certain provisions it is a concession to ideas utterly at war with Democratic principles.
>
> For many years I have fought the tariff-commission plans as they have been pressed from time to time by Republicans. In this I was in full agreement with my party and with the best teachings of those to whom the party has looked for light and leading. Tariff commissions in the past have been a farce. They have never, even in a slight degree, changed the essential aspects of the problem with which they have sought to deal and in vital particulars the information they have collected has been valueless.

Further on in this letter Mr. BAILEY says:

> Personally I can not become a party to such a betrayal of the Underwood tariff, to such a disregard of Democratic principles and pledges, to such a brazen appropriation of a Republican plan. If there are to be cheaper prices after the war—as I feel perfectly confident there will be—I want my people to have the benefits thereof. I have not fought the trusts and combines for a quarter of a century merely for the pleasure of surrendering to them now under the guise of what I deem a piece of rank false pretense. For the Democrats to reverse their traditional policy on this question, as they are being urged to reverse their traditional policy toward militarism, adopting the one Republican idea as they are being exhorted to adopt the other, would be almost too much. It certainly would be too much for me. And candor compels me to acquaint you with my feelings on the subject. My views, of course, may be of little consequence, but at least they are honest, and I think they are consistent with Democratic principles.

The difference between the President of the United States and Mr. BAILEY is that the President is willing to resort to a subterfuge and a false pretense in order to cover up for the

time being the damage that the present tariff law has done and is doing to this country, while Mr. BAILEY is frank enough and honest enough to admit that such a thing is a mere false pretense, and that it is Pharisaical in character and a fraud upon its face.

The real purpose and function of a tariff commission honestly constituted is to ascertain the facts which will show the difference in the cost of producing a given article at home and abroad. And what can be the purpose of ascertaining these facts if it is not to use them in formulating a tariff to be placed upon that article which will represent the difference between the cost of manufacture at home and abroad? And what does that mean but placing a protective tariff upon that given article? It means no more; it means no less.

If Mr. Wilson has not changed his mind with reference to protection, has he not subjected himself in recommending a tariff commission to the criticism made by the gentleman from Pennsylvania [Mr. BAILEY] that the whole thing is a farce and a false pretense? If we are to have free trade or a tariff for revenue only after this proposed tariff commission is established, the same as we have a tariff for revenue only now, why the necessity of going to all this trouble? Why the necessity of the great outlay of money that will be incident to the establishment of this commission? If, as Mr. BAILEY says, a tariff commission has "never, even in a slight degree, changed the essential aspects of the problem with which they have sought to deal, and in vital particulars the information they have collected has been valueless," what can be the purpose of the proposed tariff commission?

The information gathered by tariff commissions heretofore has been valueless to the Democratic Party, because the information afforded by them have pointed to but one result, and that is to a protective tariff as being essential to the industries of our country. That is the reason why they have not been adopted, and it was because of this fact that a Democratic Congress abolished the tariff commission that was created by a Republican Congress and absolutely refused to accept or consider the facts that had been collected by that tariff commission. In view of this attitude of the Democratic Party and of individual Democrats toward a tariff commission are we not to believe Mr. BAILEY when he says that this attempt on the part of the Democrats to create a tariff commission for any good purpose is a farce and a false pretense?

My prediction is that when this commission is established, if it is established, it will be found that instead of its being used in aid of legitimate investigation and providing the facts whereby the business industries of this country can have a fair measure of protection and the laboring men of this country a like protection it will be used for the purpose of delving into the privacy of our own business institutions to their detriment.

The Republicans of this country have long been in favor of and are now in favor of a tariff commission, the purpose of which will be to aid the legitimate business industries of this country and to aid the honest wage earners of this country. A commission which shall have as its guiding star that policy of protection to American industry and American labor that was the dream of William McKinley; that will make honest and earnest investigation to ascertain the facts for the use of this Congress which will enable it to fix the tariff upon importations so that the American manufacturer shall not be destroyed for the benefit of the foreign manufacturer; so that the American laboring man shall have fair compensation for his labor and shall not be made to compete with the pauper labor of Europe. Such a tariff commission will be a boon to the Nation and it will be hailed with delight by all who are interested in the future welfare of our country. Such a commission will not be a farce or a false pretence. It will be an actuality, designed to do the greatest good for the greatest number. [Applause on the Republican side.]

Mr. FORDNEY. Mr. Chairman, I yield one minute to the gentleman from Ohio [Mr. KEARNS].

Mr. KEARNS. Mr. Chairman, Portsmouth, Ohio, is a city of about 40,000 inhabitants and is located in my district. New Boston is a suburb of Portsmouth. For about 17 years a great steel plant has been in operation in the village of New Boston. Two years ago I was in New Boston, and that great steel plant had reduced its force to about four or five hundred men, working four or five days a week. For 15 years prior to that time it had employed every day in the week, except Sunday, 1,800 men. I was in New Boston again about two months ago. The steel plant was running full blast, with some 2,000 men employed. I met one of the foremen on the street and asked him about it. He said, "Yes; we are running every day. We can not fill our orders. We have war orders." His name is Bill Jenkins. Bill said, "These war orders are coming in faster than we can fill them, but in order to reach this market we have to climb over a wall of dead men. We all know this, and we are helping to make that wall of dead men, and we are ashamed of our jobs." [Applause on the Republican side.]

I wish the United States were full of men with consciences as keen as the conscience of Bill Jenkins; then we would never be called upon to listen to the boasts of Democratic Members of this House rejoicing in America's present prosperity, because that prosperity which appears in spots in this country is soaked in the blood of Germany.

Mr. KITCHIN. Mr. Chairman, I yield to the gentleman from Tennessee [Mr. HULL] such time as he may desire.

Mr. HULL of Tennessee. Mr. Chairman, I consider it most unfortunate that the House has not given more consideration to the tax measures embraced in this bill. We have general complaint in the municipalities, in the counties, in the States, and some in the General Government, with respect to our tax conditions. This bill embraces a number of most important tax provisions, and, in my judgment, it is a matter of deep regret that the membership here has avoided their discussion, except to a very partial extent, but insisted as a rule upon rehearsing and rehashing old campaign speeches. Of course I can understand and appreciate the severe stress of politics, as it appears to some of my ultrastandpat friends in the House; but laboring even under these conditions, it does seem to me that having several weeks ahead of us we could have delivered our campaign speeches later on and consumed the time allotted to this debate in an elaborate explanation and discussion of the merits and demerits of these tax proposals for the information and benefit of our respective constituencies. I listened yesterday with amazement to the declaration of the gentleman from Massachusetts [Mr. GILLETT], one of the oldest and ablest leaders upon his side of the House, when he practically notified the House and the country that he and those cooperating with him would disregard whatever obligation they owed to carry out the preparedness legislation, which has been partially enacted and the remainder of which is pending, unless whatever tax measures might be passed for that purpose should have as their fundamental features the old-time doctrine of standpat protection.

It is inconceivable to me that any Member of this House who advocated this legislation looking to the enlargement of the Army and the Navy and the increase of our fortifications, unless he was merely bluffing or playing politics, would now arise, when we reach the most important stage of that program, and announce that he proposes to hold up the entire movement to enlarge our Army and Navy and increase our fortifications unless the United States Steel Trust, The American Woolen Trust, and all that long list of favored and fattened creatures of the former system of special privilege shall have inserted as the fundamental feature of whatever revenue bill is considered a provision that would first guarantee to them such additional excesses of profits as they might see fit to write into the bill. These bills providing for the increase of the Army and the Navy and the expenses of our fortifications have not yet become laws in the main, and it is not too late to recall much or most of the provisions in those measures if gentlemen who have prated loudest and longest in favor of preparedness in this country are now selfishly going to reverse their attitude when they reach the most important stage of the legislation. I feel as to that matter very much as my distinguished friend from Connecticut [Mr. HILL] expressed himself in March last, when the sugar tariff provision was under consideration. He said at that time:

> I do not believe there is a Member of this House, in the face of the exigencies that confront this country, who is ready to stand and quibble as to how the money shall be raised; but, first of all, he will show his patriotism and raise it, and then criticize the methods used in the next campaign, if he chooses to do so. That is the doctrine upon which I stand, not only with reference to this bill but with reference to all supplementary revenue measures; and the leader of the Democratic side will find me occupying that position during the remainder of this session whenever he can demonstrate that the exigency exists.

[Applause on the Democratic side.]

Mr. Chairman, there have been many rash and inaccurate statements made during this discussion.

Mr. HILL. Mr. Chairman, does the gentleman object to a question at this point?

Mr. HULL of Tennessee. If the gentleman will allow me to make my statement, I will be glad then to yield for any question and try to answer any question that may be asked about the bill.

Mr. HILL. I desire to ask a question in reference to the quotation which the gentleman just made.

Mr. HULL of Tennessee. I shall take pleasure, then, in yielding to the gentleman. I was surprised, even during a campaign year, to hear so many utterly inaccurate and unfounded assertions made by gentlemen who, it must be admitted, are facing political extremities. The gentleman from Michigan

[Mr. FORDNEY], the ranking Republican member on the Committee on Ways and Means, in the course of his speech, not questioning the extraordinary conditions that we must meet, admitting all of them, dismissed the entire consideration of the revenue emergency by the flippant remark that the Payne law, if enacted, or if now in operation, would meet those exigencies, and that no other revenue legislation would be required.

Mr. Chairman, any 10-year-old schoolboy in America knows better than that. Why, Mr. Chairman, it is utterly ridiculous, and I know the gentleman, for whose personality and ability I have great respect, was not in earnest when he made this statement. I have gathered just a few figures to show the absurdity of that contention, which he affects seriously to put forward to the House and to the country as a solution of this revenue situation. He said that the increase of imports under the present law was $357,000,000 over those under the Payne law for the corresponding period of 1913, and that the Payne rates applied to this increase would get the necessary taxes. Now, as a matter of fact, just two items entirely dispose of the suggestion. I find by glancing at the figures of values in our imports that, for the 10 months ending April, 1916, compared with the corresponding 10-months period of 1913, the increase in values was $248,000,000. Only increases of quantity and not of value would enable the specific rates of the Payne law to produce more revenue. Add the other item of $134,000,000 of increased imports that are on the free list under the present law and were likewise on the free list under the Payne law, and the total more than absorbs the gentleman's $357,000,000 to which he was attempting to apply the Payne tariff rates. Now, as a matter of fact, I had hoped that gentlemen on both sides of the House, in view of the serious conditions through which this country, and through which the world, is passing, would readily admit and recognize the plain facts that we alike gather from every avenue of information. Everybody knows that during this war this country has largely ceased to import manufactured goods. For the 11 months ended May, 1916, the imports of manufactures ready for consumption were $281,834,633; for the corresponding period in 1915 they were $312,612,228; while for the corresponding period of 1913, under the Payne law, they were $383,084,000. The amount of imports of manufactures ready for consumption, and from which we get our chief tariff taxes, have largely fallen off and are far below similar imports under the Payne law. The situation is that we are, and have been, during the war, importing from South America and Canada and Asia and Africa and other countries a tremendous amount of raw material, manufacturing it into finished products, and sending and selling them back to the different countries of the world.

For example, we imported for the 11 months ended May, 1915, crude materials for use in manufacturing, $513,000,000, while for the corresponding period ended May, 1916, these imports jumped to $843,614,000, showing an increase of $330,000,000; for the same period ended May, 1915, imports of manufactures for further use in manufacturing amounted to $213,356,000, while the same imports for the corresponding period ended May, 1916, were $313,711,000, an increase of $100,000,000. These two items of imports alone account for $430,000,000 of the so-called increase, about which our Republican friends talk so much in connection with the raising of more tariff taxes.

They have contended until recently that the war acted as a high protective tariff to this country. They now ignore that contention and point to our large imports of raw materials, most of which have been free under all tariff laws, as a desirable source of tariff taxation to meet present revenue necessities.

Why do they not now carry their old-time contention to its logical conclusion and say that the Underwood law has thus allowed the United States to be flooded with imports, and in consequence is driving American manufacturers out of business? They well know that these free imports of raw materials are a boon to our domestic manufacturers. This Republican argument is an insult to the intelligence of every manufacturer in the country.

Mr. Chairman, it is axiomatic that every citizen owes certain duties to the Government under which he lives. He must pay taxes for its maintenance in time of peace and fight for its preservation in time of war. It is a great tribute to our citizenship of the past and present that those who have not had the ability to pay taxes have been ready and willing in times of danger to the Nation to leave family and fireside and hazard both life and limb on the battle field in defense of our free institutions. The question of taxation is always serious and important. It has ever been, and ever will be, a subject of constant controversy. An irrepressible conflict has been waged for thousands of years between the strong and the weak, the former always striving to heap the chief tax burdens upon the latter. That conflict still continues.

Mr. Chairman, the United States to-day finds itself confronted with the problem of levying extraordinary revenues to meet extraordinary expenditures. The General Government is considerably expanding its appropriations for the enlargement of the Army and Navy and our coast defenses, and is also assuming a measurable proportion of expenditures which have heretofore been treated as belonging to the States.

The Army, Navy, and fortifications items have been deliberately increased by the membership of this House without regard to party—each party assuming and claiming its share of the responsibility. The proposed increase of revenues does not involve permanent tax legislation. It simply involves whatever amount of revenue may become necessary to meet almost in its entirety the expenditures of our recent Army and Navy and fortification legislation. Everyone understands that when this duty has been performed and this burden met these tax rates, these tax measures, will naturally be modified or repealed and made to conform to normal conditions and normal expenditures. We may make changes in the income-tax rates periodically, just as every country that has that law changes the rates; we may lower them next year; we may change them again the year after. They are intended to be raised or lowered annually if necessary in order to meet the changing conditions of the Treasury. I still earnestly hope that the proposed normal tax will be 1½ per cent.

The American citizen who enjoys the blessings and benefits of our Federal and State and local governments must pay taxes alike for the support and maintenance of each. His chief concern, therefore, is not to whom he pays but that taxes imposed in support of these respective governmental agencies shall in their aggregate fall as fairly and equitably as possible upon all taxpayers. On account of our dual system of government, it is difficult to impose all these taxes strictly according to this standard. The taxing jurisdictions, as well as the authority to make expenditures, being entirely independent and unrelated, double taxation, conflicts of jurisdiction, and rivalry as to the subjects of taxation often occur. There is no uniformity or coordination between the States and the General Government with respect to either taxation or expenditures.

Until within a recent period both the Federal Government and the States and their subdivisions were able to meet their respective revenue necessities without extended and comprehensive systems of taxation. We are now facing a somewhat new condition. Prior to the Civil War customs receipts met the demands of the Federal Treasury. They averaged less than $20,000,000 a year during the period from 1791 to 1861. They averaged but little over $200,000,000 a year from 1861 to 1916. They averaged less than $275,000,000 a year under the Dingley and Payne tariff tax laws from 1897 to 1913.

Many persons have had the erroneous impression that tariff taxes come from an inexhaustible source of revenue to be tapped at will by the Federal Government and capable of meeting the most extraordinary expenditures. The truth is that the yield of our internal taxes has exceeded the customs yield during 14 separate years from 1861 to 1913.

It is plainly evident that in the future no political party in charge of the Government will ever be able to impose tariff taxes that will yield an amount greatly in excess of $300,000,000, whereas our annual Federal expenditures to be met by taxes alone will aggregate more than $850,000,000. In the very nature of things the tax on whisky and beer will be more liable to decrease than to increase in the future. As far back as 1909 the framers of the Payne tariff law, in search of revenue under normal conditions, were obliged to turn to internal taxes as a means of supplementing the estimated deficient tariff tax yield. They first incorporated in the Payne bill and reported to the House a graduated inheritance tax provision and one taxing coffee. Even these items left a deficit of $10,000,000. Later the special excise tax law on corporations was substituted in the Payne tariff law as a necessary means of meeting the normal expenditures of the Government. In 1913 the framers of the Underwood tariff law inserted a comprehensive and permanent tax on the incomes of individuals and corporations, both as a means of raising adequate revenue and equalizing the tax burdens. This permitted the removal of the tariff from many articles of common necessity and the material reduction of the rates on many other articles of general use by the masses. The customs provisions of the Underwood law will, during normal times, yield near $100,000,000 in excess of the customs laws of any other nation.

With its increases of internal taxes the Payne tariff law yielded less than half the normal revenue. It was impossible as far back as 1909 for even our Republican friends to draft a tariff law that would yield anything near one-half our ordinary receipts. How much less would they be able to do so now! The truth is that our internal taxes were greater

than the tariff taxes during three of the four years of the existence of the Payne law. Having thus been first to turn to internal taxes, Republicans affect now to criticize us for similar action to meet even an emergency. The taxes on whisky and tobacco were together in excess of customs taxes each year but one. Now, the truth is, Mr. Chairman, that every country only receives a comparatively small amount of its revenues from customs duties. We have heard a good deal from high protectionists of Germany and France having very desirable tariff systems. Why, Germany only derives $162,000,000 from her customs duties, and France only $132,000,000. There is a total misapprehension or inconsistency in respect to the arguments of some of my friends on the other side of the House in this connection.

Mr. HILL. Will the gentleman pardon me?

Mr. FORDNEY. Will the gentleman yield for a question?

Mr. HULL of Tennessee. I will be glad to do so.

Mr. FORDNEY. Does the gentleman know the population of France and of Germany is far below our population and therefore the amount raised from revenue is quite in keeping with the amount we raise?

Mr. HULL of Tennessee. If the gentleman will compare the figures he will find the present Underwood law, as conditions were before the war and as they will be after the war, will raise more than a hundred million dollars in excess of any tariff law on the statute books in any European country.

Mr. HILL. If the gentleman will permit, will the gentleman state the per capita of the population of both of those countries is more than double ours?

Mr. HULL of Tennessee. I hope to have space to insert that in my remarks, which I think will justify absolutely my suggestion.

Mr. FORDNEY. Will the gentleman yield for one question?

Mr. HULL of Tennessee. Yes.

Mr. FORDNEY. The gentleman is aware that England raised $3.78 per capita on import duties, whereas we only raised $3.50?

Mr. HULL of Tennessee. The gentleman has exhibited such a distaste of everything English that I have been confining myself to France and Germany. [Applause on the Democratic side.]

Now, Mr. Chairman, the truth is that in Germany the tariff law is not enacted primarily for revenue at all. It is enacted in a manner that the gentleman from Massachusetts [Mr. GILLETT], and those who think as he does, would enact a tariff law, primarily to allow the manufacturers and other special classes and interests to get together and fix up such schedules as satisfy their selfish business purposes at the expense of the masses of the people. The Government has practically nothing to do with it. They appoint a board of business men there, who meet, and after full conference and a decision as to just how much the people will stand without an open revolt, recommended it to the Parliament, and it becomes a law. One result of that class system would have been that Germany would have been in charge of the socialists before now if this war had not broken out.

Mr. SIMS. Will my colleague yield?

Mr. HULL of Tennessee. I will.

Mr. SIMS. What amount of revenue does Germany collect from all other sources compared with the amount of tariff?

Mr. HULL of Tennessee. She gets about $760,000,000 of receipts from many sources. I am sorry that I have not time to go into that again now.

Mr. SIMS. But which would show that the tariff taxes of Germany are much less in proportion to the amount raised than they are in this country?

Mr. HILL. Does not the gentleman know that it is not the manufacturing interests of Germany that control legislation, but it has been, and absolutely, for years the agrarian classes?

Mr. HULL of Tennessee. I am only stating the authorities I have with respect to the German tariff commission. I am only surprised, though, that they have not fallen into the hands of the agrarians a long time earlier.

Mr. Chairman, notwithstanding that since the Civil War our revenue system has been lopsided in its effects, the chief taxes having been imposed on consumption, the people have borne this heavy and unequal burden with small complaint.

Another new factor arising out of the European war necessarily enters into our present revenue considerations. A lesson every nation has long since learned is that during a period of general war tariff taxation becomes utterly unreliable as a means of meeting either ordinary or extraordinary expenditures. Nations, therefore, no longer hesitate, when such wars come, to turn at once to internal duties as the only certain dependence for suitable and adequate revenues. Whatever may be the tariff policy of the political party in charge of this Government in normal or peace times it is likewise compelled under the conditions to seek the chief amount of revenue from internal taxation. It would be worse than economic folly at present to hold to our shattered customs resources as a means of securing any substantial and certain amount of additional revenue. This plain truth, demonstrated by every war, needs no elaboration.

I desire at this time most strongly to point to the fact that whatever views or purposes any political party may profess in regard to an early general revision of the tariff, any such proposed revision made within the next two years would be far worse than no revision. It would be the merest guess and haphazard revision. The most intelligent revision of the tariff that could possibly be made under existing conditions would within two years after the war require a still more general revision in order to meet the new changes in commercial, economic, and financial conditions resulting from the war. No economic truth is more universally recognized than the fact that any tariff revision attempted when the cost of production, prices, and trade conditions in other commercial countries are wholly unnatural, abnormal, and out of joint, would be unintelligible, irrational, and entirely futile. Its chief effect would be to create dreaded suspense, confuson, and practical demoralization in all domestic business affairs until a later revision could be had.

Viewed from any standpoint, the citizen must be selfish, greedy, and shortsighted who would demand or seriously suggest tariff revision before normal conditions develop and reveal themselves.

At the close of the war Europe, commercially and industrially speaking, will be flat on her back. She will be most seriously handicapped by high prices, high wages, inflated currency, destroyed capital, scarcity of skilled labor, loss of export trade, high taxes, burdensome interest, extreme scarcity of all raw materials, and great depletion of her stock of manufactures, both for export and domestic purposes. The principal countries at war will be paying greater annual interest charges than the total amount of taxes annually levied by the United States Government. With these tremendous handicaps, no intelligent person expects Europe to be able to rehabilitate herself commercially and industrially within any short period of time. Many of her best markets have forever been lost to the United States.

Since this Government now has in operation an honest, fair, sound, and well-balanced system of tariff taxation, to which all business has become adjusted, it would be both unwise and suicidal commercially to start an agitation or propaganda to materially change or modify the existing system within the next two or three years and before the manifest results of the European war upon trade, finance, and industry the world over shall become known.

In the meantime the Underwood law, which, notwithstanding its lack of opportunity to be fully tried out, has so far proven so wise, equitable, and beneficial, that it should from every viewpoint continue in permanent operation. It will surely accomplish its share in safeguarding the Treasury and will work no injustice to any legitimate business interests in this country. Whenever new facts shall be developed through the proposed tariff commission or other source which suggest a change in the rate upon a given item here and there and now and then, such change can be promptly made to a competitive basis, with the result that in the end each phase of the present tariff law will become practically and intelligently adjusted to the new conditions to follow the war. This course would avoid the evil and injurious effects on business of constant and useless tariff agitation extending over the next few years.

In my judgment the life of the modernized ultrahigh protective tariff system as heretofore developed in this and one or two other leading countries has reached its end. Apart from its essential injustice to the people, this system has become a positive menace to the peace of all trade countries. It is naturally utilized for purposes of rank discrimination, practical boycotting, undue preferences, and other irritating practices. It also involves, in its logical development, as in Germany, subsidies, bounties, rebates, and drawbacks. The trade practices growing out of the very spirit and operation of these so-called scientific high protective tariff systems have been a source of constant controversy and irritation among the leading commercial nations. It is a matter of common knowledge that the operation of the many unfair, injurious, and trouble-making trade practices and the strenuous trade conquests pursued under these systems chiefly contributed to the outbreak of the present European war.

If I were President of the United States I should, at a later and suitable date, propose to the governments of all commer-

cial nations that at the close of the present European war an international trade conference be held in the city of Washington for the purpose of establishing a permanent international trade congress, the function and duty of such congress to comprise the consideration of all international trade methods, practices, and policies which in their effects are calculated to create destructive commercial controversies or bitter economic wars, and to formulate agreements with respect thereto, designed to eliminate and avoid the injurious results and dangerous possibilities of economic warfare, and to promote fair and friendly trade relations among all the nations of the world.

In the face of Europe's awful condition, it is the shallowest pretense that our giant industries, instead of encouraging their representatives here to perform a patriotic duty by imposing upon them what is comparatively a nominal tax for increased armaments, would threaten to block preparedness legislation and to hold it up unless they are protected by the most exorbitant tariff rates against the millions of former skilled laborers who now lie sleeping in their graves in Europe; against run-down foreign factories that are standing idle; against the women who in a feeble way are trying to turn out enough goods for domestic necessities; against those desolated countries, which, like the South following the Civil War, can not hope to rehabilitate themselves either physically or commercially or financially for years to come.

Gentlemen may undertake to go some distance in the coming campaign on this issue, but in my judgment they will not be successful in getting far.

Mr. HILL. May I ask the gentleman a question, or would he prefer that I should not do so?

Mr. HULL of Tennessee. I shall be glad to yield to the gentleman a little later. I am trying to get on to these bills.

Mr. HILL. I wanted to ask in regard to the $55,000,000 English increase during the last month.

Mr. HULL of Tennessee. I have those increases here and shall try to insert them in my remarks.

The whole trouble with some gentlemen in this House is that they persist in an unreasonable and unseasonable discussion and advocacy of that extreme high system of tariff protection common to two or three European countries, which, I repeat, resulted in such rank discrimination and unfair advantages among different nations that the bitterness and feeling aroused was one of the prime causes of the European war.

While the whole world is undergoing a change in many momentous respects, the United States is not without its own problems. We find that in addition to normal expenditures we must meet two large, separate, extraordinary expenditures, viz, those relating to Mexico and those relating to the increase of the Army and Navy and our fortifications. It is not deemed wise or just that the aggregate amount of both these extraordinary expenditures should be met by taxation in the same year. In accordance with well established fiscal practice under like circumstances the Mexican expenditures should be met by the issuance of bonds; the additional Army and Navy expenditures should be met by increased taxation. This course the committee has pursued.

In looking over the field of internal taxation we found as the most available and equitable sources of additional revenue an increased tax on incomes, an estate tax, and a temporary tax on the manufacture of munitions.

Mr. LONGWORTH. Will the gentleman yield at that point for a question? Has the gentleman made an estimate of the total additional cost so far as the Army and Navy are concerned, as illustrated by the present condition of those bills in the Senate?

Mr. HULL of Tennessee. An estimate was made two or three days ago after very careful inspection, just before the committee's report was written, and after very careful examination of every bill pending and passed, and of all the data on hand by the respective departments.

Mr. LONGWORTH. Can the gentleman state the total amount?

Mr. HULL of Tennessee. I have it here in my papers. I think I shall read it very soon.

Mr. LONGWORTH. Is it more than the $266,000,000 provided in this bill, or in your legislation?

Mr. HULL of Tennessee. Undoubtedly, if those appropriations that are estimated to be expended in 1917 shall all be expended, they will be more.

It can be safely stated that we would not be obliged to broaden the base of Federal taxation to this extent, nor to any additional extent, except as a means of meeting the extraordinary expenditures to which I have alluded. I may say here that I think the Senate is about to overdo these preparedness appropriations. I believe in going to the fullest reasonable extent, but there should also be a reasonable limit. The reasons and the policy in support of increased income taxes are obvious.

I have just listened to my friend from New York, who seemed to be laboring under the misapprehension that the income tax is a head tax, so that a sheepherder in the Rocky Mountain States would pay just as much as Mr. Rockefeller or Mr. Carnegie, so that the plowman in the South would pay just as much as Mr. J. P. Morgan. And under his theory those who amassed 40 per cent of the wealth of the country could segregate themselves in the State of Nevada, for example, and demand that the tax be equal and uniform with respect to every citizen in America and that the little State of Nevada should only be taxed according to population and not wealth. Under this delightful theory wealth could almost entirely exempt itself from all taxation.

I have heard some complaint about these tax rates. Mr. Chairman, some of the European countries have made two or three different increases of their income-tax rates, and either one of those increases has amounted to more in revenue than the entire provisions of this income-tax bill.

Mr. STAFFORD. Will the gentleman yield?

The CHAIRMAN. Will the gentleman from Tennessee yield to the gentleman from Wisconsin?

Mr. HULL of Tennessee. Yes.

Mr. STAFFORD. The gentleman has stated on a couple of occasions that the burden of taxation should be distributed equally among the people.

Mr. HULL of Tennessee. I am soon coming to that point. I have some other items that I wish to refer to before he asks his question.

Mr. STAFFORD. The point I make specifically is why the gentleman levies this burden of four-fifths of the entire revenue of this bill upon one-half of 1 per cent of the people of this country?

Mr. HULL of Tennessee. I am glad the gentleman asked the question, and I am going to ask the gentleman from Ohio [Mr. LONGWORTH] and the gentleman from Connecticut [Mr. HILL] to correct their speeches in that respect before they are sent out as campaign documents.

It has been chronically paraded before the country that the income tax of $124,000,000 was paid by less than one-half of 1 per cent of the population of this country. The fact is that practically one-half of the income tax is paid by some two and one-half million stockholders of 190,000 corporations. You add the three hundred thousand and odd people who have made returns and paid taxes this year to the two and one-half million stockholders and you will have the number of persons who pay the income tax. I should say, too, that our law practically makes the family the unit of income for the purpose of the tax, so that the tax in its chief effects falls on the family, and you would thus properly multiply the number of individual returns by five.

Now, Mr. Chairman, in one foreign country alone an income of over $3,500 pays 10 per cent; of over $5,000, 12½ per cent; over $10,000, 18¾ per cent; over $15,000, 25⅝ per cent; and an income of over $100,000 pays a rise of 33⅓ per cent. For this fiscal year that country expects to realize from its income tax $975,000,000. And yet, when the United States proposes to expend this revenue for the same purpose—building navies and extending fortifications and increasing our armies—we hear complaints because what is relatively a light tax is imposed not permanently but purely for the temporary purpose of meeting these temporary extraordinary expenses.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Illinois?

Mr. HULL of Tennessee. Yes.

Mr. DENISON. Will the gentleman state the increase of the income tax in percentages as provided by this bill?

Mr. HULL of Tennessee. I have it here.

Mr. DENISON. The increase in percentages.

Mr. HULL of Tennessee. The increase of percentage runs from 1 to 4 per cent.

Mr. DENISON. I would like the gentleman to state upon what incomes the different percentages are placed.

Mr. HULL of Tennessee. They are set out in the bill.

Mr. DENISON. Is there the same percentage of increase on the large incomes as there is on the small incomes?

Mr. HULL of Tennessee. The normal tax applies to everybody, from the wealthiest man down to the poorest man on the income-tax list. It applies to corporations as well. The normal tax rate has been 1 per cent. We make that 2 per cent. That increases the normal tax rate on everybody alike. On top of that we jump the extreme surtax rate 4 per cent in addition to this 1 per cent levied on everybody, and in addition to that we brought the higher classifications of income much closer to-

gether, so that those with larger incomes will still pay a much larger comparative tax than is apparently indicated under the changed rates.

Mr. DENISON. Then, I understand this bill increases the income tax on the larger incomes as much as it does on the smaller incomes?

Mr. HULL of Tennessee. The gentleman can make his own figures. I will insert in my remarks, if I get time, the effect of the rates on every class of income. The gentleman can make his own figures.

Mr. DENISON. I thought the gentleman had it figured out and could tell us briefly.

Mr. HULL of Tennessee. I am trying to get on to another stage before my time expires. Otherwise I would take pleasure in going into those details.

Now, Mr. Chairman, I want to refer to a charge that is often made—I think it was made by two or three of my colleagues on the committee in my absence yesterday—in line with the suggestion of the gentleman from New York who has just preceded me. Every person in this country knows that an income tax, which, by the way, is universally conceded in every country on earth that is civilized to be the most equitable tax that can be imposed, taxes those who have incomes over a certain amount. Those who unfortunately have them not are not to be required to contribute to this particular tax.

Naturally, when we take a money center like New York, as it is to-day, when we consider the fact that it is the great commercial metropolis of this country, and the gateway to all international trade and finance and commerce, when we consider the fact that the copper mines of Utah, the silver mines of Colorado, the iron ore mines of Minnesota, and the fields, forests, workshops, and factories of all the States South and West and East and North pour one mighty stream of earnings and profits into the city and State of New York annually, every one would agree, if he desired to be fair, that where under our business conditions one great city or one great State draws its wealth alike from every part of the country—everyone must agree that an honest tax, a fair tax, would tax wealth wherever it finds it, and would not permit the income from wealth to segregate itself and seriously challenge the Government to reach it for a reasonable tax.

Now, I wish in that connection to call attention to our tax conditions and tax burdens as they actually exist. If the income tax were the only tax that the American people were going to pay, some of the arguments we hear would be applicable; but it is one of the small items in the aggregate tax laws of this country under which all the people pay.

I have made the most accurate computation possible of all taxes paid by the American people for all governmental purposes, Federal, State, and local, for the year 1913, as follows:

Actual taxes collected in 1913.

General Government	$664,000,000
States	307,000,000
Counties	310,000,000
Municipalities	850,000,000
Total	2,130,000,000

Twenty-two dollars per capita, or $110 per family.

All the people from the hod carrier up were paying to the States and their subdivisions $1,466,000,000, or $15.10 per capita, or $75.50 per family, in 1913.

The masses were also paying to the Federal Government $627,000,000, or $6.46 per capita, or $32.30 per family, in 1913.

It must be agreed that in order to secure equitable tax systems and consequent equitable tax burdens in the United States, the Federal Government, the States, the counties, and the municipalities must, when in the act of imposing new or additional taxes, consider and have in mind all the existing tax laws and the nature and extent of their burdens upon the people. Such new tax legislation would therefore have to conform to the tax conditions already existing.

A recent legislative tax commission of New York in its report on February 14, 1916, in support of an income-tax bill, which it had drafted, stated that under the terms of the bill—

Seventy-two thousand three hundred and forty-five people having incomes less than $3,000 would pay a total of $287,587, while 82 people having the larger incomes in the State would pay a total of $1,809,649. The result is almost startling, and yet the 82 would be paying only their share.

This same report cites a statement from the Wisconsin tax authorities as follows:

Two groups of taxpayers, 667 in number, constitute less than three one-hundredths of 1 per cent of the entire population, but contribute one-half of the income tax.

Another New York State tax commission reported, as most all other State tax commissions agree, that under existing State laws the burden falls principally upon the small property owners.

The Treasury officials estimate that to lower the present Federal exemption to $2,000 and $3,000 would, at existing normal tax rates of 1 per cent, apply to 200,000 additional persons and afford only $4,500,000 additional revenue.

In certain European countries where the income tax is the largest source of revenue and local taxation is comparatively light in its burdens, the exemption is naturally lowered to the small incomes. I should not be very averse to lowering the exemption here, not so much for the revenue which would be small, but to remove the unjust prejudice against the law on account of the exemption.

The Federal Government wants $200,000,000 additional taxes. Where will you get it? Will you turn to the masses who are already paying $1,466,000,000 State and local taxes at the rate of $75.50 per family, and who will pay in addition $550,000,000 in consumption taxes to the Federal Government during the fiscal year 1917? Shall the masses be mulcted for the remainder of the taxes needed? Or shall the additional taxes required be equitably imposed upon the larger owners of income-producing property and from a small graduated estate tax, and a tax upon the profits from the sale of munitions? This latter course will square with every principle of justice and equity in taxation. The present income-tax payers in the United States derive an aggregate annual profit of $7,000,000,000. This amount is easily a 4½ per cent profit on our total national wealth of $200,000,000,000 after deducting the tens of billions owned by the Government, States, counties, municipalities, charitable organizations, and so forth, which would leave not exceeding $150,000,000,000 to $160,000,000,000. If, therefore, a standpatter charges that a compartively small percentage of the total population pay the income tax, the answer is that a still smaller percentage owns or controls practically one-half the total wealth of this country. When you tax wealth—that is, persons according to their ability to pay—you must go where the wealth is.

Take the State of New York, with its greater than $25,000,000,000 of wealth. More than one-half of that wealth consists of intangible and other personal property, and yet it paid practically nothing to the Federal Government, prior to the income-tax law, and but a small amount to the State, or a county, or a municipality; but as to the small property owner, whenever the assessor goes upon his little farm he sees the span of mules, he sees the milch cow, he sees the farm implements, he sees everything on that little farm. There is no chance for it to escape taxation. But when you go to the cities the holders of our $50,000,000,000 of intangible personal property have it in safety vaults and do not pay taxes on more than 5 per cent of it, on the average, in this country. Tangible personality is reached to a greater extent.

Mr. MADDEN. Will the gentleman yield for a question there?

Mr. HULL of Tennessee. Yes.

Mr. MADDEN. Does the gentleman pretend to say that the imposition of this $210,000,000 now proposed to be levied is going to relieve the burden of taxation to the extent of $210,000,000, or is it going to add that much?

Mr. HULL of Tennessee. Certainly, I made no remark that would bear the opposite construction, I hope.

Mr. MADDEN. I understood the gentleman to say that it was going to relieve the burden of taxation on the people to that extent.

Mr. HULL of Tennessee. I was undertaking to say that it was proposed to supplement existing tax laws, in the light of their operation and effects on all the people, by this provision.

Mr. PLATT. Will the gentleman yield for a question?

Mr. HULL of Tennessee. Yes.

Mr. PLATT. Did I understand the gentleman to say that those who have no incomes, or who have incomes below the minimum, are unfortunate enough not to be able to contribute to this tax?

Mr. HULL of Tennessee. Yes; I said that, in the light of the provisions of the law.

Mr. PLATT. Is it the gentleman's theory that the income tax is paid by the people who pay the money over, or does it fall back on others at all?

Mr. HULL of Tennessee. I have read all the authorities I could find on it during the past 10 years, and every reliable authority I have found says that the income tax is less susceptible of being transferred than any other tax that has ever been devised. [Applause on the Democratic side.]

Mr. DAVIS of Texas. Amen!

Mr. PLATT. If that is so, why did the gentleman from Tennessee [Mr. HULL] and the gentleman from Texas [Mr. DAVIS],

who says "Amen," vote in this House only a little while ago to exempt farm loans from the income tax, on the ground that otherwise the tax would go back onto the farmer?

Mr. HULL of Tennessee. I would have been glad to discuss the rural-credit bill as to that feature when the bill was under consideration, but I can not, for utter lack of time, go into that just now.

Mr. HARDY. Will the gentleman yield for a brief question?

Mr. HULL of Tennessee. How much time have I remaining, Mr. Chairman?

The CHAIRMAN. The gentleman has 10 minutes.

Mr. HULL of Tennessee. I hope the gentleman will pardon me for a few moments.

Mr. HARDY. I just want to ask one brief question. If this income tax is all drifted back onto the people, why should those who pay it object to paying it?

Mr. HULL of Tennessee. That question answers itself.

Now, Mr. Chairman, a number of minor changes have been made in the present income-tax law. When it was enacted it was impossible, in the first place, to paragraph it as thoroughly and accurately as should be done, and before the law becomes embedded in the court decisions and the textbooks it was thought by the committee that it should be reparagraphed and a number of kindred provisions in separate parts of the bill brought together under their appropriate headings. These few general changes have been made.

There have been a number of small administrative changes made. There has also been an elaboration of the present provision relating to the taxation of nonresident aliens. This question involves many difficulties. It involves many difficulties to every Government that imposes a tax on incomes and inheritances. That is the matter of avoiding double taxation. My judgment is that by elaborating this provision so that nonresident aliens receiving interest and dividends from our domestic securities would be taxable without discrimination against resident citizens would afford a basis for the working out of a reciprocal agreement through the State Department with such principal countries as Germany, France, and Great Britain, which might later be written into this law. It would be of incalculable convenience and value to each of the leading countries to have an equitable reciprocal agreement which could be incorporated in their respective laws, making a proper allotment of taxes from inheritances and incomes between the different countries. Another change would allow banks loaning money on mortgage or lien notes and issuing bonds secured by such notes and selling them to investors to deduct their bonded interest as an expense.

Now, I wish to say just a few words with respect to the State taxes.

Mr. SHERLEY. Before the gentleman leaves the income-tax provision there is one matter I would like to ask him about. Under the existing law the income tax as it applies to persons permits a deduction by the individual of any interest that he might pay during the year. When it comes to corporations, only interest in certain cases and to a certain extent paid by corporations is permitted to be deducted. Now, why?

Mr. HULL of Tennessee. I have an idea as to the phase of this matter that the gentleman has in mind.

Mr. SHERLEY. No; before I come to the particular matter about which I talked to the gentleman, I want to understand this basic matter. Perhaps I can direct him by saying that the only reason I have been able to find from anybody has been the suggestion that otherwise a corporation, by distributing its earnings in the form of interest on a debt to its stockholders, might avoid the payment of a tax, but the provision has resulted in endless confusion in the department, conflicting rulings, and more trouble than almost any other single paragraph in the income-tax law.

Mr. HULL of Tennessee. There was a somewhat drastic provision on that subject in the special excise tax law of 1909, which was carried in modified form into the present law, and we have undertaken to relax that to some extent. I think the original theory of the matter was that corporations could issue quite a lot of watered stock, transfer that into bonds, mortgage their property, and incur interest, and make a great many shifts in many ways that would result in avoiding the real purpose of the law. This bill allows them to deduct interest on an amount of indebtedness double their capital stock.

Mr. SHERLEY. Well, but the interest that it pays upon its debt, if it be a legitimate debt, is in turn accounted for by individuals when they come to make their returns as individuals. Now I can see why, when you do not tax individuals but only tax corporations, you should have a particular provision touching interest payments. But now you are taxing both the corporation and the individual, and I wanted to find out whether the committee had considered the simplification of the law by providing that the corporation should do as individuals do, and that all interest paid should be considered as an expense of doing business, assuming of course that it is a legitimate one. If it is a fraudulent one, it can be checked up otherwise. This would cut out a multitude of questions as to the character of business a corporation is doing and whether or not it is entitled to deduct this interest.

Mr. HULL of Tennessee. Many laws let corporations pay taxes with respect to dividends and interest. The corporation excise tax law partially required that. This law carries out the same provision, in a measure, in line with that theory that the corporation would not be allowed the same deduction in view of the manner in which it was organized and its superior business advantages that the individual would.

Mr. SHERLEY. Yes, but why? I want to get the reason and not the fact. I know that you made the distinction between taxing a corporation and an individual. Why should not the corporation that legitimately pays the interest on its debt be entitled to the deduction that the individual is? Why should the corporation that needs to borrow money to do business be penalized, whereas a corporation that does not have to borrow is benefited?

Mr. HULL of Tennessee. There is no relation so far as taxation is concerned between the bondholder and a corporation. The law exacts of the bondholder tax on the entire interest received from whatever source. As to corporations I might repeat the statement already made, but I do not think that is necessary. The original provision was modified, but it was not thrown wide open.

Mr. SHERLEY. This is a most important question, more important than political discussion, and I would like to have some discussion on the form of the bill.

Mr. STAFFORD. The gentleman can not get that under the rule.

Mr. SHERLEY. Oh, yes; but gentlemen over there are as guilty as they are on this side, for they have taken up the time in political discussion.

Mr. STAFFORD. I would rather have it under the five-minute rule.

Mr. HULL of Tennessee. I wish in the brief time I have left to call attention to the proposed tax on estates and comment on the objections offered on account of the fact that the States have many inheritance-tax laws. I found, Mr. Chairman, as has been suggested by some of the ablest economical writers and students in this country, that the inheritance tax is absolutely equitable and just. I found that it is, possibly, the oldest tax law in existence. It is common to every country, old and young, large and small, throughout the world. It is the quickest and the easiest tax collected that can possibly be devised. Some countries, with half our wealth, have been during peace and normal times realizing more than $100,000,000 on this particular tax levy, and without complaint from anybody.

Mr. MADDEN. How about the case where the tax is duplicated?

Mr. HULL of Tennessee. I will take that up now. The objection is offered that it results in duplication or double taxation as they generally state it. Double taxation is offensive and unfair in the sense that it is unequal. But if one State imposes a tax rate on real estate and the county imposes a tax on the same real estate, and the municipality imposes a tax on the same real estate, that is duplicate taxation, but it is not double taxation in an objectionable sense. [Applause.]

Dr. E. R. A. Seligman, one of the ablest economic writers in this country, and the most effective advocate of taxes on incomes and inheritances, has recently pointed out in a magazine article the fact that inheritances afford the largest untapped field of taxation in this country and suggests the wisdom of a Federal tax. I am in hearty accord with his views, although I confess, in common with many others, a former bias in favor of reserving this source entirely to the States. It is self-evident that the Federal Government in the future must look to internal taxes for more than $500,000,000 of revenue. In view of the far greater revenue requirements of the General Government and the comparatively small amount of taxes derived in the aggregate by the States after many years of experimentation with inheritance-tax laws, it is difficult to escape the conclusion that by far the most practical recourse of the Federal Government is to estate or inheritance taxes. The most recent returns show that the 42 States having inheritance-tax laws in some form derive only $29,000,000 revenue therefrom, whereas England, with less than half of our wealth, derives over $100,000,000 from her estate tax alone.

Some governmental agency should derive a substantial amount of tax from this undeveloped source. The justness and the

policy of this tax is not questioned; it is cheap and easy of collection and affords a constant and regular yield of revenue. There is a general demand among the people throughout the country for a substantial tax on the transmission of property. The States are under a number of handicaps in their efforts to impose comprehensive inheritance taxes. They are hampered by lack of jurisdiction; harsh double taxation constantly results from conflicting State laws; great difficulties in reaching intangible and other personal property for taxation are experienced at every step. Claims and counterclaims between different States as to the domicile of a decedent frequently result in protracted legal controversies.

It is utterly impossible thus far for the States to secure any sort of uniformity with respect to these handicaps. Another most serious drawback to the State laws is the fact that when one State undertakes to establish a substantial scale of rates wealthy taxpayers change their domicile to a State having lower rates or none at all. New York tax authorities estimated that $400,000,000 left that State within the first eight months after the legislature increased the inheritance tax rates. All these difficulties would not interfere with the successful operation of a Federal law. While it is true that the General Government has the exclusive right to impose customs taxes, it is equally true that far less than half the requisite amount of revenue can be obtained from this source. It is also true that the States are given sole power to impose direct taxes in this country. They have the power to impose direct taxes on our total real and personal property. The value of real property and improvements alone is about $110,000,000,000.

The power of the States to impose special, business, license, and other taxes is well understood. European Governments have found from experience that Federal uniformity in estate and inheritance taxation is both wise and measurably necessary. The German Empire levies a federal inheritance tax and distributes one-third of it among the States. Great Britain likewise imposes a combination of so-called death duties, including estate, legacy, and other taxes, and distributes 33⅓ per cent of their receipts to her subdivisions. It would be highly desirable for the States and the Federal Government to secure $150,000,000 a year from estate and inheritance taxes. Should one-third go to the States they would thus receive a far greater inheritance tax yield—almost double—than they have heretofore derived from their local laws. In my opinion, citizens interested in developing this tax to a substantial revenue producing point would find it highly desirable to give attention to the problem of State and Federal coordination. I am not concerned so much as to the method as I am in seeing the States and Federal Government agree on a basis that would award to each their equitable proportions of an annual yield of $150,000,000 of estate and inheritance tax revenue. I have prepared for discussion and consideration a measure designed to accomplish this result. I contemplate formally introducing it at a later date.

The effect of the rates carried in the pending estate-tax bill when considered as a supplement to our State taxes on shares of estates will not be unjust or unreasonable; on the contrary, the State laws and the proposed Federal law, when considered as a combined tax measure, so supplement each other as to make the entire taxes imposed by each more equitable than heretofore. The State laws have a rather high graduation on the shares of collaterals which the proposed measure does not impose. The States tax the smaller estates and shares thereof. The two systems taken together, therefore, do not conflict, but constitute a better rounded piece of fiscal legislation.

The proposed estate tax would also harmonize with the present income-tax law in that the estate tax would in effect come from those receiving unearned income and not from those receiving earned income. There can be no possible objection offered to the effect that this tax would injure or affect capital. Wealth increases more rapidly in this country, perhaps, than in any other. The present annual increase of our national wealth must be around $12,000,000,000. The proposed estate tax, therefore, would amount to less than one-half of 1 per cent of our annual increase of wealth and would never touch capital.

From 1904 to 1912 our national wealth increased $80,000,000,000, or $10,000,000,000 a year. An estate or inheritance tax of $150,000,000 equitably and uniformly adjusted would only be 1½ per cent of the annual increase of our national wealth and only one-twelfth of 1 per cent of the value of our total national wealth in 1912, which was $187,739,000,000. The wealth of this country is more than double the wealth of the United Kingdom, or any other country in the world. The revenue derived from the combined State inheritance-tax laws aggregates about $29,000,000, which is about three-tenths of 1 per cent of our annual increase of wealth prior to 1913, amounting to $10,000,000,000, or one-sixtieth of 1 per cent of our total national wealth.

In this connection the fact should not be overlooked that during the life of the owner not exceeding 50 per cent of the value of his realty and from 5 to 20 per cent of the value of his personalty is reached for any kind of taxation. Who, therefore, can object to the payment by his estate left at death of a trivial emergency tax such as the proposed measure imposes?

Experience teaches us that three-fourths of the value of real estate passing by death goes to direct heirs. The reason the States get very little revenue from their inheritance laws which impose a tax chiefly on collaterals is obvious. The most wholesale evasion of the State inheritance-tax laws by people possessing large estates at death is constantly occurring. The various methods of evasion are too generally known to require further reference. Another serious disadvantage under which our State laws labor relates to the properties of many public-service and other corporations.

I am informed, for example, that the street car system of Milwaukee is valued at $50,000,000 and that the stock of this corporation is vested in a holding company in New York. Virtually none of the stockholders reside in Wisconsin. Naturally, Wisconsin gets practically nothing under its inheritance-tax law from this immense property. I think this condition is somewhat general throughout the country. It is easy for the real owners of stocks and other valuable properties, especially of an intangible nature, to domicile themselves in States with low inheritance-tax rates or none at all, and thus render it most difficult of access to their estates under our State laws.

An estate tax in this country should carry suitable rates and should be combined with a well-balanced system of share taxes when viewed as a permanent tax measure. The proposed estate tax, therefore, is not within itself a comprehensive bill, but is primarily intended to aid in meeting the temporary and extraordinary armament expenditures. In pursuit of exact equity under State share tax laws the estate is divided and subdivided, and often again subdivided, until the shares become so small that even very high rates afford but comparatively small and disappointing revenues. Under the general laws of descent the proposed estate tax would be first taken out of the net estate before distribution, and distribution made under the same rule that would otherwise govern it. Where the decedent makes a will he can allow the estate tax to fasten on his net estate in the same manner, or if he objects to this equitable method of imposing it upon the entire net estate before distribution he can insert a residuary clause or other provision in his will, the effect of which would more or less change the incidence of the tax.

In view of that portion of the increased expenditures for the Army and Navy and fortifications which will be permanent, and the course of the Federal Government in taking over many important expenditures heretofore considered as belonging to the States and their localities, such as public roads and other appropriations, it is evident that in the future the Federal Government will be obliged to impose a reasonable tax on incomes, estates, or inheritances, tobacco, and whisky as internal duties, in addition to the tariff taxes.

In my judgment, a well-balanced system of coordination between the States and the Federal Government, with respect to both income and inheritance taxes will prove wise, necessary, and feasible. With such plan in operation, the States could repeal their general property-tax systems and the people would enjoy a system of equitable taxation not at all burdensome. This method would embrace reciprocal arrangements for the assessment and collection of the taxes. The Federal Government would properly allow each State imposing similar taxes access to its records, showing in strict confidence the returns of taxpayers under the income tax law. I should be glad to see that provision in the proposed measure. This country is to-day facing the great problem of devising a broad, comprehensive system of equitable taxation, which will meet the revenue requirements of all governmental agencies from Federal to municipal, so that the burden as a whole will fall in just proportion upon each citizen.

Mr. Chairman, during the war almost every nation has been obliged to enact temporary war emergency-tax laws, imposing such as excess-profit taxes, excess-income taxes, and other excess or super taxes. This action has been based upon revenue emergencies and necessities.

In the pending bill the committee sought to eliminate all the special taxes possible, and has the hope that the remainder may be eliminated within a short time. At the same time, in accordance with the sound policy pursued by several other nations, a provision has been reported in this bill imposing a tax upon the profits from the sale of certain munitions and like products. The rates thus imposed are lighter in their effects than those of any other excess-profits tax law. Canada imposes a rate of

25 per cent of excess profits, Germany and England each 50 per cent, and France a graduated tax of from 5 per cent to 30 per cent.

I regret that my time does not permit me to discuss the provisions of this bill, and in fact some of the other tax provisions of this omnibus measure, in detail.

I hope that, taken as a whole, the pending measure will meet the approval of this House, and I am confident it will, under the circumstances, meet the approval of the country.

Mr. KITCHIN. Mr. Chairman, I yield to the gentleman from Illinois [Mr. WM. ELZA WILLIAMS].

[Mr. WM. ELZA WILLIAMS addressed the committee. See Appendix.]

Mr. KITCHIN. Mr. Chairman, how much time is there remaining?

The CHAIRMAN. The gentleman from Michigan [Mr. FORDNEY] has 37 minutes remaining and the gentleman from North Carolina 15 minutes.

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. Thirty-seven minutes and 15 minutes will carry us past half past 1 o'clock. What is the order of the House?

Mr. KITCHIN. We were to have two hours and a half.

Mr. MANN. My impression is—I was not here—that the order was that general debate would expire at half past 1.

The CHAIRMAN. The Chair is informed that it was extended two hours and a half without reference to the particular hour.

Mr. KITCHIN. I understand there was unanimous consent to an extension of two hours and a half, an hour and a quarter on each side. We thought that we might get through at 1.30.

Mr. FORDNEY. Mr. Chairman, I yield 30 minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Chairman, Congressman QUIN, a Democrat from the State of Mississippi, one of the Democratic leaders of the House, in a speech on the floor yesterday on the pending bill, said in substance in reply to a charge of Democratic extravagance:

> Is it extravagance to shut out the intrenched privilege gang that has so long controlled the burglars who dominate the Grand Old Party? We have shut the door in their faces and said, "No more shall you put your heads inside of the people's Congress."

Mr. QUIN boasted of the determination of his party to collect the taxes to maintain the Government from the North, while they allow the South to escape. He said:

> Through your pernicious and insidious protective tariff you want to rob the farmer and tax all his farming implements and everything he buys.

From the amount of applause that QUIN's remarks received from Democrats on the floor it seems evident that he was expressing the sentiments of his party.

Four Northern States, Massachusetts, Pennsylvania, New York, and Illinois, paid $85,000,000 of the $124,000,000 collected from income taxes during the fiscal year closed June 30, 1916, while 12 Southern States, Mississippi, from which the gentleman, Mr. QUIN, comes, Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia, paid a total of $5,389,670. Twelve Northern States paid for the fiscal year 1916, $409,000,000 out of the $512,000,000 internal taxes, while the other 36 States, including Mississippi, paid only $103,000,000.

The Democratic Party is claiming through its newspaper organs that they have provided appropriations of $669,000,000 in the preparedness program. The truth is that the pending naval bill carries $228,000,000 more than the naval bill for last year, and the Army bill $166,000,000 more, making $394,000,000. There is considerable difference between $669,000,000 and $394,000,000, or was when I went to school. The pending bill proposes to double the income tax, and provides that $197,000,000 shall be raised under the provisions of the bill. The Democratic leader of the House, Mr. KITCHIN, in his speech explaining the bill, said that the proposition is to raise $266,000,000, $69,000,000 of this to be taken out of the surplus in the Treasury. The plan outlined in the bill does not contemplate raising revenues for the expense incurred in the Mexican fiasco, but it is proposed to issue $125,000,000 of bonds to meet whatever expense is incurred in connection with the mobilization of the militia and the concentration of the Army on the Mexican border.

It must be a matter of regret to every American to watch the vacillating attitude of the Democratic administration in connection with American interests in Mexico. The naval fleet is sent to Vera Cruz to get a salute to the flag. It comes back with the flag drooping at the masthead expressing its regret at having failed to receive the salute. The flag bows its head in shame as it passes American citizens on its way home, because of the impotency of the administration that sent it there. Instead of coming back filled with pride as it would like to do, it comes back draped in mourning for the lives of those who fell in its defense at Vera Cruz. Huerta was driven out of Mexico and an alliance was entered into with Carranza and Villa by the administration.

Ammunition is allowed to be sent to Mexicans across the border to be used against the Americans and for the destruction of American property. Our citizens are allowed to be killed without protest. Carranza and Villa are allowed to destroy property without a murmur of complaint and, finally, they turn their guns with ammunition allowed to be supplied to them by American manufacturers against American soldiers, and even within the last few weeks it is said that we have allowed 3,000,000 rounds of ammunition to pass the American border into Mexico to be used against American soldiers. They ambush our soldiers at Carrizal, a number of whom are left dead upon the field. Others are taken prisoners, and the administration makes no protest on account of those who were killed, but demands the release of those who were captured as one of the conditions of peace. It is a humiliating spectacle and makes every American bow his head in shame. Nobody wants war, and I pray God that no war will come, but everybody under the American flag wants to maintain the honor of the Nation and it should be maintained at any cost. [Applause on the Republican side.]

The Democratic administration has been conspicuous for its inefficiency and extravagance as well as for its vacillating foreign policy, and because of this extravagance and lack of courage to meet the situation in Mexico, we find ourselves considering a revenue bill to impose new burdens upon the American people. There would be no necessity for this bill had the administration been conducted under systematic economical business methods.

Twenty million dollars appropriated for a nitrate plant could have been saved. At least $25,000,000 of the $43,000,000 carried in the river and harbor bill is wasted. You have levied a $44,000,000 charge upon the Treasury to pay the salaries of those occupying 30,000 useless places that you have created outside the civil service. You have levied a tax of $75,000,000 upon the people for Federal road building, which could just as well have been postponed until the present emergency was passed.

Fifty million dollars has been recently appropriated for flood control, which, under the method applied, will be useless, for it must be agreed by all that you can not control floods at the outlets of the streams while nothing is done to regulate them at the source.

You have appropriated $50,000,000 to buy ships, not one of which can be secured for more than three years to come.

Eleven million dollars has been thrown away for the establishment of an armor-plate plant, and it will be just $11,000,000 of junk before you make a pound of armor plate.

This $255,000,000 need not have been expended. In addition to this, your argument to the contrary notwithstanding, the imports exceed between three and four hundred million dollars those of any other year in the country's history, and the revenues from these imports are approximately $110,000,000 less than ever before, and you have lost all that to the Treasury.

If the savings I have indicated had been made and the proper charge had been levied against the shippers of foreign goods into American ports, we would have $365,000,000 to use in the development of the program of preparedness. [Applause on the Republican side.] Instead of that the people of the North are compelled to pay additional taxes in order that you gentlemen from the South, who are in control of the Government, may continue in your mad rush of extravagant expenditures.

You have constantly expressed the opinion that the rich men of the country should pay the taxes because the rank and file fight the Nation's battles to protect their property, but it is not only evident that the North is called on to pay the taxes to maintain the Government, while the South absorbs the revenues, but the North has supplied the men to meet the call of the President for the country's defense, while it is said that, with the exception of Maryland, Texas, and the District of Columbia, not a single man has gone to the borders of Mexico from a southern State. Even the great State of Texas was unable to muster out of its 3,200 members of the National Guard more than about 2,100 men, 1,067 men having refused to respond to the President's call or to take the oath required by the resolution of Congress.

Mr. HARDY. Mr. Chairman, I would like to know where the gentleman gets that information?

Mr. MADDEN. I got that information from the source where it lies.

Mr. HARDY. My letters come to me from Texas soldiers who have gone to the front in any number.

Mr. MADDEN. I do not yield to the gentleman. I give the gentleman the figures.

You have forfeited your right to the people's confidence. You have not reduced the cost of living as you promised to do when you were appealing for votes in 1912. On the contrary, you have opened the ports of America to the free entry of the products of the world, while the cost of living has continually gone up.

You have refused to economize in the conduct of the Government's business.

You have given no protection to the lives and property of American citizens in foreign lands.

You have proved your unfitness for government.

You have been brazen in your determination to levy tribute in the form of taxation upon business enterprise.

You are taking away from the States the revenue which belongs to them by the application of the principle involved in the inheritance-tax section of this bill.

The State of Illinois alone collected in 1914 $1,400,000 from inheritance taxes, and in 1915 $1,995,000, and I am told that the State of New York collected as a result of an inheritance tax last year more than $11,000,000.

If it had not been for the war in Europe the business of the Nation would be paralyzed, and there is growing evidence of the fact that unless a change of administration takes place at the coming election and some economic policy is adopted to conserve the rights of America and Americans to their own market, there will be an invasion of foreign-made products into American ports that will close every mill and workshop and drive every workingman into a state of idleness, want, and despair.

You have levied taxes on the corporations without limit in the belief that they are all gold mines. You believe that every form of corporate enterprise is a menace to the life of the Nation. You do not understand the business needs of the American people. You are not familiar with the industrial side of American life. You are not qualified to run a great business enterprise like the Government of the United States. [Prolonged applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. FORDNEY. Mr. Chairman, I yield five minutes to the gentleman from Kentucky [Mr. LANGLEY.]

Mr. LANGLEY. Mr. Chairman, I congratulate my distinguished friend from North Carolina [Mr. KITCHIN] and his associates on that side of the House upon the progress they are making in purloining Republican policies. [Applause and laughter on the Republican side.] I can almost hear yet the echo of their denunciation of the Republican plan of a tariff commission, and of course we all well remember their mad haste when they got into power to abolish the tariff board. Now, after all that, they are proposing to give us a tariff commission. It is funny, is it not? [Laughter.] I think some of you have overlooked the main reason for their apparent change of heart on this question. When they were abolishing the tariff board and opposing so strenuously a tariff commission they were flushed with victory. They were drunk with power. They had been commanded by a tremendous minority of the people to settle all of these great problems at first hand. They did not want any scientific advice on the tariff. Neither did they want a nonpartisan tariff. They wanted to handle the whole proposition themselves without the aid or consent of anybody else. [Laughter.] Now that they have handled it and made a mess of it, and knowing that they are going out of power in a few months, they have made up their minds that they, too, want a tariff commission, but they want a free-trade tariff commission, named by Woodrow Wilson. I am in favor of a tariff commission, too, but I am not in favor of one of the character that he would name. I want a tariff commission that is not saturated with the dogmas and sophistries of free trade. I want the kind of a tariff commission that President Hughes will appoint. [Applause on the Republican side.]

Why, they even give us a little tidbit of protection in this bill, too. Knowing as well as I do the personal views of the gentleman from North Carolina I am not surprised that he wants even this little pill sugar-coated before he takes it. But in the fullness of time he will have to take a much larger pill, and that, too, without any sugar coating, for the country is getting ready to go back to that good old Republican policy of protection. [Applause on the Republican side.]

I will have to confess that there are some good features in this bill—things that I would like to vote for as separate propositions—but I can not vote for the bill as a whole. The purpose and effect of it are manifest. It is designed to permanently fasten upon this Government a fiscal policy totally at variance with our traditional policy of protection under which our country has grown and prospered so much. I am unalterably opposed to doing that. I believe that at least $100,000,000 of the vast sum you are proposing to raise ought to be raised by an increased duty on imports. It would be infinitely better for the country to do it in that way, not only because it would keep out that much foreign competition and thus stimulate home production but it would make lighter the enormous burden of taxation which you are proposing by this bill to place upon the people.

As I watch the alarming growth in our annual appropriations under this Democratic régime and the frantic efforts of you Democrats to devise means whereby to raise the money to pay them, my memory runs back to the time when you were restored to power in the House. While the then chairman of the Ways and Means Committee, Mr. UNDERWOOD, and the present chairman, Mr. KITCHIN, and the distinguished Speaker of this House, and other Democratic leaders, were lambasting us Republicans, accusing us of extravagant appropriations, of squandering the peoples' money, and of otherwise betraying their trust, some of you gentlemen who are sitting over there now on the Democratic side, who, having just entered Congress were on the job, cast contemptuous commiserating glances across the aisle at us Republicans, and you looked to me as if you wanted to say, "Are not you fellows ashamed of yourselves to treat the people the way you have? How can you have the nerve, after what you have done, to again come back here and take the oath of office and sit down among us anointed of the Lord?" But what a change has come over the spirit of your dreams! How calm and docile you are now! Some of you have changed your attitude toward us so radically that you even concede that we are patriotic and loyal to the flag of our country. Your distinguished floor leader has become so pacific and nonpartisan that he did us the honor the other day to appeal to us to cast aside partisanship and vote to help pull the Democrats out of the hole they have fallen into. [Laughter.] Why, you have become so meek and domesticated that even the gentleman from Washington [Mr. HUMPHREY] can get up here and hammer you for half an hour on the failures and mistakes you have made, and there is scarcely one of you who will lift up your head, much less your voice, in feeble protest. [Laughter.]

Mr. CARTER. Will the gentleman yield?

Mr. LANGLEY. Oh, I can not yield, as I have but little time. If I had the time, I would gladly do so.

Yea, verily, it is a wonderful change; and it has a meaning, too. "Coming events cast their shadows before." It is the calm that comes before the breaking of the storm. It denotes the beginning of the end of the rule of Democracy.

Charles Evans Hughes will be elected President [applause on the Republican side] and he will bring with him to Washington a Republican House and a Republican Senate, and then peace, happiness, and real, universal prosperity will come again to all the people. [Loud applause on the Republican side.] Therefore, Mr. Chairman, I am not going to worry so much if this bill does became a law. Really, I think that, as a matter of retributive justice, we deserve a dose of this kind for being fools enough to split up among ourselves and allow you fellows to get back into power. [Applause.] It will only be a few months until we will wipe all of it that is bad off the books and put in its place a genuine Republican revenue law.

Mr. Chairman, I had prepared what I think was a pretty good 15-minute speech, and I had secured the allotment of sufficient time to deliver it here this afternoon, but the pressure for time on this side of the House was very great and being always liberal and good natured I have yielded up the most of my time to others who desire to speak. I shall, however, take advantage of the privilege which has been accorded of extending my remarks in a later issue of the RECORD; and I invite your special attention to one chapter of it which will be entitled: "The psychological processes involved in the mind changing of President Wilson and his party, the subjects on which they have changed, and the chronological order in which the changes have occurred." [Laughter and applause.]

Mr. FORDNEY. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. STERLING]. [Applause.]

Mr. STERLING. Mr. Chairman, on yesterday afternoon there was some discussion on the question as to whether the American consumer or the importer paid the tariff duty. I wish briefly to address myself to that question. I have had an impression since I studied political economy in my school days that the American consumer paid every cent of a Democratic free-trade tariff. I have also had the impression that the American consumer never paid all the Republican protective tariff;

that he sometimes paid a part of it, and frequently none; and when the consumer has at any time paid any part of a Republican protective tariff it was only temporary until such time as American competition, competition among our own industries, reduced the cost to the American consumer below the cost at which he bought from the importer. My experience and my observations have confirmed that impression; and I have the conviction now that every dollar of a Democratic free-trade tariff is paid by the American consumer, and that never all of a Republican protective tariff is paid by the consumer—that sometimes a part and frequently none is paid by the American consumer. I think I can demonstrate it to a fair mind that such is the fact. The difference between the Democratic free trader and the Republican protectionist is not a difference in rates. The fundamental difference between them is on the question of what imports shall bear a duty. Sometimes Democratic rates have been higher than Republican rates. The Democratic Party has said that the tariff duty should always be imposed on noncompetitives—things the like of which we do not produce in this country—and if we do not raise enough revenue in that way to run the Government they then impose a tariff on competitive articles, but always taking care that the rate shall be so low that it does not interfere with foreign competition.

The Republican Party has said that the tariff should be imposed on competitive articles; on things the like of which were produced in this country, and if we did not in that way produce sufficient revenue to run the Government, then they impose a tariff on noncompetitive articles, so far as possible confining it to the luxuries of life. Let us go back to the days when Democratic free trade was in its original purity. Take any Democratic administration from Jefferson to the Civil War. Let us go with the customhouse officer to a ship coming from a foreign port. When he takes the inventory of the ship's cargo under a Democratic administration, he finds that it is made up of noncompetitive articles—a hundred things, the like of which are not produced in the United States. Sugar in those days was a noncompetitive article, or tea, or numerous drugs, or a hundred things which are not produced here. The Democratic customhouse officer tells the importer that under this administration a very heavy rate of duty is imposed upon those things. The importer says "That is all right; no apology is necessary. How much is the duty?" He pays it into the Treasury of the United States, adds the duty to the price of his article, and sells to the American consumer at the increased price. And why should he not do so? There is no competition in this country. We were not in those days producing sugar. We did not produce tea or quinine or camphor, or a thousand things that grow in other latitudes and in other climes, and on these things the Democratic Party imposed a high tariff. The importer added it to the price of his goods, and the American consumer paid it back to him in the price he paid for the goods.

Another ship comes in loaded with competitive articles. It carries in its cargo, wool grown on a hundred American farms, cutlery made in a hundred American factories, manufactured cotton, in which industry many American workmen are engaged, and a hundred other things produced in this country. To this importer the Democratic officer from the customhouse says, "On many of these things no duty is charged or on some of them a very low duty, but not enough to interfere with you in the American market. We desire to encourage your importation of these things into the United States in order to produce competition against the American producer, and thus we have imposed a very small, and in many instances no duty at all, so you will have an advantge in the American market against the American producer." The importer thanks the Democratic customhouse officer for his kindly consideration, pays the little duty imposed into the Treasury of the United States, adds the amount paid to the price of his goods, and sells it to the American consumer at the increased price, because after adding the duty to the original price of his goods he can still undersell the American producer.

So it seems clear to me that the American consumer pays every dollar of the Democratic free-trade tariff, whether it be a heavy duty on noncompetitive imports or the low duty on competitive imports.

Let us see how it works in the case of a Republican protective tariff. Take any Republican administration from the time of the Civil War until Mr. Taft retired from the presidency. Let us accompany a Republican customhouse officer to some ship from a foreign port. We find the cargo is made up of competitive articles, things the like of which are produced in the United States. The importer is informed that on account of the fact that Americans are engaged in the production of those things the Government has seen fit to impose a somewhat heavy duty on imports of that kind. He tells him that millions of capital are invested in American farms and factories producing those same things, and that millions of American workmen are engaged in their production, and for this reason the importer is required to pay a protective duty.

The importer pays it, and if he can add all of that duty to the price of his goods and still undersell the American producer, then it is not a protective duty. If he can add one-half of the duty to the price of his goods and still undersell the American producer he does so and sells it to the American consumer at a price increased by one-half of the amount of the duty, and the American consumer pays that one-half. The importer pays the other half out of his profits. If he can only add 10 per cent of the duty to the price of his goods and undersell the American producer he adds that amount, and the American consumer pays that 10 per cent of that protective duty and the importer pays the other 90 per cent. If he can not undersell the American producer by adding any part of the duty to the price of the goods he adds none, and in that case the American consumer pays none and the importer pays it all, and is willing to do so for the privilege of getting into the splendid American market.

Mr. HARDY. Will the gentleman yield for a brief question?

Mr. STERLING. Very brief.

Mr. HARDY. If the manufacturer can charge the consumer more for his goods under a low tariff than a high tariff, why does the manufacturer oppose a low tariff?

Mr. STERLING. No one pretends that the American manufacturer can charge more for his goods under a low tariff than he can under a high tariff, and he does not charge more, but under any kind of a tariff he sells his goods to the American people cheaper than the foreigner does when there is no tariff. The importer of foreign goods always takes advantage of the situation and sells to America at an exorbitant price when he has a monopoly of the American market. A protective tariff destroys that monopoly because it creates competition in our own country. If, however, the ship from the foreign port is laden with noncompetitive articles, such as tea and coffee, used on every table in the land, or if it brings quinine, camphor, and medicines from foreign climes, or a hundred other things used but not produced in the United States, the Republican customhouse officer gives the importer welcome to the American market with a hope that he may sell his foreign goods as cheap as possible to the American people, collects no duty on these goods, and gives him a parting God-speed away to foreign lands for another cargo.

I have already said that it may be that the American consumer pays a part—never all, and sometimes none—of the protective tariff, but I say further that in no instance, and I challenge any man on the floor of this House to cite a single case where under proper protection an American industry has sprung up and in time has not produced to the American consumer the article cheaper than he bought it from the foreigner. I believe it is the case in every instance in all our history that American competition at home, when encouraged by a protective tariff, has ultimately reduced the price to the consumer.

Mr. KITCHIN. I suggest to the gentleman the dyestuffs industry. You have protected it for 50 years, and that is a failure.

Mr. STERLING. I do not say that the Republican Party has protected every industry it ought to have protected.

Mr. KITCHIN. Why did it protect the dye industry?

Mr. STERLING. It never did protect it, due, doubtless, to Democratic opposition; but every industry it has protected has produced to the American consumer in the end his goods cheaper than the foreigner sold them to him under free trade.

Let me say another thing. The Democratic Party imposed a tariff on sugar as long as it was noncompetitive. We produced a little sugar in Louisiana, but it was an inconsequential factor in the supply of sugar, and they imposed a tariff for 50 years on sugar that was higher much of that time than any Republican protective tariff that was ever put on sugar.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. FORDNEY. I yield the balance of my time to the gentleman.

Mr. STERLING. Yes; you imposed a tariff on sugar because it was a noncompetitive article, because we did not produce it in this country, and it went on that way for 50 years. You never raised your voice against a tariff on sugar until it became a competitive article, until in 16 States of the Union splendid and prosperous factories were built up, until the farmers of the United States were receiving millions of dollars every year for their beet production. Not until that time did the Democratic Party raise its voice against a tariff on sugar, and when that time came you tried to smite down that splendid

industry by putting it on the free list. [Applause on the Republican side.]

In 1816 the Democratic Party placed an exorbitant tax on sugar. Brown sugar paid 3 cents per pound, white sugar paid 4 cents per pound, and loaf sugar 10 cents per pound. There was no time down to the Civil War when that party did not maintain a tariff on sugar, and every dollar was paid by the American consumer, because there was no competition in this country. When the beet-sugar industry sprang up under the wise protection of Republican legislation the Sugar Trust was threatened with competition, and the Democratic Party rushed to its rescue by striking down this competition, by putting sugar on the free list.

It is true you have restored that Republican tariff to sugar. You did not restore it with a view of encouraging an American industry. You did it to make up the deficits caused by Democratic extravagance. At the beginning of this session the Treasury was nearly bankrupt. The last Congress had appropriated more money than its revenue bills had produced, and you put a tariff on sugar to make up that deficit. I think I know what some gentlemen on that side will say. They will lay it to the war in Europe, and say it was necessary to restore the sugar tariff to raise money to carry out the preparedness program. That is hardly a fair excuse. You had no preparedness program when you determined to do this. Your President—and he is my President, too—on the second day of this session urged the restoration of Republican tariff rates on sugar. In that same message he set forth his plan of preparedness. He wanted only 140,000 men in the Regular Army and a very modest increase in the Navy. No great, expensive war program at that time was in mind, and it was not thought by the administration that the additional revenue was needed for such purpose; but the deficits due to excessive appropriations did then exist and this revenue was intended to make them up. But, whatever your purpose, it is to be hoped that the American sugar industry will be saved from destruction even though you did not intend that result.

Mr. KITCHIN. Mr. Chairman, I yield to the gentleman from Missouri [Mr. CLARK].

Mr. CLARK of Missouri. Mr. Chairman and gentlemen, the tariff question, like the poor, we have with us always. The first general bill put upon the statute books in the United States was a tariff bill, and we have had them at intervals ever since. After going through four general revisions, I have come to the conclusion that there are more fables told touching the tariff, and more post hoc ergo propter hoc argumentation on it, than on any other question that mortal man ever concerned his mind about. [Laughter.]

Some men are very much in the habit of making epigrams. President Cleveland was. I think the wisest epigram that he ever made was, "It is a condition and not a theory that confronts us," and certainly that is the case here to-day.

By reason of the enormous and extraordinary sums which we have appropriated, because of the trans-Atlantic war, we must increase our revenues proportionately. We all know that. The question confronting us is, "How can we most equitably increase the revenues to meet the requirements of the situation into which circumstances not of our own making have forced us—circumstances over which we have had no control whatever?" Most assuredly partisan politics should find no place in the solution of a problem so grave and which so nearly affects the country and the whole country. I am not going to argue about these tariff rates one way or another. I have done that in days gone by until it is absolutely distasteful to me. I have won at it and I have lost at it; I have been on top and I have been on the bottom in this matter. I have heard every argument made on the floor of the House on the tariff, from the building of the great Chinese wall and Augustus Cæsar's almost absolutely perfect tariff system—that is, if a tariff system is intended solely to get money out of people—down to absolute free trade, preached by Richard Cobden, John Bright, and Sir Robert Peel.

Everybody dislikes to increase taxation. I know that I do, and do not consider myself peculiar in that regard. You all do. We are all of one mind on that proposition. I take it for granted that every sane man dislikes to vote against a bill that decreases taxes. Taxes are a necessary evil. Nobody likes to pay them. If we lived according to the golden rule we would not have very much use for taxes, anyway. We would not have to have all the machinery of government for prosecuting criminals and collecting revenues and of building jails and penitentiaries, and maintaining them, and all that. Unfortunately we do not obey the golden rule, hence the mountain of taxes in every civilized country under the sun.

You can not eat your cake and keep it, too. The American people seem to have demanded extraordinary expenditures, not only for the Army and the Navy and all the appurtenances thereto but for a variety of other things. Tax bills have gone on increasing, and it seems they are going on increasing. The people demand constantly that the Federal Government shall discharge new functions, because—and I say it with genuine regret—to a large extent the State governments have abdicated their functions. It is an old saying that "Those who dance must pay the fiddler." If the people command the Congress to do new stunts in legislation, they must expect to foot the bills; and reasonable folks do expect to do so.

Senator Aldrich said a few years ago, and his saying was quoted in one of the Washington papers this morning, that if the Government were run as a man would run his private business we could save $300,000,000 a year. I do not know whether he overstated it or not.

Before I go to this bill at all I want to say this: I am proud of the record that this House has made in this Congress. [Applause.] With the exception of the Christmas holidays, we have only adjourned over two days since we assembled here in December. No set of legislators at any time or in any land ever toiled more assiduously than we have in the discharge of our duties or ever accomplished more in the same length of time. We have performed our duties faithfully and well—a fact of which the people will show their appreciation in due time.

The newspapers that accused us of dawdling and marking time did not know what they were talking about. For instance, during the two weeks of the national conventions it was said that we were marking time. We were doing nothing of the sort. We passed more bills during those two weeks than ordinarily we would have passed in four weeks, and two of them were appropriation bills, at that.

When this bill is disposed of there are only three bills which will be fairly estimated as very important bills left on the calendars of the House—the McGillicuddy compensation bill, the Alexander marine insurance bill, and the Rucker campaign-contributions bill. Of course, there are others of more or less importance, but not of such pressing necessity. We have done well. We deserve well of the country. If there is any evidence needed that we have passed good bills, beginning with the first of the last Congress and continuing down to the present hour, we have proof positive, because on every great bill, except the original war-revenue bill and the Philippine bill, a large percentage of the Republicans in this House voted with us. [Applause on the Democratic side.] Also nearly all the independents and Progressives. If our bills were not good bills, why did you Republicans vote for them? [Applause on the Democratic side.] When you get out on the stump this summer you will not have any bills to attack except the Philippine bill and the original war-revenue bill.

Everybody that has a quantum sufficit of information knows that this stupendous war across the sea in its beginning disarranged half the business of this country, and in the most unexpected ways. For instance, I was out in California last fall, part of the time in Mr. KETTNER's district, and the war in Europe had completely destroyed the lemon industry, because that war cut off the natural market of the Italian lemons in Europe, so that they brought them over here almost for nothing—brought them here in ballast—so that in hundreds and hundreds of lemon groves in California the fruit was not picked at all. That is one example. There are plenty of them, but I am not going to give any more. It would be superfluous and would only serve to weary you.

There is a certain amount of money to be raised. I do not believe we are ever going to have a direct tax in this country for Federal purposes, and I will tell you why. The so-called direct tax that is arranged for in the Constitution is in practice really a head tax, and not a property tax. People will not submit to that tax as permitted in the Constitution. So, unless you amend the Constitution we can not have a direct tax. Then how are we going to get the money to run the Government? There are only three or four ways to get it. One is by a tariff tax; another is by an income tax; another is by the inheritance tax. Still another is the internal-revenue tax, proper, as we have been considering it in days gone by.

There is a maximum revenue-producing tariff rate on every article commonly used or consumed by the American people. If I had carte blanche to arrange a tariff bill and was given mathematicians or arithmeticians enough to figure out what is the maximum revenue producer from tariff rates on every item commonly used by the American people, except two or three, such as salt, and so forth, I would put the maximum revenue-producing rate on every item. I can take this tariff

schedule and so arrange it that the American people will not have to pay any more than they are paying and at the same time the Government would receive twice as much out of the tariff system as we are getting now.

The whole philosophy of it is this: You begin at a zero tariff. You go up until you strike this maximum revenue producer on any item. Up to that point the protectionist gets what he wants, and the revenue man gets what he wants, and human ingenuity can not separate them. The very minute you pass that maximum revenue-producing rate on every item the protection increases and the revenue falls off, until you carry it to its ultimate result, where you get what my friend from Michigan [Mr. FORDNEY] wants, and what he will never get, and that is that anything that can be produced both at home and abroad shall not be imported into this country at all. [Laughter.]

The fairest and justest tax ever levied since men invented a tax system is a graduated income tax with reasonable exemptions. [Applause on the Democratic side.] In the very first speech I ever made in this House on the subject of the tariff I stated that I was in favor of a stiff graduated income tax, and as long as the world spins on its axis and slides down the ecliptic no political party is ever going to the country on a proposition to repeal the income tax. [Applause on the Democratic side.] It taxes men on what they have and not on what they consume. It raises necessary revenue from the abundance with which God has blessed some of us, and not from the wants of the poor. You may pass a law to change it, remodel it, to perfect it—but to repeal it, never! It is not an experiment among legislators. The English have had it ever since the Napoleonic wars, except for two years. Then they went back to it again, and have reduced it to almost an exact science; in Germany they derive a large revenue from an income tax; it is a feature of the fiscal system of every civilized country, and I congratulate the gentleman from North Carolina [Mr. KITCHIN] and his committee on increasing the income tax in order to meet these extraordinary expenses that have been piled up under stress of circumstances. [Applause on the Democratic side.]

People who pay the income tax are to be congratulated on having the income on which to pay it. Those who do not pay it because they have not sufficient income are to be condoled with. There is not a man or woman betwixt the two oceans who would not like to have income enough on which to pay an income tax.

In England they have a budget. I do not know whether we are ever going to have one or not. They bring in a budget, and if they need more money all they do is to slip up the income tax a little. If they have more money than they need, all they do is to scale down the income tax a little. It is easy to arrange, either to increase the income tax or to diminish the income tax.

When President Taft was inaugurated—and I will give my opinion that he is a very fine man, even if he was defeated for President [applause on the Republican side]—he declared in his inaugural address that there was liable to be a deficiency of a hundred million dollars, and the way to raise the money to pay for that deficiency was by a graded inheritance tax. For some reason—I never knew why—that suggestion was not followed.

When the Payne bill was in process of formation, I was there, not exactly consenting, but I was there. [Laughter.] The only reason that ever I heard urged against an inheritance tax in that committee was this—and so far as it went it was a very good reason—that 26 States of the Union had inheritance taxes of their own, and I do not know whether there are that many now or more. But anyhow, the inheritance tax, to some extent like the income tax, taxes people on what they have, and therefore it is better than to tax them on the necessaries of life. In exempting from its operation estates of less than $50,000, the committee acted wisely and humanely.

How much further we are going with the expenses that primarily grew out of the European war I do not know. If it had not been for that war, there would not have been any hullaballoo beyond the average about this preparedness problem, because it has been going on for years in slowly but constantly increasing volume. That war precipitated that question in this country. It started everybody to thinking about it, and along the Atlantic seaboard people were afraid that they would be bombarded overnight, notwithstanding we are, thank God, at peace with all the world. The great quantity of talk on that subject in this country originated in that region. During the Spanish war our Boston friends lived in perpetual terror of being shelled by Spanish ships. They had a great deal to say about it, and with far-resounding, ear-splitting voices.

The third thing that this bill does to raise revenue is absolutely just. No set of men in America, or on the face of the earth, have made as much money in the last two years, or as much profit, as the manufacturers of all sorts of munitions of war. They ought to be made to pay a part of it in taxation. Every dollar of the income tax, every dollar of the inheritance tax, every dollar of the munitions tax, goes directly into the Treasury of the United States to pay these enormously increased expenses which have come upon us within the last year or two.

I congratulate the House on the fact that this bill is going to pass by a good deal more than the Democratic vote. [Applause on the Democratic side.] That is evident when such eminent Republicans as the gentleman from Ohio [Mr. LONGWORTH], the gentleman from Massachusetts [Mr. GARDNER], the gentleman from Iowa [Mr. GREEN], all three of them staunch protectionists, see their duty to help the country out of a hole regardless of politics. [Applause.]

Actions speak louder than words. Here are some of the things we have done and on which we stand:

We passed a great tariff bill—the best ever placed on the statute books. It contains many excellent changes from the Payne-Aldrich-Smoot monstrosity, and it contains one new feature that would make it the best of all tariff bills, even if the rest of it were as bad as the last Republican tariff bill, which most emphatically it is not. That new feature is the income tax.

We had for more than half a century a financial system of shreds and patches, with a currency system almost wholly devoid of elasticity—one of the most necessary and valuable features of any correct currency system. The one we had was a standing invitation and temptation to panic makers. Whenever it suited their convenience they created panics and things went to smash, producing stupendous loss and widespread suffering.

It is a wonder we got along with it as well as we did. For a generation our Republican friends had been tinkering it—always promising but never achieving currency reform.

The Democrats, with the assistance of patriotic Progressives and a patriotic contingent of Republicans, placed on the statute book the national reserve-bank act, which is now praised by all business men, big and little, which provides for elasticity and provides an abundant supply of currency, and which, it is believed, will render panics impossible in the future, a consummation devoutly to be wished.

It enables farmers to borrow money on farm lands—the best security in the world—tends to prevent the draining of all the money into a few great cities, retaining it so far as possible in the communities where it belongs. Does any sane man believe that we would have escaped a most destructive panic during the over-seas war if we had not enacted the reserve-bank law?

We passed an antitrust law which tends to promote legitimate business and to crush illegitimate business. Under the old antitrust law the then existing trusts flourished like a tree planted by the rivers of water and new trusts sprang up as suddenly and as numerously as mushrooms in a damp cellar.

Under the new law trusts are being dissolved and are rearranging their business on a legitimate basis.

We passed a bill to open up our amazingly rich Alaskan empire for the benefit of all our people and to prevent that marvelous storehouse of wealth from being exploited by the few and for the benefit and behoof of the few.

The policy of locking up Alaska was preposterous; the policy of throwing it wide open to exploiters and looters was criminal. We have chosen the better part by authorizing the building of railroads into Alaska to open it up for homes for our children and our children's children.

When I was a child my father used to put me to sleep by singing a song the refrain of which was "Uncle Sam is rich enough to give us all a farm." He was then, but he is not now. So we are looking out for posterity.

Very little land worth entering now belongs to him outside of Alaska, which bids fair to be not only a great mining region, but also a great agricultural and grazing section.

The Democratic policy seeks to utilize in perpetuity the vast wealth of that marvelous territory for the benefit of the American people.

We enacted the Alexander-La Follette seamen's bill, which to a great extent, liberates American seamen from a condition of semiserfdom which was a disgrace to American civilization. We hope it will prove a great boon to American shippers.

The Trades Commission law is, so far as our country is concerned, a new venture in legislation, intended to regulate trade so that it will be fair trade—fair to all, big and little. Of course, being of recent date, we have not had time to set the machinery under it to working at its best, but much good is expected from its operations.

The rural-credits bill will undoubtedly prove a great blessing to the farmers. The most valuable features of it are the long

term which the loans run, the plan for amortization, and the low rate of interest. These will give a permanency never known before on this side of the Atlantic to agricultural pursuits, and will, it is hoped, induce more people to own their own homes, a great desideratum. The rural-credits bill, taken in connection with the reserve-bank bill, ought to give great impetus to the oldest of human occupations—that of tilling the soil. In America the rural-credits scheme is new, but in Europe it is old, having been started by Frederick the Great at the close of the Seven Years' War, a century and a half ago. The rural-credits bank, or landschaft, which he started is still doing business.

The bad wagon roads of America are a sad commentary on our sense, for, stated in briefest terms, they constitute wicked and wanton waste. We easily lead the world in railroads, but we are badly behind Europe in wagon roads. We consider the Romans of 2,000 years ago old fogies, and yet they were ahead of us, much ahead, in the matter of country roads. When they entered a country their habit was to build roads. The Appian Way is the most famous highway in the world, and the rock roads which they constructed across the Pyrenees are still traveled by the children of men. The Shackleford good-roads bill is a long step in the direction of giving us a system of wagon roads which will be of permanent and vast utility to all our people, particularly to farmers, reducing the cost of transporting food products to market, thereby reducing the high cost of living and increasing the joy of living.

After many years of agitation in favor of electing United States Senators by the popular vote, we secured a constitutional amendment authorizing it and passed laws to put the amendment into effect. Not one of the dire evils predicted touching that plan has been fulfilled. No man ever possessed ingenuity enough to produce a valid argument against it. The new plan is working well.

What is known as the Rucker corrupt-practice act will go far to lift our politics to a higher plane, into a purer atmosphere. That it is perfect no man claims, but it will be amended and improved until the corrupt use of money in politics is reduced to the minimum. On the purity of politics depends the perpetuity of the Republic.

We have passed grain-grading and cotton-future bills to prevent swindles upon the public and to aid honest trade in those necessary commodities.

We have passed a carefully prepared and thoroughly discussed water-power bill which will put an end to the attempted monopoly of water-power sites and the charging of exorbitant charges for power.

We passed amended and better bills for the government of Porto Rico and the Philippines, giving more of self-government to the peoples of those islands.

The House has passed the Alexander ship bill, intended to resuscitate the American merchant marine, which all wise and patriotic Americans favor. It is to be hoped that it will pass the Senate at an early day and that once more our flag will float over every sea and in every harbor of the world. That bill will enable us to prevent exorbitant charges for ocean freights.

The House has passed a good, conservative "Overflow-prevention bill," which we hope will prove valuable in preventing the appalling loss of life and property caused by the great floods. That bill is now on the calendar of the Senate.

We have passed such bills for defense of our country by land and sea as public opinion demands.

The last three Congresses—including the present one—have done more to improve the conditions under which wage earners live and move and have their being than all the preceding Congresses put together.

DAVID J. LEWIS, the able chairman of the Labor Committee in the House, also the next Senator from Maryland—a student, philosopher, and worker—recently in an analytical speech in the House enumerated 15 important statutes touching labor which have passed the House in the last six years, 13 of which are now laws, the other two awaiting the action of the Senate. Every man with brains in his head and love of country and of humanity in his heart rejoices in these laws intended to improve the condition of the laborers of the land. We have passed many other good laws which I have not mentioned.

The chances are the voters of America will act on the sage dictum of Abraham Lincoln, that 'it is unwise to swap horses while crossing the stream," and continue the Democrats in power.

The people seem to have absolute confidence in the pilot of the ship of state, Woodrow Wilson, and are not likely to drop him overboard in midocean while the storm whips the waters into fury.

He did his duty; the Democratic House did its duty; the Democratic Senate did its duty, and the word "duty" is the sublimest word in our vernacular. We submit that we deserve well of the Republic—all of us. Thomas Campbell said:

I watch the wheels of nature's mazy plan,
And read the future from the past of man.

Having discharged our duty and been faithful to our trust so far, the people will assume that we will do our duty and be faithful even unto the end.

It is written: "By their works ye shall know them." Men are measured more by what they do than by what they say. We rest our case upon the things we have accomplished as an earnest of what we will accomplish if continued in power.

Ours is a magnificent, a wonderful record, which anybody save a stark idiot can easily and successfully defend. Upon that unequaled record we confidently appeal to the grand inquest of the Nation in the impending campaign.

The CHAIRMAN. All time has expired, and the Clerk will read the bill.

The Clerk read the bill, as follows:

A bill (H. R. 16763) to increase the revenue, and for other purposes.

Be it enacted, etc.

Title I.—Income tax.

PART I.—ON INDIVIDUALS.

SEC. 1. (a) That there shall be levied, assessed, collected, and paid annually upon the entire net income received in the preceding calendar year from all sources by every individual, a citizen or resident of the United States, a tax of 2 per cent upon such income; and a like tax shall be levied, assessed, collected, and paid annually upon the entire net income received in the preceding calendar year from all sources within the United States by every individual, a nonresident alien, including interest on bonds, notes, or other interest-bearing obligations of residents, corporate or otherwise.

(b) In addition to the income tax imposed by subdivision (a) of this section (herein referred to as the normal tax) there shall be levied, assessed, collected, and paid upon the total net income of every individual, or, in the case of a nonresident alien, the total net income received from all sources within the United States, an additional income tax (herein referred to as the additional tax) of 1 per cent per annum upon the amount by which such total net income exceeds $20,000 and does not exceed $40,000, 2 per cent per annum upon the amount by which such total net income exceeds $40,000 and does not exceed $60,000, 3 per cent per annum upon the amount by which such total net income exceeds $60,000 and does not exceed $80,000, 4 per cent per annum upon the amount by which such total net income exceeds $80,000 and does not exceed $100,000, 5 per cent per annum upon the amount by which such total net income exceeds $100,000 and does not exceed $150,000, 6 per cent per annum upon the amount by which such total net income exceeds $150,000 and does not exceed $200,000, 7 per cent per annum upon the amount by which such total net income exceeds $200,000 and does not exceed $250,000, 8 per cent per annum upon the amount by which such total net income exceeds $250,000 and does not exceed $300,000, 9 per cent per annum upon the amount by which such total net income exceeds $300,000 and does not exceed $500,000, and 10 per cent per annum upon the amount by which such total net income exceeds $500,000.

For the purpose of the additional tax there shall be included as income dividends on the capital stock or from the net earnings of any corporation, joint-stock company or association, or insurance company, except that in the case of nonresident aliens such income derived from sources without the United States shall not be included.

All the provisions of this title relating to the normal tax on individuals, so far as they are applicable and are not inconsistent with this subdivision and section 3, shall apply to the imposition, levy, assessment, and collection of the additional tax imposed under this subdivision.

(c) The foregoing normal and additional tax rates shall apply to the entire net income, except as hereinafter provided, received by every taxable person in the calendar year 1916 and in each year thereafter.

INCOME DEFINED.

SEC. 2. (a) That, subject only to such exemptions and deductions as are hereinafter allowed, the net income of a taxable person shall include gains, profits, and income derived from salaries, wages, or compensation for personal service of whatever kind and in whatever form paid, or from professions, vocations, businesses, trade, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in real or personal property, also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever: *Provided*, That the term "dividends" as used in this title shall be held to mean any distribution made or ordered to be made by a corporation out of its earnings or profits and payable to its shareholders, whether in cash or in stock of the corporation.

(b) Income received by estates of deceased persons during the period of administration or settlement of the estate, shall be subject to the normal and additional tax and taxed to their estates, and also income of estates or any kind of property held in trust, including income accumulated in trust for the benefit of unborn or unascertained persons, or persons with contingent interests, shall be likewise taxed, the tax in each instance to be assessed to the executor, administrator, or trustee, as the case may be.

Such trustees, executors, administrators, and other fiduciaries are hereby indemnified against the claims or demands of every beneficiary for all payments of taxes which they shall be required to make under the provisions of this title, and they shall have credit for the amount of such payments against the beneficiary or principal in any accounting which they make as such trustees or other fiduciaries.

(c) Of the gain derived or loss sustained from the sale of real estate, stocks, bonds, securities, or other property, acquired before March 1, 1913, not bought and sold in the course of trade by the taxpayer, only such proportion shall be included as the time between March 1, 1913, and the date of sale bears to the entire time between the date of acquisition and the date of sale.

ADDITIONAL TAX INCLUDES UNDISTRIBUTED PROFITS.

SEC. 3. For the purpose of the additional tax, the taxable income of any individual shall include the share to which he would be entitled of the gains and profits, if divided or distributed, whether divided or distributed or not, of all corporations, joint-stock companies or associations, or insurance companies, however created or organized, formed or fraudulently availed of for the purpose of preventing the imposition of such tax through the medium of permitting such gains and profits to accumulate instead of being divided or distributed; and the fact that any such corporation, joint-stock company or association, or insurance company, is a mere holding company, or that the gains and profits are permitted to accumulate beyond the reasonable needs of the business, shall be prima facie evidence of a fraudulent purpose to escape such tax; but the fact that the gains and profits are in any case permitted to accumulate and become surplus shall not be construed as evidence of a purpose to escape the said tax in such case unless the Secretary of the Treasury shall certify that in his opinion such accumulation is unreasonable for the purposes of the business. When requested by the Commissioner of Internal Revenue, or any district collector of internal revenue, such corporation, joint-stock company or association, or insurance company shall forward to him a correct statement of such gains and profits and the names of the individuals who would be entitled to the same if divided or distributed.

INCOME EXEMPT FROM LAW.

SEC. 4. The following income shall be exempt from the provisions of this title:

The proceeds of life-insurance policies paid to individual beneficiaries upon the death of the insured; the amount received by the insured as a return of premium or premiums paid by him under life insurance, endowment, or annuity contracts, either during the term or at the maturity of the term mentioned in the contract or upon the surrender of the contract; the value of specific property acquired by gift, bequest, devise, or descent (but the income from such property shall be included as income); interest upon the obligations of a State or any political subdivision thereof or upon the obligations of the United States or its possessions; the compensation of the present President of the United States during the term for which he has been elected, and the judges of the Supreme and inferior courts of the United States now in office, and the compensation of all officers and employees of a State, or any political subdivision thereof, except when such compensation is paid by the United States Government.

DEDUCTIONS ALLOWED.

SEC. 5. That in computing net income in the case of a citizen or resident of the United States—

(a) For the purpose of the tax there shall be allowed as deductions—

First. The necessary expenses actually paid in carrying on any business or trade, not including personal, living, or family expenses.

Second. All interest paid within the year on his indebtedness.

Third. Taxes paid within the year imposed by the authority of the United States, or its Territories, or possessions, or any foreign country, and any State, county, school, or municipal taxes, not including those assessed against local benefits.

Fourth. Losses actually sustained during the year incurred in business or trade or arising from fires, storms, shipwreck, or other casualty, and from theft, when not compensated for by insurance or otherwise.

Fifth. In transactions entered into for profit but not connected with his business or trade, the losses actually sustained therein during the year to an amount not exceeding the profits arising therefrom.

Sixth. Debts due to the taxpayer actually ascertained to be worthless and charged off within the year.

Seventh. A reasonable allowance for the exhaustion, wear, and tear of property arising out of its use or employment in the business or trade, and in the case of mines, including oil wells or gas wells, a reasonable allowance for depletion of ores and of other natural deposits not to exceed 5 per cent of the gross value at the mine of the output for the year for which the computation is made, and in the case of timber a reasonable allowance for stumpage not in excess of the cost of or capital actually invested in the timber sold or removed during the year for which the return is made: *Provided*, that no deduction shall be allowed for any amount paid out for new buildings, permanent improvements, or betterments made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made.

CREDITS ALLOWED.

(b) For the purpose of the normal tax only, the income embraced in a personal return shall be credited with the amount received as dividends upon the stock or from the net earnings of any corporation, joint-stock company or association, or insurance company, which is taxable upon its net income as hereinafter provided.

(c) A like credit shall be allowed as to the amount of income, the normal tax upon which has been paid or withheld for payment at the source of the income under the provisions of this title.

NONRESIDENT ALIENS.

SEC. 6. That in computing net income in the case of a nonresident alien—

(a) For the purpose of the tax there shall be allowed as deductions—

First. The necessary expenses actually paid in carrying on any business or trade conducted by him within the United States, not including personal, living, or family expenses.

Second. The proportion of all interest paid within the year by such person on his indebtedness which the gross amount of his income for the year derived from sources within the United States bears to the gross amount of his income for the year derived from all sources within and without the United States, but this deduction shall be allowed only if such person includes in the return required by section 8 all the information necessary for its calculation.

Third. Taxes paid within the year imposed by the authority of the United States, or its Territories, or possessions, and any State, county, school, or municipal taxes, paid within the United States, not including those assessed against local benefits.

Fourth. Losses actually sustained during the year, incurred in business or trade conducted by him within the United States, and losses of property within the United States arising from fires, storms, shipwreck, or other casualty, and from theft, when not compensated for by insurance or otherwise.

Fifth. Debts arising in the course of business or trade conducted by him within the United States due to the taxpayer actually ascertained to be worthless and charged off within the year.

Sixth. A reasonable allowance for the exhaustion, wear and tear of property within the United States arising out of its use or employment in the business or trade; and in the case of mines within the United States, including oil wells or gas wells, a reasonable allowance for depletion of ores and of other natural deposits, not to exceed 5 per cent of the gross value at the mine of the output for the year for which the computation is made; and in the case of timber within the United States, a reasonable allowance for stumpage not in excess of the cost of, or capital actually invested in, the timber sold or removed during the year for which the return is made: *Provided*, That no deduction shall be allowed for any amount paid out for new buildings, permanent improvements, or betterments, made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made.

(b) There shall also be allowed the credits specified by subdivisions (b) and (c) of section 5.

PERSONAL EXEMPTION.

SEC. 7. (a) That for the purpose of the normal tax only, there shall be allowed as an exemption in the nature of a deduction from the amount of the net income of each individual taxpayer, the sum of $3,000; except where such person is the head of a family, when the said exemption shall be $4,000: *Provided*, That the aggregate net income of all the members of any family, composed of one or both parents and one or more minor children, or of husband and wife living together, shall for the purpose of the normal tax only, constitute one taxable income to be returned by, and taxed to, the husband or the head of said family, and the tax thereon shall be payable by such husband, or head of the family, but if not paid by him may be enforced against any person whose income is included in the assessment; but the member of the family who pays the tax shall have the legal right of reimbursement against each other member of the family in the proportion that the net income of such other member bears to the combined net income: *Provided further*, That the wife may elect to make an independent return of income derived from her separate estate, in which case she shall be entitled to an exemption of $2,000, and the husband to an exemption of $2,000; but the total exemption to husband, wife, and minor children living together shall in no case exceed $4,000: *Provided further*, That guardians or trustees shall be allowed to make this personal exemption as to income derived from the property of which such guardian or trustee has charge in favor of each ward or cestui que trust: *Provided further*, That in no event shall a ward or cestui que trust be allowed a greater personal exemption than $3,000 or $4,000, as provided in this paragraph, from the amount of net income received from all sources.

(b) A nonresident alien individual may receive the benefit of the exemption provided for in this section only by filing or causing to be filed with the collector of internal revenue a true and accurate return of his total income, received from all sources, corporate or otherwise, in the United States, in the manner prescribed by this title; and in case of his failure to file such return the collector shall collect the tax on such income, and all property belonging to such nonresident alien individual shall be liable to distraint for the tax.

RETURNS.

SEC. 8. (a) The tax shall be computed upon the net income, as thus ascertained, of each person subject thereto, received in each preceding calendar year ending December 31.

(b) On or before the 1st of March, 1917, and the 1st of March in each year thereafter, a true and accurate return under oath shall be made by each person of lawful age, except as hereinafter provided, having a net income of $3,000 or over for the taxable year to the collector of internal revenue for the district in which such person has legal residence, or, in the case of a person residing in a foreign country, in the place where his legal residence or principal business is carried on within the United States, or if there be no legal residence or place of business in the United States, then with the collector of internal revenue at Baltimore, Md., in such form as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, setting forth specifically the gross amount of income from all separate sources, and from the total thereof deducting the aggregate items of allowances herein authorized: *Provided*, That the Commissioner of Internal Revenue shall have authority to grant a reasonable extension of time, in meritorious cases, for filing returns of income by persons residing or traveling abroad who are required to make and file returns of income and who are unable to file said returns on or before March 1 of each year: *Provided further*, That the aforesaid return may be made by an agent when by reason of illness, absence, or nonresidence the person liable for said return is unable to make and render the same, the agent assuming the responsibility of making the return and incurring penalties provided for erroneous, false, or fraudulent return.

(c) Guardians, trustees, executors, administrators, receivers, conservators, and all persons, corporations, or associations acting in any fiduciary capacity shall make and render a return of the income of the person, trust, or estate for whom or which they act, and be subject to all the provisions of this title which apply to individuals. Such fiduciary shall make oath that he has sufficient knowledge of the affairs of such person, trust, or estate to enable him to make such return and that the same is true and correct, and be subject to all the provisions of this title which apply to individuals: *Provided*, That a return made by one or two or more joint fiduciaries filed in the district where such fiduciary resides, under such regulations as the Secretary of the Treasury may prescribe, shall be a sufficient compliance with the requirements of this paragraph.

(d) All persons, firms, companies, copartnerships, corporations, joint-stock companies, or associations, and insurance companies, except as hereinafter provided, in whatever capacity acting, having the control, receipt, disposal, or payment of fixed or determinable annual or periodical gains, profits, and income of another individual subject to tax, shall, in behalf of such person, deduct and withhold from the payment an amount equivalent to the normal tax upon the same and make and render a return as aforesaid, but separate and distinct, of the portion of the income of each person from which the normal tax has been thus withheld, and containing also the name and address of such person, or stating that the name and address or the address, as the case may be, are unknown: *Provided*, That the provision requiring the normal tax of individuals to be deducted and withheld at the source of the income shall not be construed to require the withholding of such tax according to the 2 per cent normal tax rate herein prescribed until on and after January 1, 1917, and the law existing at the time of the passage of this act shall govern the amount withheld or to be withheld at the source until January 1, 1917.

That in either case mentioned in subdivisions (c) and (d) of this section no return of income not exceeding $3,000 shall be required, except in the case of estates or trusts not entitled to any exemption and except as hereinafter provided.

(e) Persons carrying on business in partnership shall be liable for income tax only in their individual capacity, and the share of the profits of a partnership to which any taxable partner would be entitled if the same were divided, whether divided or otherwise, shall be returned for taxation and the tax paid under the provisions of this title; and any such partnership, when requested by the Commissioner of Internal Revenue or any district collector, shall render a correct return of the earnings, profits, and income of the partnership, setting forth the items of gross income and the deductions allowed by this title, and the names of the individuals who would be entitled to the net earnings, profits, and income if distributed.

(f) In every return shall be included the income derived from dividends on the capital stock or from the net earnings of any corporation, joint-stock company or association, or insurance company, except that in the case of nonresident aliens such income derived from sources without the United States shall not be included.

(g) The collector or deputy collector shall require every return to be verified by the oath of the party rendering it. If the collector or deputy collector have reason to believe that the amount of any income returned is understated, he shall give due notice to the person making the return to show cause why the amount of the return should not be increased, and upon proof of the amount understated may increase the same accordingly.

Such person may furnish sworn testimony to prove any relevant facts, and, if dissatisfied with the decision of the collector, may appeal to the Commissioner of Internal Revenue for his decision under such rules of procedure as may be prescribed by regulations.

(h) An individual keeping accounts upon any basis other than that of actual receipts and disbursements, unless the Commissioner of Internal Revenue finds that such other basis does not clearly reflect his income, may, subject to regulations made by such commissioner, with the approval of the Secretary of the Treasury, make his return upon the basis upon which his accounts are kept, in which case the tax shall be computed upon his income as so returned.

ASSESSMENT AND ADMINISTRATION.

SEC. 9. (a) That all assessments shall be made by the Commissioner of Internal Revenue and all persons shall be notified of the amount for which they are respectively liable on or before the 1st day of June of each successive year, and said amounts shall be paid on or before the 15th day of June, except in cases of refusal or neglect to make such return and in cases of erroneous, false, or fraudulent returns, in which cases the Commissioner of Internal Revenue shall, upon the discovery thereof, at any time within three years after said return is due, or return made is found to be erroneous, false, or fraudulent, make a return upon information obtained as provided for in this title or by existing law, or require the necessary corrections to be made, and the assessment made by the Commissioner of Internal Revenue thereon shall be paid by such person or persons immediately upon notification of the amount of such assessment; and to any sum or sums due and unpaid after the 15th day of June in any year, and for 10 days after notice and demand thereof by the collector, there shall be added the sum of 5 per cent on the amount of tax unpaid, and interest at the rate of 1 per cent per month upon said tax from the time the same became due, except from the estates of insane, deceased, or insolvent persons.

(b) All persons, firms, copartnerships, companies, corporations, joint-stock companies or associations, and insurance companies, in whatever capacity acting, including lessees or mortgagors of real or personal property, trustees acting in any trust capacity, executors, administrators, receivers, conservators, employers, and all officers and employees of the United States having the control, receipt, custody, disposal, or payment of interest, rent, salaries, wages, premiums, annuities, compensation, remuneration, emoluments, or other fixed or determinable annual or periodical gains, profits, and income of another person, exceeding $3,000 for any taxable year, other than income derived from dividends on capital stock, or from the net earnings of corporations and joint-stock companies or associations, or insurance companies, the income of which is taxable under this title, who are required to make and render a return in behalf of another, as provided herein, to the collector of his, her, or its district, are hereby authorized and required to deduct and withhold from such annual or periodical gains, profits, and income such sum as will be sufficient to pay the normal tax imposed thereon by this title, and shall pay the amount withheld to the officer of the United States Government authorized to receive the same; and they are each hereby made personally liable for such tax, and they are each hereby indemnified against every person, corporation, association, or demand whatsoever for all payments which they shall make in pursuance and by virtue of this title.

In all cases where the income tax of a person is withheld and deducted and paid or to be paid at the source, such person shall not receive the benefit of the personal exemption allowed in section 7 of this title except by an application for refund of the tax unless he shall, not less than 30 days prior to the day on which the return of his income is due, file with the person who is required to withhold and pay tax for him a signed notice in writing claiming the benefit of such exemption, and thereupon no tax shall be withheld upon the amount of such exemption: *Provided*, That if any person for the purpose of obtaining any allowance or reduction by virtue of a claim for such exemption, either for himself or for any other person, knowingly makes any false statement or false or fraudulent representation, he shall be liable to a penalty of $300.

And where the income tax is paid or to be paid at the source, no person shall be allowed the benefit of any deduction provided for in sections 5 or 6 of this title unless he shall, not less than 30 days prior to the day on which the return of his income is due, either (1) file with the person who is required to withhold and pay tax for him a true and correct return of his gains, profits, and income from all other sources, and also the deductions asked for, and the showing thus made shall then become a part of the return to be made in his behalf by the person required to withhold and pay the tax, or (2) likewise make application for deductions to the collector of the district in which return is made or to be made for him: *Provided*, That when any amount allowable as a deduction is known at the time of receipt of fixed annual or periodical income by an individual subject to tax, he may file with the person, firm, or corporation making the payment a certificate, under penalty for false claim, and in such form as shall be prescribed by the Commissioner of Internal Revenue, stating the amount of such deduction and making a claim for an allowance of the same against the amount of tax otherwise required to be deducted and withheld at the source of the income, and such certificate shall likewise become a part of the return to be made in his behalf.

If such person is absent from the United States, or is unable owing to serious illness to make the return and application above provided for, the return and application may be made by an agent, he making oath that he has sufficient knowledge of the affairs and property of his principal to enable him to make a full and complete return, and that the return and application made by him are full and complete.

(c) The amount of the normal tax hereinbefore imposed shall be deducted and withheld from fixed or determinable annual or periodical gains, profits, and income derived from interest upon bonds and mortgages, or deeds of trust or other similar obligations of corporations, joint-stock companies, associations, and insurance companies, whether payable annually or at shorter or longer periods, although such interest does not amount to $3,000, subject to the provisions of this title requiring the tax to be withheld at the source and deducted from annual income and returned and paid to the Government.

(d) And likewise the amount of such tax shall be deducted and withheld from coupons, checks, or bills of exchange for or in payment of interest upon bonds of foreign countries and upon foreign mortgages or like obligations (not payable in the United States), and also from coupons, checks, or bills of exchange for or in payment of any dividends upon the stock or interest upon the obligations of foreign corporations, associations, and insurance companies engaged in business in foreign countries.

And the tax in such cases shall be withheld, deducted, and returned for and in behalf of any person subject to the tax hereinbefore imposed, although such interest or dividends do not exceed $3,000, by (1) any banker or person who shall sell or otherwise realize coupons, checks, or bills of exchange drawn or made in payment of any such interest or dividends (not payable in the United States), and (2) any person who shall obtain payment (not in the United States), in behalf of another of such dividends and interest by means of coupons, checks, or bills of exchange, and also (3) any dealer in such coupons who shall purchase the same for any such dividends or interest (not payable in the United States), otherwise than from a banker or another dealer in such coupons.

(e) Where the tax is withheld at the source, the benefit of the exemption and the deductions allowable under this title may be had by complying with the foregoing provisions of this section.

(f) All persons, firms, or corporations undertaking as a matter of business or for profit the collection of foreign payments of such interest or dividends by means of coupons, checks, or bills of exchange shall obtain a license from the Commissioner of Internal Revenue, and shall be subject to such regulations enabling the Government to ascertain and verify the due withholding and payment of the income tax required to be withheld and paid as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and any person who shall knowingly undertake to collect such payments as aforesaid without having obtained a license therefor, or without complying with such regulations, shall be deemed guilty of a misdemeanor and for each offense be fined in a sum not exceeding $5,000, or imprisoned for a term not exceeding one year, or both, in the discretion of the court.

(g) The tax herein imposed upon gains, profits, and income not falling under the foregoing and not returned and paid by virtue of the foregoing shall be assessed by personal return under rules and regulations to be prescribed by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury. The intent and purpose of this title is that all gains, profits, and income of a taxable class, as defined by this title, shall be charged and assessed with the corresponding tax, normal and additional, prescribed by this title, and said tax shall be paid by the owner of such income, or the proper representative having the receipt, custody, control, or disposal of the same. For the purpose of this title ownership or liability shall be determined as of the year for which a return is required to be rendered.

The provisions of this title relating to the deduction and payment of the tax at the source of income shall only apply to the normal tax hereinbefore imposed upon individuals.

PART II.—ON CORPORATIONS.

SEC. 10. That there shall be levied, assessed, collected, and paid annually upon the total net income received in the preceding calendar year from all sources by every corporation, joint-stock company or association, or insurance company organized in the United States, no matter how created or organized, but not including partnerships, a tax of 2 per cent upon such income; and a like tax shall be levied, assessed, collected, and paid annually upon the total net income received in the preceding calendar year from all sources within the United States by every corporation, joint-stock company or association, or insurance company organized, authorized, or existing under the laws of any foreign country, including interest on bonds, notes, or other interest-bearing obligations of residents, corporate or otherwise, and including the income derived from dividends on capital stock or from net earnings of resident corporations, joint-stock companies or associations, or insurance companies whose net income is taxable under this title.

The foregoing tax rate shall apply to the total net income received by every taxable corporation, joint-stock company or association, or insurance company in the calendar year 1916 and in each year thereafter, except that if it has fixed its own fiscal year under the provisions of existing law the foregoing rate shall apply to the proportion of the total net income returned for the fiscal year ending prior to December 31, 1916, which the period between January 1, 1916, and the end of such fiscal year bears to the whole of such fiscal year, and the rate fixed in Section II of the act approved October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," shall apply to the remaining portion of the total net income returned for such fiscal year.

CONDITIONAL AND OTHER EXEMPTIONS.

SEC. 11. (a) That there shall not be taxed under this title any income received by any—

First. Labor, agricultural, or horticultural organization;

Second. Mutual savings bank not having a capital stock represented by shares;

Third. Fraternal beneficiary society, order, or association operating under the lodge system or for the exclusive benefit of the members of a fraternity itself operating under the lodge system, and providing for the payment of life, sick, accident, or other benefits to the members of such society, order, or association, or their dependents;

Fourth. Domestic building and loan association;
Fifth. Cemetery company owned and operated exclusively for the benefit of its members;
Sixth. Corporation or association organized and operated exclusively for religious, charitable, scientific, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual;
Seventh. Business league, chamber of commerce, or board of trade, not organized for profit and no part of the net income of which inures to the benefit of any private stockholder or individual;
Eighth. Civic league or organization not organized for profit, but operated exclusively for the promotion of social welfare;
Ninth. Club organized and operated exclusively for pleasure, recreation, and other nonprofitable purposes, no part of the net income of which inures to the benefit of any private stockholder or member;
Tenth. Farmers' mutual hail, cyclone, or fire insurance company, mutual or cooperative telephone company, or like organization of a purely local character, the income of which consists solely of assessments, dues, and fees collected from members for the sole purpose of meeting its expenses;
Eleventh. Farmers', fruit growers', or like association, organized and operated as a sales agent for the purpose of marketing the products of its members and turning back to them the proceeds of sales, less the necessary selling expenses, on the basis of the quantity of produce furnished by them; or
Twelfth. Corporation or association organized for the exclusive purpose of holding title to property, collecting income therefrom, and turning over the entire amount thereof, less expenses, to an organization which itself is exempt from the tax imposed by this title.

(b) There shall not be taxed under this title any income derived from any public utility or from the exercise of any essential governmental function accruing to any State, Territory, or the District of Columbia, or any political subdivision of a State or Territory, nor any income accruing to the government of the Philippine Islands or Porto Rico, or of any political subdivision of the Philippine Islands or Porto Rico: *Provided*, That whenever any State, Territory, or the District of Columbia, or any political subdivision of a State or Territory, has, prior to the passage of this title, entered in good faith into a contract with any person or corporation, the object and purpose of which is to acquire, construct, operate, or maintain a public utility, no tax shall be levied under the provisions of this title upon the income derived from the operation of such public utility, so far as the payment thereof will impose a loss or burden upon such State, Territory, or the District of Columbia, or a political subdivision of a State or Territory; but this provision is not intended to confer upon such person or corporation any financial gain or exemption or to relieve such person or corporation from the payment of a tax as provided for in this title upon the part or portion of the said income to which such person or corporation shall be entitled under such contract.

DEDUCTIONS.

SEC. 12. (a) In the case of a corporation, joint-stock company or association, or insurance company, organized in the United States, such net income shall be ascertained by deducting from the gross amount of its income received within the year from all sources—

First. All the ordinary and necessary expenses paid within the year in the maintenance and operation of its business and properties, including rentals or other payments required to be made as a condition to the continued use or possession of property to which the corporation has not taken or is not taking title or in which it has no equity.

Second. All losses actually sustained within the year and not compensated by insurance or otherwise, including a reasonable allowance for the exhaustion, wear and tear of property arising out of its use or employment in the business or trade; and in the case of mines, including oil wells or gas wells, a reasonable allowance for depletion of ores and of other natural deposits, not to exceed 5 per cent of the gross value at the mine of the output for the year for which the computation is made; and in the case of timber, a reasonable allowance for stumpage not in excess of the cost of, or capital actually invested in, the timber sold or removed during the year for which the return is made: *Provided*, That no deduction shall be allowed for any amount paid out for new buildings, permanent improvements, or betterments, made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made; and in case of insurance companies the net addition, if any, required by law to be made within the year to reserve funds and the sums other than dividends paid within the year on policy and annuity contracts: *Provided*, That mutual fire insurance companies requiring their members to make premium deposits to provide for losses and expenses shall not return as income any portion of the premium deposits returned to their policyholders, but shall return as taxable income all income received by them from all other sources plus such portions of the premium deposits as are retained by the companies for purposes other than the payment of losses and reinsurance reserves: *Provided further*, That mutual marine insurance companies shall include in their return of gross income gross premiums collected and received by them less amounts paid for reinsurance, but shall be entitled to include in deductions from gross income amounts repaid to policyholders on account of premiums previously paid by them and interest paid upon such amounts between the ascertainment thereof and the payment thereof, and life insurance companies shall not include as income in any year such portion of any actual premium received from any individual policyholder as shall have been paid back or credited to such individual policyholder, or treated as an abatement of premium of such individual policyholder within such year.

Third. The amount of interest paid within the year on its indebtedness to an amount of such indebtedness not in excess of the sum of (a) the entire amount of the paid-up capital stock outstanding at the close of the year, or, if no capital stock, the entire amount of capital employed in the business at the close of the year, and (b) one-half of its interest-bearing indebtedness then outstanding: *Provided*, That for the purpose of this title preferred capital stock shall not be considered interest-bearing indebtedness, and interest or dividends paid upon this stock shall not be deductible from gross income: *Provided further*, That in cases wherein shares of capital stock are issued without par or nominal value, the amount of paid-up capital stock, within the meaning of this section, as represented by such shares, will be the amount of cash, or its equivalent, paid or transferred to the corporation as a consideration for such shares: *Provided further*, That in the case of indebtedness wholly secured by personal property collateral, tangible or intangible, the subject of sale in the ordinary business of such corporation, joint-stock company, or association as a dealer in the property constituting such collateral, the total interest paid by such corporation, company, or association within the year on any such indebtedness may be deducted as a part of its expenses of doing business, but interest on such indebtedness shall only be deductible on an amount of such indebtedness not in excess of the actual value of such personal property collateral: *Provided further*, That in the case of bonds or other indebtedness, which have been issued with a guaranty that the interest payable thereon shall be free from taxation, no deduction for the payment of the tax herein imposed, or any other tax paid pursuant to such guaranty, shall be allowed; and in the case of a bank, banking association, loan or trust company, interest paid within the year on deposits or on moneys received for investment and secured by interest-bearing certificates of indebtedness issued by such bank, banking association, loan or trust company.

Fourth. Taxes paid within the year imposed by the authority of the United States, or its Territories or possessions, or any foreign country, and any State, county, school, or municipal taxes, not including those assessed against local benefits.

(b) In the case of a corporation, joint-stock company or association, or insurance company, organized, authorized, or existing under the laws of any foreign country, such net income shall be ascertained by deducting from the gross amount of its income received within the year from all sources within the United States—

First. All the ordinary and necessary expenses actually paid within the year out of earnings in the maintenance and operation of its business and property within the United States, including rentals or other payments required to be made as a condition to the continued use or possession of property to which the corporation has not taken or is not taking title, or in which it has no equity.

Second. All losses actually sustained within the year in business or trade conducted by it within the United States and not compensated by insurance or otherwise, including a reasonable allowance for the exhaustion, wear and tear of property arising out of its use or employment in the business or trade; and in the case of mines, including oil wells and gas wells, a reasonable allowance for depletion of ores and of other natural deposits, not to exceed 5 per cent of the gross value at the mine of the output for the year for which the computation is made; and in the case of timber, a reasonable allowance for stumpage not in excess of the cost of, or capital actually invested in, the timber sold or removed during the year for which the return is made: *Provided*, That no deduction shall be allowed for any amount paid out for new buildings, permanent improvements, or betterments, made to increase the value of any property or estate, and no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made; and in the case of insurance companies the net addition, if any, required by law to be made within the year to reserve funds and the sums other than dividends paid within the year on policy and annuity contracts: *Provided further*, That mutual fire insurance companies requiring their members to make premium deposits to provide for losses and expenses shall not return as income any portion of the premium deposits returned to their policyholders, but shall return as taxable income all income received by them from all other sources plus such portions of the premium deposits as are retained by the companies for purposes other than the payment of losses and expenses and reinsurance reserves: *Provided further*, That mutual marine insurance companies shall include in their return of gross income gross premiums collected and received by them less amounts paid for reinsurance, but shall be entitled to include in deductions from gross income amounts repaid to policyholders on account of premiums previously paid by them, and interest paid upon such amounts between the ascertainment thereof and the payment thereof, and life insurance companies shall not include as income in any year such portion of any actual premium received from any individual policyholder as shall have been paid back or credited to such individual policyholder, or treated as an abatement of premium of such individual policyholder, within such year.

Third. The amount of interest paid within the year on its indebtedness to an amount of such indebtedness not in excess of the proportion of the sum of (a) the entire amount of the paid-up capital stock outstanding at the close of the year, or, if no capital stock, the entire amount of the capital employed in the business at the close of the year, and (b) one-half of its interest-bearing indebtedness then outstanding, which the gross amount of its income for the year from business transacted and capital invested within the United States bears to the gross amount of its income derived from all sources within and without the United States: *Provided*, That in the case of bonds or other indebtedness which have been issued with a guaranty that the interest payable thereon shall be free from taxation, no deduction for the payment of the tax herein imposed shall be allowed; and in case of a bank, banking association, loan or trust company, or branch thereof, interest paid within the year on deposits by or on moneys received for investment from either citizens or residents of the United States and secured by interest-bearing certificates of indebtedness issued by such bank, banking association, loan or trust company, or branch thereof.

Fourth. Taxes paid within the year imposed by the authority of the United States, or its Territories, or possessions, and any State, county, school, or municipal taxes, paid within the United States, not including those assessed against local benefits.

(c) In the case of assessment insurance companies, whether domestic or foreign, the actual deposit of sums with State or Territorial officers, pursuant to law, as additions to guarantee or reserve funds shall be treated as being payments required by law to reserve funds.

RETURNS.

SEC. 13. (a) The tax shall be computed upon the net income, as thus ascertained, received within each preceding calendar year ending December 31: *Provided*, That any corporation, joint-stock company or association, or insurance company, subject to this tax, may designate the last day of any month in the year as the day of the closing of its fiscal year and shall be entitled to have the tax payable by it computed upon the basis of the net income ascertained as herein provided for the year ending on the day so designated in the year preceding the date of assessment instead of upon the basis of the net income for the calendar year preceding the date of assessment; and it shall give notice of the day it has thus designated as the closing of its fiscal year to the collector of the district in which its principal business office is located at any time not less than 30 days prior to the 1st day of March of the year in which its return would be filed if made upon the basis of the calendar year.

(b) Every corporation, joint-stock company or association, or insurance company, subject to the tax herein imposed, shall, on or before the 1st day of March 1917, and the 1st day of March in each year thereafter, or, if it has designated a fiscal year for the computation

of its tax, then within 60 days after the close of such fiscal year ending prior to December 31, 1916, and the close of each such fiscal year thereafter, render a true and accurate return of its annual net income in the manner and form to be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, and containing such facts, data, and information as are appropriate and in the opinion of the commissioner necessary to determine the correctness of the net income returned and to carry out the provisions of this title. The return shall be sworn to by the president, vice president, or other principal officer, and by the treasurer or assistant treasurer. The return shall be made to the collector of the district in which is located the principal office of the corporation, company, or association, where are kept its books of account and other data from which the return is prepared, or in the case of a foreign corporation, company, or association to the collector of the district in which is located its principal place of business in the United States. All such returns shall as received, be transmitted forthwith by the collector to the Commissioner of Internal Revenue.

(c) In cases wherein receivers, trustees in bankruptcy, or assignees are operating the property or business of corporations, joint-stock companies or associations, or insurance companies, subject to tax imposed by this title, such receivers, trustees, or assignees shall make returns of net income as and for such corporations, joint-stock companies or associations, and insurance companies, in the same manner and form as such organizations are hereinbefore required to make returns, and any income tax due on the basis of such returns made by receivers, trustees, or assignees shall be assessed and collected in the same manner as if assessed directly against the organizations of whose businesses or properties they have custody and control.

(d) A corporation, joint-stock company or association, or insurance company, keeping accounts upon any basis other than that of actual receipts and disbursements, unless the Commissioner of Internal Revenue finds that such other basis does not clearly reflect its income, may, subject to regulations made by such commissioner, with the approval of the Secretary of the Treasury, make its return upon the basis upon which its accounts are kept, in which case the tax shall be computed upon its income as so returned.

ASSESSMENT AND ADMINISTRATION.

SEC. 14. (a) All assessments shall be made and the several corporations, joint-stock companies or associations, and insurance companies shall be notified of the amount for which they are respectively liable on or before the 1st day of June of each successive year, and said assessment shall be paid on or before the 15th day of June: *Provided*, That every corporation, joint-stock company or association, and insurance company, computing taxes upon the income of the fiscal year which it may designate in the manner hereinbefore provided, shall pay the taxes due under its assessment within 105 days after the date upon which it is required to file its list or return of income for assessment; except in cases of refusal or neglect to make such return, and in cases of erroneous, false, or fraudulent returns, in which cases the Commissioner of Internal Revenue shall, upon the discovery thereof, at any time within three years after said return is due, make a return upon information obtained as provided for in this title or by existing law; and the assessment made by the Commissioner of Internal Revenue thereon shall be paid by such corporation, joint-stck company or association, or insurance company immediately upon notification of the amount of such assessment; and to any sum or sums due and unpaid after the 15th day of June in any year, or after 105 days from the date on which the return of income is required to be made by the taxpayer, and after 10 days' notice and demand thereof by the collector, there shall be added the sum of 5 per cent on the amount of tax unpaid and interest at the rate of 1 per cent per month upon said tax from the time the same becomes due.

(b) When the assessment shall be made, as provided in this title, the returns, together with any corrections thereof which may have been made by the commissioner, shall be filed in the office of the Commissioner of Internal Revenue and shall constitute public records and be open to inspection as such: *Provided*, That any and all such returns shall be open to inspection only upon the order of the President, under rules and regulations to be prescribed by the Secretary of the Treasury and approved by the President: *Provided further*, That the proper officers of any State imposing a general income tax may, upon the request of the governor thereof, have access to said returns or to an abstract thereof, showing the name and income of each such corporation, joint-stock company or association, or insurance company, at such times and in such manner as the Secretary of the Treasury may prescribe.

(c) If any of the corporations, joint-stock companies or associations, or insurance companies aforesaid shall refuse or neglect to make a return at the time or times hereinbefore specified in each year, or shall render a false or fraudulent return, such corporation, joint-stock company or association, or insurance company shall be liable to a penalty of not exceeding $10,000.

PART III.—GENERAL ADMINISTRATIVE PROVISIONS.

SEC. 15. That the word "State" or "United States" when used in this title shall be construed to include any Territory, the District of Columbia, Porto Rico, and the Philippine Islands, when such construction is necessary to carry out its provisions.

SEC. 16. That sections 3167, 3172, 3173, and 3176 of the Revised Statutes of the United States as amended are hereby amended so as to read as follows:

"SEC. 3167. It shall be unlawful for any collector, deputy collector, agent, clerk, or other officer or employee of the United States to divulge or to make known in any manner whatever not provided by law to any person the operations, style of work, or apparatus of any manufacturer or producer visited by him in the discharge of his official duties, or the amount or source of income, profits, losses, expenditures, or any particular thereof, set forth or disclosed in any income return, or to permit any income return or copy thereof or any book containing any abstract or particulars thereof to be seen or examined by any person except as provided by law; and it shall be unlawful for any person to print or publish in any manner whatever not provided by law any income return or any part thereof or the amount or source of income, profits, losses, or expenditures appearing in any income return; and any offense against the foregoing provision shall be a misdemeanor and be punished by a fine not exceeding $1,000 or by imprisonment not exceeding one year, or both, at the discretion of the court; and if the offender be an officer or employee of the United States he shall be dismissed from office or discharged from employment.

"SEC. 3172. Every collector shall, from time to time, cause his deputies to proceed through every part of his district and inquire after and concerning all persons therein who are liable to pay any internal-revenue tax, and all persons owning or having the care and management of any objects liable to pay any tax, and to make a list of such persons and enumerate said objects.

"SEC. 3173. It shall be the duty of any person, partnership, firm, association, or corporation, made liable to any duty, special tax, or other tax imposed by law, when not otherwise provided for, (1) in case of a special tax, on or before the 31st day of July in each year, (2) in case of income tax on or before the 1st day of March in each year, or on or before the last day of the 60-day period next following the closing date of the fiscal year for which it makes a return of its income, and (3) in other cases before the day on which the taxes accrue, to make a list or return, verified by oath, to the collector or a deputy collector of the district where located, of the articles or objects, including the amount of annual income charged with a duty or tax, the quantity of goods, wares, and merchandise, made or sold and charged with a tax, the several rates and aggregate amount, according to the forms and regulations to be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, for which such person, partnership, firm, association, or corporation is liable: *Provided*, That if any person liable to pay any duty or tax, or owning, possessing, or having the care or management of property, goods, wares, and merchandise, articles or objects liable to pay any duty, tax, or license, shall fail to make and exhibit a list or return required by law, but shall consent to disclose the particulars of any and all the property, goods, wares, and merchandise, articles, and objects liable to pay any duty or tax, or any business or occupation liable to pay any tax as aforesaid, then, and in that case, it shall be the duty of the collector or deputy collector to make such list or return, which, being distinctly read, consented to, and signed and verified by oath by the person so owning, possessing, or having the care and management as aforesaid, may be received as the list of such person: *Provided further*, That in case no annual list or return has been rendered by such person to the collector or deputy collector as required by law, and the person shall be absent from his or her residence or place of business at the time the collector or a deputy collector shall call for the annual list or return, it shall be the puty of such collector or deputy collector to leave at such place of residence or business, with some one of suitable age and discretion, if such be present, otherwise to deposit in the nearest post office a note or memorandum addressed to such person, requiring him or her to render to such collector or deputy collector the list or return required by law within 10 days from the date of such note or memorandum, verified by oath. And if any person, on being notified or required as aforesaid, shall refuse or neglect to render such list or return within the time required as aforesaid, or whenever any person who is required to deliver a monthly or other return of objects subject to tax fails to do so at the time required, or delivers any return which, in the opinion of the collector, is erroneous, false, or fraudulent, or contains any undervaluation or understatement, or refuses to allow any regularly authorized Government officer to examine the books of such person, firm, or corporation, it shall be lawful for the collector to summon such person, or any other person having possession, custody, or care of books of account containing entries relating to the business of such person, or any other person he may deem proper, to appear before him and produce such books at a time and place named in the summons, and to give testimony or answer interrogatories, under oath, respecting any objects or income liable to tax or the returns thereof. The collector may summon any person residing or found within the State or Territory in which his district lies; and when the person intended to be summoned does not reside and can not be found within such State or Territory, he may enter any collection district where such person may be found and there make the examination herein authorized. And to this end he may there exercise all the authority which he might lawfully exercise in the district for which he was commissioned: *Provided*, That 'person,' as used in this section, shall be construed to include any corporation, joint-stock company or association, or insurance company when such construction is necessary to carry out its provisions.

"SEC. 3176. If any person, corporation, company, or association fails to make and file a return or list at the time prescribed by law, or makes, willfully or otherwise, a false or fraudulent return or list, the collector or deputy collector shall make the return or list from his own knowledge and from such information as he can obtain through testimony or otherwise. Any return or list so made and subscribed by a collector or deputy collector shall be prima facie good and sufficient for all legal purposes.

"If the failure to file a return or list is due to sickness or absence, the collector may allow such further time, not exceeding 30 days, for making and filing the return or list, as he deems necessary.

"The Commissioner of Internal Revenue shall assess all taxes, other than stamp taxes, as to which returns or lists are so made by a collector or deputy collector. In case of any failure to make and file a return or list within the time prescribed by law or by the collector, the Commissioner of Internal Revenue shall add to the tax 50 per cent of its amount except that, when a return is voluntarily and without notice from the collector filed after such time and it is shown that the failure to file it was due to a reasonable cause and not to willful neglect, no such addition shall be made to the tax. In case a false or fraudulent return or list is willfully made, the Commissioner of Internal Revenue shall add to the tax 100 per cent of its amount.

"The amount so added to any tax shall be collected at the same time and in the same manner and as part of the tax unless the tax has been paid before the discovery of the neglect, falsity, or fraud, in which case the amount so added shall be collected in the same manner as the tax."

SEC. 17. That it shall be the duty of every collector of internal revenue to whom any payment of any taxes is made under the provisions of this title to give to the person making such payment a full written or printed receipt, expressing the amount paid and the particular account for which such payment was made; and whenever such payment is made such collector shall, if required, give a separate receipt for each tax paid by any debtor on account of payments made to or to be made by him to separate creditors, in such form that such debtor can conveniently produce the same separately to his several creditors in satisfaction of their respective demands to the amounts specified in such receipts; and such receipts shall be sufficient evidence in favor of such debtor to justify him in withholding the amount therein expressed from his next payment to his creditor; but such creditor may, upon giving to his debtor a full written receipt, acknowledging the payment to him of whatever sum may be actually paid and accepting the amount of tax paid as aforesaid (specifying the same) as a further satisfaction of the debt to that amount, require the surrender to him of such collector's receipt.

SEC. 18. That if any individual liable to make the return or pay the tax aforesaid shall refuse or neglect to make such return at the time

or times hereinbefore specified in each year, he shall be liable to a penalty of not less than $20 nor more than $1,000. Any individual or any officer of any corporation, joint-stock company or association, or insurance company required by law to make, render, sign, or verify any return, who makes any false or fraudulent return or statement with intent to defeat or evade the assessment required by this title to be made, shall be guilty of a misdemeanor, and shall be fined not exceeding $2,000 or be imprisoned not exceeding one year, or both, in the discretion of the court, with the costs of prosecution.

SEC. 19. That jurisdiction is hereby conferred upon the district courts of the United States for the district within which any person summoned under this title to appear to testify or to produce books shall reside, to compel such attendance, production of books, and testimony by appropriate process.

SEC. 20. That the preparation and publication of statistics reasonably available with respect to the operation of the income-tax law and containing classifications of taxpayers and of income, the amounts allowed as deductions and exemptions, and any other facts deemed pertinent and valuable, shall be made annually by the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury.

SEC. 21. That all administrative, special, and general provisions of law, including the laws in relation to the assessment, remission, collection, and refund of internal-revenue taxes not heretofore specifically repealed and not inconsistent with the provisions of this title, are hereby extended and made applicable to all the provisions of this title and to the tax herein imposed.

SEC. 22. That the provisions of this title shall extend to Porto Rico and the Philippine Islands: *Provided*, That the administration of the law and the collection of the taxes imposed in Porto Rico and the Philippine Islands shall be by the appropriate internal-revenue officers of those governments, and all revenues collected in Porto Rico and the Philippine Islands thereunder shall accrue intact to the general governments thereof, respectively: *Provided further*, That the jurisdiction in this title conferred upon the district courts of the United States shall, so far as the Philippine Islands are concerned, be vested in the courts of the first instance of said islands: *And provided further*, That nothing in this title shall be held to exclude from the computation of the net income the compensation paid any official by the governments of the District of Columbia, Porto Rico, and the Philippine Islands, or the political subdivisions thereof.

SEC. 23. That section 2 of the act approved October 3, 1913, entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," is hereby repealed, except as herein otherwise provided, and except that it shall remain in force for the assessment and collection of all taxes which have accrued thereunder, and for the imposition and collection of all penalties or forfeitures which have accrued or may accrue in relation to any of such taxes, and except that the unexpended balance of any appropriation heretofore made and now available for the administration of such section or any provision thereof shall be available for the administration of this title or the corresponding provision thereof.

SEC. 24. That income on which has been assessed the tax imposed by section 2 of the act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, shall not be considered as income within the meaning of this title.

Title II.—Estate tax.

SEC. 100. That when used in this title—

The term "person" includes partnerships, corporations, and associations;

The term "United States" means only the States, the Territories of Alaska and Hawaii, and the District of Columbia;

The term "executor" means the executor or administrator of the decedent, or, if there is no executor or administrator, any person who takes possession of any property of the decedent; and

The term "collector" means the collector of internal revenue of the district in which was the domicile of the decedent at the time of his death, or, if there was no such domicile in the United States, then the collector of the district in which is situated the part of the gross estate of the decedent in the United States, or, if such part of the gross estate is situated in more than one district, then the collector of internal revenue at Baltimore, Md.

SEC. 101. That a tax (hereinafter in this title referred to as the tax), equal to the following percentages of the value of the net estate, to be determined as provided in section 103, is hereby imposed upon the transfer of the net estate of every decedent, whether a resident or nonresident of the United States:

One per cent of the amount of such net estate not in excess of $50,000;

Two per cent of the amount by which such net estate exceeds $50,000 and does not exceed $150,000;

Three per cent of the amount by which such net estate exceeds $150,000 and does not exceed $250,000;

Four per cent of the amount by which such net estate exceeds $250,000 and does not exceed $450,000; and

Five per cent of the amount by which such net estate exceeds $450,000.

SEC. 102. That the value of the gross estate of the decedent shall be determined by including the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated:

(a) To the extent of the interest therein of the decedent at the time of his death which after his death is subject to the payment of the charges against his estate and the expenses of its administration and to distribution as part of his estate;

(b) To the extent of any interest therein of which the decedent has at any time made a transfer, or with respect to which he has created a trust, in contemplation of or intended to take effect in possession or enjoyment at or after his death, except in case of a bona fide sale for a fair and adequate consideration in money or money's worth. Any transfer of a material part of his property in the nature of a final disposition or distribution thereof, made by the decedent within four years prior to his death without such a consideration, shall, unless shown to the contrary, be deemed to have been made in contemplation of death within the meaning of this title; and

(c) To the extent of the interest therein held jointly or as tenants in the entirety by the decedent and any other person, or deposited in banks or other institutions in their joint names and payable to either or the survivor, except such part thereof as may be shown to have originally belonged to such other person and never to have belonged to the decedent.

For the purpose of this title stock in a domestic corporation owned and held by a nonresident decedent shall be deemed property within the United States, and any property of which the decedent has made a transfer or with respect to which he has created a trust, within the meaning of subdivision (b) of this section, shall be deemed to be situated in the United States, if so situated either at the time of the transfer or the creation of the trust, or at the time of the decedent's death.

SEC. 103. That for the purpose of the tax the value of the net estate shall be determined—

(a) In the case of a resident, by deducting from the value of the gross estate—

(1) Such amounts for funeral expenses, administration expenses, claims against the estate, unpaid mortgages, losses incurred during the settlement of the estate arising from fires, storms, shipwreck, or other casualty, and from theft, when not compensated for by insurance or otherwise, support during the settlement of the estate of those dependent upon the decedent, and other charges against the estate, as are allowed by the laws of the jurisdiction, whether within or without the United States, under which the estate is being administered; and

(2) An exemption of $50,000;

(b) In the case of a nonresident, by deducting from the value of that part of his gross estate which at the time of his death is situated in the United States that proportion of the deductions specified in paragraph (1) of subdivision (a) of this section which the value of such part bears to the value of his entire gross estate, wherever situated. But no deductions shall be allowed in the case of a nonresident unless the executor includes in the return required to be filed under section 105 the value at the time of his death of that part of the gross estate of the nonresident not situated in the United States.

SEC. 104. That the tax shall be due one year after the decedent's death. If the tax is paid before it is due, a discount at the rate of 5 per cent per annum, calculated from the time payment is made to the date when the tax is due, shall be deducted. If the tax is not paid within 60 days after it is due, interest at the rate of 10 per cent per annum from the time of the decedent's death shall be added as part of the tax, unless because of claims against the estate, necessary litigation, or other unavoidable delay the collector finds that the tax can not be determined, in which case the interest shall be at the rate of 6 per cent per annum from the time of the decedent's death until the cause of such delay is removed, and thereafter at the rate of 10 per cent per annum. Litigation to defeat the payment of the tax shall not be deemed necessary litigation.

SEC. 105. That the executor, within 30 days after qualifying as such, or after coming into possession of any property of the decedent, whichever event first occurs, shall give written notice thereof to the collector. The executor shall also, at such times and in such manner as may be required by the regulations made under this title, file with the collector a return under oath in duplicate, setting forth (a) the value of the gross estate of the decedent at the time of his death, or, in case of a nonresident, of that part of his gross estate situated in the United States; (b) the deductions allowed under section 103; (c) the value of the net estate of the decedent as defined in section 103; and (d) the tax paid or payable thereon; or such part of such information as may at the time be ascertainable. If there is no net estate subject to the tax, no notice or return shall be required.

SEC. 106. That if no administration is granted upon the estate of a decedent, or if no return is filed as provided in section 105, or if a return contains a false or incorrect statement of a material fact, the collector or deputy collector shall make a return, and the Commissioner of Internal Revenue shall assess the tax thereon.

SEC. 107. That the executor shall pay the tax to the collector or deputy collector. If for any reason the amount of the tax can not be determined, the payment of a sum of money sufficient, in the opinion of the collector, to discharge the tax shall be deemed payment in full of the tax, except as in this section otherwise provided. If the amount so paid exceeds the amount of the tax as finally determined, the Commissioner of Internal Revenue shall refund such excess to the executor. If the amount of the tax as finally determined exceeds the amount so paid, the commissioner shall notify the executor of the amount of such excess. From the time of such notification to the time of the final payment of such excess part of the tax interest shall be added thereto at the rate of 10 per cent per annum, and the amount of such excess shall be a lien upon the entire gross estate, except such part thereof as may have been sold to a bona fide purchaser for a fair and adequate consideration in money or money's worth.

The collector shall grant to the person paying the tax duplicate receipts, either of which shall be sufficient evidence of such payment, and shall entitle the executor to be credited and allowed the amount thereof by any court having jurisdiction to audit or settle his accounts.

SEC. 108. That if the tax herein imposed is not paid within 60 days after it is due, the collector shall, unless there is reasonable cause for further delay, commence appropriate proceedings in any court of the United States, in the name of the United States, to subject the property of the decedent to be sold under the judgment or decree of the court. From the proceeds of such sale the amount of the tax, together with the costs and expenses of every description to be allowed by the court, shall be first paid, and the balance shall be deposited according to the order of the court, to be paid under its direction to the person entitled thereto.

SEC. 109. That unless the tax is sooner paid in full, it shall be a lien for 10 years upon the gross estate of the decedent, except that such part of the gross estate as is used for the payment of charges against the estate and expenses of its administration, allowed by any court having jurisdiction thereof, shall be divested of such lien.

If the decedent makes a transfer of, or creates a trust with respect to, any property in contemplation of or intended to take effect in possession or enjoyment at or after his death (except in the case of a bona fide sale for fair and adequate consideration in money or money's worth) and if the tax in respect thereto is not paid when due, the transferee or trustee shall be personally liable for such tax, and such property, to the extent of the decedent's interest therein at the time of such transfer, shall be subject to a like lien equal to the amount of such tax. Any part of such property sold by such transferee or trustee to a bona fide purchaser for fair and adequate consideration in money or money's worth, shall be divested of the lien, and a like lien shall then attach to all the property of such transferee or trustee, except any part sold to a bona fide purchaser for a fair and adequate consideration in money or money's worth.

SEC. 110. That whoever knowingly makes any false statement in any notice or return required to be filed by this title shall be liable to a penalty of not exceeding $5,000, or imprisonment not exceeding one year, or both, in the discretion of the court.

Whoever fails to comply with any duty imposed upon him by section 105, or, having in his possession or control any record, file, or paper, containing or supposed to contain any information concerning the estate of the decedent, fails to exhibit the same upon request to the Commis-

sioner of Internal Revenue or any collector or law officer of the United States, or his duly authorized deputy or agent, who desires to examine the same in the performance of his duties under this title, shall be liable to a penalty of not exceeding $500, to be recovered, with costs of suit, in a civil action in the name of the United States.

SEC. 111. That all administrative, special, and general provisions of law, including the laws in relation to the assessment and collection of taxes, not heretofore specifically repealed are hereby made to apply to this title so far as applicable and not inconsistent with its provisions.

SEC. 112. That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall make such regulations, and prescribe and require the use of such books and forms, as he may deem necessary to carry out the provisions of this title.

TITLE III.—MUNITION MANUFACTURER'S TAX.

SEC. 200. That when used in this title—

The term "person" includes partnerships, corporations, and associations;

The term "manufacture" and its derivatives, except as used in section 201, include the terms "smelt," "refine," "alloy," and their derivatives;

The term "taxable year" means the 12 months ending December 31. The first taxable year shall be the 12 months ending December 31, 1916; and

The term "United States" means only the States, the Territories of Alaska and Hawaii, and the District of Columbia.

SEC. 201. That every person manufacturing gunpowder or other explosives shall pay for each taxable year an excise tax equivalent to the following percentages of the gross receipts during such year from the sale or disposition of such explosives manufactured in the United States, except blasting powder and dynamite:

Five per cent of the amount of such receipts not in excess of $1,000,000; and

Eight per cent of the amount by which such receipts exceed $1,000,000.

Every person manufacturing (a) cartridges, loaded or unloaded, caps or primers; or (b) projectiles, shells, or torpedoes of any kinds, including shrapnel, loaded or unloaded, or fuses; or (c) firearms of any kind, including small arms, cannons, machine guns, rifles, and bayonets; or (d) any parts of any of the articles mentioned in (a), (b), or (c), shall pay for each taxable year an excise tax equivalent to the following percentages of the gross receipts during such year from the sale or disposition of any such articles manufactured in the United States:

Two per cent of the amount of such receipts not in excess of $250,000;

Three per cent of the amount by which such receipts exceed $250,000 and do not exceed $500,000;

Four per cent of the amount by which such receipts exceed $500,000 and do not exceed $1,000,000; and

Five per cent of the amount by which such receipts exceed $1,000,000.

Every person smelting copper ore, refining metallic copper, or alloying copper shall pay for each taxable year an excise tax equivalent to the following percentages of the gross receipts during such year from the sale or disposition of refined copper or copper alloys and from the sale or disposition of crude or unrefined copper if sold or disposed of for any purpose except for refining or alloying:

One per cent of the amount by which such receipts exceed $25,000 and do not exceed $1,000,000;

Two per cent of the amount by which such receipts exceed $1,000,000 and do not exceed $10,000,000; and

Three per cent of the amount by which such receipts exceed $10,000,000.

SEC. 202. If any person during any taxable year or part thereof, whether under any agreement, arrangement, or understanding, or otherwise, sells or disposes of any such article at less than the fair market price obtainable therefor, either (a) in such manner as directly or indirectly to benefit such person or any person directly or indirectly interested in the business of such person, or (b) with intent to cause such benefit, the amount of the gross receipts of such person during such year or part thereof from the sale or disposition of such article shall be taken to be the amount which would have been received from the sale or disposition of such article if sold at the fair market price.

SEC. 203. That if the net profit derived during such year from the sale or disposition of such articles manufactured in the United States is less than 10 per cent, no tax shall be levied, collected, and paid; and if the payment of the tax would reduce such net profit below 10 per cent, the tax to be levied, collected, and paid shall be equal to the net profit in excess of 10 per cent. Such net profit shall be computed on the amount actually invested in the United States in the manufacture of such articles, making reasonable allowance, in the case of the increase or decrease of such amount during the taxable year, for the proportion of such year during which such increased or decreased amount has been employed in the manufacture of such articles.

In cases where such person has undivided capital invested in the manufacture of the articles specified in section 201 and of other articles, the amount invested in the manufacture of the articles specified in section 201 shall be considered as in the same ratio to the total amount invested as the gross receipts from the sale and disposition of such articles bear to the total gross receipts from the sale and disposition of all articles manufactured.

The duty of establishing to the satisfaction of the Commissioner of Internal Revenue the fact that the net profit is less than 10 per cent or that the payment of the tax would reduce the net profit below 10 per cent shall devolve upon the person subject to the tax.

SEC. 204. That when used in this title the term "net profit" means the aggregate gross receipts during the taxable year from the sale and disposition of such articles manufactured in the United States less the following items, or the proportionate part thereof chargeable to the manufacture of such articles, any deductions not kept separate from similar items arising in connection with the joint manufacture of other articles not specified in section 201 being ascertained according to the ratio above prescribed for the determination of the amount invested:

(a) The cost of raw materials entering into the manufacture;

(b) Running expenses, including rentals, cost of repairs and maintenance, heat, power, insurance, management, salaries, and wages;

(c) Interest paid within the taxable year on debts or loans contracted to meet the needs of the business, and the proceeds of which have been actually used to meet such needs;

(d) Taxes of all kinds paid during the taxable year with respect to the business or property relating to the manufacture;

(e) Losses actually sustained within the taxable year in connection with the business of manufacturing such articles, including losses from fire, flood, storm, or other casualty, and not compensated for by insurance or otherwise; and

(f) A reasonable allowance, according to the conditions peculiar to each concern, for amortization of the values of buildings and machinery, account being taken of the exceptional depreciation of special plants.

SEC. 205. Any person manufacturing any of the articles specified in section 201 through the agency of a subsidiary concern or of a subcontractor, shall, for the purposes of this title, be deemed the manufacturer of such articles, instead of the subsidiary concern or the subcontractor.

SEC. 206. Every person manufacturing in the United States any of the articles mentioned in section 201 shall, on or before February 1 of each year, make a return under oath to the collector of internal revenue of the district wherein the principal office or place of business in the United States is located, stating the amount of gross receipts from the sale and disposition of such articles during the preceding taxable year. All such returns shall be transmitted forthwith by the collector to the Commissioner of Internal Revenue, who shall, on or before March 1, notify the person making such return of the amount of tax for which such person is liable, and such person shall pay the tax to the collector on or before April 1.

SEC. 207. The tax may be assessed on any person for the time being owning or carrying on the business or on any person acting as agent for that person in carrying on the business, or, where a business has ceased, on the person who owned or carried on the business or acted as agent in carrying on the business immediately before the time at which the business ceased.

SEC. 208. No person employed by the United States shall communicate or allow to be communicated to any person not legally entitled thereto any information obtained under the provisions of this title or allow any such person to inspect or have access to any return furnished under the provisions of this title.

SEC. 209. Whoever violates this title or the regulations made thereunder, or knowingly makes a false statement in any return, is guilty of a misdemeanor, and upon conviction, shall, in addition to paying any tax to which liable, be fined not more than $10,000, or imprisoned not exceeding one year, or both, in the discretion of the court.

SEC. 210. All administrative, special, and general provisions of law, including the laws in relation to the assessment and collection of taxes, not heretofore specifically repealed are hereby made to apply to this title so far as applicable and not inconsistent with its provisions.

SEC. 211. The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall make all necessary regulations for carrying out the provisions of this title.

Title IV.—Miscellaneous taxes.

SEC. 300. That there shall be levied, collected, and paid a tax of $1.50 on all beer, lager beer, ale, porter, and other similar fermented liquor, brewed or manufactured and sold, or stored in warehouse, or removed for consumption or sale, within the United States, by whatever name such liquors may be called, for every barrel containing not more than 31 gallons; and at a like rate for any other quantity or for the fractional parts of a barrel authorized and defined by law. And section 3339 of the Revised Statutes is hereby amended accordingly.

SEC. 301. (a) That upon all still wines, including vermuth, and upon all artificial or imitation wines hereafter produced in or imported into the United States, and upon all like wines which on the date this section takes effect shall be in the possession or under the control of the producer, holder, dealer, or compounder, there shall be levied, collected, and paid taxes at rates as follows:

On wines containing not more than 14 per cent of absolute alcohol, 4 cents per wine gallon, the per cent of alcohol taxable under this section to be reckoned by volume and not by weight.

On wines containing more than 14 per cent and not exceeding 21 per cent of absolute alcohol, 10 cents per wine gallon.

On wines containing more than 21 per cent and not exceeding 24 per cent of absolute alcohol, 25 cents per wine gallon.

All such wines containing more than 24 per cent of absolute alcohol shall be classed as distilled spirits and shall pay tax accordingly: *Provided*, That on all unsold still wines in the actual possession of the producer at the time this title takes effect, upon which the tax imposed by the act approved October 22, 1914, entitled "An act to increase the internal revenue, and for other purposes," and the joint resolution approved December 17, 1915, entitled "Joint resolution extending the provisions of the act entitled 'An act to increase the internal revenue, and for other purposes,' approved October 22, 1914, to December 31, 1916," has been assessed, the tax so assessed shall be abated, or, if paid, refunded under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

(b) That the taxes imposed by this section shall be paid by stamp on removal of the wines from the customshouse, winery, or other bonded place of storage for consumption or sale, and every person hereafter producing, or having in his possession or under his control when this title takes effect, any wines subject to the tax imposed in this section shall file such notice, describing the premises on which such wines are produced or stored; shall execute a bond in such form; shall make such inventories under oath; and shall, prior to sale or removal for consumption, affix to each cask or vessel containing such wine such marks, labels, or stamps as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may from time to time prescribe; and the premisces described in such notice shall, for the purpose of this section, be regarded as bonded premises. But the provisions of this subdivision of this section, except as to payment of tax and the affixing of the required stamps or labels, shall not apply to wines held by retail dealers, as defined in section 3244 of the Revised Statutes of the United States, nor subject to regulations prescribed by the Commissioner of Internal Revenue, shall the tax imposed by this section apply to wines produced for the family use of the producer thereof and not sold or removed from the place of manufacture and not exceeding in any case 200 gallons per year. The Commissioner of Internal Revenue is hereby authorized to have prepared and issue such stamps denoting payment of the tax imposed by this section as he may deem requisite and necessary; and until such stamps are provided the taxes imposed by this section shall be assessed and collected as other taxes are assessed and collected, and all provisions of law relating to assessment and collection of taxes, so far as applicable, are hereby extended to the taxes imposed by this section.

(c) That under such regulations and official supervision and upon the giving of such notices, entries, bonds, and other securities as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, any producer of wines taxable under the provisions of this section may withdraw from any fruit distillery or special bonded warehouse grape brandy, or wine spirits, for the fortification of such wines on the premises where actually made: *Provided*, That there shall be levied and assessed against the producer

of such wines a tax of 10 cents per proof gallon of grape brandy or wine spirits so used by him in the fortification of such wines during the preceding month, which assessment shall be paid by him within 90 days from the date of notice thereof: *Provided further*, That nothing herein contained shall be construed as exempting any wines, cordials, liqueurs, or similar compounds from the payment of any tax provided for in this section.

That sections 42, 43, and 45 of the act of October 1, 1890, as amended by section 68 of the act of August 27, 1894, are further amended to read as follows:

"SEC. 42. That any producer of pure sweet wines may use in the preparation of such sweet wines, under such regulations and after the filing of such notices and bonds, together with the keeping of such records and the rendition of such reports as to materials and products as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, wine spirits produced by any duly authorized distiller, and the Commissioner of Internal Revenue, in determining the liability of any distiller of wine spirits to assessment under section 3309 of the Revised Statutes, is authorized to allow such distiller credit in his computations for the wine spirits withdrawn to be used in fortifying sweet wines under this act.

"SEC. 43. That the wine spirits mentioned in section 42 herein mentioned is the product resulting from the distillation of fermented grape juice, to which water may have been added prior to, during, or after fermentation, for the sole purpose of facilitating the fermentation and economical distillation thereof, and shall be held to include the product from grapes or their residues commonly known as grape brandy, and shall include commercial grape brandy which may have been colored with burnt sugar or caramel; and the pure sweet wine which may be fortified with wine spirits under the provisions of this act is fermented or partially fermented grape juice only, with the usual cellar treatment, and shall contain no other substance whatever introduced before, at the time of, or after fermentation, except as herein expressly provided: *Provided*, That the addition of pure boiled or condensed grape must or pure crystallized cane or beet sugar, or pure dextrose sugar or water, or any or all of them, to the pure grape juice before fermentation, or to the fermented product of such grape juice, or to both, prior to the fortification herein provided for, either for the purpose of perfecting sweet wines according to commercial standards or for mechanical purposes, shall not be excluded by the definition of pure sweet wine aforesaid: *Provided, however*, That the cane or beet sugar, or pure dextrose sugar so used shall not be in excess of 11 per cent of the weight of the wine to be fortified: *And provided further*, That the addition of water herein authorized shall be under such regulations and limitations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may from time to time prescribe: *Provided, however*, That records kept in accordance with such regulations as to the percentage of saccharine, acid, alcoholic, and added water content of the wine offered for fortification shall be open to inspection by any official of the Department of Agriculture thereto duly authorized by the Secretary of Agriculture; but in no case shall such wines to which water has been added be eligible for fortification under the provisions of this act, where the same, after fermentation and before fortification, have an alcoholic strength of less than 5 per cent of their volume.

"SEC. 45. That under such regulations and official supervision, and upon the execution of such entries and the giving of such bonds, bills of lading, and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, any producer of pure sweet wines as defined by this act may withdraw wine spirits from any special bonded warehouse in original packages or from any registered distillery in any quantity not less than 80 wine gallons, and may use so much of the same as may be required by him under such regulations, and after the filing of such notices and bonds and the keeping of such records and the rendition of such reports as to materials and products and the disposition of the same as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, in fortifying the pure sweet wines made by him, and for no other purpose, in accordance with the foregoing limitations and provisions; and the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is authorized whenever he shall deem it to be necessary for the prevention of violations of this law to prescribe that wine spirits withdrawn under this section shall not be used to fortify wines except at a certain distance prescribed by him from any distillery, rectifying house, winery, or other establishment used for producing or storing distilled spirits, or for making or storing wines other than wines which are so fortified, and that in the building in which such fortification of wines is practiced no wines or spirits other than those permitted by this regulation shall be stored in any room or part of the building in which fortification of wines is practiced. The use of wine spirits for the fortification of sweet wines under this act shall be under the immediate supervision of an officer of internal revenue, who shall make returns describing the kinds and quantities of wine so fortified, and shall affix such stamps and seals to the packages containing such wines as may be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury; and the Commissioner of Internal Revenue shall provide by regulations the time within which wines so fortified with the wine spirits so withdrawn may be subject to inspection, and for final accounting for the use of such wine spirits and for rewarehousing or for payment of the tax on any portion of such wine spirits which remain not used in fortifying pure sweet wines."

(d) That under such regulations and upon the execution of such notices, entries, bonds, and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, domestic wines subject to the tax imposed by this section may be removed from the winery where produced, free of tax, for storage on other bonded premises or for exportation from the United States or for use as distilling material at any regularly registered distillery: *Provided, however*, That the distiller using any such wine as material shall, subject to the provisions of section 3309 of the Revised Statutes of the United States, as amended, be held to pay the tax on the product of such wines as will include both the alcoholic strength therein produced by fermentation and that obtained from the brandy or wine spirits added to such wines at the time of fortification.

(e) That upon all domestic and imported sparkling wines, liqueurs, and compounds remaining in the hands of dealers when this title takes effect, or thereafter removed from the place of manufacture or storage for sale or consumption, there shall be levied and paid, by stamp, taxes as follows:

On each bottle or other container of champagne or sparkling wine, 3 cents on each one-half pint or fraction thereof.

On each bottle or other container of artificially carbonated wine, 1 cent on each one-half pint or fraction thereof.

On each bottle or other container of liqueurs, cordials, compounds, or preparations containing distilled spirits of wine, 1½ cents on each one-half pint or fraction thereof.

The taxes imposed by this section shall not apply to wines, liqueurs, or cordials on which the tax imposed by the act approved October 22, 1914, entitled "An act to increase the internal revenue, and for other purposes," and the joint resolution approved December 17, 1915, entitled "Joint resolution extending the provisions of the act entitled 'An act to increase the internal revenue, and for other purposes,' approved October 22, 1914, to December 31, 1916," has been paid by stamp, nor to medicinal compounds prepared by retail druggists on physician's prescription, where the quantity of such compound does not exceed one-half pint.

The Commissioner of Internal Revenue is hereby authorized to have prepared suitable revenue stamps denoting the payment of the taxes imposed by this section; and all provisions of law relating to internal-revenue stamps, so far as applicable, are hereby extended to the taxes imposed by this section.

(f) That any person who shall evade or attempt to evade the tax imposed by this section, or any requirement of this section or regulation issued pursuant thereof, or who shall, otherwise than provided in this section, recover or attempt to recover any spirits from domestic or imported wine, or who shall rectify, mix, or compound with distilled spirits any domestic wines, other than in the manufacture of liqueurs, cordials, preparations, or compounds taxable under the provisions of this section, shall, on conviction, be punished for each such offense by a fine of not exceeding $5,000, or imprisonment for not more than five years, or both, and all wines or spirits as to which such violation occurs shall be forfeited to the United States. But the provision of this subdivision of this section and the provision of section 3244 of the Revised Statutes of the United States, as amended, relating to rectification, or other internal-revenue laws of the United States, shall not be held to apply to or prohibit the mixing or blending of wines subject to tax under the provisions of this section with each other or with other wines for the sole purpose of perfecting such wines according to commercial standards.

(g) That the Commissioner of Internal Revenue, by regulations to be approved by the Secretary of the Treasury, may require the use at each fruit distillery of such spirit meters, and such locks and seals to be affixed to fermenters, tanks, or other vessels and to such pipe connections as may in his judgment be necessary or expedient; and the said commissioner is hereby authorized to assign to any such distillery and to each winery where wines are to be fortified such number of gaugers or storekeeper-gaugers in the capacity of gaugers as may be necessary for the proper supervision of the manufacture of brandy or the making or fortifying of wines subject to tax imposed by this section; and the compensation of such officers shall not exceed $5 per diem while so assigned, together with their actual and necessary traveling expenses, and also a reasonable allowance for their board bills, to be fixed by the Commissioner of Internal Revenue, but not to exceed $2.50 per diem for said board bills.

(h) That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is hereby authorized to make such allowances for unavoidable loss of wines while on storage or during cellar treatment as in his judgment may be just and proper, and to prepare all necessary regulations for carrying into effect the provisions of this section.

SPECIAL TAXES.

SEC. 302. That on and after January 1, 1917, special taxes shall be, and hereby are, imposed annually, as follows, that is to say:

First. Bankers shall pay $1 for each $1,000 of capital, surplus, and undivided profits used in any of the activities or functions of banking, including such sums as may be invested in or loaned upon stocks, bonds, mortgages, real estate, or other securities. The amount of such annual tax shall in all cases be computed on the basis of the capital, surplus, and undivided profits for the preceding fiscal year. Every person, firm, or company, and every incorporated or other bank, having a place of business where credits are opened by the deposit or collection of money or currency, subject to be paid or remitted upon draft, check, or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange, or promissory notes, or where stocks, bonds, bullion, bills of exchange, or promissory notes are received for discount or sale, shall be deemed a banker under this section: *Provided*, That any postal savings bank, or savings bank having no capital stock, and whose business is confined to receiving deposits and loaning or investing the same for the benefit of its depositors, and which does no other business of banking, shall not be subject to this tax.

Second. Brokers shall pay $30. Every person, firm, or company, whose business it is to negotiate purchases or sales of stocks, bonds, exchange, bullion, coined money, bank-notes, promissory notes, or other securities, for others, shall be regarded as a broker: *Provided*, That any person having paid the special tax as a banker shall not be required to pay the special tax as a broker.

Third. Pawnbrokers shall pay $50. Every person, firm, or company whose business or occupation it is to take or receive, by way of pledge, pawn, or exchange, any goods, wares, or merchandise, or any kind of personal property whatever, as security for the repayment of money loaned thereon, shall be deemed a pawnbroker.

Fourth. Ship brokers shall pay $20. Every person, firm, or company whose business it is as a broker to negotiate freights and other business for the owners of vessels, or for the shippers or consignors or consignees of freight carried by vessels, shall be regarded as a ship broker under this section.

Fifth. Customhouse brokers shall pay $10. Every person, firm, or company whose occupation it is, as the agent of others, to arrange entries and other customhouse papers, or transact business at any port of entry relating to the importation or exportation of goods, wares, or merchandise, shall be regarded as a customhouse broker.

Sixth. Proprietors of theaters, museums, or concert halls, where a charge for admission is made, located in a city, town, or village with a population not exceeding 1,000, according to the last preceding census of the United States, shall pay $10; located in a city, town, or village having a population in excess of 1,000 but not in excess of 2,000, shall pay $15; located in a city, town, or village having a population in excess of 2,000 and not in excess of 3,000, shall pay $20; located in a city, town, or village having a population in excess of 3,000, shall pay one-half of 1 per cent of their gross receipts from admission. Every edifice used for the purpose of dramatic or operatic or other representations, plays, or performances, for admission to which entrance money is received, not including halls or armories rented or used occasionally for concerts or theatrical representation, shall be regarded as a theater.

Every proprietor of such theater, museum, or concert hall located in a city, town, or village having a population in excess of 3,000 inhabitants shall, on or before the 15th day of March, 1917, and on or before the 15th day of June, September, December, and March there-

after, make a return, under oath, to the collector of internal revenue of the district wherein they are located, stating the gross receipts from admissions for the preceding quarter. The collector shall, within five days of receipt of the return, notify the proprietor of the amount of the tax for which such person is liable, and such person shall pay the tax to the collector on or before the 1st day of the next month.

Seventh. The proprietor or proprietors of circuses shall pay $100. Every building, space, tent, or area where feats of horsemanship or acrobatic sports or theatrical performances not otherwise provided for in this section are exhibited shall be regarded as a circus: *Provided*, That no special tax paid in one State, Territory, or the District of Columbia shall exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be imposed for exhibitions within any one State, Territory, or District.

Eighth. Proprietors or agents of all other public exhibitions or shows for money not enumerated in this section shall pay $10: *Provided*, That a special tax paid in one State, Territory, or the District of Columbia shall not exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be required for exhibitions within any one State, Territory, or the District of Columbia: *Provided further*, That this paragraph shall not apply to Chautauquas, lecture lyceums, agricultural or industrial fairs, or exhibitions held under the auspices of religious or charitable associations: *Provided further*, That an aggregation of entertainments known as a street fair shall not pay a larger tax than $100 in any State, Territory, or in the District of Columbia.

Ninth. Proprietors of bowling alleys and billiard rooms shall pay $5 for each alley or table. Every building or place where bowls are thrown or where games of billiards or pool are played, and that are open to the public with or without price, shall be regarded as a bowling alley or a billiard room, respectively.

SEC. 303. That on and after January 1, 1917, special taxes on tobacco, cigar, and cigarette manufacturers shall be, and hereby are, imposed annually as follows, the amount of such annual taxes to be computed in all cases on the basis of the annual sales for the preceding fiscal year:

Manufacturers of tobacco whose annual sales do not exceed 50,000 pounds shall each pay $3:

Manufacturers of tobacco whose annual sales exceed 50,000 and do not exceed 100,000 pounds shall each pay $6;

Manufacturers of tobacco whose annual sales exceed 100,000 and do not exceed 200,000 pounds shall each pay $12;

Manufacturers of tobacco whose annual sales exceed 200,000 pounds shall each pay at the rate of 8 cents per thousand pounds or fraction thereof;

Manufacturers of cigars whose annual sales do not exceed 50,000 cigars shall each pay $2;

Manufacturers of cigars whose annual sales exceed 50,000 and do not exceed 100,000 cigars shall each pay $3;

Manufacturers of cigars whose annual sales exceed 100,000 and do not exceed 200,000 cigars shall each pay $6;

Manufacturers of cigars whose annual sales exceed 200,000 and do not exceed 400,600 cigars shall each pay $12;

Manufacturers of cigars whose annual sales exceed 400,000 cigars shall each pay at the rate of 5 cents per thousand cigars or fraction thereof;

Manufacturers of cigarettes whose annual sales do not exceed 1,000,000 cigarettes shall each pay $12; and

Manufacturers of cigarettes whose annual sales exceed 1,000,000 cigarettes shall each pay at the rate of 25 cents for every 10,000 cigarettes, or fraction thereof

In arriving at the amount of special tax to be paid under this section, and in the levy and collection of such tax, each person, firm, or corporation engaged in the manufacture of more than one of the classes of articles specified in this section shall be considered and deemed a manufacturer of each class separately.

Every person who carries on any business or occupation for which special taxes are imposed by this title, without having paid the special tax therein provided, shall, besides being liable to the payment of such special tax, be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than $500, or be imprisoned not more than six months, or both, in the discretion of the court.

SEC. 304. That all administrative or special provisions of law, including the law relating to the assessment of taxes, so far as applicable, are hereby extended to and made a part of this title, and every person, firm, company, corporation, or association liable to any tax imposed by this title shall keep such records and render, under oath, such statements and returns, and shall comply with such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may from time to time prescribe.

SEC. 305. That the act approved October 22, 1914, entitled "An act to increase the internal revenue, and for other purposes," and the joint resolution approved December 17, 1915, entitled "Joint resolution extending the provisions of the act entitled 'An act to increase the internal revenue, and for other purposes,' approved October 22, 1914, to December 31, 1916," are hereby repealed, except sections 3 and 4 of such act as so extended, which sections shall remain in force till January 1, 1917, and except that the provisions of the said act shall remain in force for the assessment and collection of all special taxes imposed by sections 3 and 4 thereof, or by such sections as extended by said joint resolution, for any year or part thereof ending prior to January 1, 1917, and of all other taxes imposed by such act, or by such act as so extended, accrued prior to the taking effect of this title, and for the imposition and collection of all penalties or forfeitures which have accrued or may accrue in relation to any of such taxes.

SEC. 306. That the Commissioner of Internal Revenue, subject to regulation prescribed by the Secretary of the Treasury, may make allowance for or redeem stamps, issued, under authority of the act approved October 22, 1914, entitled "An act to increase the internal revenue, and for other purposes," and the joint resolution approved December 17, 1915, entitled "Joint resolution extending the provisions of the act entitled 'An act to increase the internal revenue, and for other purposes,' approved October 22, 1914, to December 31, 1916," to denote the payment of internal-revenue tax, and which have not been used, if presented within two years after the purchase of such stamps.

SEC. 307. That the provisions of this title shall take effect on the day following the passage of this act, except where otherwise in this title provided.

Title V.—Dyestuffs.

SEC. 400. That on and after the day following the passage of this act, except as otherwise specially provided for in this title, there shall be levied, collected, and paid upon the articles named in this section when imported from any foreign country into the United States or into any of its possessions, except the Philippine Islands and the islands of Guam and Tutuila, the rates of duties which are prescribed in this title, namely:

FREE LIST.

Group I. Acenaphthene, anthracene, benzol, carbazol, cresol, cumol, fluorene, methylanthracene, methylnaphthalene, naphthalene, pyridin, quinolin, toluol, xylol, crude coal tar, pitch of coal tar, dead or creosote oil, anthracene oil, all other distillates which on being subjected to distillation yield less than 5 per cent of tar acids in the portion distilling below 200° C., and all other products that are found naturally in coal tar, whether produced or obtained from coal tar or other source, and not otherwise specially provided for in this title, shall be exempt from duty.

DUTIABLE LIST.

Group II. Amidonaphthol, amidophenol, amidosalicylic acid, aniline oil, aniline salt, anthraquinone, binitrobenzol, binitrotoluol, binitronaphthalene, binitrochlorbenzol, benzaldehyde, benzylchloride, benzidin, chlorphthalic acid, cumidin, dianisidin, dimethylanilin, dioxynaphthalene, diphenylamin, methylanthraquinone, metanilic acid, nitrobenzol, nitrotoluol, nitronaphthalene, nitraniline, nitrophenylenediamine, nitrotoluenediamine, naphthylamine, naphthol, naphthylenediamine, phenol, phthalic acid, phthalic anhydride, phenylenediamine, phenylnaphthylamine, resorcin, salicylic acid, sulfanilic acid, toluidin, tolidin, toluylenediamine, xylidin, or any sulfoacid or sulfoacid salt of any of the foregoing, all other distillates which on being subjected to distillation yield 5 per cent or more of tar acids in the portion distilling below 200° C., and all other products obtained, derived, or manufactured in whole or in part from the products provided for in Group I, all the foregoing not colors, dyes, or stains, photographic chemicals, or explosives, and not otherwise provided for in this title, 15 per cent ad valorem.

Group III. All colors, dyes, or stains, whether soluble or not in water, color acids, color bases, color lakes, photographic chemicals, or explosives, not otherwise specially provided for in this title, when obtained, derived, or manufactured in whole or in part from any of the products provided for in Groups I and II, including natural alizarin and indigo, 30 per cent ad valorem.

SEC. 401. That on and after the day following the passage of this act, in addition to the duties provided in section 400, there shall be levied, collected, and paid upon all articles contained in Group II a special duty of 2½ cents per pound, and upon all articles contained in Group III (except natural and synthetic alizarin and dyes obtained from alizarin, anthracene, and carbazol; and natural and synthetic indigo and all indigoids (whether or not obtained from indigo), a special duty of 5 cents per pound.

During the period of five years beginning five years after the passage of this act such special duties shall be annually reduced by 20 per cent of the rate imposed by this section, so that at the end of such period such special duties shall no longer be assessed, levied, or collected; but if at the expiration of five years from the date of the passage of this act the President finds that there is not being manufactured or produced within the United States as much as 60 per cent in value of the domestic consumption of the articles mentioned in Groups II and III of section 400, he shall by proclamation so declare, whereupon the special duties imposed by this section on such articles shall no longer be assessed, levied, or collected.

SEC. 402. That paragraphs 20, 21, 22, and 23 of Schedule A of section 1 of an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, and paragraphs 394, 452, and 514, and the words "carbolic" and "phthalic," in paragraph 387 of the "free list" of section 1 of said act, and so much of said act or any existing law or parts of law as may be inconsistent with this title are hereby repealed.

Title VI.—Tariff Commission.

SEC. 500. That a commission is hereby created and established, to be known as the United States Tariff Commission (hereinafter in this title referred to as the commission), which shall be composed of six members, who shall be appointed by the President, by and with the advice and consent of the Senate, not more than three of whom shall be members of the same political party. In making said appointments members of different political parties shall alternate as nearly as may be practicable. The first members appointed shall continue in office for terms of 2, 4, 6, 8, 10, and 12 years, respectively, from the date of the passage of this act, the term of each to be designated by the President. The President shall also designate biennially the chairman and vice chairman, but their successors shall be appointed for terms of 12 years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. No person shall be eligible for appointment as a member of the commission who has been elected to or served in the Senate or House of Representatives of the United States. No member shall engage actively in any other business, function, or employment. Any member may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy shall not impair the right of the remaining members to exercise all the powers of the commission, but no vacancy shall extend beyond any session of Congress.

SEC. 501. That each commissioner shall receive a salary of $10,000 per year, payable monthly. The commission shall appoint a secretary, who shall receive a salary of $6,000 per year, payable in like manner, and it shall have authority to employ and fix the compensations of such special experts, examiners, clerks, and other employees as the commission may from time to time find necessary for the proper performance of its duties.

With the exception of the secretary, a clerk to each commissioner, and such special experts as the commission may from time to time find necessary for the conduct of its work, all employees of the commission shall be a part of the classified civil service.

All of the expenses of the commission, including all necessary expenses for transportation incurred by the commissioners or by their employees under their orders in making any investigation or upon official business in any other places than at their respective headquarters, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the commission.

Unless otherwise provided by law, the commission may rent suitable offices for its use, and purchase such furniture, equipment, and supplies as may be necessary.

The principal office of the commission shall be in the city of Washington, but it may meet and exercise all its powers at any other place. The commission may, by one or more of its members, or by such agents as it may designate, prosecute any inquiry necessary to its duties in any part of the United States or in any foreign country.

SEC. 502. That it shall be the duty of said commission to investigate the administration and fiscal effects of the customs laws of this country now in force or which may be hereafter enacted, the relations between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties and of compound specific and ad valorem duties, all questions relative to the arrangement of schedules and classification of articles in the several schedules of the customs law, and, in general, to investigate the operation of customs laws, including their relation to the Federal revenues, and to submit reports of its investigations as hereafter provided.

SEC. 503. That the commission shall put at the disposal of the President of the United States, the Committee on Ways and Means of the House of Representatives, and the Committee on Finance of the Senate, whenever requested, all information at its command, and shall make such investigations and reports as may be requested by the President or by either of said committees or by either branch of the Congress, and shall report to Congress on the first Monday of December of each year hereafter a statement of the methods adopted and all expenses incurred, and a summary of all reports made during the year.

SEC. 504. That the commission shall have power to investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, the effect of export bounties and preferential transportation rates, the volume of importations compared with domestic production and consumption, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production.

SEC. 505. That upon the organization of the commission, the Cost of Production Division in the Bureau of Foreign and Domestic Commerce in the Department of Commerce shall be transferred to said commission, and the clerks and employees of said division shall be transferred to and become clerks and employees of the commission, and all records, papers, and property of the said division and of the former tariff board shall be transferred to and become the records, papers, and property of the commission.

SEC. 506. That for the purposes of carrying this title into effect the commission or its duly authorized agent or agents shall have access to and the right to copy any document, paper, or record, pertinent to the subject matter under investigation, in the possession of any person, firm, copartnership, corporation, or association engaged in the production, importation, or distribution of any article under investigation, and shall have power to summon witnesses, take testimony, administer oaths, and to require any person, firm, copartnership, corporation, or association to produce books or papers relating to any matter pertaining to such investigation. Any member of the commission may sign subpœnas, and members and agents of the commission, when authorized by the commission, may administer oaths and affirmations, examine witnesses, take testimony, and receive evidence.

Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States at any designted place of hearing. And in case of disobedience to a subpœna the commission may invoke the aid of any district court of the United States in requiring the attendance and testimony of witnesses and the production of documentary evidence, and such court within the jurisdiction of which such inquiry is carried on may, in case of contumacy or refusal to obey a subpœna issued to any corporation or other person, issue an order requiring such corporation or other person to appear before the commission, or to produce documentary evidence if so ordered, or to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof.

Upon the application of the Attorney General of the United States, at the request of the commission, any such court shall have jurisdiction to issue writs of mandamus commanding compliance with the provisions of this title or any order of the commission made in pursuance thereof.

The commission may order testimony to be taken by deposition in any proceeding or investigation pending under this title at any stage of such proceeding or investigation. Such depositions may be taken before any person designated by the commission and having power to administer oaths. Such testimony shall be reduced to writing by the person taking the deposition, or under his direction, and shall then be subscribed by the deponent. Any person, firm, copartnership, corporation, or association, may be compelled to appear and depose and to produce documentary evidence in the same manner as witnesses may be compelled to appear and testify and produce documentary evidence before the commission, as hereinbefore provided.

Witnesses summoned before the commission shall be paid the same fees and mileage that are paid witnesses in the courts of the United States, and witnesses whose depositions are taken and the persons taking the same, except employees of the commission, shall severally be entitled to the same fees and mileage as are paid for like services in the courts of the United States: *Provided*, That no person shall be excused, on the ground that it may tend to incriminate him or subject him to a penalty or forfeiture, from attending and testifying, or producing books, papers, documents, and other evidence, in obedience to the subpœna of the commission; but no natural person shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing as to which, in obedience to a subpœna and under oath, he may so testify or produce evidence, except that no person shall be exempt from prosecution and punishment for perjury committed in so testifying.

SEC. 507. That the said commission shall in appropriate matters act in conjunction and cooperation with the Treasury Department, the Department of Commerce, the Federal Trade Commission, or any other departments, or independent establishments of the Government, and such departments and independent establishments of the Government shall cooperate fully with the commission for the purposes of aiding and assisting in its work, and, when directed by the President, shall furnish to the commission, on its request, all records, papers, and information in their possession relating to any of the subjects of investigation by said commission and shall detail, from time to time, such officials and employees to said commission as he may direct.

SEC. 508. It shall be unlawful for any member of the United States tariff commission, or for any employee, agent, or clerk of said commission, or any other officer or employee of the United States, to divulge, or to make known in any manner whatever not provided for by law, to any person, the trade secrets or processes of any person, firm, copartnership, corporation, or association embraced in any examination or investigation conducted by said commission, or by order of said commission, or by order of any member thereof. Any offense against the provisions of this section shall be a misdemeanor and be punished by a fine not exceeding $1,000, or by imprisonment not exceeding one year, or both, in the discretion of the court, and such offender shall also be dismissed from office or discharged from employment.

SEC. 509. That there is hereby permanently appropriated, for the purpose of defraying the expense of the establishment and maintenance of the commission, including the payment of salaries herein authorized, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $300,000 for the fiscal year ending June 30, 1917, and each fiscal year thereafter.

Title VII.—Unfair competition.

SEC. 600. That when used in this title the term "person" includes partnerships, corporations, and associations.

SEC. 601. That it shall be unlawful for any person importing or assisting in importing any articles from any foreign country into the United States, to commonly and systematically sell or cause to be sold such articles within the United States at a price substantially less than the actual market value or wholesale price of such articles, at the time of exportation to the United States, in the principal markets of the country of their production, or of other foreign countries to which they are commonly exported, after adding to such market value or wholesale price, freight, duty, and other charges and expenses necessarily incident to the importation and sale thereof in the United States: *Provided*, That such act or acts be done with the intent of destroying or injuring an industry in the United States, or of preventing the establishment of an industry in the United States, or of restraining or monopolizing any part of trade and commerce in such articles in the United States.

Any person who violates or combines or conspires with any other person to violate this section is guilty of a misdemeanor, and, on conviction thereof, shall be punished by a fine not exceeding $5,000, or imprisonment not exceeding one year, or both, in the discretion of the court.

Any person injured in his business or property by reason of any violation of, or combination or conspiracy to violate, this section, may sue therefor in the district court of the United States for the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover threefold the damages sustained, and the cost of the suit, including a reasonable attorney's fee.

SEC. 602. That if any article produced in a foreign country is imported into the United States under any agreement, understanding, or condition that the importer thereof or any other person in the United States shall not use, purchase, or deal in, or shall be restricted in his using, purchasing, or dealing in, the articles of any other person, there shall be levied, collected, and paid thereon, in addition to the duty otherwise imposed by law, a special duty equal to double the amount of such duty.

SEC. 603. That the Secretary of the Treasury shall make such rules and regulations as are necessary for the carrying out of the provisions of section 602.

Title VIII.

SEC. 700. That if any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of said act but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.

SEC. 701. That unless otherwise herein specially provided, this act shall take effect on the day following its passage, and all provisions of any act or acts inconsistent with the provisions of this act, are hereby repealed.

Mr. KITCHIN. Mr. Chairman, with the consent of the gentleman from Illinois [Mr. MANN] and the gentleman from Michigan [Mr. FORDNEY], I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FOSTER, Chairman of the Committee of the Whole House on the state of Union, reported that that committee had had under consideration the bill (H. R. 16763) to increase the revenue, and for other purposes, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted to Mr. HOWELL, indefinitely, on account of important business.

HOUR OF MEETING ON MONDAY.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 10 o'clock on Monday.

The SPEAKER. The gentleman from North Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 10 o'clock a. m. on Monday next. Is there objection?

There was no objection.

LEAVE TO EXTEND REMARKS.

Mr. KELLEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address delivered by my colleague, Dr. FESS, of Ohio, before the National Educational Association in New York yesterday, upon the subject of a national university.

The SPEAKER. The gentleman from Michigan [Mr. KELLEY] asks unanimous consent to extend his remarks in the RECORD by printing an address by Dr. FESS before the National Educational Association at New York yesterday on the subject of a national university. Is there objection?

There was no objection.

Mr. JAMES. I ask unanimous consent to extend my remarks in the RECORD on the subject of treaties.

The SPEAKER. The gentleman from Michigan [Mr. JAMES] asks unanimous consent to extend his remarks in the RECORD on the subject of treaties. Is there objection?

There was no objection.

INFANTILE PARALYSIS.

Mr. SIEGEL. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution offered by me this morning, authorizing the Department of Labor to extend to the city of New York the use of Federal hospitals for the treatment of patients suffering from infantile paralysis.

The SPEAKER. The gentleman from New York [Mr. SIEGEL] asks unanimous consent for the present consideration of a resolution authorizing the use of Federal hospitals in New York for the treatment of children suffering from infantile paralysis. Is there objection?

Mr. MANN. Let us have the resolution reported first.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House joint resolution 257.

Resolved, etc., That until November 1, 1916, the Secretary of Labor be, and he is hereby, authorized in his discretion to utilize the available hospital facilities at the immigration station at Ellis Island, New York Harbor, for the purpose of housing and caring for indisposed persons from the city of New York and vicinity, under such conditions as the Secretary of Labor shall prescribe.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, why should the General Government take care of these people who are ill in New York City?

Mr. SIEGEL. The General Government is not going to do that.

Mr. MANN. That is what this provides for.

Mr. SIEGEL. That is not the intention of the department.

Mr. BENNET. Mr. Speaker, if the gentleman will permit me, at Ellis Island——

Mr. MANN. I am talking about the resolution that is pending. That is what the resolution says.

Mr. BENNET. The resolution simply permits the Department of Labor to utilize what is known as the Third Island, at Ellis Island, in connection with the epidemic of infantile paralysis that unfortunately has attained large proportions in New York City. There is a third island there, where some ten or a dozen hospital buildings were built a few years ago, with the idea that they would be needed for diseases of children. The quarantine laws were changed, and they were not needed. Those buildings stand there to-day practically empty and unused, and the city of New York really needs those hospital facilities. I do not know whether that is an answer to the suggestion of the gentleman from Illinois.

Mr. MANN. It is not. I will ask the gentleman from New York whether it is expected under this resolution that the people of New York City will pay all the expenses of caring for these patients, or whether it is expected that the General Government shall contribute.

Mr. SIEGEL. No; the city of New York is to pay all the expenses. In addition to that, the Secretary of Labor has written a letter, which I have here, wherein he urges the adoption of this resolution.

Mr. MANN. Oh, well, of course, that is nothing.

Mr. SIEGEL. I may say also that at my request on Thursday the United States Public Health Service was instructed to take charge, because this disease is spreading all over the country, and to-day no one knows from whence it comes or how it originates, or how to treat it. The city of New York is only asking to have the use of these premises, and will pay all the expenses.

Mr. MANN. There is no such provision in the resolution, but if that is the understanding, I do not think I shall object.

Mr. BURNETT. Mr. Speaker, let us have the resolution reported again.

The SPEAKER. Without objection, the resolution will be again reported.

The resolution was again read.

The SPEAKER. Is there objection?

Mr. FOSTER. Mr. Speaker, reserving the right to object, it seems to me that the resolution ought to provide that the Secretary of Labor may authorize the use of these buildings by the city of New York without expense to the Government.

Mr. GARNER. Strike out the words "caring for" in the resolution.

Mr. SIEGEL. I want to say that the resolution as prepared by me this morning reads somewhat differently from the one prepared by the department. The resolution which has been read was prepared by the department this morning after I had offered my other resolution. The Secretary of Labor has written a letter asking that the resolution be offered in this form, and he has done this after consulting the Solicitor General. I know him and have the most implicit faith in him.

Mr. MANN. The resolution as read provides that the Secretary of Labor shall utilize the hospital for caring for these patients.

Mr. FOSTER. As I understand the gentleman, the intention is that there shall be authority given to the Secretary of Labor to permit the use of these hospital buildings by the city of New York for the care of these patients.

Mr. HOWARD. At their own expense.

Mr. GARNER. But the resolution does not say that.

Mr. SIEGEL. That is the intention.

Mr. GARNER. That may be the intention, but it does not say so.

Mr. SIEGEL. Without expense to the United States Government.

Mr. GARNER. That is all right.

Mr. FOSTER. Why not word it so as to permit the use of these buildings by the authorities of the city of New York without expense to the Federal Government?

Mr. SIEGEL. My resolution made some such provision, but the department changed the language and wrote this letter, which uses the language I have offered, as the Secretary of Labor would have the discretion under it to make such terms and conditions as he deems just.

Mr. KITCHIN. I suggest to the gentleman that he add the words "without expense to the United States Government."

Mr. SIEGEL. Mr. Speaker, I ask unanimous consent to add the words "without expense to the United States Government."

The SPEAKER. The gentleman from New York [Mr. SIEGEL] asks unanimous consent to add the words "without expense to the United States Government." Is there objection?

There was no objection.

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. HOWARD. Mr. Speaker——

Mr. SHERLEY. May we have the resolution reported?

The SPEAKER. What part of it? It has been read twice.

Mr. SHERLEY. I want to hear enough of it to know what it provides. I was unable to hear it.

The SPEAKER. Without objection, it will be reported a third time.

Mr. BURNETT. Let it be reported as amended under the suggestion of the gentleman.

The SPEAKER. It will be reported this time as amended.

The Clerk read as follows:

Resolved, etc., That until November 1, 1916, the Secretary of Labor be, and he is hereby, authorized, in his discretion, to utilize the available hospital facilities at the immigration station at Ellis Island, New York Harbor, for the purpose of housing and caring for indisposed persons from the city of New York and vicinity under such conditions as the Secretary of Labor shall prescribe, but without expense to the Government of the United States.

Mr. HOWARD. Mr. Speaker, reserving the right to object, I desire to ask the gentleman just one or two questions. Are any of the buildings adjacent to the hospital that you desire used for this purpose by the city of New York used in any manner now for adult patients in the Immigration Service?

Mr. SIEGEL. Originally these buildings were erected by the United States Government on what is known as the Third Island of Ellis Island. At that time it was intended to use them for children's cases, but the city of New York through the health department handled children's cases, and these buildings are now idle and are not used. They have every facility for handling children's cases.

Mr. HOWARD. What I am trying to get at is whether or not the Government of the United States uses these buildings for children or anyone else that the gentleman is asking Congress to permit the city of New York to use for these cases?

Mr. SIEGEL. No; they are not being used.

Mr. HOWARD. Is there any likelihood of any of these adjacent buildings being used between now and November 1 for any patients of the Government?

Mr. SIEGEL. No; for the reason that immigration has so dropped down. These buildings are not used, and were rarely used at the time when immigration was at its flood.

Mr. HOWARD. Are these hospitals furnished or empty?

Mr. SIEGEL. They are partially empty.

Mr. HOWARD. Does the gentleman know whether they are furnished or unfurnished?

Mr. SIEGEL. They are partially furnished, as I am informed by the department.

Mr. HOWARD. Does the city of New York propose to use the beds and furniture and appliances there in the hospital that are now owned by the Government or does the city propose to clean them out and furnish everything?

Mr. SIEGEL. Whatever the city of New York uses will have to be destroyed, because that is the fundamental basis of the treatment of this kind of disease.

Mr. HOWARD. That is what I was coming to.

Mr. SIEGEL. I would like to finish my answer to the gentleman, and to state to him that I am pleading for the infants of New York City.

Mr. HOWARD. I have got all of the information that I need, so far as I am concerned, about the use of these buildings, and for the present I am going to object to the consideration of this resolution for this reason. I may not object on Monday, but this is a very serious proposition. The States are now preparing to quarantine against New York City because of infantile paralysis. It is a horrible disease. About 25 or 30 per cent of the cases are fatal, and I do not think it is right to allow the city of New York to go into a governmental institution and use that building and then later have immigrants come there and occupy the building, when the greatest scientists of the country do not know whether it is a contagious disease or not, and in that way possibly permit the scattering of it all over the United States so that thousands of little children may be killed. I am going to object to it.

Mr. SIEGEL. I will ask the gentleman to reserve his objection for a moment.

Mr. HOWARD. I reserve it, of course.

Mr. SIEGEL. These buildings are separate and distinct from the other buildings that are being used by the Government. They were built there for the purpose of being used and they are not being used. There are over a thousand cases in the city of New York to-day. Our hospitals are filled. These buildings were prepared for infants. The death rate in New York has reached 23 per cent.

Mr. BURNETT. They were prepared for the infants of immigrants?

Mr. SIEGEL. Now or then?

Mr. BURNETT. Then, when they were constructed?

Mr. SIEGEL. They were prepared for it at that time, it is true, but the idea as I was about to say was this, that whatever the city of New York uses will have to be replaced, because everything that is used in the treatment of infantile paralysis must be destroyed, as I am informed.

Mr. BURNETT. Let me ask the gentleman right there, who will replace those things, the city of New York or the Government?

Mr. SIEGEL. We make provision here that whatever is done shall be done within the discretion of the Secretary of Labor and without expense to the Government.

Mr. BURNETT. That does not provide that the city of New York or the State of New York shall replace those things.

Mr. SIEGEL. I desire to call attention to the fact that the United States Public Health Service was ordered to take charge of this fight against this disease because it affects the entire Nation, and I will ask the gentleman to accept the following modification:

And the State of New York or the city of New York, or both, shall pay to the Government for any property that may be destroyed or used while the same is so occupied.

Mr. BURNETT. I will state that that ought to be in it anyway.

Mr. FOSTER. Mr. Speaker, I will ask the gentleman to please yield to me for a moment. I want to say this, that New York, as I understand it, is having a very serious struggle with infantile paralysis. The Public Health Service has been called into cooperation with the State and city authorities in New York. There is now dying in New York City one child every hour of the 24, a very serious situation it seems to me. If the Federal Government has to give up these buildings at the end of their use by the city of New York, when the hospitals of that city are filled with more than a thousand of these little children who are afflicted with this horrible disease, even if they have to be torn down and rebuilt, it is all done in the interest of these little children and these unfortunate families, and it seems to me that this great Government of ours can well afford to permit the use of these buildings now. [Applause.]

I know that my friend from Georgia [Mr. HOWARD] is looking well to the future and fears that there might be infection received from those who might be housed in the buildings in the future, but as has been said here, every article of furniture would be taken out and destroyed, the buildings thoroughly fumigated as well as all the surroundings which it is possible to do to prevent that disease, and if it should be necessary, aye, to destroy those buildings, I believe it would be in the interest of humanity to do so. I hope my friend from Georgia will not object. I know him to be one of the kindest, best men I ever knew. He is as sympathetic for those in distress as any man and will do all he can to relieve suffering.

Mr. SMITH of Minnesota. Will the gentleman yield for a question?

Mr. FOSTER. Yes.

Mr. SMITH of Minnesota. Is it not true that if these hospitals should be used for taking care of these children who are infected that it would serve to prevent the spread of the disease, and that the sooner it is done the better?

Mr. FOSTER. That is undoubtedly true. The medical profession does not know all about infantile paralysis. It is a terrible disease, and yet there is not very much known about it; at least the knowledge of its germ and communication it is hoped may be known soon.

Mr. SMITH of Minnesota. Does the medical profession know whether or not it is contagious?

Mr. FOSTER. It is judged that it is an infectious disease, and will spread if children are permitted to congregate, so the case must be isolated. However, I do not know; nobody else knows, and that is what the profession would like to know more about.

Mr. FESS. I would like to ask the Member from New York whether the city authorities have taken every precaution in excluding children from the moving-picture shows and such places?

Mr. SIEGEL. We have. We closed the libraries yesterday and to-day we closed all the playgrounds, and we have closed every moving-picture house in New York City.

Mr. FESS. And it is rapidly increasing?

Mr. SIEGEL. At the rate of 100 cases a day.

Mr. FESS. There are people in my town who have been sent from Brooklyn to get rid of the dread disease.

Mr. SIEGEL. They are leaving New York City by thousands. A hundred thousand have left in the last three days, going all over the country.

Mr. FOSTER. From the newspaper reports there have been cases occurring in other cities of the country as far west as Chicago.

Mr. BURNETT. Does the gentleman think it is the duty of the Federal Government to provide against all these things in all these cities? Does not the gentleman think that would be a monstrous precedent to be established for the Federal Government?

Mr. FOSTER. I think this. Here is an isolated hospital unused by the Federal Government and, after New York has housed as many of these afflicted children as possible, they now ask that they might use this hospital for the isolation of those who may become infected in the future. So I think while it is not the duty of the Federal Government to take care of this disease, yet the Federal Government in every such crisis of this kind coming upon the country has given its assistance, and I am glad that it has done so. I believe in this case Congress ought to do this. I am as sincere about it as anyone could be, and I hope there will be no objection to this resolution and that it may go through unanimously.

Mr. BURNETT. Does not the gentleman believe not only the beds and cots but other appurtenances there would have to be destroyed, and that perhaps the buildings themselves would have to be destroyed?

Mr. FOSTER. I do not know whether it will be or not, that is something that can be decided in the future. But, as I said before, this is a small matter to me. Here is a condition in which it is said that 24 children at least every 24 hours die in the city of New York. Now if these buildings—I do not know how expensive they are, I do not care very much how expensive they are—if it is for the purpose of taking care of these unfortunate children and helping to stamp out this disease so that others can not become infected with it, I will tell the gentleman human life can not be counted in dollars.

Mr. HOWARD. If the gentleman will permit, if it was the intention of the gentleman from New York by this resolution to isolate all the children in New York who had this disease on a Government reservation on the Third Island, I would not object to it, but it does not remedy the spread of this disease, and I am just as sympathetic as my distinguished friend from Illinois [Mr. FOSTER].

Mr. FOSTER. I am sure of that.

Mr. HOWARD. What could appeal to me or any other man with a heart in him any more than the thought of little children suffering with infantile paralysis, but it is a question whether or not we expect to use this island exclusively for the isolation of infantile paralysis cases, whether you will continue to crowd the hospitals in New York City——

Mr. SIEGEL. You can not house them all there.

Mr. HOWARD (continuing). Or use Ellis Island, on Government property, without any additional benefit to the city of New York except the mere usage of the buildings.

Mr. FOSTER. Let me say this to my friend from Georgia. If they have this disease they should be placed in some hospital if possible——

Mr. HOWARD. That is true; I agree with the gentleman about that.

Mr. FOSTER. Where they can have proper treatment for this disease, and, as has been said here, the hospitals of New York have been filled up.

Mr. BURNETT. Are they? Is that a fact?

Mr. SIEGEL. It is a fact.

Mr. FOSTER. They go into certain isolated wards, I do not mean the whole hospital is filled with these children.

Mr. HOWARD. Mr. Chairman, to eliminate any further discussion, and fearing that what I have said may be misunderstood by my colleagues in reference to having these poor little children cared for, I will withdraw any objection I have made. [Applause.]

Mr. BURNETT. Now, Mr. Speaker, may I ask the gentleman as to the modification to the effect that the city or the State of New York will bear the expense? What is the provision?

Mr. SIEGEL. Without expense to the Government.

Mr. BURNETT. Suppose the buildings are to be torn down and the cots or beds have to be destroyed?

The SPEAKER. The Clerk will report the resolution with amendments.

The Clerk read as follows:

Resolved, etc., That until November 1, 1916, the Secretary of Labor be, and he is hereby, authorized in his discretion to utilize the available hospital facilities at the immigration station at Ellis Island, New York Harbor, for the purpose of housing and caring for indisposed persons from the city of New York and vicinity under such conditions as the Secretary of Labor shall prescribe, but without expense to the Government of the United States. And the State or city of New York, or both, shall compensate the Government of the United States for any and all loss sustained by the Government in the use and occupation of such buildings.

Mr. GARRETT. Mr. Speaker, of course the immediate occasion for this is the epidemic, if it can be called an epidemic, of infantile paralysis. Equally, of course, the resolution is not confined to that at all. It can be open to every indisposed person, no matter whether afflicted with infantile paralysis or whatever it may be.

Mr. SIEGEL. Will the gentleman yield?

Mr. GARRETT. Certainly.

Mr. SIEGEL. I have a letter here from the Department of Labor——

Mr. GARRETT. Certainly I am not going to object to it, but I want to call attention to that and the utterance of the gentleman, at least, that that is the purpose.

Mr. SIEGEL. That is the purpose.

Mr. GARRETT. I think it ought to go into the RECORD that that is the purpose and intent.

Mr. SIEGEL. That is the purpose and intent, and I wish the Clerk would read this letter showing that that is the understanding.

The SPEAKER. Is there objection?

Mr. BURNETT. All of the speech of the gentleman from Illinois [Mr. FOSTER] has been made on the idea that it was for those who are afflicted or liable to be afflicted with infantile paralysis, and I understand from the reading of that resolution that it is not confined to that at all. It takes in everybody, those who are recovering from a protracted drunk, or everything else.

Mr. FOSTER. Will the gentleman yield? It does not so state, it is true, but the statement is made here by the Member from New York that the city has asked for the use of this hospital for this purpose, and I take it that such will be the case. If it is necessary to incorporate that in the resolution, I think it ought to be done.

Mr. BURNETT. Why, certainly.

Mr. FOSTER. I have no objection. I am willing to meet every technicality that is necessary to be met in order to get the use of this hospital.

Mr. GARRETT. Is it the hope of the gentleman to get this resolution passed this afternoon?

Mr. SIEGEL. It is.

Mr. GARRETT. The Senate has adjourned, has it not?

Mr. SIEGEL. That is true, but I hope to get it through here this afternoon and get it to the Senate early Monday morning. This resolution was prepared by the Department of Labor. I have a letter here that states it is to be confined to these cases.

Mr. GARRETT. I understand the resolution does not confine it to them.

Mr. MANN. I think the gentleman's criticism is a good one, but here is a letter from Mr. Wilson, the Secretary of Labor, in which he refers to the epidemic of infantile paralysis in New York and suggests this resolution. Now, the resolution provides that the use of the hospital shall be under such conditions as the Secretary of Labor shall prescribe. And I think, perhaps, it will be perfectly safe, under the circumstances, to pass the resolution, with the knowledge on the part of the Secretary that he has asked for this only for care of patients suffering with infantile paralysis, and with the knowledge that that is the understanding of the House as well.

Mr. GARRETT. Mr. Speaker, I have stated that I did not intend to object to the consideration of the resolution. I really feel like there ought to be in the resolution itself a definite and specific statement of the purposes for which these buildings are to be used. But these things appeal to our sympathies; and with the letter that has been read by the gentleman from Illinois, I think we ought to understand that if this matter comes up again we will be able to at least point to the letter as to some understanding of what the buildings are to be used for.

Mr. MANN. It is a loosely drawn resolution.

Mr. GALLAGHER. Why does the gentleman say in his resolution that this hospital shall be open to "persons"?

Mr. SIEGEL. In answer to that I will say that the resolution was drawn by the Department of Labor.

Mr. GALLAGHER. I do not care by whom it is drawn. The resolution says that this hospital shall be open to "persons." If all this sympathy is going out, the resolution ought to say "children."

Mr. SIEGEL. The letter itself says that it is infantile paralysis.

Mr. GALLAGHER. I am talking about the resolution. It says that this hospital shall be open to "persons."

Mr. PLATT. Does not the gentleman know that this disease is not confined to children, but people of his age might take it?

Mr. SIEGEL. Let me say to the gentleman from Illinois that infantile paralysis may be gotten by an adult. I do not see how it can, and no one seems to know. This letter from the department says it refers to infantile paralysis. The department put the word "persons" in there.

Mr. GALLAGHER. I have no objection to it.

The SPEAKER. Is there objection to the present consideration of this resolution? [After a pause.] The Chair hears none.

The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

Mr. SIEGEL. Mr. Speaker, I ask leave to insert in the RECORD the letter which I referred to.

The SPEAKER. The gentleman from New York asks unanimous consent to insert in the RECORD the letter he referred to. Is there objection?

There was no objection.

Following is the letter referred to:

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, July 8, 1916.

Hon. ISAAC SIEGEL, M. C.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: In reference to the call of your secretary, in regard to a resolution which you contemplate introducing in the House, having for its object the utilization of certain hospital facilities at Ellis Island, in relieving the existing situation in New York and vicinity brought about by the epidemic of infantile paralysis, I have to state that this department would favor the enactment of a joint resolution substantially as follows:

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That until November 1, 1916, the Secretary of Labor be, and he is hereby, authorized in his discretion to utilize the available hospital facilities at the immigration station at Ellis Island, New York Harbor, for the purpose of housing and caring for indisposed persons from the city of New York and vicinity, under such conditions as the Secretary of Labor shall prescribe."

Respectfully, yours,

W. B. WILSON, *Secretary.*

MARINE HOSPITAL, CLEVELAND, OHIO.

Mr. CROSSER rose.

The SPEAKER. For what purpose does the gentleman from Ohio rise?

Mr. CROSSER. To ask unanimous consent for the present consideration of the bill (S. 2845) to permit the sale of the Cleveland Marine Hospital in order to invest the funds in another marine hospital and allow the present site to be used for a depot. It has been holding up all improvements there for quite a little while.

The SPEAKER. Is there a House bill here of similar character?

Mr. CROSSER. I do not think so. I think it is reported in an omnibus bill, but not separately.

Mr. MANN. Reserving the right to object, Mr. Speaker, I know what the bill is. I have no objection to passing the bill permitting the sale of the marine hospital at Cleveland, but this bill provides that after the sale the Public Health Service shall use the money at any place they please in the United States by building a new marine hospital or putting in new equipment.

In other words, the department in drawing this bill entirely overlooked all safe limitations. Such a bill can not pass by unanimous consent.

The SPEAKER. Is there objection?

Mr. MANN. I object.

The SPEAKER. The gentleman from Illinois objects.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 34 minutes p. m.) the House adjourned, pursuant to the order previously made, until Monday, July 10, 1916, at 10 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and a joint resolution were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. JOHNSON of Kentucky, from the Committee on the District of Columbia, to which was referred the bill (H. R. 14824) to prevent fraud at public auctions in the District of Columbia, reported the same without amendment, accompanied by a report (No. 932), which said bill and report were referred to the House Calendar.

Mr. BARKLEY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 10496) to prohibit the manufacture, sale, or transportation in interstate commerce of misbranded articles, to regulate the traffic therein, and for other purposes, reported the same with amendment, accompanied by a report (No. 934), which said bill and report were referred to the House Calendar.

Mr. STOUT, from the Committee on Irrigation of Arid Lands, to which was referred the joint resolution (S. J. Res. 51) appropriating money for the payment of certain claims on account of labor, supplies, materials, and cash furnished in the construction of the Corbett Tunnel, reported the same with amendment, accompanied by a report (No. 935), which said joint resolution and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. JOHNSON of Kentucky, from the Committee on the District of Columbia, to which was referred the bill (H. R. 9760) for the relief of James T. Petty, Charles W. Church, and others, executors of Charles B. Church, deceased, Jesse B. Wilson, and George T. Dearing, reported the same without amendment, accompanied by a report (No. 933), which said bill and report were referred to the Private Calendar.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. DENISON: A bill (H. R. 16866) authorizing the Secretary of War to donate to the new armory at Carbondale, Jackson County, Ill., two suitable cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. SISSON: A bill (H. R. 16867) to provide for the purchase of a site and the erection of a public building thereon at Okolona, in the State of Mississippi; to the Committee on Public Buildings and Grounds.

By Mr. BURKE: A bill (H. R. 16868) to amend section 2 of an act entitled "An act to promote the welfare of American seamen in the merchant marine of the United States, to abolish arrest and imprisonment as a penalty for desertion, and to secure the abrogation of treaty provisions in relation thereto, and to promote safety at sea"; to the Committee on the Merchant Marine and Fisheries.

By Mr. GOULD: A bill (H. R. 16869) authorizing the Secretary of War to donate cannon and balls; to the Committee on Military Affairs.

By Mr. FIELDS: A bill (H. R. 16870) to authorize the Secretary of War to furnish one condemned cannon to the John T. Parker Post No. 57, Kentucky Grand Army of the Republic, of the city of Vanceburg, Lewis County, Ky.; to the Committee on Military Affairs.

By Mr. CAMPBELL: A bill (H. R. 16871) to prevent the publication of false reports and rumors affecting the international relations of the United States; to the Committee on the Judiciary.

By Mr. WICKERSHAM: A bill (H. R. 16872) to amend section 831 of the Compiled Laws of the Territory of Alaska; to the Committee on the Territories.

By Mr. KITCHIN: A bill (H. R. 16873) to authorize the adoption of a national trade-mark for the manufactures of the United States, particularly for export purposes, and to authorize the Secretary of Commerce to license manufacturers to use the same, and for other purposes; to the Committee on Appropriations.

By Mr. McCULLOCH (by request): A bill (H. R. 16874) proposing an amendment to section 2 of the act of March 3, 1905 (33 Stats., p. 1021); to the Committee on Indian Affairs.

By Mr. CRISP: A bill (H. R. 16875) granting the consent of Congress to Crisp County, Ga., to construct a bridge across Flint River, Ga., between Crisp and Sumter Counties; to the Committee on Interstate and Foreign Commerce.

By Mr. SPARKMAN: A bill (H. R. 16876) to amend section 4414 of the Revised Statutes of the United States; to the Committee on the Merchant Marine and Fisheries.

By Mr. COLEMAN: Joint resolution (H. J. Res. 256) to authorize the Secretary of the Treasury to accept from the city of Pittsburgh certain lands in exchange for other lands of equal area; to the Committee on Mines and Mining.

By Mr. HULBERT: Resolution (H. Res. 296) directing the Secretary of the Treasury to report to Congress as to the advisability of establishing free ports, etc.; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. EAGAN: A bill (H. R. 16877) granting an increase of pension to Egnitz Rensing; to the Committee on Invalid Pensions.

By Mr. KIESS of Pennsylvania: A bill (H. R. 16878) granting a pension to Willie L. Rogers; to the Committee on Pensions.

By Mr. KING: A bill (H. R. 16879) granting an increase of pension to Gen. F. M. Bean; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16880) granting a pension to Mary Trower; to the Committee on Invalid Pensions,

Also, a bill (H. R. 16881) granting an increase of pension to Mathew O'Brien; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16882) granting an increase of pension to David H. Tulles; to the Committee on Invalid Pensions.

By Mr. McCULLOCH: A bill (H. R. 16883) granting a pension to Willard Kolp; to the Committee on Pensions.

By Mr. OLDFIELD: A bill (H. R. 16884) granting an increase of pension to Charles E. Frizzell; to the Committee on Invalid Pensions.

By Mr. RAMSEYER: A bill (H. R. 16885) granting an increase of pension to Joseph Ohman; to the Committee on Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 16886) granting a pension to Joel H. Haden; to the Committee on Invalid Pensions.

By Mr. STEPHENS of California: A bill (H. R. 16887) granting an increase of pension to Patrick F. Nealon; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16888) granting an increase of pension to Frederick J. Cressey; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. DALE of New York: Memorial of Equal Suffrage League of Baltimore, Md., relative to woman-suffrage amendment; to the Committee on the Judiciary.

By Mr. EAGAN: Petitions of German-American Button Co., of Rochester, N. Y., and Packard Motor Car Co., Detroit, Mich., against bill to prohibit time study; to the Committee on Labor.

By Mr. HOWELL: Petition of J. R. Smith, Joseph Thompson, and 50 other citizens of Uinta County, Utah, against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. PRATT: Petition of W. A. Simkin and sundry citizens of Pine City and Elmira, N. Y., opposing the passage of House bill 13778, authorizing the Postmaster General to exclude from the mails certain publications; to the Committee on the Post Office and Post Roads.

By Mr. STINESS: Petition of Rhode Island Bankers' Association, favoring passage of House bill 12998, relative to amend-

ing Federal-reserve act; to the Committee on Banking and Currency.

Also, papers to accompany House bill 14723, granting an increase of pension to Mary E. Caswell; to the Committee on Invalid Pensions.

Also, papers to accompany a bill granting an increase of pension to Ellener R. Potter; to the Committee on Invalid Pensions.

Also, papers to accompany a bill granting an increase of pension to Margaret Brayton; to the Committee on Invalid Pensions.

SENATE.

MONDAY, *July 10, 1916.*

(Legislative day of Friday, July 7, 1916.)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll and the following Senators answered to their names:

Ashurst	Gronna	Norris	Smoot
Bankhead	Hollis	O'Gorman	Sterling
Brady	Husting	Overman	Stone
Brandegee	James	Pittman	Sutherland
Bryan	Johnson, Me.	Poindexter	Swanson
Chamberlain	Johnson, S. Dak.	Ransdell	Taggart
Chilton	Jones	Reed	Thomas
Clapp	Kenyon	Saulsbury	Thompson
Clark, Wyo.	Kern	Shafroth	Vardaman
Colt	La Follette	Sheppard	Wadsworth
Culberson	Lane	Sherman	Walsh
Cummins	McCumber	Shields	Williams
Curtis	Martin, Va.	Simmons	Works
Fletcher	Martine, N. J.	Smith, Ga.	
Gallinger	Nelson	Smith, S. C.	

Mr. MARTINE of New Jersey. I desire to announce that the Senator from Montana [Mr. MYERS] is detained from the Senate by illness.

The VICE PRESIDENT. Fifty-eight Senators have answered to the roll call. There is a quorum present.

RELIEF OF SYRIAN SUFFERERS.

Mr. STONE. Mr. President, before the unfinished business is taken up I ask leave to report back from the Committee on Foreign Relations Senate resolution 209, introduced by the Senator from West Virginia [Mr. CHILTON], and I submit a report (No. 652) thereon. The resolution was unanimously agreed to by that committee. It is exactly in line with other resolutions relating in the main to similar subjects. I call the attention of the Senator from West Virginia to the resolution.

Mr. CHILTON. Mr. President——

Mr. GALLINGER. Let the resolution be read for the information of the Senate.

The VICE PRESIDENT. The Secretary will read the resolution.

The Secretary read Senate resolution 209, submitted by Mr. CHILTON June 2, 1916, and referred to the Committee on Foreign Relations, as follows:

Whereas the attention of the people of the United States has been directed to the helpless situation in which many of the Syrians in the Mount Lebanon district have been placed, and that many thousands have perished from hunger and exposure; and

Whereas thousands of citizens of the United States in practically every State of the Union were either born in Syria or are the children of Syrians born in that country, and that thousands of American citizens are related by blood and affinity to many of the said suffering and helpless people; and

Whereas the people of the United States have demonstrated their sympathy for the suffering people on all sides in the great European war, having helped in a practical way the people of Belgium, Serbia, Ireland, Poland, and others, as becomes a nation which is neutral in this war and on friendly terms with all the belligerents: Therefore be it

Resolved, That appreciating the sufferings of the Syrian people it is suggested that the President of the United States set aside a day upon which a direct appeal to the sympathy of all American citizens shall be made and an opportunity shall be given for our public-spirited people to contribute to a much needed fund for the relief of the Syrian people.

Mr. CHILTON. Mr. President, I had intended to submit briefly some observations to the Senate upon this resolution, but in view of the fact that we are working now by virtue of the courtesy of those in charge of the Agricultural appropriation bill, I will content myself with asking unanimous consent for the immediate consideration of the resolution.

Mr. SMOOT. May I ask the Senator whether it is a Senate resolution?

Mr. CHILTON. It is a Senate resolution. It is simply a suggestion as we have done in the case of all the suffering people in Poland and elsewhere. It is the customary resolution.

Mr. SMOOT. Of course it is not in the power of the Senate to pass a resolution directing the President.

Mr. CHILTON. He is not directed. It is merely a suggestion. We could not direct him.

Mr. SMOOT. I see it is a mere suggestion, and therefore a Senate resolution is proper.

Mr. NORRIS. Permit me to ask a question.

The VICE PRESIDENT. Does the Senator from West Virginia yield to the Senator from Nebraska?

Mr. CHILTON. With pleasure.

Mr. NORRIS. I wish to ask the Senator if there will be any difficulty in the transmission of the funds that are collected in this way to the Syrian people.
